About 100 kilometers (62 miles) north of Berlin, a subcamp attached to Ravensbrück was created in Neustrelitz-Fürstensee (Mecklenburg province). An unknown number of male inmates were deported to Neustrelitz-Fürstensee most likely from the men's camp at Ravensbrück sometime in 1943. During the trial of several Ravensbrück staff members in 1946, former Ravensbrück block elder (Blockältester) and witness Hermine Salvini confirmed in cross-examination that Neustrelitz was attached to Ravensbrück and tentatively totaled the number of prisoners in Neustrelitz, Konterei, and Kellehelt between 70 and 100. No further breakdown of the number of inmates in Neustrelitz is available.<sup>1</sup>

There is no further information about the subcamp in Neustrelitz, including the number of inmates, kind of prisoner work, camp guards, commandant, living and working conditions, or postwar trials. The camp was occupied on April 30, 1945, by Allied troops.

**SOURCES** There are few primary or secondary sources on the Neustrelitz-Fürstensee subcamp of Ravensbrück. For a brief outline of the camp, including the dates of occupation, and so on, see the entry for Neustrelitz in the ITS's *Verzeichnis der Haftstätten unter dem Reichsführer-SS (1933–1945): Konzentrationslager und deren Aussenkommandos sowie andere Haftstätten unter dem Reichsführer-SS in Deutschland und deutsch besetzten Gebieten*, vol. 1 (Arolsen, 1979).

The ZdL in Ludwigsburg contains some files related to the Neustrelitz camp: see BA-L, IV 409 AR-Z 39/59 and IV 409 AR 1592/69. The camp is briefly mentioned in the postwar trial documentation of several Ravensbrück staff members, copies of which are located in USHMMA: Judge Advocate General's Office: War Crimes Case Files, Second World War, RG-59.016M, Reel 10 (originals stored in the PRO, London, WO 235/305). Additional materials are most likely found at the AG-R.

Christine Schmidt van der Zanden

## NOTE

1. Trial of members of Ravensbrück staff, Judge Advocate General's Office: War Crimes Case Files, Second World War [1945–1953], PRO (London), WO 235/305 (as copied in USHMM, RG-59.016M, Reel 10).

## PRENZLAU-KLEINE HEIDE

### [ALSO HINDENBURG, BIRKENHAIN]

A specific date for the establishment of the Prenzlau-Kleine Heide subcamp of the Ravensbrück concentration camp is unknown. The existing statements by former prisoners are very contradictory and range from May 1943 to the autumn of 1943.

In all likelihood, a labor detachment of about 30 prisoners was brought to the vicinity of Prenzlau to construct the camp in the late summer of 1943. The camp itself changed locations from Prenzlau-Kleine Heide to Hindenburg (present-day Lindenhagen). At the latter site, an existing windmill, circus wagons, and barracks constructed at a later date served as a camp. The transfer of the prisoners to the vicinity of the Birkenhain construction site was intended as a means of economizing on fuel. The distance to the place of work was now 2 kilometers (1.2 miles), which had to be traveled on foot. A proportion of the prisoners also had their living quarters directly in Birkenhain.

According to an official report, the camp's dissolution took place on April 27, 1945. This date is presumably incorrect, however, in view of the fact that the personal staff of Reichsführer-SS Heinrich Himmler had already left Birkenhain—code name “Birkenwald”—at the end of March 1945, and the existing buildings were occupied by military operations of fices until the war came to an end in the Uckermark.

The prisoners were initially assigned the task of constructing alternative headquarters for the personal staff of the Reichsführer-SS. To this end, large buildings were confiscated, and a considerable number of prefabricated wooden barracks were erected. The completion of the various facilities dragged on into the spring of 1945. In isolated cases, prisoners were employed at the Birkenhain site as custodians, gardeners, and cleaning staff.

The entire facility was under the command of the personal staff of the Reichsführer-SS. The guard units assigned to oversee the prisoners at their living quarters and at work were deployed from Ravensbrück.

On the basis of eyewitness interrogations and the evaluation of the existing archives, it was possible to ascertain the following prisoner insignia: red triangles for political prisoners, purple triangles for Jehovah's Witnesses, green triangles for criminals. In a few cases, foreign (Eastern European and French) prisoners were also assigned to labor in Birkenhain.

The precise size of the workforce employed in Birkenhain at any given time cannot always be reconstructed since the SS records did not survive. On May 14, 1944, 59 prisoners were on labor duty in Birkenhain; on August 25, 1944, 172.

According to the few existing documents and eyewitness reports, the prisoners were not tortured at their place of work, and there were no murders.

Witnesses to the events stated that, at their living quarters, prisoners were beaten for the slightest violations of the camp regulations.

The identities of this subcamp's leaders are not ascertainable. The names of the guards are known. They were deployed from the guard units of the main camp. According to eyewitness interrogations, it came about on occasion that prisoners were hired out to the people of Hindenburg as skilled workers. Jobs for electricians were mentioned in this context.

For one resident of the town of Hindenburg (the owner of the windmill), the prisoners painted two oil paintings in return for his help in the form of additional food. These paintings are still in the family's possession.

At least one attempt must have been made to escape from the camp, since there is a document regulating the collaboration between the SS and the local police/gendarmerie in the event of a further escape attempt.

One witness to the events spoke of two prisoners who were allegedly caught, shot to death, and then buried in the forest; however, it has not been corroborated.

The dissolution of the camp along with its workforce presumably took place in late March 1945. Individual laborers—women and Jehovah's Witnesses who worked as cleaning personnel—are reported to have been present in the officers' lodgings until April 1945. Proceedings against individual members of the SS who belonged to the guard units from Ravensbrück were carried out in the Federal Republic of Germany between the 1940s and the 1960s.

**SOURCES** The author's research uncovered just a few key bibliographical references. These include Elisabeth Kinder, “Der Persönliche Stab Reichsführer-SS: Geschichte, Aufgaben und Überlieferung,” in *Aus der Arbeit des Bundesarchivs: Beiträge zum Archivwesen, zur Quellenkunde und Zeitgeschichte*, ed. Heinz Boberach and Hans Booms (Boppard am Rhein: Harald Boldt Verlag, 1977), pp. 379–397; Axel Klätte, “Von der Randow zur Ucker—Die Kampfhandlungen am 25. und 26. April 1945 im östlichen Vorfeld Prenzlau,” *MUGP* 6 (1997): 147–166; Marion and Reinhard Timm, “Aktion ‘Birkenwald,’” *HKfKrP* (1989): 87.

Numerous documents on the history of the subcamp are to be found in the BA-K, Bestandsnummer NS 19, Persönlicher Stab RFSS. File No. AR Z 94/1971, Prenzlau, in the BA-L is likewise significant. It contains statements by former prisoners on the working and living conditions in Birkenhain. In the holdings of the BA-B is a film of documents (Film No. 3612) on the Birkenhain camp containing reports on the labor deployment of the prisoners from the perspective of the SS. The author's archive contains records of numerous eyewitness interrogations.

## RETZOW [AKA RECHLIN]

Retzow is a district of the town of Rechlin and is located southeast of Müritz (district of Waren, state of Mecklenburg-Western Pomerania).

The barracks camp in Retzow was built between 1939 and 1942. It was to provide lodgings for workers employed in the construction of the Lärz airport. The airfield was part of the Luftwaffe testing site in Rechlin. The camp was located 500 meters (1,640 feet) from the northern entrance to Lärz airfield. Until 1943, the camp provided lodging primarily for members of the Reich Labor Service (RAD) and Italian workers. In 1943, 4 of the 12 barracks in the camp as well as a large proportion of the social barrack were fenced in. On the basis of the type of enclosure that was built, it was soon clear that a special type of camp was being set up—a concentration camp. In the early summer of 1943, 1,000 to 1,200 male prisoners were committed to this camp.

It is very difficult to determine what camp the men came from. In any case, they were not from the Sachsenhausen concentration camp. It is assumed with some certainty that they came from the men's camp in Ravensbrück.

For the most part, the prisoners were put to work carrying out excavations for the construction of the Lärz airfield and of a pilot's shelter. Some witnesses to the events have claimed, however, that there were specialists among the prisoners who were assigned to help with assembly tasks at the airfield or the testing site. During the performance of their labor assignments, the prisoners were subjected to rigorous treatment by the guard units. The rations were relatively satisfactory. In the early summer of 1944, a large majority of the men were transferred. To replace them, women were sent from Ravensbrück on July 9, 1944. By the late autumn of 1944, the camp population had risen to 3,000 at times. The number fluctuated strongly during this period.

Whether women or men, the prisoners were put to work primarily in the construction of the Lärz maneuvering area. As a rule, they carried out excavation work. This labor was often much too strenuous for women.

Beginning in the autumn of 1944, the majority of the women were employed building so-called camouflage pits.<sup>1</sup> These pits were depressions dug into the ground, over which—on a wooden framework—a camouflage net was spread to hide the aircraft from enemy pilots flying overhead. Here again, excavation constituted the major proportion of the work. At times, smaller groups of men were also assigned to help with the harvest. The women, for their part, were assigned to work in the halls in smaller groups. The work in the halls was considered easier. The greatest burdens placed on the women were the trench work and the clearing work following air raids. The work was organized by the management of the testing site or by the command of the air base. Among the male as well as the female prisoners, various nationalities were represented in the camp. According to the memories of former prisoners, a conspicuous number of French people were imprisoned in Retzow. From the autumn of 1944 onward, due

to lack of space in the barracks, the cinema of the social barracks was also used as living quarters. The prisoners lodged in the cinema were primarily Jewish women who had previously been imprisoned in Auschwitz. This was also the period in which the camp population rose to as many as 3,000. The death rate fluctuated sharply. Relatively few men died. Several of them were shot to death during alleged escape attempts. A great deal more of the women died. In the period from the end of 1944 to April 1945, the rations were severely reduced.<sup>2</sup> Moreover, the prisoners suffered increasingly from vermin of all kinds, ranging from rats to head lice. As a result, the incidence of many kinds of disease increased to the point where they could be classified as epidemics.

The dissolution of the Eastern European extermination camps and the resulting deportations of Jewish prisoners to concentration camps in the West caused the situation in the Retzow subcamp to change. The Jewish women had separate lodgings, being literally crammed into the cinema of the social barracks.<sup>3</sup> There, selections were carried out regularly, and the selected women were taken back to the Ravensbrück main camp, presumably for extermination.<sup>4</sup> Every Friday, a transport of women classified as “unfit for life” was sent to the Ravensbrück concentration camp. In her monograph on Ravensbrück, Germaine Tillion, a prisoner in the main camp, describes a scene she witnessed on March 27, 1945. That evening, there was a transport from Rechlin on the camp street. She passed close by it on her way back from work. The women were lying in front of the washroom wing on the ground, and five or six of the women had died during this time. The others were horribly emaciated, very tan from the sun, but pale at the same time. Their gazes were full of fear and agitation.<sup>5</sup> In February 1945, even more prisoners were detained in the cinema, among them a large number of French women.<sup>6</sup> Even prisoners who had been in various concentration camps in the course of the years and were sent to the cinema barrack described the conditions there as especially atrocious. There is no evidence as to whether any of the women held in the cinema survived. Anise Postel Vinay recounts that, on April 26, 1945, women who had previously been in the Retzow subcamp were transported in trucks from the Uckermark camp to the main camp and then murdered.<sup>7</sup>

The memoirs of Tillion, Postel Vinay, and Renault indicate that, at least in certain phases, the camp was divided in its functions: Some of the prisoners were forced to perform the heaviest conceivable labor—but were out in the fresh air. Other women were doomed to vegetate in locked rooms day and night with minimal rations. Hunger, thirst, overcrowding, and disastrous hygienic conditions led to the deaths of the women.

Many of the prisoners who died in Retzow were taken to Ravensbrück for cremation.<sup>8</sup> A large number of women were killed during air raids. They were not evacuated but merely subjected to the bombing without any form of protection. Another considerable portion were killed in work-related accidents.<sup>9</sup> The extension of the runway was carried out while the planes were in operation, and the women were frequently

blown to the ground by landing aircraft with such force that they subsequently died.

Altogether 251 dead prisoners—men, women, and children—were buried at three sites in Retzow.<sup>10</sup> In 1948, 30 of the corpses were exhumed, identified as French women, and transported to France. The remaining 221 were dug up in 1950, cremated in Schwerin, and buried at a memorial in Waren (Müritz). Three other bodies were buried in a neighboring village. The overall death toll of the Retzow subcamp, however, has never been determined.

It is difficult not only to find the names of the dead today but also to describe the routes taken by the prisoner transports. It is known for certain that major relocations of prisoners took place in February 1945. At that time, the men who had remained in the camp in the summer of 1944 and many women prisoners were deported by train to the Ellrich concentration camp in the Harz (a subcamp of the Mittelbau concentration camp). These prisoners had been selected because they were still in relatively good physical condition. At Ellrich they were put to work in the construction of underground industrial facilities. In Ellrich, as well, there was little chance of survival.

No information concerning acts of resistance in Retzow has been found. In February 1944, one man succeeded in escaping from the camp. He was found by a forest worker 2 kilometers (1.2 miles) from the camp in a wooded area, suffering from a severe chill. He allowed himself to be taken back to the camp without resistance.<sup>11</sup>

On April 30 and May 1, 1945, the majority of the prisoners were driven on foot in the direction of Röbel-Malchow under the close surveillance of guards.<sup>12</sup> They were ultimately liberated by U.S. troops. The number of prisoners who died on the road is not known. The guards not needed for the evacuation were ordered to report to Neustadt-Glewe. Altogether, 71 women remained behind in the camp. At this point in time, 56 women were dead. The remaining prisoners were liberated by soldiers of the Red Army on the morning of May 2. At the instruction of the first in command of the Red Army in the town, Karl Wulf, a citizen of Retzow, assumed the medical care of the living prisoners and the burial of the dead. An additional 10 women died in May, the last in July. The women of the town were assigned to help Wulf. He succeeded quite well in caring for these severely enfeebled people, particularly in view of the fact that he initially had no medical personnel at his disposal.

Beginning in 1969, the Central Office of State Justice Administrations (ZdL) in Ludwigsburg instituted legal proceedings against alleged criminals of the Retzow subcamp. In 1974, criminal proceedings were initiated against the guard Paul P. on charges of murder. Paul P. claimed that he had been a guard at the Ravensbrück women's concentration camp, that he guarded male prisoners during the construction of stables at the Damshöhe subcamp, and that he was assigned to guard duty as a concentration camp guard at the Rechlin runway and transferred to Barth, a subcamp of Ravensbrück, in the winter of 1944.<sup>13</sup> In 1975 he was sentenced to youth custody for three years by the District Court of

Kleve. The verdict was amended by the 3rd Criminal Division of the Federal Supreme Court after the defendant lodged an appeal (on account of a procedural error). The charge was changed from consummated murder to attempted murder. The 1976 sentence was for two years and six months.<sup>14</sup>

No other trials were carried out. No original documents on the SS guard personnel have been uncovered.

**SOURCES** Material relevant to this subcamp may be found in Heinrich Baetke and Heinrich Ross, *Aus der Geschichte der Erprobungsstelle Rechlin* (Waren, 1999); Christian Bernadoc, *Les Mannequins Nus* (Paris, 1973); Heinrich Beauvais et al., *Flugerprobungsstellen bis 1945: Johannistal, Lipezk, Rechlin, Travemünde, Tarnowitz, Peenemünde West* (Bonn, 1998); Magistrat der Stadt Mörfelden-Walldorf, ed., *„Das Geheimnis der Erlösung heisst Erinnerung“: Ein Begleitheft zum Historischen Lehrpfad am ehemaligen KZ-Aussenlager Walldorf* (Mörfelden-Walldorf, 2000). Useful information may also be found in Grit Philipp, *Kalendarium der Ereignisse im Frauen-KZ Ravensbrück 1939–1945* (Berlin, 1999).

As is the case of many of the Ravensbrück subcamps, there are hardly any primary sources on Retzow. The only existing detailed memoirs pertaining to the history of the Rechlin-Retzow camp were provided by French women formerly imprisoned at the camp; they are available in the form of written testimonies. Various set pieces of the memories of individual inmates are in the “Erika Buchmann” file in the AG-R. In this source, however, often neither the point in time nor the specific context of the events described is known. The documents of the ZdL were transferred to the holdings of the BA-L in the year 2000. The public attorney investigations comprise records of hearings of men and women formerly imprisoned in the Retzow subcamp, carried out between 1968 and 1971. Because of the author's personal interest in the history of this subcamp, he conducted interviews with eyewitnesses for many years. Many of these people were already very old at the time of the interviews and insisted on remaining anonymous. Their memories have been incorporated into this text. Two published testimonies on this subcamp are Maisie Renault, *La grande Misère* (Vannes, 1948); and Germaine Tillion, *Frauenkonzentrationslager Ravensbrück* (Lüneburg, 1998).

## NOTES

1. Cf. Marie Moulan, “Les Colonnes,” Sammlung AG-R/SBG, RA-Nr. 32, Bericht 286. Cf. Maisie Renault, *La Grande Misère* (Vannes, 1948).

2. Interviews with witnesses to the events conducted by Heinrich Ross.

3. In 1998, an international student group developed a memorial at the authentic site. In a personal interview conducted there with Johanna Krause, who was 90 years old at the time, she stated with regard to her period of imprisonment in Retzow that having been a political and Jewish concentration camp prisoner for many years, she had become accustomed to a great deal. The accommodation in this so-called cinema was an especially devastating and unforgettable experience.

4. On the subject of transports, cf. Ilse Hunger, Briefe an die VVN Berlin, Sammlung MGR/SBG, RA-Nr. 18, Bericht 74; interviews with former residents of Retzow conducted by Heinrich Ross.

5. Germaine Tillion, *Frauenkonzentrationslager Ravensbrück* (Lüneberg, 1998), p. 312; Katalyn Weinberger, Interview 1996, YVA.

6. In Tillion's memoirs there is an account of a transport of 2,000 French women to Rechlin on February 14, 1945. As in the Uckermark camp, the treatment of the women was aimed at their murder. Selections were carried out in March and April in this subcamp as well. The selected prisoners were picked up by trucks and probably murdered in the Ravensbrück gas chamber. See Grit Philipp, *Kalendarium der Ereignisse im Frauen-KZ Ravensbrück 1939–1945* (Berlin, 1999), pp. 194, 201.

7. Philipp, *Kalendarium der Ereignisse im Frauen-KZ Ravensbrück 1939–1945*, p. 202.

8. Sammlung AG-R/SBG, RA-Nr. 20, Bericht 188/1.

9. Heinrich Ross, interview with witnesses to the events.

## RHEINSBERG

About 80 kilometers (50 miles) north of Berlin, a subcamp attached to Ravensbrück was created in Rheinsberg (Brandenburg province). An unknown number of male inmates were deported to Rheinsberg, most likely from the men's camp at Ravensbrück. The inmates were transferred there to perform clearing work after air raids; however, there is no specific information about the date the camp was established.

Moreover, no further information about the subcamp in Rheinsberg is available, including the number of inmates, kind of prisoner work, living and working conditions, evacuation or occupation date, or postwar trials of guards or the commandant. The fate of the Rheinsberg inmates is unknown.

**SOURCES** There are few primary or secondary sources on the Rheinsberg subcamp of Ravensbrück. For a brief outline of the camp, including the kind of work, gender of inmates, and so on, see the entry for Rheinsberg in the ITS's, *Verzeichnis der Haftstätten unter dem Reichsführer-SS (1933–1945): Konzentrationslager und deren Aussenkommandos sowie andere Haftstätten unter dem Reichsführer-SS in Deutschland und deutsch besetzten Gebieten*, vol. 1 (Arolsen, 1979).

Relevant materials may be found at the AG-R.

## ROSTOCK-SCHWARZENPFOST/ STEINHEIDE

In 1943, one year after the especially heavy bombardment of the Hanse city of Rostock, the idea was formulated to relocate essential armament production facilities to well-camouflaged sites. One such top-secret project lay concealed behind the code name "Robert" in the extensive forests of the Rostock Heath. Illusionary plans for constructing a large new aircraft factory were under consideration. Following the bombing of the Heinkel Works in Rostock-Marienehe, the plant had been divided into 40 small- and medium-size operations spread all over Mecklenburg, a solution that, however, did not guarantee acceptable production figures. Now a large facility was to be constructed on an area measuring 97 hectares (240 acres). The plant was built from the ground up almost exclusively by concentration camp prisoners and foreign workers. In addition, there was also a lodging camp for female prisoners in Oberhagen, a district of Rövershagen. It was enclosed by an electrically charged barbed-wire fence and kept under surveillance from three watchtowers manned by heavily armed guards belonging to the Ravensbrück unit of the SS-Totenkopfstandarte (Death's Head Regiment). In addition to an administration building, five barracks had been built to serve as lodgings for approximately 300 prisoners. Every day the emaciated inmates were driven on foot a distance of more than 2 kilometers (1.2 miles) to a forest near Schwarzenpfost to carry out 12 hours of the heaviest conceivable construction work.

A large number of eyewitness documents were discovered in the estate of Alfred Weber in the Western Pomeranian Landesarchiv in Greifswald (VLA-G). Among them is a letter written from Bulgaria by Mara Zanewa Beltschewa Göblsmann, excerpts of which are reproduced here:

One day—the picture that I still see in my mind's eye even today—two hundred women and young girls came from the Barth camp and were taken to join the other prisoners. They also had to work in the same factory [Schwarzenpfost]. They were so dirty, so infested with lice, that I could not possibly take them to the other prisoners. I left them standing in the courtyard and ran to the overseer to ask for fresh underwear and clothing for them. They hadn't changed for months and the shirts on their backs were like hard boards. The shirt . . . [?] them more than it warmed them. Their backs, their bodies were covered with sores. . . . These women were primarily journalists, doctors, teachers. They had deliberately been insulted, humiliated in this way, simply not given any change of clothing for eight months. . . . Then I took two hundred dresses and two hundred shirts for all of them.<sup>1</sup>

Magdalena Szabolcsi Imrene of Hungary recounted her memories of the Schwarzenpfost camp in 1964:

VOLUME I: PART B

In April 1945 we were taken to Schwarzenpfost to work in an aircraft factory, but because of our weakness, we were no longer in a position to do so. There was no kitchen whatsoever; we survived on what we found on the ground. The camp was not far from the road, and we could see that the people were fleeing from the advancing front. . . . In Schwarzenpfost camp there were approximately three hundred women. There were also men there, but they were separated from us by a wire fence; how many of them there were I do not know, because contact of any kind with them was entirely impossible. As far as the nationality of the inmates was concerned, there were Germans, Czechs, Hungarians, Yugoslavs, Dutch, and above all Russians. The overseers were SS women. Our lodgings were in Schwarzenpfost, as I remember. I can remember with absolute certainty that there were several barracks there, though I can no longer say exactly how many. During the death march which ended in Warnemünde and led from Schwarzenpfost through the forest, many women were killed. . . . On the night of April 29, 1945, the advancing front forced the SS to evacuate the camp. The prisoners—in April, male inmates had arrived from the east, some on foot, some in trucks—were driven through the forest to Hinrichshagen. From there the march went on to the Hohe Düne by way of Markgrafenheide. When the SS guard troops learned that the Red Army was already close to Warnemünde, they put on civilian clothing. One SS officer who had always treated us with such fine expressions as “scumbags,” “sows,” and “bitches” suddenly called out to us: “You’re free, ladies!” Now suddenly we were “ladies.” . . . On the way, we heard shots again and again; prisoners who were too weak to go on were “finished off,” murdered, by the SS.<sup>2</sup>

What Weber concealed and negated as he was gathering the witnesses’ reports on behalf of the Socialist Unity Party of Germany (SED) was the circumstance that among the prisoners there were hundreds of Jewish men and women of various nationalities, Sinti and Roma (Gypsies), homosexuals, so-called asocials, criminals, and others. Even in the internal, unpublished documents, antifascism was equated exclusively with the concept of communism. As a consequence, many of the documentations were decried because of their obvious bias in the recounting of historical events.

References to the Schwarzenpfost/Steinheide camp are also found in the rationality of indexes and statistics, often concealed behind code names such as “Robert” and “Sturm.” The organizational plan of the Heinkel aircraft works includes a depiction of the company hierarchy showing not only the chief branches in Rostock, Oranienburg, Vienna, and Stuttgart but also a number of subsidiaries under the administration of the Rostock branch. The sites Patriotischer Weg, Werftstrasse, Bleicherstrasse, Pütnitz bei Ribnitz-Damgarten Kraków, Lübz,

Güstrow, Rövershagen, Oelsnitz, and Adorf in Voigtland as well as the underground facility Kabel und Leitungswerke AG (Cable and Conductor Works, Inc., KALAG) in Stassfurt were listed in conjunction with the Rostock main factory.

In the International Tracing Service (ITS) catalog, the following memo is found on Schwarzenpfost: “Schwarzenpfost, District of Rostock, Russian Zone, CC-Kommando of Ravensbrück (Concentration Camp Kommando) May 1944—one thousand women at Heinkel Company.”<sup>3</sup> In another list published by the ITS, the following can be read in connection with the Schwarzenpfost camp: “Opened in mid-1943 according to a statement by a chief department head of the SS-WVHA (Business Administration Main Office).”<sup>4</sup>

The Central Archive of the Federal Commissioner for the Documentation of the State Security Service (BSTU) also holds documents that shed light on the history of Schwarzenpfost camp. Particularly in the 1960s, the Ministry for State Security (Staatssicherheit, Stasi) of the German Democratic Republic (GDR) carried out a considerable number of investigation procedures on the concentration camps in Mecklenburg and Western Pomerania. In this context, it is conspicuous that quite a few persons decisively involved in the camp hierarchy carried out their offices and functions in the GDR until their deaths, although they had been proven guilty.

In April 1964, Prof. Dr. Köhler, who as head of operations in the Heinkel company was responsible for the establishment of the concentration camps in Barth and Schwarzenpfost, among others, was interrogated on this subject. In the course of the hearing, he stated the following about a conversation with higher-ranking SS men in Ravensbrück: “The only thing I remember about the negotiations was that the conditions of the already existing Oranienburg concentration camp [by this he meant the Sachsenhausen concentration camp] were included in the basis for the agreements.”

Köhler also claimed: “Shortly before the divestiture a proportion of the prisoners from Barth concentration camp were employed in the construction of a forest plant for the Heinkel company near Rövershagen. The prisoners’ wages were paid by the Heinkel company as a flat rate, two to three Reichsmark per day. The payments were settled with Office D (SS-Economic Office). This form of payment brought the Heinkel company a financial advantage which was passed on to the Ministry of Aviation only in part. Through this form of payment, the services actually performed by the prisoners were by no means compensated.”<sup>5</sup>

Finally, two drawings were found in which the camp grounds, the course of the electric fence, and, to some extent, the locations of individual buildings are depicted. These drawings are of particular value for the endeavor to carry out targeted research work on the former camp grounds themselves.

**SOURCES** There is to date no completed publication on the Schwarzenpfost/Steinheide concentration camp near Rövershagen. More specifically, a brochure was issued by Prof. Dr. Karl Bittel titled *Wir klagen an—Die Wahrheit über die faschistischen Konzentrationslager im Ostseengebiet* (Stralsund, 1966),

but its documentary value is extremely doubtful since—in keeping with the state doctrine of East Germany at that time—facts were concealed or purposely changed. This assessment also applies to the work carried out by Alfred Weber during the same period. The first objectively correct publication on this camp is in volume 5 of the *Schriften der Geschichtswerkstatt Toitenwinkel* (Rostock, 1998) in an article titled “Kriegsgefangene und Zwangsarbeiter zwischen Warnow und Barthe.” Since 2002, a research group has undertaken a thorough investigation of the camp.

As far as is known, there is little in the way of archival material on the concentration camp. In the ASt-Ros, among the forestry records, the files 1.10.537 “Mitbenutzung der Holzverladestelle u.a. Heinkel AG” and 1.10.477 “Einsetzung von Kriegsgefangenen in der Rostocker Heide” are to be found. A number of isolated documents were found in the AG-R. In BStU the following material pertaining to this concentration camp was found: “Untersuchungsvorgang Zöllner, Arnold,” the “Bildbericht zur Exumierung von zehn ermordeten KZ-Häftlingen aus zwei Gräbern in der Gemeinde Rövershagen Krs. Rostock.”

## SIEMENSLAGER RAVENSBRÜCK

The Siemens subcamp (Siemenslager) was located on a swampy rise above Lake Schwedt in the immediate vicinity of the Ravensbrück women’s concentration camp and the Ravensbrück “production center” of the Siemens concern. On December 3, 1944,<sup>1</sup> detainees of the so-called Siemens detail were transferred to the Siemens subcamp. The history of the Siemens detail is the history of the Siemens subcamp as well as the Siemens & Halske (S&H) firm’s involvement with the Ravensbrück women’s concentration camp.

At the end of 1941 and the beginning of 1942, following the failure of the Blitzkrieg, Reichsführer-SS Heinrich Himmler and Generalluftzeugmeister Erhard Milch arranged for the utilization of concentration camp prisoners to produce Luftwaffe armaments.<sup>2</sup> Siemens quickly assumed a key role in the arrangement: out of the companies already using concentration camp detainees as labor at this time, Siemens had the

largest share—at that time, over 1,500 of the 6,400 female detainees at Ravensbrück. In addition, Siemens at this initial phase had the responsibility for coordinating the use of female detainees as labor at other firms. The reason for this was that Siemens had full order books, but its Berlin factories were desperately short of labor.<sup>3</sup> The Reich Air Ministry’s (RLM) interest in the expansion of production by its important supplier was such that Siemens could shift a large proportion of its investment costs to the Reich. The factory erected next door to the Ravensbrück concentration camp, built at the cost of the RLM, was ready for use. The factory buildings were then leased to Siemens, which in turn fitted out the buildings with the relevant machinery.<sup>4</sup>

The project became a reality on June 8, 1942, when male and female prisoners from Ravensbrück constructed, from precast materials, the factory buildings next to the concentration camp. Production began in the factory on August 21, 1942, in one of the first buildings constructed.<sup>5</sup> Adroit female detainees with finger dexterity and good eyesight were chosen for the production line. The women manufactured relays, microphones, toggle switches, and other electronic parts. The items were manufactured from precast parts from Berlin. All the products were destined for use by the Luftwaffe.<sup>6</sup> A total of 20 buildings were erected over a period of time. With its “own Ravensbrück operation,”<sup>7</sup> Siemens increased its production capacity of telephone terminals (WWFg), radios, building components (WWR), telegraphic equipment (WWT), and meters (WWM).<sup>8</sup>

Records of the numbers of people in the Siemens detail are fragmentary and incomplete. In January 1945, Siemens used 2,307 prisoners, the largest number. In February 1945, 2,298 female concentration camp detainees, the biggest production detail of female prisoners, were still being used for labor by the Siemens complex.<sup>9</sup>

The workplaces were fitted out with ergonomic facilities. They were adequately heated and lit because of the work required on the delicate material. Nevertheless, the work was very demanding and burdensome. The prisoners worked initially in 8-hour shifts and later in 12-hour shifts, day and night. The work required a high degree of concentration. In addition, there was the constant supervision and demands by Siemens employees and female SS guards. In cooperation with the SS, the factory management established a system, based on an assumed piecework rate of production, to measure an individual’s “learning” and production rates. For adequate or good performance, there were additional rations; for inadequate performance, as punishment, there was additional work or rations were withheld, or the detainees were subjected to a hierarchy of beatings, or they were reported to the SS. Notwithstanding the burdensome work, the prisoners feared being dismissed from the detail; it was considered a “disconnection” because those affected went back into the pool of “disposable” people who were allocated the most strenuous work, largely unprotected in the open air. By manipulating the account settlement statements, the prisoner-functionaries employed in the workshops and offices of the firm tried to support and protect their

fellow detainees. The extent and effectiveness of this sabotage, which is given a prominent account in survivors' reports, are difficult to gauge. All that is known for certain is that Siemens was so satisfied with the detainees' work that it used the Ravensbrück "production center" model, for example, at the Flossenbürg, Graslitz and Zwodau subcamps.<sup>10</sup>

The main camp, in which the Siemens detail prisoners were originally quartered, had filled beyond capacity. The cumulative catastrophic overcrowding, together with typhoid and dysentery epidemics and general camp disorganization, resulted in the creation of the Siemens subcamp in the second half of 1944. Probably the firm expected a reduction in downtime from this camp, by shortening the period in which the more than 2,000 detainees marched to and from the camp. Also hoped for was an increase in control over the food supply.

Some 13 barracks, enclosed by an electric fence, were constructed between the factory and Lake Schwedt. The barracks functioned as lodgings, kitchen, dispensary, and washing facilities. Unlike the main camp, the lodgings consisted of a single, large room. There were no toilets. The latrine consisted of simple ditches with long boards across them. The women detainees found it particularly degrading when they had to relieve themselves under the gaze of the SS guards.<sup>11</sup> The lodgings are described as unheated, overcrowded, and stifling. Until the beginning of 1945, most of the detainees had to share their bunks. Bedding on the bunks was sacks of straw. There were approximately 250 to 300 prisoners per barracks. This was a marked contrast to the overcrowded main camp where, in many barracks, between 700 and 800 detainees were crowded together.<sup>12</sup>

The Siemens camp was under the command of SS-Hauptscharführer Grabow and SS-Oberaufseherin Holthöver. The head of the Kapos of the Siemens subcamp, Anna or Anni Vavak, acted as the unofficial camp elder (*Lagerältester*).<sup>13</sup> Some prisoners claim that Grabow beat them, while others report that they were "justly treated." Many survivors hold him responsible for the fact that during their work-free periods they were required to transport peat to the camp for flowerbeds. It is said of Holthöver that she personally often beat detainees and represented the "old camp methods," that is, the common practice of humiliating and mistreating the prisoners. The behavioral patterns created in the main camp were transferred to the Siemens subcamp with the results that the block elders (*Blockältester*) also often beat the detainees, and prisoner-functionaries of the so-called prominent block enjoyed privileges such as daily showers.<sup>14</sup> The detainees successfully maintained their cultural activities (thereby asserting themselves against the SS) in the Siemens camp. Reports mention theater performances, group singing, and New Year's festivities.<sup>15</sup>

Overall, the transfer from the main camp represented only a small improvement in living conditions. The most significant was the food: less was misappropriated from the kitchen in the Siemens subcamp than in the main camp. In the infirmary with some 20 beds, presumably with double occupancy, and in the face of a shortage of medicine and bandages, the detainees' chief doctor, Dr. Court, and chief nurse, Countess

zu D., could not provide adequate care for the sick. Seriously ill detainees were transferred back to the main camp. Yvonne Useldinger strikingly described those conditions in her diary—on a visit to the dentist in the main camp, she had to step over corpses. The Siemens subcamp itself supposedly had no deaths among the prisoners.<sup>16</sup>

Production decreased in the last few months of the war because of air-raid alarms and difficulties in the supply of energy and components for production. This resulted in production decreases and reductions in the size of the Siemens detail, which were dangerous for the prisoners because selections then took place. Elderly and "less productive" women were the main targets. The firm management was directly and decisively involved in determining who would be "disconnected" and transferred either to the main camp or to the youth camp Uckermark.<sup>17</sup> An additional life-threatening danger arose in the spring of 1945 for those "unproductive" detainees when a gas chamber at Ravensbrück commenced operation.<sup>18</sup>

The Siemens subcamp was probably evacuated on April 13 and 14, 1945. With the evacuation of the subcamp, the Siemens model project, its "own Ravensbrück production center," came to an end. Male detainees of an "evacuation transport" from Mittelbau or Buchenwald then occupied the empty barracks.

Between 1946 and 1948 in Hamburg, the British occupying authorities conducted 7 "Ravensbrück Trials" against members of the SS camp and security personnel as well as against prisoner-functionaries of the women's concentration camp. Only in 2 of the trials did the accused have a connection with Siemens' use of detainees or the Siemens subcamp. In the first trial, lasting from December 5, 1946, to February 3, 1947 (Judge Advocate General [JAG] 225), Eugenia Skene, the block elder in the Siemens subcamp, was sentenced to more than 10 years' imprisonment. On the other hand, the military tribunal in the 6th trial that took place between July 2, 1948, and July 21, 1948 (JAG 334), acquitted Christine Holthöver, the senior female guard at the Siemens subcamp, because of a lack of evidence. The French occupying authorities also prosecuted Ravensbrück SS personnel and prisoner-functionaries. Between 1946 and 1950, 11 trials were conducted in Reutlingen and Rastatt. Only the proceedings against Emmy Kowa and Ruth Schumann had a connection with Siemens. Kowa, a temporary guard in the Siemens factory, was sentenced on February 20, 1948, in Rastatt to 20 years' imprisonment with hard labor. Schumann, a former Siemens employee, was acquitted on appeal. Under the Soviet Military Administration in Germany (SMAD) and in the German Democratic Republic (DDR), a number of trials against Ravensbrück SS personnel were conducted. However, the trials did not meet the requirements of the rule of law. The accused were tried before a military tribunal. Most of the accused had neither legal representation nor translators, so the accused were not in a position to defend themselves. Later trials in the DDR in the 1960s were conducted in accordance with the requirements and under the supervision of the Ministry for State Security (MfS). They were mainly characterized by political opportunism and doubtful verdicts relating

to the social behavior of the accused in the social milieu of the DDR. They should thus be seen as being politically motivated and as a means for securing power. The trials played neither a role in appraising nor explaining the National Socialist crimes committed in the Ravensbrück concentration camp.

**SOURCES** As it is difficult to provide a complete overview of the scholarly literature dealing with the Ravensbrück Siemens subcamp and the prisoners' forced labor, only a selection will be given here. Reinhard Plewe and Jan Thomas Köhler provide a history of construction of the women's concentration camp and its typology, including the Siemens subcamp, in *Baugeschichte Frauenkonzentrationslager Ravensbrück* (Berlin, 2001). A calendar of the camp history appeared in Grit Phillip, *Kalendarium der Ereignisse im Frauen-Konzentrationslager Ravensbrück 1939–1945* (Berlin, 1999). Carola Sachse and Tilla Siegel analyzed Siemens's strategy and practical application of detainee labor in Ravensbrück in their respective articles in *IWK* 27:1 (1991): "Zwangsarbeit jüdischer und nicht-jüdischer Frauen und Männer bei der Firma Siemens, 1940–1945," pp. 1–12; "Die doppelte Rationalisierung des 'Ausländereinsatzes' bei Siemens," pp. 12–24. This work still forms the basis for all subsequent studies. The works by Ursula Krause-Schmidt (1993), Ulrike Brandes et al. (1994), and Sigrid Jacobeit (1999) should also be mentioned in this context. Karl Heinz Roth has compared a number of cases where Siemens used forced labor in "Zwangsarbeit im Siemens-Konzern (1938–1945): Fakten—Kontroversen—Probleme," in *Konzentrationslager und deutsche Wirtschaft, 1939–1945*, ed. Hermann Kaienburg (Opladen, 1996), pp. 149–168. The thesis prepared by the author, "Zwangsarbeit von Konzentrationslagerhäftlingen in der letzten Phase des Zweiten Weltkrieges: Das Beispiel Siemens unter besonderer Berücksichtigung der Aussenlager Siemens-Haselhorst und 'Siemenslager' Ravensbrück" (Master's thesis, Technische Universität Berlin, 1997), contains a study of the structured typology of Siemens forced labor. The monograph by the former director of the AS-M, Wilfried Feldenkirchen, was published on the 150th anniversary of Siemens AG, *Siemens 1918–1945* (Munich, 1996). Its obvious apologetics should be noted, above all the generous use of annotations from documents in the unregistered files of the Siemens temporary archive, which are inaccessible to the public.

The location of the SMAD files is unclear. They are most likely located in CAFSSRF and are probably inaccessible. The BStU holds the files of the DDR trials. Included in these files are numerous statements made by former SS female guards. These statements were made before 1950, so they are, like numerous other National Socialist documents, not codified the way such documents in later decades were. In 1959, the ZdL, now BA-L, conducted an exhaustive preliminary investigation into the Ravensbrück women's concentration camp (AR-Z 39/59), including the Siemens subcamp (AR-Z 39/59 SH). As there were no killings in the Siemens subcamp, the results of the investigations were not handed over to the state prosecutors. The holdings of the AS-M are apparently quite extensive. Regrettably, to a large extent the "unregistered files of the temporary archive" are not accessible for independent researchers. This includes the Ravensbrück production center's monthly "production

center reports," including information about the genesis of the use of detainees and cooperation between management and the SS and the Siemens subcamp. Researchers are therefore forced to rely on state archives. In addition to the already mentioned trial documents, the BA-B has micro-filmed records of the Deutsche Bank. Deutsche Bank was Siemens's banker, and representatives of the bank sat on the board of directors of S&H. The detailed information kept by the bank and now in the BA contains valuable information on the origins and development of the use of Ravensbrück detainees by Siemens. Also kept in the BA are microfilms of documents seized by the OMGUS. These documents deal with the production of armaments by Siemens. The original documents are held by NARA. Additional extensive collections dealing with armaments and economic administration are held in the BA-MA. Reports by former, mostly Communist, detainees of the Ravensbrück women's concentration camp, which are unrelated to judicial proceedings, are kept at a number of locations. The reports deal mostly with issues of solidarity and resistance. They are found at the AG-R, DÖW, as well as in the former BPASSED-B(O), which is now part of LA-B. This latter archive keeps in particular the records of Bruno Baums, a former concentration camp prisoner. The Compensation Treuhand GmbH has collected other important records. Dating from the beginning of the 1960s, the records concern compensation claims by Jewish survivors against large German companies. As a result of the claims, the German companies made available their management files. Excerpts from these files can be found in the preliminary investigations conducted by the ZdL. Probably the most valuable collection of documents is the record group M32 in YVA. However, the author was not granted access to those records on the basis that they contained personal confidential information. Other sources have been quoted in the text. In many of the publications of survivors of Ravensbrück, the Siemens subcamp plays a role as an important provider of work in the main Ravensbrück camp. A drawing of the Siemenslager by prisoner Astrid Petersen Blumensaad is reproduced in Sigrid Jacobeit, "Arbeitsalltag Ravensbrück: Aus der Lebensbeschreibung von Rita Sprengel, Häftling Nr. 12867," in *Verfolgung, Alltag, Widerstand, Brandenburg in der NS-Zeit, Studien und Dokumente*, ed. Dietrich Eichholtz (Berlin, 1993), pp. 303–321. Prisoner-functionaries have published reports about their activities with Siemens, such as Margaret Buber-Neumann, *Als Gefangene bei Stalin und Hitler: Ein Welt im Dunkel* (1958; repr., Frankfurt am Main, 1993); or Rita Sprengel, *Im Schatten der eisernen Fesse* (Berlin [East], 1949); and *Der rote Fadden: Lebenserinnerungen; Ostpreussen, Weimarer Republik, Ravensbrück, DDR, Die Wende*, ed. Sigrid Jacobeit (Berlin, 1994); as well as Maria Montuoro, "Schicht 'B,'" *DaHe* 3 (187): 221–230, a worker on the production line.

Records of the trials are kept at AG-R and PRO.

## STARGARD IN POMMERN

About 40 kilometers (25 miles) southeast of Stettin (Szczecin), a subcamp attached to Ravensbrück was created in Stargard in Pommern (later Stargard Szczecinski, Poland). Created in mid-1943, a contingent of both male and female inmates was deported to the Stargard camp from both the Flossenbürg and Ravensbrück main camps.<sup>1</sup> The Stargard subcamp was created to supply cheap labor to the Gerätewerk Pommern GmbH in Stargard. The introduction of concentration camp inmates from Ravensbrück and other camps into the armaments manufacturing workforce stemmed from an agreement forged between the SS-Business Administration Main Office (WVHA) and the administration of the armaments firms. Inmates were provided to the firms at a low, per-day "price" paid by the firms to the WVHA.

No further information about the subcamp at Stargard, including the number of inmates, camp guards, commandant, living and working conditions, or postwar trials, is available. The inmates were evacuated from Stargard to the main Ravensbrück camp in early 1945. The further fate of the Stargard inmates is unknown.

**SOURCES** There are few primary or secondary sources on the Stargard in Pommern subcamp of Ravensbrück. For a brief outline of the camp, including opening and closing dates, kind of

prisoner work, and so on, see the entry for Stargard in the ITS's *Verzeichnis der Haftstätten unter dem Reichsführer-SS (1933–1945): Konzentrationslager und deren Aussenkommandos sowie andere Haftstätten unter dem Reichsführer-SS in Deutschland und deutsch besetzten Gebieten*, vol. 1 (Arolsen, 1979).

The ZdL (now BA-L) contains various files that may provide additional information on the Stargard camp: see files IV 409 AR 1475/66; VI 302 AR-Z 47/65; IV 409 AR-Z 39/59; IV 410 (F) AR 2629–67; IV 409 AR-Z 99/70; and IV 409 AR 1479/66. Additional materials are most likely stored at the AG-R.

Christine Schmidt van der Zanden

## STEINHÖRING

The village of Steinhöring is situated east of Munich. In the summer of 1944, it became a headquarters of the SS organization Lebensborn e.V., which was established by Heinrich Himmler on December 12, 1935. “Lebensborn” was part of National Socialist ideology: The SS authorities supported German women to deliver babies. They established so-called Lebensborn homes (*Lebensbornheime*) where—in most cases, unmarried—women and girls could deliver their babies. The first Lebensborn home was “Haus Hochland” in Steinhöring, which was built in September 1936. About two-thirds of the approximately 1,400 children at Steinhöring had mothers who were unmarried.

The first Lebensborn headquarters was located in Berlin, but it was transferred to Munich in 1938. On July 11, July 12, and July 13, 1944, Allied air strikes destroyed the buildings of the Lebensborn in Munich. The SS started the evacuation to Steinhöring in July 1944 and completed the evacuation on September 20, 1944.

Steinhöring was a subcamp in the broadest sense, because the SS authorities allowed the female prisoners to walk around. In addition, the prisoners wore civilian clothes. There was a maximum of 24 female prisoners from the Ravensbrück concentration camp and about 27 male prisoners from the Dachau concentration camp. SS authorities counted 27 male prisoners in Steinhöring on April 3, 1945, and 24 female prisoners were counted by Allied authorities after the liberation on May 3, 1945. Most of the female prisoners were Jehovah's Witnesses and worked between 1943 and 1945 at the Lebensborn e.V. The female inmates had a German background. However, 3 prisoners came from Austria, 2 others came from the Netherlands, and 1 woman was a prisoner from Poland. The work they were forced to do was housework at the Hochland maternity clinic or at the local Lebensborn administration department. At first they lived in a hut outside the maternity clinic, but later authorities gave them some beds inside the Hochland house. Only in the case of serious diseases were female prisoners deported back to the Ravensbrück main camp.

The male prisoners arrived from the concentration camp of Dachau: They were forced to work in the establishment of

huts outside the maternity clinic—there were six huts, each 42.5 meters (139.4 feet) long and 12.5 meters (41 feet) wide. The huts were used as living space, stores for textiles and equipment, and offices. Moreover, some prisoners built the house of SS member Max Sollmann in Steinhöring. The first male prisoners were a bricklayer, a tailor, and an electrician. In October and November 1944, a shoemaker, a cook, and two tailors from Poland as well as a cook, a baker, and a welder from France arrived as prisoners in Steinhöring.

A small SS unit controlled the whole area, while Dr. Gregor Ebner led the maternity clinic, together with one hospital matron and five or six nurses. The SS deported the male prisoners from Steinhöring to Dachau on April 28, 1945, and left Steinhöring one day later. In contrast, the female prisoners were asked by the hospital matron to stay and help with the babies even after the liberation; as a result, most of the female prisoners left Steinhöring two months after the end of the war.

**SOURCES** Secondary sources on Steinhöring include Johannes Wrobel, “Steinhöring (männliche KZ-Häftlinge),” in Wolfgang Benz and Barbara Distel, eds., *Der Ort des Terrors: Geschichte der nationalsozialistischen Konzentrationslager*, vol. 2, *Frühe Lager, Dachau, Emslandlager* (Munich, 2005), pp. 500–502. Steinhöring is listed as a Ravensbrück subcamp in Gudrun Schwarz, *Die Nationalsozialistischen Lager* (Frankfurt am Main, 1996), p. 220. On the “Lebensborn” program, the standard work is Georg Lilienthal, *Der “Lebensborn e.V.”: Ein Instrument nationalsozialistischer Rassenpolitik* (1985; repr., Stuttgart: Gustav Fischer Verlag, 2003).

Primary sources for the Steinhöring subcamp of Ravensbrück may be found at AG-R.

Alexander Jossifidis

## ZICHOW

The Zichow subcamp was established 75 kilometers (46.6 miles) from the city of Fürstenberg-Havel in Mecklenburg and from the Ravensbrück concentration camp that was within Fürstenberg's municipal area.<sup>1</sup> The subcamp was located near Gramzow on the manor of the same name. The farm, in Uckermark in the northeast part of the Prussian province of Brandenburg, was owned by Adolf Julius Albrecht Bernd Count von Arnim,<sup>2</sup> member of an extended aristocratic family that owned a large number of manors.

Von Arnim owned the Kleinow and Netzwow manors, 15 and 60 kilometers (9.3 and 37.3 miles), respectively, from Zichow. Servants and day laborers worked on his manor, and then beginning in 1940, first Polish, later French, and from 1942 on, Russian prisoners of war (POWs) also worked on the farm.<sup>3</sup> As the labor force in the German Reich was getting scarcer in the armaments industry, due to the war, the number of POWs on the manor went from 60 to 13 in 1944.<sup>4</sup> These people and the German and foreign agricultural workers were insufficient labor for harvesting the 608 hectares (1,502 acres) that were under cultivation—220.75 hectares (545.5 acres) of grain, 315.25 hectares (779 acres) of root crops,

43 hectares (106.3 acres) of oil and fiber plants capable of being woven, and 29 hectares (71.7 acres) of forage crops. Von Armin must have had good connections directly to the SS or via the offices and people of the Wehrmacht. This is the only way that he could have ensured that detainees from the Zichow subcamp could be made available for work at his manors in a time of severe labor shortage where the priority lists for the use of detainees, POWs, and forced laborers rapidly changed.

The exact date when the Ravensbrück concentration camp prisoners arrived at Zichow cannot be determined. All that is certain is that at the beginning of 1944, at the commencement of the harvest, 70 female prisoners were assigned to von Armin's manor. They were housed in a brick building with iron bars over the windows, a former storehouse, not far from the manor house. Inside, there was a lounge and bedroom, both 147 square meters (176 square yards). Both rooms were drafty and unheated. The detainees' kitchen is said to have been located in the cellar of the farm building opposite the storehouse. The Zichow subcamp closed, and the detainees were transported back to Ravensbrück on February 3, 1945.<sup>5</sup>

The population of the detachment fluctuated during the seven months of its existence, as the prisoners were rotated several times. This was necessary because not all of the women were able to do the heavy farmwork, especially since they had been weakened by a long period of detention. Those who could not meet the demands were promptly returned to the main camp. On December 16, 1944, for reasons that are not fully clear but possibly because there was less work, a transport of 28 women left the subcamp in the direction of Ravensbrück. It is possible to identify approximately 100 prisoners who for either a shorter or longer period were brought to Zichow as forced laborers. The Ravensbrück concentration camp administered Zichow from the moment it opened to its closure.

All the women came from Germany, except for one Polish woman. The youngest was 18 and the oldest 43; 35 of the women were between the ages of 22 and 24. They all wore a red triangle, so Gestapo officials had classified them as political detainees. The reasons for their arrest have not been clearly determined, but it is certain that some had been sent to the concentration camp for "adulterous relations" with foreign forced laborers.

The leader of an SS detachment was in control of the Zichow subcamp. He maintained a line of communication to the main camp and organized matters relating to the detainees, including exchanging detainees, basic medical care, clothes, mail, and recommendations for awards. SS men guarded the camp. At least three female guards, sent from Ravensbrück, were present and ensured that the detachment's work was done without any trouble.

The women primarily worked in the field from Monday to Saturday, regardless of the weather. By November they had harvested hay, grain, rapeseed, flax, root crops, as well as

vegetables. After that they loaded sugar beets, cabbage, straw, and potatoes.<sup>6</sup> Sick detainees and those incapable of doing this work worked inside, mostly in the kitchen. Two prisoners had special functions, one in the kitchen and the other doing things outside the camp. The detainees were encouraged to exceed work norms by means of an award system. The detainees were given award cards valued at either 1 or 2 Reichsmark (RM), which, among other things, they could exchange for stamps. Conversely, the prisoners were punished if, in the opinion of a supervisor, they had not worked hard enough or had not carried out an instruction. In September 1944, two women were not given lunch for four days.

The heavy work in the heavy clay Uckermark soil, for which the detainees had inadequate clothing and footwear, produced many colds and flu, rheumatic pains, stomach and intestinal problems, boils and abscesses, and abdominal complaints. The Zichow subcamp did not have an infirmary. A dentist in Gramzow, 5 kilometers (3.1 miles) away, dealt with minor dental problems—but only after the detachment leader had spoken with the head of the dental unit in the Ravensbrück main camp and after a transfer pass was presented. The detainees' mail was sent by the detachment leader to be checked in Ravensbrück, from where the mail was sent out.

On October 7, 1944, three women attempted to escape after they had succeeded in taking a key from one of the female guards. Their absence was discovered the following day during morning roll call. They were discovered that morning hiding in an adjacent barn where Russian POWs were held. The following day the three women were returned to Ravensbrück. On October 21, 1944, the manor received replacement laborers.

**SOURCES** The history and purpose of the Zichow subcamp were first mentioned by Simone Steppan and Erika Schwarz in *BWF* 20 (2003): 30–42. A research project of the MGR/SBG, from January 2000 to January 2001, by A. Meyer, E. Schwarz, and S. Steppan, began to collect further information about the Zichow subcamp.

The most important source on the Zichow subcamp is a file on the camp's internal organization, which is located in the collection of AG-R. The BLHA holds other documents on the manor.

## RIGA-KAISERWALD MAIN CAMP [AKA MEŽAPARKS]

On March 15, 1943, the Inspectorate of Concentration Camps (IKL) established the Riga-Kaiserwald concentration camp, with SS-Sturmbannführer Albert Sauer as commandant.<sup>1</sup> Situated at the Mežaparks Forest resort near Riga, Latvia, the camp was divided into male and female sections separated by barbed-wire fencing. Some 47 German and Polish criminal, political, and “asocial” inmates from the Sachsenhausen concentration camp set up the “prisoner self-administration.” This contingent grew to 500 prisoners, but most were returned to the Reich by December 1943. A Ravensbrück detachment, including “asocials,” opened the women’s section. Under the supervision of the Wolf & Döring construction firm, Jews from the Riga ghetto built the camp, which had three accommodation barracks per section and an infirmary.<sup>2</sup> Located in the camp’s rear was the Anode Kommando, a battery recycling detachment, which was accessed by a narrow path between the men’s and women’s sections. Holding approximately 2,000 to 3,000 prisoners at a time, Kaiserwald was a clearinghouse for an estimated 15,000 Jewish prisoners deployed in 12 to 14 subcamps, called quartering sites (*Kasernierungen*).<sup>3</sup> Although Kaiserwald registered the prisoners, some were moved from one site to another without entering the main camp. Kaiserwald’s prisoner statistics are scant, because shortly after the camp opened, SS-Brigadeführer Richard Glücks, the head of IKL, exempted the newly established camps in the East from reporting admissions and deaths to IKL and because most of its records were destroyed prior to evacuation.<sup>4</sup> An incomplete mortality list, from December 15, 1943, to August 8, 1944, recorded 484 deaths.<sup>5</sup> To these must be added the numerous prisoners killed in shooting opera-

tions (*Aktionen*), the synonym for “selections” that carried over from the ghetto. The victims were placed on trucks and dispatched to the forests for shooting. Prisoners and staff referred to the killing sites by the euphemism, “base command” (*Stützpunktkommando*).

Although ostensibly a concentration camp, Kaiserwald differed from other IKL camps in three salient respects. First, family life and friendships formed in the Riga, Vilna, and Libau ghettos carried over into the camp. Husbands and wives and, in some cases, their children communicated across the fences dividing the men’s and women’s sections. Friendships from the ghetto fostered a reliable rumor mill between Kaiserwald and its subcamps. The placement of friends and relatives at other sites and regular transfers between the sites made this source of unofficial news possible.<sup>6</sup> Second, except for the Sachsenhausen and Ravensbrück inmates, the Kaiserwald prisoners did not normally wear prisoner uniforms with color-coded triangles. Most were ordered to paint or sew yellow stars and prisoner numbers on their civilian clothes; in some cases, they had to paint white stripes on the sleeves and trouser legs as well. Many did not get “zebra” uniforms, as the prisoners called them, until just prior to the evacuation in the summer of 1944, at which time they also got prisoner haircuts, with a stripe shaved down the middle of the scalp for males and shaved heads for females.<sup>7</sup> Finally, as discussed below, the establishment of *Kasernierungen* rather than a full subcamp system distinguished Kaiserwald from other IKL camps.

Prefiguring the establishment of Kaiserwald and its quartering sites was a dispute between the SS-Business Administration Main Office (WVHA) and the Reich Commissariat Ostland (Reichskommissariat Ostland, RKO) over the status of the Salaspils police camp. On December 1, 1942, the Reich Security Main Office (RSHA) in Berlin asked the Commander of the Security Police and SD (BdS) Riga, Dr. Rudolf Lange, whether Salaspils was a concentration camp and, if so, why it did not fall under WVHA jurisdiction.<sup>8</sup> Located to the southeast of Riga and built by Riga ghetto labor in 1941, Salaspils held non-Jewish Latvians, Estonians, and Lithuanians. An SS-Obersturmbannführer, later Standartenführer, in the SD (Nazi Party no. 290308), Lange emphatically denied it was a concentration camp, instead calling Salaspils a work education camp (*Arbeitserziehungslager* [AEL]) and police prison (*Polizeigefängnis*).<sup>9</sup> That Reichsführer-SS Heinrich Himmler found this explanation unsatisfactory was evident shortly after Kaiserwald’s establishment, when he called Salaspils a concentration camp in everything but name, pointing out that it properly belonged to the WVHA and ordering that it perform war-related tasks, not construction or “peat work” (*Torfstich*).<sup>10</sup> In a demonstration of Lange’s autonomy,

Interior of a barracks at Riga-Kaiserwald shortly after evacuation in September 1944.

USHMM WS #85598, COURTESY OF THE BELARUSSIAN STATE ARCHIVE OF DOCUMENTARY FILM AND PHOTOGRAPHY

Salaspils remained under Security Police (Sipo) control until the German abandonment of Latvia.

On June 21, 1943, Himmler decreed the closure of all ghettos in Latvia, Lithuania, and Estonia (the Ostland) and the formation instead of IKL camps by August 1, 1943. Jews were to perform war work, especially for Wehrmacht units but not for “private firms.” Those deemed unfit were to be deported “to the East,” a euphemism for mass murder.<sup>11</sup> With the important exception that Kaiserwald never had a gas chamber/crematory complex, Himmler’s model was the Lublin-Majdanek concentration camp, which confined Jews from liquidated ghettos in the General Government. Himmler’s order similarly affected the concentration camps at Kauen (Kaunas) and Vaivara. In Riga, Higher-SS and Police Leader (HSSPF) Ostland Friedrich Jeckeln informed his superior, Reichskommissar Hinrich Lohse, about the reorganization. The ghetto authorities quickly closed 125 old Kasernierungen, and, according to historian Andrew Ezer-gailis, 312 employers lost Jewish labor, while additional firms underwent drastic workforce cuts.<sup>12</sup> In early August 1943, Lohse altered the meaning of Himmler’s decree, calling for the establishment of “big” and “small” concentration camps. Focusing on the alleged security “threat” posed by Jewish prisoners, Lohse demanded their strict separation from Riga’s population.<sup>13</sup>

On August 18, 1943, the RKO’s and BdS Riga’s interference became apparent when the Riga Stadtkommissar announced the creation of “Jewish camps” (*Judenlager*). Naming 13 “big” Kasernierungen, the Stadtkommissar claimed they were answerable to the Sicherheitsdienst (SD)—that is, to Lange of BdS Riga—not to the WVHA. The list included “old,” ghetto-administered, as well as “new” quartering sites designed for big projects. They were (1) Kaiserwald, (2) Dünawerke, (3) SD-Werkstätte (Lenta), (4) Truppenwirtschaftslager (TWL), (5) Spilve airport, (6) Heereskraftfahrzeugpark (HKP), (7) Papierfabrik Schlock, (8) Reichsbahn, (9) Armeebekleidungsamt (ABA) 701, (10) Allgemeine Elektrizitäts-Gesellschaft (AEG), (11) Zementfabrik Riga, (12) Strasdenhof, and (13) Generalkommissar (GK) Abteilung Finanzen. Not all of these quartering sites became subcamps. Of the 16,450 Jews to be allocated, over 7,800 prisoners had already been deployed.<sup>14</sup>

The Stadtkommissar’s list was misleading. The paper factory utilized Kaiserwald prisoners, and it has yet to be established whether GK was a quartering site or a Kaiserwald work detachment. In the fall of 1943, Kaiserwald opened a complex of camps near the Baltic Sea in Kurland (Kurzeme), for the erection of the Dondangen (Dundaga) SS “sea camp” (*Seelager*). The camps consisted of Dondangen I, Dondangen II (Poperwahlen), and Kurben. The HKP and ABA sites spawned subcamps, respectively, at Hirtenstrasse and Krottingen. Kaiserwald also formed a quartering site in October 1943 for railway work at Elley-Meiten. The International Tracing Service’s (ITS) claim that AEG had a battery-producing subcamp at Strasdenhof appears to be unfounded,

because witnesses place this detachment in the Kaiserwald camp. The Kaiserwald detachment was contracted to the Wehrmacht, not to AEG. In the class-action suit brought against AEG in the late 1950s, one witness mentioned working in the Anode Kommando, but she was removed from it by truck to work at the AEG camp at Strasdenhof.<sup>15</sup> Depending upon whether the Dondangen complex is counted as one camp or three, then Kaiserwald had 12 to 14 subcamps. According to the ITS, Kaiserwald also furnished work details for Gummifabrik “Meteor,” a rubber factory, and for a number of SS construction projects.

Although Himmler ordered the Ostland ghettos’ closure by August 1, 1943, the liquidations concluded between September and November 1943. From Lithuania, the Germans dispatched the survivors of the Vilna (Vilnius, Wilno) ghetto to Kaiserwald in late September 1943. From Kurland, the Libau (Liepāja) ghetto’s survivors arrived in early October 1943. In October 1943, the Germans stopped assigning Riga ghetto inhabitants to the Kasernierungen. On November 2, 1943, the Riga Sipo sent its remaining inhabitants to Auschwitz II-Birkenau, where 850 were gassed upon arrival.<sup>16</sup> In addition to the Ostland ghettos, Kaiserwald received approximately 2,000 Hungarian Jewish women from Birkenau in June 1944.

Several Kaiserwald staff members had lengthy IKL experience. Born on August 17, 1898, in Misdroy, Sauer (Nazi Party no. 862698; SS no. 19180) served at the Berlin Columbia Haus early camp in 1935, was the commandant of the Bad Sulza early camp during its dissolution in 1937, and worked in Sachsenhausen’s administration. He was the first commandant of the Mauthausen concentration camp but was dismissed in early 1939 after a dispute with the Austrian police. Working for the Reich Commissariat for the Strengthening of Germanism (RKFDV) until 1943, he was briefly attached to the Auschwitz staff before assuming command at Riga. Posted to Ravensbrück after Kaiserwald’s evacuation, Sauer was killed in action on May 3, 1945.<sup>17</sup> Kaiserwald’s administrators were SS-Obersturmführer Eberhard von Bonin, until June 1, 1944, and SS-Hauptsturmführer Wilhelm Vogler from the Stutthof concentration camp, from that date until Kaiserwald’s closure. The chief of labor allocation (Arbeits-einsatzführer) was SS-Hauptscharführer Hans Brüner.

Born on August 8, 1894, Kaiserwald’s camp doctor, SS-Sturmbannführer Dr. Eduard Krebsbach, had previously occupied the same position at Mauthausen. His eagerness to murder patients by phenol injection at Mauthausen gave rise to his nickname “The Needle” (Spritzbach).<sup>18</sup> In the Mauthausen Trial, the U.S. Army condemned him to death and executed him on May 28, 1947. Krebsbach’s assistant SS-Sanitätsdienstgrad (SDG) Heinz Günther Wisner was born Heinz von Wisotzky in Danzig on December 5, 1916. Joining the Allgemeine-SS on March 14, 1935, he worked in the Danzig sanitarium and trained as an SDG. On February 1, 1939, he joined the Nazi Party and became a police reservist on August 22, 1939. Before Stutthof became an IKL camp,

Wisner served as its SDG and from May 27, 1942, held the same post at the Flossenbürg concentration camp. After joining the Waffen-SS in June 1943, he underwent ideological training in Berlin and was promoted to Unterscharführer in the summer of 1943. On November 1, 1943, Wisner joined Kaiserwald's staff and was later promoted to Oberscharführer. Wisner selected numerous Jews in Kaiserwald and its subcamps for murder and killed infirm patients by lethal injection. Many of the infirm victims were from the subcamps, especially Dondangen, which consumed lives at a catastrophic rate.

Kaiserwald's camp elder (Lagerältester) was Xavier Abel, known to the prisoners as "Mr. X." A Sachsenhausen criminal, he committed homicides at Kaiserwald and carried on illicit relationships with younger female prisoners. According to Josef Katz, a Jewish prisoner from Lübeck, Abel drowned the Riga ghetto's police chief, Haar, in the latrine during a drinking party for the German prisoners. According to Katz, "Mr. X" and other German prisoners still at Kaiserwald shortly before its evacuation were recruited for the Dirlewanger Brigade, a Waffen-SS unit composed chiefly of German green and black triangle prisoners in 1944.<sup>19</sup> Kapos Hans "Hannes" Bruhn and Reinhold Rosemayer also brutalized the inmates. For a time, Bruhn was the camp elder at the Strassenhof subcamp. The prisoner-functionaries instituted penal drills, forcing new prisoners, like Ernest Kan, to remove caps with the appropriate snap.<sup>20</sup> In 1961, the Hamburg State Prosecutor inconclusively investigated Bruhn for his activities at Sachsenhausen.<sup>21</sup>

Approximately 30 male and female prisoners worked in the Anode Kommando. The men unloaded large Wehrmacht truck batteries from an adjacent train depot, and in a small workshop, the women dismantled them in order to extract their carbon anodes. One prisoner, Schoschana Rabinovici (born Susanne Weksler), credited the detachment leader, a German army Feldwebel, with protecting her during an Aktion. For the women at least, the work took place indoors, but it required the handling of corrosive and noxious chemicals that blackened and burned the hands.<sup>22</sup>

"Children's operations" (*Kinderaktionen*) occurred regularly at Kaiserwald and in the subcamps. Especially endangered were children who stayed in the blocks while their parents worked. Thanks to alert adults, a few youngsters managed to evade these selections. As an 11-year old, Rabinovici was deported in late September 1943 from Vilna to Kaiserwald with her mother and older stepsister. Her mother, Raja Indurski-Weksler, used subterfuges with the connivance of friends from Vilna to prevent the Germans from discovering that Schoschana was prepubescent, including standing in front of her when prisoners were ordered to undress and awakening her earlier than the rest of the block so that she could clean up in private. At Kaiserwald, Rabinovici usually worked in the Anode detail, but when her mother perceived a change in SS behavior, thereby indicating an imminent Aktion, she was told to report to an outside detail for the day.<sup>23</sup>

From May to September 1944, the Sonderkommando (SK) 1005 B under SS-Obersturmführer Walter Helfsgott attempted to obliterate evidence of the "Final Solution" in the Riga area, exhuming mass graves that dated back to 1941. At Lange's insistence, Helfsgott deployed only Jews for this task. At his 1969 jury trial in Stuttgart, where he was acquitted on technical grounds, the court noted that the likely source of this labor was Kaiserwald. In succession, two detachments of 30 inmates disinterred mass graves in the Rumbula and Bikernieki forests, cremated the bodies, and scattered the ashes and bones. As "bearers of secrets" (*Geheimnisträger*), the groups were shot after completing their tasks.<sup>24</sup>

With the Red Army advancing on Riga, Kaiserwald commenced preparations for evacuation in late June and July 1944. Among them Krebsbach and Wisner conducted a series of selections, including the "Krebsbach Aktion" on July 28, 1944, which involved the main camp and every subcamp in Riga. Apart from some prisoners who reached Stutthof overland via Libau, most were marched to the port of Riga, where they boarded ships bound for Danzig. On August 6, 1944, the *Bremerhaven* departed Riga with 6,382 Jews from the subcamps. Subsequent sea evacuations took place in mid-September 1944 (called the Rosh Hashanah Transport by prisoners) and on September 24 or 25 (the Yom Kippur Transport).<sup>25</sup> On the latter, the *Kanonier* carried 3,155 prisoners to Danzig. A final 190-member cleanup detail left Riga on October 11, 1944. Held below decks for three days with few provisions, the inmates suffered from overcrowding and seasickness caused by rough seas. To distribute food and remove excrement from the holds, the Kapos improvised a bucket-and-winch system, but the high seas caused food and excrement to spill onto the prisoners below. A few prisoners got fresh air by relaying buckets to the deck. Landing at Danzig, the survivors were marched to the Vistula River, where they boarded 500-person barges for two or three days before entering Stutthof.<sup>26</sup> According to Rabinovici, the vessel carrying her family sailed under a Red Cross flag, which protected it from attack. Katz remembered that the last vessel in the Rosh Hashanah Transport was sunk by a Soviet submarine.<sup>27</sup> Most of Kaiserwald's survivors were scattered among the Stutthof subcamps. Others were sent to Dachau/Mühldorf, Buchenwald/Magdeburg (Polte), and Nevengamme/Hamburg-Fuhlsbüttel.

**SOURCES** The Riga-Kaiserwald concentration camp is discussed in chapters and articles on the Latvian Holocaust, but to date there is not a one-volume history of the camp. The most recent and best-documented study is Andrej Angrick and Peter Klein, *Die "Endlösung" in Riga: Ausbeutung und Vernichtung 1941–1944* (Darmstadt: Wissenschaftliche Buchgesellschaft, 2006). Another useful work is Andrew Ezergailis, *The Holocaust in Latvia, 1941–1944: The Missing Center* (Riga: Historical Institute of Latvia; published in association with USHMM, 1996). Ezergailis erroneously terms Kaiserwald and other IKL camps "SD" camps. The source of his confusion is the Riga Stadtkommissar's announcement of August 18, 1943. Additional information may be gleaned

from three contributions by historian and Latvian Holocaust survivor Marģers Vestermanis, *Juden in Riga: Auf den Spuren des Lebens und Wirkens einer ermordeten Minderheit; ein historischer Wegweiser* (Bremen: Edition Temmen, 1995); “Die nationalsozialistischen Haftstätten und Todeslager im okkupierten Lettland, 1941–1945,” in *Die nationalsozialistischen Konzentrationslager—Entwicklung und Struktur*, ed. Ulrich Herbert, Karin Orth, and Christoph Dieckmann (Göttingen: Wallstein Verlag, 1998), 1:472–492; and “Das SS-Seelager Dondangen—Ein Modell für die geplante nazistische ‘Neuordnung Europas,’” *MiGe* [GDR] 25:2 (1986): 145–146. For an overview of the Kaiserwald, Vaivara, and Kauen concentration camps, see Alfred Streim, “Konzentrationslager auf dem Gebiet der Sowjetunion,” *DaHe* 5 (1989): 174–187. The earliest treatment of Kaiserwald is Max Kaufmann, *Churban Lettland: Die Vernichtung der Juden Lettlands*, ed. Erhard Roy Wiehn, intro by Steven Springfield (1947; repr., Konstanz: Hartung-Gorre Verlag, 1999). Kaufmann was a survivor of the Riga ghetto, Kaiserwald, and Riga (HKP, Hirtenstrasse). Another survivor’s account that covers Kaiserwald and selected Kasernierungen is Alfred Winter, *The Ghetto of Riga and Continuation* (Monroe, CT: Self-pub., 1998). Based in large measure on other survivors’ memoirs, it must be used with due caution because the sources are not cited. Essential background on Kaiserwald, including evacuation statistics, may be found in Anita Kugler, *Scherwitz: Der jüdische SS-Offizier* (Cologne: Kiepenhauer & Witsch, 2004). Kugler discusses the IKL-BdS Riga rivalry to show how SS-Untersturmführer Fritz Scherwitz, the camp leader of Riga (Lenta), used his connections with Lange in order to maintain a degree of autonomy from Kaiserwald. Riga-Kaiserwald and its work detachments are listed as separate men’s and women’s camps in ITS, *Verzeichnis der Haftstätten unter dem Reichsführer-SS (1933–1945)*, 2 vols. (Arolsen, 1979), 1:247. On Sauer, see French L. MacLean, *The Camp Men: The SS Officers Who Ran the Nazi Concentration Camp System* (Atglen, PA: Schiffer Pub., 1999), p. 197; Gordon J. Horwitz, *In the Shadow of Death: Living Outside the Gates of Mauthausen* (London: I.B. Tauris, 1991), pp. 31–32; and Tom Segev, *Soldiers of Evil: The Commandants of the Nazi Concentration Camps* (New York: McGraw Hill, 1987), p. 89. On Sauer and Krebsbach, additional information may be found in Evelyn Le Chêne, *Mauthausen: The History of a Death Camp* (London: Methuen, 1971), pp. 30, 38, 88–93. The Wisner case (Lfd. 896) will be included in a forthcoming volume of *Justiz und NS-Verbrechen* but is listed cursorily on the publication’s Web site, [www1.jur.uva.nl/junsv](http://www1.jur.uva.nl/junsv). The author would like to thank Dick de Mildt for furnishing supplementary biographical information on Wisner.

Primary sources for Riga-Kaiserwald start with Heinrich Müller’s announcement of its opening in USHMMA, RG 11.001 M.05, Reel 75, RGVA, fond (record group) 504, opis (inventory) 2, delo (file) 8 (504/2/8), which also contains documentation on the Salaspils police camp. On the Kasernierungen and BdS Riga’s intervention, see Wolfgang Benz, Konrad Kwiet, and Jürgen Matthäus, eds., *Einsatz im “Reichskommissariat Ostland”: Dokumente zum Völkermord im Baltikum und in Weissrussland, 1941–1944* (Berlin: Metropol, 1998),

Docs. 253–254, pp. 265–266, which reproduces Lohse’s announcement of early August 1943 and the Riga Stadtkommissar’s memorandum on the Kasernierungen of August 18, 1943. According to the ITS Archival Catalog, Kaiserwald transports are mentioned in the following pre-1955 holdings: Inventory No. 107: Buchenwald GCC 2/189 a–c Ordner 10, “Zugänge vom KL Riga, Sachsenhausen, und, Sachsenburg,” December 11, 1943, August 20, 1942, to March 31, 1945, and July 27, 1937; Inventory No. 112: GCC2/193/d–f Ordner 15, “Transportlisten, Abgänge vom KL Buchenwald nach KL Riga,” March 15, 1943; Inventory No. 150: Buchenwald GCC2/189 IC/6 Ordner 159, “Zugänge vom KL Riga und Sachsenhausen,” December 11, 1943, August 20, 1942, to July 31, 1944; Inventory No. 164: Buchenwald GCC 2/193 Ordner 170, “Abgänge nach KL Ravensbrück und KL Riga,” April 24, 1941, to January 26, 1945, and March 15, 1943; and Inventory No. 276, Buchenwald GCC 2/119 IIB/19 Ordner 236, “Listen um überstellten Häftlingen, deren Effekten vom KL Buchenwald dem KL Ravensbrück, Riga, Sachsenhausen, Stutthof, und Warschau übergeben wurden,” April 26, 1941, to August 20, 1944, and March 17, 1943, to May 5, 1943. These lists apparently concern only the German and Polish prisoners sent to Kaiserwald and returned to the Reich in 1943. The ITS received the documents on loan from the U.S. Army. Further research is required to determine whether any of the Reich prisoners originated from Buchenwald instead of Sachsenhausen. As cited by Angrick and Klein, additional archival sources on Kaiserwald may be found in BA-B, R 92 (GK Riga). For the partial death list, Vestermanis cites LVVA, P 132/30/43a, pp. 1–44. Himmler’s query to Lange, March 18, 1943, concerning Salaspils is reproduced in ITS, *Vorläufiges Verzeichnis der Konzentrationslager und deren Aussenkommandos sowie anderer Haftstätten unter dem Reichsführer-SS in Deutschland und besetzten Gebieten*, 2 vols. (Arolsen, 1969), 1: xxxi. The Krebsbach trial is listed as US 401 Case No. 000–50–5, *USA v. Hans Altfurdisch, et al.* The Helfsgott trial (Ks 22/67) is summarized in Lfd. 701, JuNS-V 31: 693–798. As cited by Kugler, BA-L holds witness testimony in connection with Kaiserwald’s involvement in SK 1005 B’s operations. As cited by Angrick and Klein, the investigation of Bruhn is listed as Hamburg Sta. 141 Js 534/60. The personnel files of Lange and Sauer are available at BA-B and NARA. Lange was a participant in the Wannsee Conference of January 20, 1942. See NG-2586 in John Mendelssohn, ed., *The Holocaust: Selected Documents in Eighteen Volumes*, vol. 11, *The Wannsee Protocol and a 1944 Report on Auschwitz by the Office of Strategic Services*, intro. Robert Wolfe (New York: Garland, 1982). Unpublished prisoner testimony from Riga-Kaiserwald may be found at USHMMA. In RG-12.004.02 \*02 and \*04, Benjamin Ferencz Collection, Claims against German Industrial Firms Records, 1952–1994, AEG Correspondence, there are several affidavits on the Riga AEG camp, which help to document Kaiserwald’s role as a registration center. In RG-12.004.02 \*02, see Betty Rothschild Willner (notarized affidavit, October 13, 1958) and Golda Geller Lewinsohn Klein (unsigned

affidavit, October 1, 1958); in RG-12.004.02\*04, see Hilde Diamant (n.d.); Tauba Maskin Buchhalter (September 19, 1958); Marga Hahn (undated letter); and Luba Klot Slodov (statement of May 24, 1960). USHMMA also holds a substantial collection of oral histories by Kaiserwald survivors, some of which have been transcribed. Interviews helpful for this essay are RG-50.431\*1076, Ernest Kan interview, June 7, 2001, by HDEC; RG-50.030\*0150, Lily Margules interview, January 3, 1990; RG-50.030\*0176, Bella Simon Pasternak interview, April 21, 1994; RG-50.030\*0216, Rochelle Blackman Slivka interview, June 15, 1990; and RG-50.030\*0220, Steven Springfield interview, March 30, 1990. In a follow-up telephone interview with the author, September 27, 2006, and an email exchange, Ernest Kan furnished additional details on Kaiserwald's subcamps and the camp's rumor mill. The interview summary is to be deposited at USHMMA. There are many unpublished witness statements on Kaiserwald at WL and reproduced in *Testaments to the Holocaust* (originally WL), <http://159.104.6.6/testaments/en/t3h.asp>. Particularly useful for this essay is P III H No. 286 (Riga), Herman Voosen, "Report on the Criminals of Riga," July 28, 1945. Riga-Kaiserwald is mentioned or alluded to in several published documents in *USA v. Oswald Pohl, et al.* (NMT Case IV) in TWC 4: 382–383, 387, 626: NO-020 a (Pohl to Himmler, April 5, 1943, on the expansion of the camp system); NO-1558 (Glücks circular, April 26, 1943); NO-2403 (an English translation of Himmler's order of June 21, 1943); and 1469-PS (Pohl to Himmler, September 30, 1943, on death cases). On the Riga transport to Auschwitz, see Danuta Czech, *Auschwitz Chronicle, 1939–1945* (New York: Henry Holt, 1990), p. 519. Published prisoner testimonies include Josef Katz, *One Who Came Back: The Diary of a Jewish Survivor*, trans. Hilda Reach (New York: Herzl Press and Bergen-Belsen Memorial Press, 1973); and Schoschana Rabinovici, *Thanks to My Mother*, trans. James Skofield (New York: Dial Books, 1998), pp. 101–190. Brief testimonies may be found in two compilations by Gertrude Schneider, ed., *Muted Voices: Jewish Survivors of Latvia Remember* (New York: Philosophical Library, 1987); and *Unfinished Road: Jewish Survivors of Latvia Look Back* (New York: Praeger, 1991).

## **DONDANGEN I AND II, WITH KURBEN [AKA SEELAGER DONDANGEN, DUNDAGA, POPERWAHLEN]**

In the late summer of 1943, Riga-Kaiserwald concentration camp established a subcamp for the SS “sea camp” (*Seelager*) at Dondangen (Dundaga). The camp was intended to erect an SS colony near the Baltic coast in Kurland (Kurzeme), Latvia. According to a West German report, Dondangen held 12,000 prisoners.<sup>1</sup> A more conservative estimate by Mārgers Vestermanis puts the total number of prisoners, mostly Latvian, Lithuanian, and Hungarian Jews, at 5,000.<sup>2</sup> Dondangen’s catastrophic death rate, 10 to 20 prisoners per day, may help to reconcile these estimates, because the camp was constantly replenished by fresh Kaiserwald prisoners. Unlike other camps and quartering sites (*Kasernierungen*) in the Riga-Kaiserwald complex, the prisoners at Dondangen wore striped uniforms with yellow stars.<sup>3</sup>

Dondangen had two successive camp leaders (Lagerführer), SS-Oberscharführer Gröschel and SS-Hauptscharführer

SS-Hauptscharführer Gustav Sorge, camp leader of the Heereskraftfahrzeugpark and Spilwe camps in Riga, and subsequently of the Dondangen complex. At the time this mug shot was taken, Sorge was a defendant in the Soviet Sachsenhausen trial, 1947.

USHMM WS #33598, COURTESY OF CAFSSRF

Gustav Sorge. Gröschel’s mismanagement prompted the commandant of Riga-Kaiserwald, SS-Sturmabführer Albert Sauer, to replace him with Sorge on January 30, 1944. Gröschel assumed command at Sorge’s former post, the Kaiserwald Kasernierung at Riga-Spilwe. An Esterwegen and Sachsenhausen concentration camp guard whose career in the Inspectorate of Concentration Camps (IKL) dated back to 1934, and who had been a guard at the Esterwegen early camp in 1933, Sorge lived up to his nickname “Iron Gustav” (*Eiserne Gustav*). During the two years prior to commanding Dondangen, he had been Arbeitseinsatzführer at Vught, the Herzogenbusch main concentration camp in the Netherlands, and served in the summer of 1943 in a “bandit”-hunting (anti-partisan) detail for the Higher-SS and Police Leader (HSSPF) Ostland. In the Riga complex, he had previously commanded Spilwe and the neighboring Heereskraftfahrzeugpark (HKP) Kasernierung.<sup>4</sup>

Designed as a “Germanization” colony, the SS-Seelager Dondangen was to become a permanent SS base.<sup>5</sup> At Dundaga, the SS displaced some 15,000 Latvian farmers in the summer of 1943. For the SS, one of Dondangen’s attractive features was Dundaga Castle, erected in 1249 for the Livonian Order of crusaders, which served as the SS headquarters. Critical to the project was the erection of a troop training base (*Truppenübungsplatz*) for SS-Panzer personnel. To create the base, Dondangen’s prisoners cleared forests, built roads, and erected troop barracks. A survivor of Dondangen II (Poperwahlen), Vestermanis observed that the Seelager “was probably Himmler’s only colonization experiment in the temporarily occupied Soviet territories that was half-way realized. It shows how the ‘European New Order’ strived for by the Nazis should have looked.”<sup>6</sup>

The living conditions at Dondangen (and subsequently the Poperwahlen and Kurben subcamps) were by far the worst in the Riga-Kaiserwald complex. Prisoner Abraham Shpungin characterized Dondangen as an “extermination camp,” but historian Andrew Ezergailis described it as a camp for “extermination through labor” (*Vernichtung durch Arbeit*).<sup>7</sup> While the prisoners erected SS troop accommodations, they lived in “Finnish tents” (*Finnenzelter*), plywood structures with dirt floors and a stove in the center, somewhat like primitive Quonset huts.<sup>8</sup> The overcrowded tents did not protect against the cold Baltic winds. The SS never bothered to erect a barracks camp at Dondangen or in its subcamps. The prisoners’ rations consisted of thin soup, bread, and very little else.

Compounding the lethal conditions was the brutal behavior of Gröschel and Sorge. Gröschel dealt with Dondangen’s staggering mortality by ordering the bodies dumped into the half-frozen Baltic Sea.<sup>9</sup> In the spring of 1944, as the ice thawed, fishermen discovered some corpses, which prompted Sorge, who had already assumed command, to institute the “bathing Kommando.” Consisting primarily of weakened prisoners, this detail removed the bodies from the sea and cremated them in improvised pyres on the beach. According to Shpungin, the detachment also had a high mortality rate.<sup>10</sup>

Despite the frightful conditions, the Truppenübungsplatz opened by the spring of 1944. Training at this facility were the Nachrichten-Ausbildungs- und Ersatz-Abteilung 1, SS-Panzer-Ausbildungs- und Ersatz-Regiment 1, and the Fourth SS-Panzer-Aufklärungs-Ausbildungs-Abteilung 2. Some of the Waffen-SS troops were Dutch volunteers. Sorge ordered the Waffen-SS to shoot escaping prisoners on sight.<sup>11</sup>

A small exception to Dondangen's brutal conditions was the troop supply depot (*Truppenwirtschaftslager* [TWL]), which was situated in the city of Dundaga. Not to be confused with Kaiserwald's separately listed TWL Kasernierung, this detachment consisted of 20 Jewish men and 5 Jewish women. Fearing epidemics, the detachment leader, SS-Oberscharführer Wilhelm Wichmann, had the prisoners cleaned up and ensured that they received a steady supply of nutritious rations. Eventually, he secured Sorge's permission to quarter them in an apartment in Dundaga, with the women held in the smaller and the men in the larger room. The detachment's prisoners included Shpungin and Mendel Poliak, who escaped in late July 1944, when word came to evacuate Dondangen. In the city of Dundaga, the Vanags family (parents Anton and Klara and daughter Skaidrite) gave them food and shelter until the Soviet liberation, which in Kurland did not take place until the German surrender on May 8, 1945.<sup>12</sup> For their efforts in saving Shpungin and Poliak, Yad Vashem awarded the Vanags family the Righteous among the Nations medal in 1993.

Dondangen opened a second subcamp for both male and female Jewish prisoners at Poperwahlen (Popervāle), also known as Dondangen II. Under SS-Rottenführer Baufeldt, this subcamp also consisted of Finnish tents. The first 165 prisoners, 15 of whom were female, entered the camp in November 1943, but the camp swelled to 1,000 prisoners by June 1944, including some Hungarian Jewish women dispatched from Auschwitz II-Birkenau.<sup>13</sup> The prisoners cleared swamps in preparation for the erection of an airfield. Some Poperwahlen prisoners were redeployed inside the Reich in May 1944, in fulfillment of a March 1944 order from the SS-Business Administration Main Office (WVHA).<sup>14</sup> According to Vestermanis, Poperwahlen opened a crematorium for the disposal of Dondangen's dead in the spring of 1944.<sup>15</sup>

The sources disagree on the existence of the third Dondangen subcamp at Kurben. While the International Tracing Service (ITS) counted Kurben as a Dondangen subcamp, Vestermanis does not list it. Shpungin claimed that Kurben was the third "entity" of Dondangen, which held as many as 5,000 Hungarian Jewish women dispatched from Birkenau, an estimate that is exceedingly high.<sup>16</sup> Prisoner Ernest Ābols likewise called Kurben a Dondangen subcamp. Survivor Helen Rodak-Izso, a Jewish woman from Kassa, Hungary, who was deported to Birkenau on June 4, 1944, and shortly thereafter dispatched to Kaiserwald, was held at Kurben, which she called "Kurbe." Rodak-Izso built roads and felled trees for approximately one month. An Oberscharführer headed the camp, and the guards included female SS, who oversaw the work details.<sup>17</sup>

With the Red Army's approach, Dondangen II (Popervahlen) closed in late June or early July 1944, after which the prisoners were moved to Dondangen. En route, the prisoners had to cross the Venta River by swimming and holding on to one another, as the main bridge had been bombed out and only German troops were permitted to use the temporary bridge. A number of Poperwahlen prisoners escaped during the march, including Vestermanis, who shortly joined the partisans.<sup>18</sup> Like those from Poperwahlen, the Kurben prisoners undertook a similar crossing of the Venta before arriving at Dondangen.<sup>19</sup> Dondangen I closed on July 26 or 27, 1944, and the prisoners proceeded in the direction of Goldingen (Kuldīga). The SS dumped many of the dead in a mass grave at Zlekas.<sup>20</sup> From Windau, most of the prisoners were dispatched by sea to the Stutthof concentration camp in Poland. A smaller group marched to Libau (Liepāja) and then were sent by train to Stutthof.

A Bonn court sentenced Lagerführer Sorge to life imprisonment plus 15 years for 67 murders and 20 attempted murders. None of the charges brought against him arose from his service in Latvia, however.<sup>21</sup>

**SOURCES** Dondangen I and II are discussed extensively in the partially autobiographical studies of Mārgers Vestermanis, "Die nationalsozialistischen Haftstätten und Todeslager im okkupierten Lettland, 1941–1945," in *Die nationalsozialistischen Konzentrationslager—Entwicklung und Struktur*, ed. Ulrich Herbert, Karin Orth, and Christoph Dieckmann (Göttingen: Wallstein Verlag, 1998), 1: 488–489; and "Das SS-Seelager Dondangen—Ein Modell für die geplante nazistische 'Neuordnung Europas,'" *MiGe* [GDR] 25:2 (1986): 145–146. The latter article furnishes extensive background on the SS-Seelager project. The first chronicler of the Latvian Holocaust, Max Kaufmann, discusses Dondangen and Poperwahlen at some length in *Churbn Lettland: Die Vernichtung der Juden Lettlands*, ed. Erhard Roy Wiehn, intro by Steven Springfield (1947; repr., Konstanz: Hartung-Gorre Verlag, 1999), pp. 418–422. The most important English-language account of Dondangen is Andrew Ezergailis, *The Holocaust in Latvia, 1941–1944: The Missing Center* (Riga: Historical Institute of Latvia; published in association with USHMM, 1996), pp. 364, 367. The Dondangen project is also recounted in Andrej Angrick and Peter Klein, *Die "Endlösung" in Riga: Ausbeutung und Vernichtung 1941–1944* (Darmstadt: Wissenschaftliche Buchgesellschaft, 2006), pp. 399, 402, 424. Angrick and Klein also mention Poperwahlen in passing. Dondangen is also mentioned in Alfred Streim, "Konzentrationslager auf dem Gebiet der Sowjetunion," *DaHe* 5 (1989): 177. Some information on Dondangen may be gleaned from the account by Riga-Kaiserwald survivor and chronicler Alfred Winter, in *The Ghetto of Riga and Continuation* (Monroe, CT: Self-pub., 1998), pp. 81–93. Winter's account must be used with due caution, however, because he did not cite his sources. A useful account of the Dutch troops at Dondangen and Poperwahlen can be found in L.M. Bruyn, "KZ-Lager Poperwahlen (Latvia)" (unpub. MSS, n.d.), [www.jewishgen.org/yizkor/popervale](http://www.jewishgen.org/yizkor/popervale). The Dondangen I, Dondangen II (Popervahlen), and Kurben camps are listed in ITS, *Verzeichnis der Haftstätten unter dem Reichsführer-SS (1933–1945)*, 2 vols. (Arolsen, 1979), 1: 248–249. The opening and closing dates found in these listings are

erroneous. The Vanags family is listed in *Index to the Righteous Gentile Registry of Yad Vashem* (Jerusalem: Yad Vashem, 2002), p. 166. Some background on Dundaga Castle may be found at [www.castle.lv/castles4/episkop-eng.html](http://www.castle.lv/castles4/episkop-eng.html).

Primary documentation for the Dondangen complex is scattered. On the SS-Seelager, Angrick and Klein cited documentation in BA-B, R 92. The trial of Gustav Sorge is listed as 8 Ks 1/58, Lfd. Nr. 473, in JuNS-V, 15: 399–658. As cited in Angrick and Klein, Poperwahlen is mentioned in the Wehrwirtschaftskommando Riga, Lagebericht, March 30, 1944, available at BA-MA. An unpublished Dondangen testimony is P III h. No. 1023, Statement of Max Bunzl (Salaspils & other Latvian Camps), “The Sadism of Nazi Camp Leaders,” August 31, 1948, *Testaments to the Holocaust*, originally WL, <http://159.104.6.6/testaments/en/t3h.asp>. As cited by Ezer-gailis and Vestermanis, three survivors who contributed unpublished testimonies were Ernest Ābols, Joseph Berman, and Lagersanitäter A. Jakobsen. Published testimonies on Dondangen include the account by Basja Zin, *Wie ein grauenhafter Traum: Vier Jahre zwischen Leben und Tod; Jüdische Schicksale aus Lettland, 1941–1945*, trans. Kurt Foss, ed. Erhard Roy Wiehn (Konstanz: Hartung-Gorre Verlag, 1998), pp. 27–31. Although she named the camp where she and her husband were held as “Dondangen,” from context it appears that she was held in Poperwahlen. The TWL detachment and other parts of the Dondangen camp are recorded in Abraham Shpungin, “The Terrors of Dundaga,” trans. Isaac Leo Kram, in *The Unfinished Road: Jewish Survivors of Latvia Look Back*, ed. Gertrude Schneider, (Westport, CT: Praeger, 1991), pp. 151–166. A firsthand account of Kurben is Helen Rodak-Izso, *The Last Chance to Remember* (Montreal: Concordia University Chair in Canadian Jewish Studies and the Montreal Institute for Genocide and Human Rights Studies, 2001), pp. 30–31, 39–41, 44–47. On the mass grave at Zlekas, Vestermanis cites a newspaper article in *VBal*, March 30, 1993.

## ELLEY-MEITEN

Between October 1943 and June 1944, the SS deployed nearly 3,000 male and female Jewish prisoners from Lithuania and Poland at Elley-Meiten (Eleja-Meitene). Elley-Meiten was 1 of about 12 to 14 subcamps, called quartering sites (*Kasernierungen*), that were absorbed or established by the Riga-Kaiserwald concentration camp. The date of its foundation indicated that Elley-Meiten was a “new” Kasernierung. Living in 16 barracks at a disused tractor factory, the prisoners performed railway repair work for the construction firms of Rippel, Berger, and Ottlieb. The SS returned the prisoners to Riga-Kaiserwald beginning in May 1944, well before the dissolution of other Kasernierungen, most of which closed in August 1944 in connection with the Red Army’s advance.

**SOURCES** This subcamp is briefly discussed in Margers Vestermanis, “Die nationalsozialistischen Haftstätten und Todeslager im okkupierten Lettland, 1941–1945,” in *Die nationalsozialistischen Konzentrationslager—Entwicklung und Struktur*, ed. Ulrich Herbert, Karin Orth, and Christoph Dieckmann (Göttingen: Wallstein Verlag, 1998), 1: 488. It is listed

as separate men's and women's camps in ITS, *Verzeichnis der Haftstätten unter dem Reichsführer-SS (1933–1945)*, 2 vols. (Arolsen, 1979), 1: 248. It is also listed with some information on the construction firms in *Das nationalsozialistische Lagersystem (CCP)*, ed. Martin Weinmann, with Anne Kaiser and Ursula Krause-Schmitt, prepared originally by ITS (1949–1951; repr., with new intro. matter, Frankfurt am Main: Zweitausendeins, 1990), p. 661.

As cited by Vestermanis, the primary sources for this subcamp may be found in LVVA, in file P-132/26/13, p. 197.

## KROTtingEN

According to the International Tracing Service (ITS), Krottingen originated as a Buchenwald subcamp that was transferred to Riga-Kaiserwald's administration in order to supply female Jewish labor for the Army Clothing Office 709 (Armeebekleidungsamt [ABA]). The subcamp was the second Riga-Kaiserwald quartering site (*Kasernierung*) established for the ABA; the first was Mühlgraben, which furnished female Jewish inmates for ABA 701. Krottingen opened in May 1944, when 200 Mühlgraben prisoners were transferred to the new site. Eventually, the subcamp grew in size to approximately 700 prisoners, according to survivor Johanna Rosenthal.<sup>1</sup>

Appointed a prisoner forewoman (Vorarbeiterin) after two weeks in the camp, Rosenthal reported that cold, hunger, and "heavy labor" made existence difficult.<sup>2</sup> There were several selections at Krottingen, which in the language of Kaiserwald were called "operations" (*Aktionen*). The largest took place on July 28, 1944, when 200 weakened prisoners were removed for killing. In preparation for Riga-Kaiserwald's evacuation, the Krottingen inmates were given concentration camp haircuts in early July 1944, but the issuance of "zebra clothing" (*Zebra-Kleidung*) only took place in August 1944.<sup>3</sup> Although Krottingen officially closed in August 1944, with most of the prisoners removed by sea and evacuated to the Stutthof concentration camp in Poland, Rosenthal and a small group remained behind at Krottingen until Yom Kippur 1944. The remaining prisoners were evacuated to Libau (Liepāja).<sup>4</sup>

**SOURCES** This subcamp is listed in ITS, *Verzeichnis der Haftstätten unter dem Reichsführer-SS (1933–1945)*, 2 vols. (Arolsen, 1979), 1: 248.

Mühlgraben and Krottingen prisoner Johanna Rosenthal described Krottingen in her testimonies, listed in *Testaments to the Holocaust*, <http://159.104.6.6/testaments/en/t3h.asp>, which were originally collected by WL. Rosenthal's undated statement said that the major selection took place on July 28, 1944, while her June 26, 1945, statement placed the date on June 28, 1944.

## RIGA (BALASTDAMM)

According to the International Tracing Service (ITS), Riga-Kaiserwald had a men's and women's quartering site (*Kasernierung*) located at Balastdamm (Balasta) on Kipsala Island in the city of Riga. Listed as "Zementwerk Riga" by Detachment III of the Riga Stadtkommissar, it was 1 of 13 *Kasernierungen* absorbed from the Riga ghetto or established by Kaiserwald on August 18, 1943. Balastdamm had a planned capacity of 300 prisoners but an effective strength at the time of 205.<sup>1</sup> The cement factory was the Sägewerk Zunda, which manufactured prefabricated construction parts. According to chronicler of the Latvian Holocaust Max Kaufmann, the camp reached the planned strength of 300 prisoners, of whom 30 were females, and had Latvian SS guards. The prisoners also worked for the SS-Bauhof, a construction unit, and for a carpentry workshop.

According to Riga (Lenta) prisoner Abraham Bloch, prisoners from Balastdamm reported, in early August 1944, that the SS had just concluded a "children's operation" (*Kinderaktion*) in their subcamp, during which 25 young Jews were selected for killing.<sup>2</sup> Kaufmann subsequently listed 22 young victims of this Aktion and stated that most of its remaining Balastdamm prisoners were murdered at the Riga-Kaiserwald concentration camp after Balastdamm's closure on August 7, 1944.

**SOURCES** The Riga (Balastdamm) *Kasernierung* of Riga-Kaiserwald is described in Max Kaufmann, *Churban Lettland: Die Vernichtung der Juden Lettlands*, ed. Erhard Roy Wiehn, intro. by Steven Springfield (1947; repr., Konstanz: Hartung-Gorre Verlag, 1999), pp. 415–416; and in Anita Kugler, *Scherwitz: Der jüdische SS-Offizier* (Cologne: Kiepenhauer & Witsch, 2004), pp. 415–416. The subcamp is also mentioned in Margers Vestermanis, *Juden in Riga: Auf den Spuren des Lebens und Wirkens einer ermordeten Minderheit; ein historischer Wegweiser* (Bremen: Edition Temmen, 1995), pp. 70–71. It is listed as separate men's and women's camps in ITS, *Verzeichnis der Haftstätten unter dem Reichsführer-SS (1933–1945)*, 2 vols. (Arolsen, 1979), 1: 250.

Primary sources for this subcamp begin with the documents compiled by Wolfgang Benz, Konrad Kwiet, and Jürgen Matthäus, eds., *Einsatz im "Reichskommissariat Ostland": Dokumente zum Völkermord im Baltikum und in Weissrussland, 1941–1944* (Berlin: Metropol, 1998), Doc. 254, pp. 265–266, which reproduces the Riga Stadtkommissar's memorandum on the Riga-Kaiserwald *Kasernierungen* of August 18, 1943. As cited by Kugler, Abraham Bloch's memoirs are available in Yiddish and Russian in MSS form at MEL.

## RIGA (DÜNAWERKE)

Established in the city of Riga, with a planned capacity of 1,500 male and female Jewish prisoners, Dünawerke was 1 of 13 old and new quartering sites (*Kasernierungen*) formed or absorbed by the Riga-Kaiserwald concentration camp on August 18, 1943. On the date of its foundation, the subcamp had 398 prisoners.<sup>1</sup> Important information on this *Kasernierung* comes from survivor Lily Margules, who entered Kaiserwald and Dünawerke after the liquidation of the Vilna ghetto in September 1943. According to her account, the inmates performed construction work under the supervision of Organisation Todt (OT) personnel and older German guards who were unfit for frontline duty. The prisoners wore civilian clothing with white rings and white stripes painted on them in order to prevent escape. At Dünawerke, Margules and other prisoners hauled sand in wheelbarrows. "Russian" civilians who worked on the same job site were kind to the prisoners. The men's and women's compounds, she recalled, were in the same building but separated by "a very heavy door." The availability of water and beds made this *Kasernierung* relatively tolerable. Margules recalled that the camp leader (Lagerführer), who was an SS-Obersturmführer, had an illicit relationship with a Jewish woman from Berlin that benefited the prisoners, as his treatment softened somewhat. According to Riga survivor and historian Alfred Winter, the Lagerführer was actually an Oberscharführer, which is more consistent with the ranks of known *Kasernierungen* leaders.<sup>2</sup>

Margules's sister, who for a time worked for the camp administration, contracted rheumatic fever while at Dünawerke. Unlike the fate suffered by many patients in the infirmaries of the Kaiserwald *Kasernierungen*, she received care from a German doctor, who gave her more than three weeks to recover. As Margules recognized, patients who stayed longer than three days were usually selected in operations (*Aktionen*) and murdered in the forests near Riga.<sup>3</sup>

As evidenced by the account of Golda Geller Lewinsohn Klein, there were some transfers of prisoners between Dünawerke and the other *Kasernierungen*. Dispatched to Kaiserwald from the Vilna ghetto in late September 1943, Klein was sent to Dünawerke three days later. After five months, she and other prisoners were returned to Kaiserwald and reassigned to the

Allgemeine Elektrizitäts-Gesellschaft (AEG) camp at Riga-Strasdenhof.<sup>4</sup>

At Dünawerke, the prisoners composed poetry and songs to keep up their morale. Margules's friend Tosha, who subsequently perished, composed a song called "Dünawerke," which "tells us that . . . [the camp was] an island surrounded by waters and forests, and there are Jews from all [over] the world that work very hard and are constantly freezing in the cold weather. In the morning, it is still dark, but the bell rings and we have to go out, stand up and go to work. And we are asking the world why are the Jews punished? . . . For whose things are Jews being punished?"<sup>5</sup>

As part of the dissolution of Kaiserwald's *Kasernierungen*, Dünawerke closed in the summer of 1944. The prisoners were evacuated by ship via Danzig to Stutthof.<sup>6</sup>

**SOURCES** This subcamp is briefly mentioned in Andrej Angrick and Peter Klein, *Die "Endlösung" in Riga: Ausbeutung und Vernichtung 1941–1944* (Darmstadt: Wissenschaftliche Buchgesellschaft, 2006), p. 405. Dünawerke is described in some detail in Alfred Winter, *The Ghetto of Riga and Continuance* (Monroe, CT: Self-pub., 1998), pp. 112–113. This account must be used with due caution, as the author, who was a survivor of the Riga ghetto and Kaiserwald concentration camp, synthesizes many uncited survivors' accounts and continually employs the first-person plural in describing Kaiserwald and its *Kasernierungen*, making it difficult to distinguish what he personally witnessed from what he pieced together from other survivors' accounts. It is listed as having separate women's and men's camps in ITS, *Verzeichnis der Haftstätten unter dem Reichsführer-SS (1933–1945)*, 2 vols. (Arolsen, 1979), 1: 250.

Primary sources for Dünawerke begin with its listing in the documents compiled by Wolfgang Benz, Konrad Kwiet, and Jürgen Matthäus, eds., *Einsatz im "Reichskommissariat Ostland": Dokumente zum Völkermord im Baltikum und in Weissrussland, 1941–1944* (Berlin: Metropol, 1998), Doc. 254, pp. 265–266, which reproduces the Riga Stadtkommissar's memorandum on the Riga-Kaiserwald *Kasernierungen* of August 18, 1943, and copied from NARA. The affidavit of Golda Geller Lewinsohn Klein was submitted in the class-action suit against AEG brought by the Conference on Jewish Material Claims against Germany. It is located in USHMMA, RG-12.004.02\*04, Benjamin Ferencz Collection, Claims against German Industrial Firms Records, 1952–1994. The most detailed account of Dünawerke is found in USHMMA, RG-50.030\*0150, Lily Margules oral history interview, January 3, 1990, which is available in videotape and transcript.

### **RIGA (HEERESKRAFTFAHRZEUGPARK, HIRTENSTRASSE) [AKA PARK]**

According to the International Tracing Service (ITS), Riga-Kaiserwald established a quartering site (*Kasernierung*) at Hirtenstrasse, Riga, at the end of January 1944. Called “Park,” Hirtenstrasse provided male and female Jewish prisoner labor for an army vehicle repair facility (Heereskraftfahrzeugpark [HKP]). It was the second HKP *Kasernierung* formed in Riga; the first had already been established by August 18, 1943. The subcamp closed on August 6, 1944, as the SS closed the *Kasernierung* during the Red Army’s advance, and the survivors were eventually sent by ship and barge to Stutthof.

**SOURCES** The only source for the Hirtenstrasse subcamp is ITS, *Verzeichnis der Haftstätten unter dem Reichsführer-SS (1933–1945)*, 2 vols. (Arolsen, 1979), 1: 251, where the men’s and women’s camps are listed separately.

Joseph Robert White

### **RIGA (HEERESKRAFTFAHRZEUGPARK)**

On August 18, 1943, the SS established a quartering site (*Kasernierung*) for male Jewish prisoners for the army vehicle repair installation (Heereskraftfahrzeugpark, HKP) in the city of Riga. Located near the Spilwe (Spilva) airport, this camp held 1,000 male Jewish prisoners from the Riga ghetto, then in the process of being liquidated by the Germans. According to the Stadtkommissar of Riga, it held 375 prisoners when it began operating. HKP was 1 of the original 13 *Kasernierungen* established or absorbed by the Riga-Kaiserwald concentration camp.<sup>1</sup> According to the International Tracing Service (ITS), the SS established a second HKP *Kasernierung* at Hirtenstrasse in Riga in late January 1944 [see Riga-Kaiserwald/Riga (Heereskraftfahrzeugpark, Hirtenstrasse)]. According to survivor Max Kaufmann, the prisoners from the two *Kasernierungen* were able to maintain some informal communications.<sup>2</sup>

On December 15, 1943, the camp leader (Lagerführer) of Riga-Spilwe, SS-Hauptscharführer Gustav Sorge, also assumed command at HKP. He had only been appointed camp leader at Spilwe on December 1. A staff member at the Esterwegen and Sachsenhausen concentration camps whose career in the Inspectorate of Concentration Camps (IKL) dated back

to 1934, and who had even been a guard at the Esterwegen early camp in 1933, Sorge lived up to his nickname “Iron Gustav” (Eiserne Gustav). During the two years prior to taking command at Spilwe, he had been Arbeitseinsatzführer at the Herzogenbusch main concentration camp [aka Vught] in the Netherlands and served in the summer of 1943 on a “bandit”-hunting (antipartisan) detail for the Higher SS and Police Leader (HSSPF) Ostland. At Spilwe, Sorge had already imposed a severe regime along IKL lines. On January 31, 1944, he was transferred from Spilwe and HKP to the massive Kaiserwald subcamp at Dondangen. At HKP, Sorge’s replacement was SS-Hauptscharführer Ludwig Blatterspiel (called in some survivor testimonies “Platterspiel”). After the September–October 1944 evacuation of Kaiserwald, Sorge assumed command of SS-Baubrigade XII (Construction Brigade XII) in November 1944, which was organized at Sachsenhausen. U.S. troops captured him on April 28, 1945, and held him in the SS internment camp at Bad Kreuznach.<sup>3</sup>

Prisoners at HKP repaired vehicles for the German army. Although the ITS listed HKP as a men’s camp, there were some Jewish women held there as well, according to survivor Josef Katz. Katz was a German Jew from Lübeck who entered HKP in the late spring or early summer of 1944. At Kaiserwald, Katz was assigned to a gardening detail to be established at HKP, but upon arrival at HKP, he was arbitrarily dispatched to Spilwe, where he worked on airstrips. After repeated entreaties, he finally gained admittance to HKP’s gardening detail, where he worked with another Jewish man and five Jewish women. The Kommando raised vegetables, fruit, and flowers. As Katz recalled, the Red Army Air Force bombed HKP in July 1944. Unlike other concentration camps inside and outside the Reich, the prisoners were able to enter an air-raid shelter during the attack.<sup>4</sup>

According to Katz, Kaiserwald’s SS medic (Sanitätsdienstgrad), SS-Oberscharführer Heinz Günther Wisner (misspelled “Wiesner” in Katz’s account), carried out a mass selection at HKP in June 1944. During this “operation” (*Aktion*), the euphemism used at Riga for selections for murder, Wisner ordered 40 men and 30 women to board trucks, which took them, in another Riga euphemism, to the “base command” (Stützpunktkommando), the nearby forests where they were murdered. Born Heinz von Wisotzky, Wisner had served since 1939 as an SS orderly at Stutthof and Flossenbürg. Promoted to Unterscharführer in the summer of 1943, Wisner joined the Kaiserwald staff on November 1, 1943, where he subsequently advanced in rank to Oberscharführer. Known to the prisoners as “Dr. Wisner,” he was sentenced in 1985 to five years’ imprisonment by a Düsseldorf court, in connection with the selections committed at Riga *Kasernierungen*, as well as homicides committed in the Riga-Kaiserwald main camp. The prosecution did not charge him in connection with selections at HKP, however. By the time of his arrest in 1979, Wisner had retired from a mechanical engineering firm located in Düsseldorf.<sup>5</sup>

HKP was closed on August 6, 1944, and the prisoners were marched to the port of Riga, where they boarded the

*Bremerhaven* with almost 6,400 other prisoners. After three days below decks in overcrowded and filthy conditions, the *Bremerhaven's* prisoners were sent via barges on the Vistula River to Stutthof.

In 1959, the Bonn Landgericht (Regional Court) sentenced Spilwe's former Lagerführer, Sorge, to life imprisonment plus 15 years for the murder of 67 prisoners and for 20 additional attempted murders. Inexplicably, the charges against him did not involve his service in Riga.

**SOURCES** The Heereskraftfahrzeugpark Kasernierung of Riga-Kaiserwald is described in Max Kaufmann, *Churbn Lettland: Die Vernichtung der Juden Lettlands*, ed. Erhard Roy Wiehn, intro. by Steven Springfield (1947; repr., Konstanz: Hartung-Gorre Verlag, 1999), pp. 373–381, and from his personal testimony about Hirtenstrasse, in pp. 382–393. It is listed as a men's camp in ITS, *Verzeichnis der Haftstätten unter dem Reichsführer-SS (1933–1945)*, 2 vols. (Arolsen, 1979), 1: 251. The Wisner case (Lfd. Nr. 896) will be included in a forthcoming volume of *Justiz und NS-Verbrechen* but is listed cursorily on the publication's Web site at [www1.jur.uva.nl/junsv](http://www1.jur.uva.nl/junsv). The author would like to thank Dick de Mildt for furnishing supplementary biographical information on Wisner. Anita Kugler, *Scherwitz: Der jüdische SS-Offizier* (Cologne: Kiepenhauer & Witsch, 2004), p. 411, reports that 6,382 boarded the *Bremerhaven*.

Primary sources for Riga (Heereskraftfahrzeugpark) begin with the document collection by Wolfgang Benz, Konrad Kwiet, and Jürgen Matthäus, eds., *Einsatz im "Reichskommissariat Ostland": Dokumente zum Völkermord im Baltikum und in Weissrussland, 1941–1944* (Berlin: Metropol, 1998), Doc. 254, pp. 265–266, which reproduces the Riga Stadtkommissar's memorandum on the Riga-Kaiserwald Kasernierungen of August 18, 1943, and copied from NARA. Investigation files for Wisner are available at ZLNW-K under the heading 130 Js 2/78 (Z). The case of Gustav Sorge (8 Ks 1/58) is found in Lfd. Nr. 473, *Justiz und NS-Verbrechen*, 15: 399–658 (Amsterdam, 1976). A published testimony of HKP is Josef Katz, *One Who Came Back: The Diary of a Jewish Survivor*, trans. Hilda Reach (New York: Herzl Press and Bergen-Belsen Memorial Press, 1973).

## RIGA (LENTA) (SD-WERKSTÄTTE)

On August 18, 1943, the Stadtkommissar for Riga listed the Lenta Security Service (Sicherheitsdienst [SD]) Workshop (Werkstätte) as 1 of 13 quartering sites (*Kasernierungen*) established or absorbed by the Riga-Kaiserwald concentration camp. On that date, this Kasernierung held 1,083 Jews, with a planned capacity of 2,000.<sup>1</sup> Named after the Latvian word for "ribbon," Lenta was located in the Dūna area, near the Dünawerke Kasernierung, but originated as an old Kasernierung at Washington Platz and Peter-Holm-Strasse in downtown Riga. Lenta consisted of three separate sites: the textile workshop at Washington Platz; a small SS clothing depot at Peter-Hohn-Strasse; and Lenta, which was formed only in July–August 1943 and which by itself held over 900 prisoners. The camp had bathing facilities and an infirmary. The International Tracing Service (ITS) erroneously listed Lenta as a men's camp, but according to historian and journalist Anita Kugler, it held women prisoners as well.

Under the commandant, SS-Untersturmführer Fritz Scherwitz, Lenta consisted of a multifaceted complex of lucrative workshops. Although its core mission was to supply high-quality tailored uniforms for the SS, the Kasernierung also held furriers, bookbinders, photo developers, gold- and silversmiths, automobile repairmen, and skilled construction workers. Scherwitz, a police official before his promotion to Untersturmführer in August 1943, deployed skilled artisans from the Riga ghetto. For two weeks in August 1943, he participated in Operation Heinrich, an antipartisan campaign in Minsk organized by the Higher SS and Police Leader (HSSPF) Ostland, SS-Obergruppenführer Friedrich Jeckeln, serving as a supply officer and bringing with him a detail of 20 Lenta prisoners for assistance.<sup>2</sup> Inside Lenta, he often protected Jewish forced laborers and their families in order to raise productivity. Scherwitz "aryanized" his Jewish girlfriend, Tamara Sherman, with false identity papers and did the same for Boris Rudow, although not for Rudow's brothers. Rudow managed the Washington Platz workshop. These incidents and the generally lax discipline prompted the Riga SD allegedly to call him the "King of the Jews" (*Judenkönig*).<sup>3</sup> Although Riga-Kaiserwald rarely interfered with the running of the Lenta camp, which most closely fit the SD model of quasi-autonomous small concentration camps, not an Inspectorate of Concentration Camps (IKL) camp, Scherwitz's perceived softness and devotion to productivity led to the appointment of harsh co-commandants, called "guard officers" (*Bewachungsoffizieren*).<sup>4</sup> These appointments took place at the behest of Chief of the Sicherheitspolizei (Sipo) and SD in Riga Dr. Rudolf Lange, who had overseen Einsatzgruppen killings in Latvia, was an attendee at the Wannsee Conference on January 20, 1942, and was Scherwitz's superior.<sup>5</sup>

From August 1943 until April 1944, Sipo official SS-Untersturmführer Eduard Roschmann directed the camp along with Scherwitz. A Jewish affairs specialist, Roschmann exercised little influence at Lenta until the completion of the Riga ghetto's liquidation on November 2, 1943, and the departure of Scherwitz on a business trip to France, in December 1943, for the procurement of luxury goods. In Scherwitz's absence, Roschmann arrested Tamara Sherman. After his return in January 1944, Scherwitz reportedly offered a bribe of 20,000 Reichsmark (RM) to secure her release. Imposing a harsh regime, Roschmann instituted the IKL practice of 25 cane blows for punishment and construed work accidents as sabotage. Dismissing two Latvian Jews from the subcamp's ghetto-like prisoner police force (Jewish ghetto police, Ordnungsdienst), he appointed a German Jew, named Levi or Levy, from Cologne as its head. As Roschmann's factotum, Levi instituted a search for so-called organizers (thieves), seizing stolen goods and punishing the offenders, in some cases, resulting in their torture. Roschmann transferred 250 less productive prisoners to the SS factory (*Betrieb*) at Strasdenhof on the orders of Kaiserwald commandant SS-Sturmbannführer Albert Sauer. According to Kugler, Lenta's population declined to 550 by January 1944. In light of these conditions, 4 male prisoners, Hirschberg, Schnaider, Juter, and Juter's son, escaped and reached the home of Janis and Johanna Lipke. The Lipkes sheltered almost 40 Jews, nearly two-fifths of the 103 Jews rescued in Latvia. In 1989, Yad Vashem honored them with the Righteous among the Nations medal.

According to Kugler, the combination of mismanagement and escapes led to Roschmann's removal in April 1944. Roschmann's successor as co-commandant was the lower-ranking SS-Hauptscharführer Robert Nickel, whom Roschmann had appointed as a guard in February 1944 on the strength of Nickel's performance at the Salaspils police camp. More pragmatic than Roschmann, Nickel cooperated with Scherwitz and the prisoner staff in the improvement of production and somewhat relaxed his predecessor's regime. According to prisoner Werner Sauer, Scherwitz and Nickel even organized tennis and European football matches for the prisoners. Sauer's building Kommando team wore red-trimmed black pants with red shirts with a mason's trowel as team symbol, while the furriers had blue-and-white-striped shirts emblazoned with a fox symbol.<sup>6</sup>

In June 1944, Scherwitz returned to France for another procurement trip. After his return, as other Kasernierungen prepared for evacuation, Scherwitz marched nearly all of Lenta's prisoners to the police camp at Salaspils on July 31, 1944. At Salaspils the Lenta inmates were segregated by gender but housed in a separate part of the camp. They were not generally subjected to Salaspils's harsh regime. As Kaiserwald's camp doctor (Lagerarzt) Sturmbannführer Eduard Krebsbach and SS medic (Sanitätsdienstgrad) SS-Oberscharführer Heinz Günther Wisner undertook mass selections in the various Kasernierungen for the killing of Jews no longer capable of working, called *Aktionen*, it is pos-

sible that Scherwitz sought by this abrupt move to forestall a selection. If this were the case, then he only delayed it, because after the prisoners' return to Lenta, on August 8 or 9, 1944, 110 prisoners by Kugler's estimate were dispatched to the "base command" (Stützpunktkommando), the Kaiserwald euphemism for murder in the neighboring forests. Scherwitz used his influence to spare at least one family. Some 300 of the surviving Lenta prisoners boarded the *Kanonier* on August 24 or 25, 1944, in a transport that totaled 3,155 prisoners. After crossing the Baltic, the prisoners disembarked at Danzig, where barges then took them to the Stutthof concentration camp. Separately, Scherwitz took a smaller group of prisoners with him to Libau (Liepāja).

During the U.S. occupation of Bavaria, Scherwitz posed as a Lithuanian Jewish refugee named Eleke Scherwitz and claimed to be a Riga camp victim. As he worked for a survivors' association, former Lenta prisoners identified him to the Americans. Transferred from U.S. to Bavarian custody, where he called himself Erika (Eleken) Sirewitz, a Jew who joined the SS in 1943, Scherwitz was tried for murdering three escapees in August 1944. Listed in the case under a variant spelling of one of his aliases, "Elke S.," the court described him as a "full Jew" (*Volljude*).<sup>7</sup> Kugler argues that the Bavarians eagerly tried him because of his alleged Jewishness. As discovered by investigator Christel Paulsen in 1950 at the Berlin Document Center (BDC), then run by the U.S. Department of State, Scherwitz's Nazi Party card revealed his date of birth as August 21, 1903, not August 8, 1910. While the BDC card listed his SS number as 51561, which indicated entrance into the SS before the Nazi takeover, his SS autobiography (*Lebenslauf*) showed an SS number of 241935 with entry into the SS in 1933.<sup>8</sup> After a complicated series of legal proceedings, Scherwitz was sentenced to six years' imprisonment with credit for two years of time served. He died in 1962.

**SOURCES** The most important source for the Lenta Kasernierung of the Riga-Kaiserwald concentration camp and its commandant is the provocatively titled book by Anita Kugler, *Scherwitz: Der jüdische SS-Offizier* (Cologne: Kiepenhauer & Witsch, 2004). For a less sympathetic interpretation of Scherwitz, see Andrej Angrick and Peter Klein, *Die "Endlösung" in Riga: Ausbeutung und Vernichtung 1941–1944* (Darmstadt: Wissenschaftliche Buchgesellschaft, 2006). This subcamp is listed in ITS, *Verzeichnis der Haftstätten unter dem Reichsführer-SS (1933–1945)*, 2 vols. (Arolsen, 1979), 1: 251. A short biography of Janis Lipke may be found at [www1.yad-vashem.org/righteous/index-righteous.html](http://www1.yad-vashem.org/righteous/index-righteous.html).

Primary sources for this subcamp begin with the documents compiled by Wolfgang Benz, Konrad Kwiet, and Jürgen Matthäus, eds., *Einsatz im "Reichskommissariat Ostland": Dokumente zum Völkermord im Baltikum und in Weissrussland, 1941–1944* (Berlin: Metropol, 1998), Doc. 254, pp. 265–266, which reproduces the Riga Stadtkommissar's memorandum on the Riga-Kaiserwald Kasernierungen of August 18, 1943. Scherwitz's trials are summarized in Lfd. Nr. 227, *Justiz und NS-Verbrechen*, 7: 137–146, Amsterdam, 1971, but the excerpts

contain little useful information on Lenta and reproduce Scherwitz's false identity. The Scherwitz cases are listed as LG München 1 Ks 26/49, OLG München 1 Ss 70/49, and Bayerischen OLG I, III 16/50. Kugler makes extensive use of the original prosecution and trial records, which include testimonies and Scherwitz's scanty personnel records. The trial records are held at BHStA-(M), Sta. München, Sirewitz Verfahren, 17434; and Gsta. OLG München Nr. 207 (Sirewitz). Scherwitz's personnel card is available in the SSO collection at BA-B. Kugler reproduces his Lebenslauf in the photographic section. As cited by Kugler, two unpublished survivors' accounts for this camp are Werner Sauer's "Mensch unter Menschen" (unpub. MSS, n.d., YVA 033/4126); and Abraham Bloch's letters and memoirs in Russian and Yiddish, which are available at MEL. Lange's listing as a participant in the Wannsee Conference may be found in John Mendelssohn, ed., *The Holocaust: Selected Documents in Eighteen Volumes*, vol. 11, *The Wannsee Protocol and a 1944 Report on Auschwitz by the Office of Strategic Services*, intro. Robert Wolfe (New York: Garland, 1982).

## RIGA (MÜHLGRABEN) [AKA ULTRA]

On July 7, 1943, Chief of the Sicherheitspolizei (Sipo) und Sicherheitsdienst (SD) in Riga Dr. Rudolf Lange designated Mühlgraben (Milgravis) a quarterming site (*Kasernierungen*) for the deployment of at least 1,000 Jewish inhabitants from the Riga ghetto, which was then in the process of being liqui-

dated.<sup>1</sup> On August 18, 1943, the Stadtkommissar Riga confirmed Mühlgraben's inclusion among the *Kasernierungen* absorbed or established by the Riga-Kaiserwald concentration camp. Although the site was supposed to hold 1,300 prisoners, it had 737 at the time.<sup>2</sup> Other accounts place the camp's total population at 1,500 Jewish prisoners.<sup>3</sup> The Mühlgraben inmates worked for the Army Clothing Office 701 (Armeebekleidungsamt [ABA]), which sorted and repaired soiled and damaged uniforms for the German army. The camp was situated inside a former Latvian chemical factory called Lēverkūzi Ultramarina fabrics, which once had commercial ties to the German IG Farbenindustrie AG chemical concern. Called "Ultra" by some prisoners, the camp betrayed signs of its original purpose, as everything inside the complex had been painted blue, according to survivor Hilde Sherman-Zander, and the main sorting operations and roll calls took place in the former "gas hall" (*Gasballe*). Segregated by gender, the prisoners lived in two "community rooms" (*Gemeinschaftsräumen*). The camp population originally included children as well as adults.<sup>4</sup>

The camp administration belonged exclusively to the German army. Unteroffizier Heinz Müller was the camp leader (Lagerführer), and his deputy was Obergefreiter Franz Schwellenberg (or Schwellenbach). It is possible that Schwellenberg may have been an SD or police member.<sup>5</sup> The soldiers mistreated and harassed the prisoners. Former Mühlgraben prisoners attested to the brutality, recalling that Schwellenberg threatened to beat "black and blue" anyone caught stealing military uniforms.<sup>6</sup> Jakov Galanter remembered that punishments included 25 blows with a cane. The work pace imposed upon the prisoners, he reported, was frenetic.<sup>7</sup>

Mühlgraben had a penal column (Strafkommando), which held prisoners deemed guilty of minor infractions or whose work pace was too slow. Hilde Sherman-Zander was assigned to the penal detachment on two occasions, respectively, for three and four weeks. In one instance her work performance was judged inadequate, and in the second, she was caught with books in her possession and thus punished for holding contraband.<sup>8</sup> Another prisoner in the penal detachment, Erwin Sekules, hauled wagons filled with wood at the double for six hours straight, which resulted in his being brought to the camp infirmary in a state of utter exhaustion. The prisoner doctor, Dr. Josef (called "Dr. Joseph" in some survivors' accounts), a Jewish physician from Vienna, warned that additional labor would kill him. Nevertheless, Sekules was dispatched on yet another penal detail shortly afterward.<sup>9</sup>

As was the case at the Riga (Lenta) quartering site, Mühlgraben had a Jewish Ordnungsdienst (OD) that kept internal order. From Zander's testimony, which named some of the Jewish "police," the army displayed a degree of favoritism toward German over Latvian Jews in the appointment of OD members.<sup>10</sup>

In May 1944, the ABA opened a second *Kasernierung* at Krottingen, on behalf of ABA 709. For this camp, the army dispatched approximately 200 Mühlgraben inmates to form this subcamp.<sup>11</sup>

According to Max Kaufmann, who produced the earliest chronicle of the Holocaust in Latvia, Kaiserwald camp doctor (Lagerarzt) SS-Sturmbannführer Eduard Krebsbach and SS medic (Sanitätsdienstgrad) Heinz Günther Wisner selected children at Mühlgraben. The selections, called “operations” (*Aktionen*) at Kaiserwald, involved the removal by truck of weakened and youthful prisoners who were then shot in the forest. In the Kaiserwald euphemism, the unknown destination of these victims was the “base camp command” (Stützpunktkommando). Although Mühlgraben was not cited in Wisner’s indictment, Kaufmann’s claim accorded with the pattern of the *Aktionen* that took place in other Kaiserwald subcamps in the Riga area, for which Wisner was held responsible at his 1985 trial in Düsseldorf. Survivor testimony further underscored Kaufmann’s charge. According to Sherman-Zander, three major selections occurred at Mühlgraben: the first was the “January [1944] Aktion,” during which 24 children and about half the adult population were selected for murder. The second selection occurred while Sherman-Zander was kept in the infirmary. The timely intervention of Dr. Josef prevented her selection, but most of the patients were taken away. The third Aktion occurred on or around August 6, 1944, shortly before the camp was evacuated.<sup>12</sup>

Most of the remaining Mühlgraben prisoners were evacuated by sea on a harrowing three-day journey aboard the *Bremerhaven* to Danzig. From the port of Danzig, the survivors proceeded via barges on the Vistula River to Stutthof. Although the International Tracing Service (ITS) listed the official closure date for the Mühlgraben men’s and women’s camps as August 6, 1944, Sherman-Zander recalled that a small detachment of prisoners, including herself, remained behind to operate the clothing depot, until shortly before the Germans abandoned Riga to the Soviets. Sherman-Zander dated her evacuation, aboard the *Sanga*, to late October 1944. The prisoners in her transport were dispatched to Libau (Liepāja).<sup>13</sup>

**SOURCES** The earliest mention of the Mühlgraben Kasernierung of the Riga-Kaiserwald concentration camp appears in Max Kaufmann, *Churbn Lettland: Die Vernichtung der Juden Lettlands*, ed. Erhard Roy Wiehn, intro. Steven Springfield (1947; repr., Konstanz: Hartung-Gorre Verlag, 1999), pp. 402–403, where Kaufmann accused Krebsbach and Wisner (misspelled Kressbach and Wiesner) of conducting selections at Mühlgraben. The subcamp is briefly mentioned in Andrej Angrick and Peter Klein, *Die “Endlösung” in Riga: Ausbeutung und Vernichtung 1941–1944* (Darmstadt: Wissenschaftliche Buchgesellschaft, 2006), pp. 400, 403; and Margers Vestermanis, *Juden in Riga: Auf den Spuren des Lebens und Wirkens einer ermordeten Minderheit; ein historischer Wegweiser* (Bremen: Edition Temmen, 1995), pp. 70–71. Mühlgraben is listed as men’s and women’s subcamps in ITS, *Verzeichnis der Haftstätten unter dem Reichsführer-SS (1933–1945)*, 2 vols. (Arolsen, 1979), 1: 252. The Wisner case (Lfd. Nr. 896) will be included in a forthcoming volume of *Justiz und NS-Verbrechen* but is listed cursorily on the publication’s Web site at [www1.jur.uva.nl/junsv](http://www1.jur.uva.nl/junsv). The author would like to thank Dick de Mildt for furnishing supplementary biographical information on Wisner.

Primary sources for Mühlgraben begin with its listing in the documents compiled by Wolfgang Benz, Konrad Kwiet, and Jürgen Matthäus, eds., *Einsatz im “Reichskommissariat Ostland”: Dokumente zum Völkermord im Baltikum und in Weissrussland, 1941–1944* (Berlin: Metropol, 1998), Doc. 254, pp. 265–266, which reproduces the Riga Stadtkommissar’s memorandum on the Riga-Kaiserwald Kasernierungen of August 18, 1943, and copied from NARA. As cited by Angrick and Klein, Lange’s conference discussing Mühlgraben can be found in BA-B, R 91 (Gebietskommissare im Geschäftsbereich des Reichskommissars für das Ostland)/164. Investigation files for Wisner are available at ZLNW-K under heading 130 Js 2/78 (Z). Unpublished testimony may be found in P III h. No. 1034, Erwin Sekules (and 11 others), Evidence against “Unteroffizier” Franz Schwellenberg, August 17, 1947, in *Testaments to the Holocaust*, originally WL, <http://159.104.6.6/testaments/en/t3h.asp>. The survivors listed in this testimony are Erwin Sekules, Else Sekules, Rosa Federmann, Malli Federmann, Sofi Billig, Karl Schneider, Heinz Rosenhain, Cläre Rosenhain, Hilde Lehmann, Erika Manne, Martin Manne, and Ilse Herzberg. In the same collection may be found P III h. no. 1034a, Statement of Karl Schneider, Evidence against “Unteroffizier” Franz Schwellenberg, August 17, 1947; and P III h. No. 1034 c, Statement of Jakov Galanter, Evidence against “Unteroffizier” Franz Schwellenbach, September 3, 1947. Two testimonies by the same witness on the subcamps at Mühlgraben and Krottingen are also found in *Testaments*: P III h. No. 283 (Riga), Statement of Mrs. Johanna Rosenthal, n.d.; and P III h. No. 538 (Riga), Statement of Mrs. Johanna Rosenthal, June 26, 1945. Also see the detailed published testimony by Hilde Sherman-Zander, *Zwischen Tag und Dunkel: Mädchenjahre im Ghetto* (Frankfurt am Main: Ullstein, 1993).

## RIGA (REICHSBAHN)

The SS established a quartering site (*Kasernierung*) for 600 male and female Jewish prisoners on August 18, 1943, to work for the Deutsche Reichsbahn (German Railways). This *Kasernierung* was 1 of the original 13 absorbed from the Riga ghetto, then in the process of liquidation, or established by the Riga-Kaiserwald concentration camp. On the date of its first mention, in a memorandum from the Stadtkommissar of Riga concerning the reorganization of the ghetto's *Kasernierungen*, the Reichsbahn camp held 192 Jewish prisoners.<sup>1</sup>

According to Riga ghetto and Kaiserwald survivor Alfred Winter, who has compiled prisoner testimonies on this camp, the inmates were mostly skilled workers who repaired railway equipment under the direction of Reichsbahn personnel. The work pace was unrelenting, but the prisoners had marginally better living conditions, including weekly showers, than in other *Kasernierungen*. Some overseers took care of their work detachments in the name of improving performance. The work day began with a scramble for usable tools, which were in perennially short supply. As was common elsewhere in the Riga camps, the imposition of concentration camp uniforms and haircuts, including the cropping of women's hair, began only shortly before the camp's dissolution.

In preparation for the evacuation, the Kaiserwald medical staff conducted a selection, or *Aktion*, as Riga prisoners called it, at the Reichsbahn camp on July 27, 1944. Present were Kaiserwald's camp doctor (*Lagerarzt*) Dr. Eduard Krebsbach and the SS medic (*Sanitätsdienstgrad*) Heinz Günther Wisner. Forcing the male and then the female prisoners to run naked past a reviewing area, Krebsbach and Wisner dispatched the weakest by truck to the “base camp command” (*Stützpunktkommando*), a Kaiserwald euphemism for murder in the nearby forests. Krebsbach was previously the *Lagerarzt* at Mauthausen, where, in a play on his name, he was called “The Needle” (*Spritzbach*). Born Heinz von Wisotzky, Wis-

ner had served since 1939 as an SS orderly at Stutthof and Flossenbürg. Promoted to *Unterscharführer* in the summer of 1943, Wisner joined the Kaiserwald staff on November 1, 1943, where he subsequently advanced in rank to *Oberscharführer*. Known to the prisoners as “Dr. Wisner,” he was sentenced in 1985 to five years' imprisonment by a Düsseldorf court, in connection with the selections committed at this and other Riga *Kasernierungen*, as well as homicides committed in the Kaiserwald main camp. By the time of his arrest in 1979, Wisner had retired from a mechanical engineering firm located in Düsseldorf.

On August 6, 1944, as the Red Army closed on Riga, the SS conducted the remaining Reichsbahn prisoners to the port of Riga, where they boarded the *Bremerhaven* with almost 6,400 other prisoners from Riga's *Kasernierungen*. This departure marked the first stage in the evacuation of the Kaiserwald camps. After a harrowing three-day journey aboard ship, they arrived in Danzig and proceeded by barge to the Stutthof concentration camp.

**SOURCES** This subcamp is discussed at some length in Alfred Winter, *The Ghetto of Riga and Continuance* (Monroe, CT: Self-published, 1998), pp. 114–115. This account must be used with caution, as the author does not cite his sources and often employs the first-person plural, making it difficult to separate his personal testimony from other accounts. The Reichsbahn subcamp is listed as separate men's and women's camps in ITS, *Verzeichnis der Haftstätten unter dem Reichsführer-SS (1933–1945)*, 2 vols. (Arolsen, 1979), 1: 242. The Wisner case (Lfd. Nr. 896) will be included in a forthcoming volume of *Justiz und NS-Verbrechen* but is listed cursorily on the publication's Web site at [www1.jur.uva.nl/junsv](http://www1.jur.uva.nl/junsv). The author would like to thank Dick de Mildt for furnishing supplementary biographical information on Wisner. Anita Kugler, *Scherwitz: Der jüdische SS-Offizier* (Cologne: Kiepenhauer & Witsch, 2004), p. 411, reports that 6,382 boarded the *Bremerhaven*.

Primary sources for this subcamp begin with its listing in the document collection by Wolfgang Benz, Konrad Kwiet, and Jürgen Matthäus, eds., *Einsatz im “Reichskommissariat Ostland”: Dokumente zum Völkermord im Baltikum und in Weissrussland, 1941–1944* (Berlin: Metropol, 1998), Doc. 254, pp. 265–266, which reproduces the Riga Stadtkommissar's memorandum on the Riga-Kaiserwald *Kasernierungen* of August 18, 1943, and copied from NARA. Investigation files for Wisner are available at ZLNW-K under heading 130 Js 2/78 (Z).

III, August 18, 1943, Betr. “Umsetzung” von Juden in Konzentrationslager [reproduced from NARA, T-459 Reel 19, fr. 503], in Wolfgang Benz, Konrad Kwiet, and Jürgen Matthäus, eds., *Einsatz im “Reichskommissariat Ostland”: Dokumente zum Völkermord im Baltikum und in Weissrussland, 1941–1944* (Berlin: Metropol, 1998), Doc. 254, p. 266.

## RIGA (TRUPPENWIRTSCHAFTSLAGER)

According to the Stadtkommissar of Riga, the Troop Supply Camp (Truppenwirtschaftslager, TWL) was one of the quarantining sites (*Kasernierungen*) established or absorbed by the Riga-Kaiserwald concentration camp during the liquidation of the Riga ghetto. First mentioned on August 18, 1943, the subcamp was intended to hold 700 prisoners, of whom 419 were already quartered at TWL on that date.<sup>1</sup> Located only a few miles from the Kaiserwald main camp at Mežaparks, some of its prisoners originated from the old Kasernierung for the Reichskommissariat Ostland (RKO). According to survivor and Riga chronicler Max Kaufmann, some 350 men, women, and children entered TWL from the Reichskommissariat's quarantining site during the reorganization. TWL's prisoners sorted clothing and other supplies for the German army.

Among the TWL prisoners was Steven Springfield, who volunteered to work in this subcamp in order to escape the vicious conditions inside Kaiserwald. After learning that his older brother and father had been dispatched from the ghetto to Kaiserwald, Springfield attempted to get word to them to volunteer for TWL as well. Regular exchanges of prisoners resulted in the establishment of tenuous lines of communication between prisoners in the TWL and Kaiserwald camps. In particular, TWL prisoners having dental problems had to report to Kaiserwald for treatment, which created opportunities for communications and smuggling. Feigning a toothache, Springfield reported for one such transport, bringing with him contraband socks stolen from the warehouse, in order to contact his family. Upon realizing that the prisoners faced a close search at the Kaiserwald gate, Springfield surreptitiously handed over the socks to a Latvian SS man. His move was too late, however, as another prisoner who had also tried to sneak socks into the main camp panicked and dropped his contraband on the ground. As Springfield's fellow prisoners knew he was carrying ill-gotten goods, and had not seen him hand them over to the Latvian guard, they pressured him into confessing to the SS, lest the remainder face retaliation. Springfield did so in the knowledge that someone else had committed the offense. Tortured in the Kaiserwald bunker, Springfield credited the TWL camp elder, David Kagan, who accompanied two infuriated German guards, with saving his life:

[A]s they entered the bunker, before the Germans had a chance to draw their guns, the camp *Ältester* [elder] started beating me, saying you lousy son of a gun. . . . How dare you . . . steal from the Germans, and kicked me and beat me and kicked me and beat me. I started bleeding profusely from all over my body and he beat me into unconsciousness. But somehow, ironically, that saved my life. He beat me so much that the Germans assumed that I was dead or close to dead. They just turned around and walked out, which I was told later because I was uncon-

scious. I was laying in this bunker for another two or three days and then finally the camp elder came and got me and took me back to [the TWL] camp and it is something which I have never forgotten. Mr. Kagan who did not have a very good reputation from everybody because a lot of people felt that he was too strict and sometimes too merciless, but I must, if I want to be honest, I really have to admit that if not for him I wouldn't be alive today.<sup>2</sup>

Just prior to the camp's evacuation in the summer of 1944, the Kaiserwald medical staff conducted a mass selection of weakened prisoners at TWL. Present were Kaiserwald's camp doctor (Lagerarzt) Dr. Eduard Krebsbach and the SS medic (Sanitätsdienstgrad) Heinz Günther Wisner. Krebsbach and Wisner dispatched the victims by truck to the "base camp command" (Stützpunktkommando), a Kaiserwald euphemism for murder in the nearby forests. Krebsbach was previously the Lagerarzt at Mauthausen, where, in a play on his name, he was called "The Needle" (Spritzbach). Born Heinz von Wisotzky, Wisner had served since 1939 as an SS orderly at Stutthof and Flossenbürg. Promoted to Unterscharführer in the summer of 1943, Wisner joined the Kaiserwald staff on November 1, 1943, where he subsequently advanced in rank to Oberscharführer. Known to the prisoners as "Dr. Wisner," he was sentenced in 1985 to five years' imprisonment by a Düsseldorf court, in connection with the selections committed at this and other Riga Kasernierungen, as well as homicides committed in the Kaiserwald main camp. By the time of his arrest in 1979, Wisner had retired from a mechanical engineering firm located in Düsseldorf.

After succeeding in getting his father and older brother to transfer into TWL, Springfield witnessed the selections that took place in the camp. As his account makes clear, he had to protect his father against the selections:

In the meantime, periodically the Germans would come into our camp, line everybody up in front of a table where one of the Germans would sit. Everybody had to undress naked and walk in front of him, and if there was something he would not like on your body, any scar or anything like that, you went to the left, and left meant certain death. And my father who was an invalid and who was with us at that time yet still on many occasions he would have been doomed if . . . we're [un]able to save him by not letting him go into the line, by sneaking him out. When once I remember my father was taken out and sent to the left, and he was still standing there and waiting [for] the truck to take him away, and the German guard was walking back and forth, and as he turned his back I snuck in. I grabbed my father and pulled him out of there which at that time saved his life.<sup>3</sup>

Springfield's father subsequently perished at Stutthof concentration camp.

According to the International Tracing Service (ITS), the TWL men's camp was dissolved on June 28, 1944, and the women's camp closed in October 1944. According to Springfield, however, the men did not evacuate the TWL subcamp until the fall of 1944. After the sea evacuation, which took them first to Stutthof near Danzig, some of the survivors were moved to one of the Magdeburg subcamps near Buchenwald, according to Kaufmann.

**SOURCES** The Riga (TWL) Kasernierung of Kaiserwald is briefly mentioned in Max Kaufmann, *Churbn Lettland: Die Vernichtung der Juden Lettlands*, ed. Erhard Roy Wiehn, intro. Steven Springfield (1947; repr., Konstanz: Hartung-Gorre Verlag, 1999), pp. 412, 424. TWL is listed as men's and women's subcamps in ITS, *Verzeichnis der Haftstätten unter dem Reichsführer-SS (1933–1945)*, 2 vols. (Arolsen, 1979), 1: 254. The Wisner case (Lfd. Nr. 896) will be included in a forthcoming volume of *Justiz und NS-Verbrechen* but is listed cursorily on the publication's Web site at [www1.jur.uva.nl/junsv](http://www1.jur.uva.nl/junsv). The author would like to thank Dick de Mildt for furnishing supplementary biographical information on Wisner.

Primary sources for this subcamp begin with its listing in the document collection by Wolfgang Benz, Konrad Kwiet, and Jürgen Matthäus, eds., *Einsatz im "Reichskommissariat Ostland": Dokumente zum Völkermord im Baltikum und in Weissrussland, 1941–1944* (Berlin: Metropol, 1998), Doc. 254, pp. 265–266, which reproduces the Riga Stadtkommissar's memorandum on the Riga-Kaiserwald Kasernierungen of August 18, 1943, and copied from NARA. Investigation files for Wisner are available at ZLNW-K under heading 130 Js 2/78 (Z). Steven Springfield provided an oral history of his ordeal in the Riga ghetto, Kaiserwald, and TWL, which is available in video and transcript form in USHMMA, RG-50.030\*0220, March 30, 1990. Born in Riga in 1923, Springfield is the former president of the Jewish Survivors of Latvia.

Joseph Robert White

## RIGA-SPILWE

According to the International Tracing Service (ITS), the SS established a quartering site (*Kasernierung*) for Jewish women at the Spilwe (Spilva) airport on July 5, 1943. On August 5, 1943, a men's camp also opened at the same site. The Luft-

waffe deployed the prisoners on construction and repair details at the airport, whose military significance increased with the Red Army's approach. On August 18, 1943, the Stadtkommissar of Riga reported that Spilwe's planned capacity was 1,500 prisoners, of which 775 were already on-site. Spilwe was 1 of the 13 original Kasernierungen absorbed or established by Kaiserwald.<sup>1</sup> The constant turnover due to horrific working conditions, mistreatment, selections, and epidemics has led one chronicler, Riga ghetto and Kaiserwald survivor Alfred Winter, to estimate that as many as 3,000 Jews passed through this camp.

Before the establishment of the Riga-Kaiserwald concentration camp in March 1943, a small Kasernierung of the Kovno ghetto existed at this site but worked only in support services for the Luftwaffe, not construction. Situated in the Ilgezener Brewery adjacent to the airport, this structure subsequently served as living quarters for the much-larger Spilwe Kasernierung under Kaiserwald's jurisdiction. Its limited space produced catastrophic overcrowding.

On December 1, 1943, SS-Hauptscharführer Gustav Sorge became Spilwe's camp leader (*Lagerführer*). A staff member at the Esterwegen and Sachsenhausen concentration camps whose career in the Inspectorate of Concentration Camps (IKL) dated back to 1934, and who had even been a guard at the Esterwegen early camp in 1933, Sorge lived up to his nickname "Iron Gustav" (*Eiserne Gustav*). During the two years prior to taking command at Spilwe, he had been *Arbeits-einsatzführer* at Vught, the Herzogenbusch main camp, in the Netherlands and served in the summer of 1943 on a "bandit"-hunting (antipartisan) detail for the Higher SS and Police Leader (HSSPF) Ostland. At Spilwe, the new *Lagerführer* imposed a harsh regime along IKL lines, in a departure from many of Kaiserwald's other Kasernierungen.<sup>2</sup> According to Winter, in one incident Sorge emptied the men's barracks one night and forced the prisoners, already weakened by hunger and exhaustion, to perform penal exercises and endure beatings. One former prisoner called this ordeal the "witches' dance," which was similar to collective punishments practiced in the early Emsland camps.<sup>3</sup> On December 15, 1943, Sorge also assumed command of the neighboring camp for army vehicle repair, the Heereskraftfahrzeugpark (HKP). Sorge's deputy at Spilwe was a Luftwaffe Gefreiter, Schuhmacher, who had already been an administrator at the Spilwe Kasernierung before its absorption by Kaiserwald. Schuhmacher enjoyed setting dogs upon the prisoners and otherwise complemented Sorge's brutality. Worsening the situation for the prisoners was the second camp elder (*Lagerältester*), "Mr. X," the nickname of Xavier Abel, the notorious camp elder and German criminal prisoner at Kaiserwald. After replacing the first camp elder, a German Jew named Kohn, Mr. X beat and otherwise harassed the Spilwe prisoners. On January 31, 1944, Sorge was transferred from Spilwe to the Kasernierung at Dondangen. After the September–October 1944 evacuation of Kaiserwald, Sorge assumed command of SS-Baubrigade (Construction Brigade) XII in November 1944, which was organized at Sachsenhausen.

U.S. troops captured him on April 28, 1945, and held him in the SS internment camp at Bad Kreuznach. Sorge's replacement at Spilwe was Dondangen's erstwhile camp leader SS-Oberscharführer Gröschel. Gröschel lost his post at Dondangen because of chronic alcoholism and mismanagement. At Spilwe, he proved susceptible to bribery and drink, in the form of alcohol pilfered by a prisoner, which somewhat tempered his violent behavior.<sup>4</sup>

Spilwe's male and female prisoners worked for the construction firms of Wolf und Döring, Firma Müller, and Organisation Todt (OT), which repaired and maintained the Spilwe airport. The work consisted of laying steel matting on airstrips, hauling heavy construction materials, and other hard labor. Some of the women were transferred to the Kauen/Schaulen subcamp in the spring of 1944, but the ITS erred in claiming that the women's camp closed in April of that year, because Hungarian Jewish women were dispatched to Spilwe from Auschwitz II-Birkenau in June 1944. According to Winter, these women brought the Spilwe prisoners the first reports about gas chambers and crematories.

Josef Katz, a German Jew from Lübeck, was held at both the Spilwe and HKP camps in the spring of 1944. Although he was originally dispatched to work in a garden at HKP, the SS on-site arbitrarily transferred him to Spilwe, where he worked on airfield repair under OT supervision. The Hungarian women at Spilwe, reported Katz, were worked to death. After repeated importuning, Katz succeeded in gaining a place in the garden Kommando at HKP.<sup>5</sup>

The infirmary at Spilwe was little more than a place to die or to be selected for murder. In the spring of 1944, Emil Würth-Tscherne entered Spilwe as a prisoner orderly (Sanitäter). A political prisoner who held the same post at Dachau until late 1943, Würth had no medical experience. During his time at Spilwe, many Jewish women suffered from typhoid fever, which led to numerous selections.<sup>6</sup>

Just prior to the camp's evacuation in the summer of 1944, the Kaiserwald medical staff conducted a mass selection of Spilwe's weakened prisoners. Present were Kaiserwald's camp doctor (Lagerarzt) Dr. Eduard Krebsbach and medic (Sanitätsdienstgrad) Heinz Günther Wisner. Krebsbach and Wisner dispatched the victims by truck to the "base command" (Stützpunktkommando), a Kaiserwald euphemism for murder in the nearby forests. Krebsbach was previously the Lagerarzt at Mauthausen, where, in a play on his name, he was called "The Needle" (Spritzbach). Born Heinz von Wisotzky, Wisner had served since 1939 as an SS orderly at Stutthof and Flossenbürg. Promoted to Unterscharführer in the summer of 1943, Wisner joined the Kaiserwald staff on November 1, 1943, where he subsequently advanced in rank to Oberscharführer. Known to the prisoners as "Dr. Wisner," he was sentenced in 1985 to five years' imprisonment by a Düsseldorf court, in connection with the selections committed at this and other Riga Kasernierungen, as well as homicides committed in the Kaiserwald main camp. By the time of his arrest in 1979, Wisner had retired from a mechanical engineering firm located in Düsseldorf.

Spilwe was closed on August 6, 1944, when the surviving prisoners were marched to the port of Riga, where they boarded the *Bremerhaven* en route to the Stutthof concentration camp in Poland. The conditions aboard ship, which held about 6,400 Jews for three days, were lethal. According to ITS, a small group of Jewish men were retained at Spilwe after the closure, to undertake "clearance work" (*Aufräumungsarbeiten*).<sup>7</sup>

In 1959, the Bonn Landgericht (Regional Court) sentenced Spilwe's former Lagerführer Sorge to life imprisonment plus 15 years for the murder of 67 prisoners and for 20 additional attempted murders. The charges included homicides committed at Esterwegen as early as 1934 and included cases at Sachsenhausen as late as 1942, but the prosecution inexplicably did not charge him with causing any deaths at Spilwe, HKP, or Dondangen.

**SOURCES** This subcamp is discussed at some length in Alfred Winter, *The Ghetto of Riga and Continuance* (Monroe, CT: Self-published, 1998), pp. 97–102. This account must be used with caution, as the author does not cite his sources and often employs the first-person plural, making it difficult to separate his personal testimony from other accounts. The Spilwe subcamp is listed as separate men's and women's camps in ITS, *Verzeichnis der Haftstätten unter dem Reichsführer-SS (1933–1945)*, 2 vols. (Arolsen, 1979), 1: 253. The Wisner case (Lfd. Nr. 896) will be included in a forthcoming volume of *Justiz und NS-Verbrechen* but is listed cursorily on the publication's Web site at [www1.jur.uva.nl/junsv](http://www1.jur.uva.nl/junsv). The author would like to thank Dick de Mildt for furnishing supplementary biographical information on Wisner. Anita Kugler, *Scherwitz: Der jüdische SS-Offizier* (Cologne: Kiepenhauer & Witsch, 2004), p. 411, reports that 6,382 boarded the *Bremerhaven*.

Primary sources for this subcamp begin with its listing in the document collection by Wolfgang Benz, Konrad Kwiet, and Jürgen Matthäus, eds., *Einsatz im "Reichskommissariat Ostland": Dokumente zum Völkermord im Baltikum und in Weissrussland, 1941–1944* (Berlin: Metropol, 1998), Doc. 254, pp. 265–266, which reproduces the Riga Stadtkommissar's memorandum on the Riga-Kaiserwald Kasernierungen of August 18, 1943, and copied from NARA. Investigation files for Wisner are available at ZLNW-K under heading 130 Js 2/78 (Z). The case of Gustav Sorge (8 Ks 1/58) is found in Lfd. Nr. 473, *Justiz und NS-Verbrechen* 15:399–658 (Amsterdam, 1976). The testimony of Emil Würth-Tscherne can be found in P III h No. 1007 (Riga-Kaiserwald, Spilwe), "Report of an 'Aryan' Political Prisoner," in *Testaments to the Holocaust*, orig. WL, <http://159.104.6.6/testaments/en/t3h.asp>. A published testimony of Spilwe is Josef Katz, *One Who Came Back: The Diary of a Jewish Survivor*, trans. Hilda Reach (New York: Herzl Press and Bergen-Belsen Memorial Press, 1973).

## RIGA-STRASDENHOF (AEG/VEF)

In 1942, the second-largest German electronics enterprise the Allgemeine Elektrizitäts-Gesellschaft (AEG) took over the Latvian state-owned electronics factory Valsts Elektrotehniska Fabrika (VEF) in Riga-Strasdenhof (Strazdumīva). Between 1943 and 1944, around 800 female Jewish prisoners from the Riga-Kaiserwald concentration camp worked as forced laborers for the AEG, manufacturing cables.

In 1941, after the German occupation of Latvia, the AEG established a sales office in Riga to promote its products mostly produced in Berlin with the Reichskommissariat Ostland (RKO). Products such as plugs, heating elements, cook tops, and electric ovens, which the AEG sent to Riga until October 1941, could only be sold in compliance with the Reich Economics Ministry (RWM) to the Wehrmacht for its winter quarters, workshops, and accommodations.

In the same period, the AEG prepared to take over the VEF, which had been compulsorily acquired by the German Military Administration. The VEF was the largest Latvian industrial enterprise. One of the best-known VEF products was a small camera, the Minox, which had been mass-produced in Riga beginning in 1938.

When the Wehrmacht took over the factory in the summer of 1941, it appointed an AEG representative as temporary director. Factory production valued at approximately 7 million Reichsmark (RM) was set with the production almost exclusively for the Wehrmacht. The factory was to supply the needs of the army, Luftwaffe, and navy, producing radios, batteries for flashlights, hand held microphones, head microphones, transmitting and receiving devices, as well as other electrical equipment.<sup>1</sup> The AEG continued producing these items even after it leased the VEF factory in 1942. “The new factory,” as it was referred to in an AEG directive in October 1942, “shall supply primarily the Wehrmacht, so that for the time being there shall be no supplies for civilian requirements.”<sup>2</sup> The factory was formally operated by the AEG through a new company, AEG Ostlandwerk GmbH, but from a technical and production point of view, it was ad-

ministered by the AEG-owned Apparatewerk Treptow in Berlin. Berlin supplied all the employees for the management of the Riga factory. The majority continued with their careers after the war in management positions in the AEG concern.

The VEF factory was the largest AEG production site in occupied Eastern Europe, even larger than the Krakau Kabelwerk, if measured by the number of employees. In May 1943, it had 4,800 Latvian employees both on the production floor and in offices.

In the late summer of 1943, the AEG began to use female Jewish prisoners from the Kaiserwald concentration camp in the production process. The decision to use a large number of concentration camp prisoners arose probably as the result of a decline in the number of Latvian employees from 4,600 to 3,350. Additionally, Jews, beginning July 1943, could only be used outside the Riga-Kaiserwald concentration camp in large enterprises vital for the war effort that had their sub-camps (called “quartering sites,” or *Kasernierungen*) to accommodate the prisoners.<sup>3</sup>

In August or September 1943, around 200 mostly young women were used in the factory to test their suitability. The numbers were eventually increased to approximately 800.<sup>4</sup> Among them were Latvian Jewish women from Riga and Libau as well as German, Lithuanian, Czech, Polish, and Hungarian Jewish women.<sup>5</sup>

The women were taken by truck from the Kaiserwald concentration camp to factory grounds opposite the main VEF factory building on the then Grosse Freiheitsstrasse. Here they were accommodated in a factory building equipped with three-tiered wooden bunk beds. Hygiene was better in the subcamp than in the Kaiserwald concentration camp.

Each day the women had to assemble for roll call, before and after work in the factory. From the end of 1943, the women working in the factory wore prisoner uniforms and wooden shoes. They worked alternatively in three eight-hour shifts in different departments without protective clothing, producing lightbulbs, cables, and batteries.<sup>6</sup> They worked under the supervision of Latvian foremen.<sup>7</sup>

“The people were afraid,” according to Eugenia Borvoskaja, a survivor from Riga born in 1922. “They tried to work good [so] they [would] not to be shot or punished.”<sup>8</sup>

The food from the Kaiserwald concentration camp was always inadequate.<sup>9</sup> Sometimes the women were secretly given food while working by Latvian workers.<sup>10</sup> The survivor, Paula Zaltzman-Frankel, states that they could secretly roast potatoes in the factory.<sup>11</sup>

According to Else Schwarz-Katz, technical director of the factory Herbert Dallmann declined to make additional food available.<sup>12</sup> On the other hand, he intervened for the return of Zaltzman-Frankel and four other concentration camp prisoners after they had been transported by the SS to the Kaiserwald main camp because they were “good workers.”<sup>13</sup>

The use of prisoners ceased in the summer of 1944 in Riga, and the factory was evacuated in the face of the Red Army advance. The AEG transported raw materials such as

copper, lead, and iron from Riga to the Apparatefabrik Trep-tow in Berlin, where some of it was distributed to other AEG factories.<sup>14</sup> Preparations were made to relocate part of the production process to Thorn in Poland, where production would recommence in a 900-square-meter (1,076-square-yard) cellar in the air-raid-safe fortress called Fort XIII. Fort XIII was the most southern part of a defense ring established in the city of Thorn in the nineteenth century.

The concentration camps for women were also to be relocated from Riga to Thorn. On August 9, 1944, approximately 450 women were taken in goods train cars from the Riga factory grounds to the Thorn central railway station, and they were initially held in Fort XIII.

The female concentration camp prisoners were to work in Thorn on the machines also transported from Riga, but the machines would not work. Wehrmacht soldiers were to be quartered in the cellars of Fort XIII in October 1944. As a result, the women were transferred to a newly erected wooden barrack camp on the Vistula. It had three accommodation barracks. The Thorn-Winkenau subcamp was under the control of the Stutthof concentration camp.<sup>15</sup> The SS camp commander was SS-Hauptscharführer Ludwig Blatterspiel, who had been the leader of Kaiserwald's AEG, Strasdenhof (SS-Betriebe), and Heereskraftfahrzeugpark (HKP) subcamps in Riga.<sup>16</sup>

In addition to the first transport of female prisoners at the beginning of August 1944, there were other transports until mid-October 1944 of female prisoners from Riga in the direction of Thorn.<sup>17</sup> The SS did not transport these women in a train to Thorn but by ship via Danzig to the Stutthof concentration camp.<sup>18</sup> From there, at the direction of the SS-Business Administration Main Office (WVHA) in Oranienburg, 250 female concentration camp prisoners were transported on September 13, 1944, most likely to Thorn.<sup>19</sup> On October 30, 1944, another 280 women were transported from the Stutthof concentration camp to Thorn. They were to replace 230 women also transported from Riga to Thorn, who were to be sent by the SS to Stutthof.<sup>20</sup> A Stutthof concentration camp strength report from January 1945 puts the number of female concentration camp prisoners in the Thorn subcamp at 510.<sup>21</sup>

The women in the AEG production process in Thorn put rubber around the cables and probably produced weapons, grenades, and munitions. They also built the barracks for the subcamp.<sup>22</sup>

In January 1945, again in the face of the Red Army advance, it was planned to relocate the AEG assembly line from Thorn. The Thorn subcamp was dissolved at the end of January 1945.<sup>23</sup> The remaining female concentration camp prisoners were forced to march by the SS for 50 kilometers (31 miles) to the city of Bromberg (Bydgoszcz). Shortly before Bromberg, the women were freed when the SS guards fled the Red Army.<sup>24</sup>

**SOURCES** The principal secondary sources that discuss the Riga-Strasdenhof (AEG) subcamp are Max Kaufmann,

*Chubn Lettland: Zur Vernichtung der Juden Lettlands*, ed. Erhard Roy Wiehn (Konstanz: Hartung-Corre Verlag, 1999), p. 404; and Benjamin B. Ferencz, *Lohn des Grauens: Die verweigerte Entschädigung für jüdische Zwangsarbeiter* (Frankfurt am Main: Campus, 1981), p. 152. Background on the Minox camera may be found in Hubert E. Heckmann, *Minox—Variationen in 8x11: Die autorisierte Geschichte der Kleinbildkamera*, foreword by Walter Zapp (Hückelhoven: Wittig, 1992), p. 31. On the Thorn subcamp, see Marek Orski, *Filie obozu koncentracyjnego Stutthof w latach 1939–1945* (Danzig: Muzeum Stutthof w Sztutwie, 1992); Danuta Drywa, *Zagada Zydów w obozie koncentracyjnym Stutthof 1939–1945* (Danzig: Muzeum Stutthof w Sztutwie, 2001), pp. 215–216. The Riga-Strasdenhof (AEG) is listed in ITS, *Verzeichnis der Haftstätten unter dem Reichsführer-SS (1933–1945)*, 2 vols. (Arolsen, 1979), 1:254.

The archival sources on the history of the VEF and the AEG are held in LVVA, the BA-B, LA-B, and BA-MA. Individual documents in the AEG-Firmenarchiv in DTM contain few details on the use of the forced labor. Unpublished survivors' accounts may be found in USHMM in RG-12.004.02 \*02 and \*04, Benjamin Ferencz Collection, Claims against German Industrial Firms Records, 1952–1994, AEG Correspondence. Published memoirs on the AEG subcamp include Paula Zaltzman-Frankel, *Häftling No. 94771*, ed. M. M. Shafir (Montreal: Concordia University Chair in Jewish Studies and Montreal Institute for Genocide and Human Right Studies, 2003); Hartmut Schmidt, *Zwischen Riga und Locarno: Bericht über Hilde Schneider, Christin jüdischer Herkunft, Diakonisse, Ghetto- und KZ-Häftling, Gefängnis-pfarrerin* (Berlin: Wichern, 2001); and Vanessa Schwarz, "My Great Grandmother [Else Schwarz-Katz]," *EI 7* (June 1999): 35–38.

## **RIGA-STRASDENHOF [AKA SS-BETRIEBE, STRAZDENHOF]**

Situated near the Widzemer-Chaussee Bridge on the Jugla River, the SS factory (*Betriebe*) at Strasdenhof (Strazdumviža) was one of the original quartering sites (*Kasernierungen*) absorbed or established by the Riga-Kaiserwald concentration camp with the dissolution of the Riga ghetto. According to the Stadtkommissar of Riga, the subcamp, misspelled Strazdenhof, held 820 Jewish prisoners on August 18, 1943, with a planned deployment of 3,000 male and female prisoners.<sup>1</sup> After the final liquidation of the Riga ghetto on November 2, 1943, the *Kasernierung* held approximately 2,000 inmates, including many children and elderly. While most prisoners manufactured SS uniforms on-site at the SS-owned textile factory, other detachments performed street construction. This *Kasernierung* is not to be confused with the Allgemeine Elektrizitäts-Gesellschaft (AEG) subcamp at Strasdenhof, which fell under separate administration.

Under the camp leader (Lagerführer), SS-Unterscharführer Hermann "Usche" Dering, the guards consisted of ethnic Germans (*Volksdeutsche*) from Transylvania. Some prisoner accounts also listed Dering's rank as Untersturmführer. Dering's deputy was Hans Hoffmann. According to survivors, Dering and Hoffmann were responsible for Strasdenhof's harsh conditions. Prisoners were routinely forced to perform "sport," an SS euphemism for penal exercises de-

signed to exhaust, humiliate, and kill; roll calls were used for beatings and humiliation; and the food conditions were completely inadequate for the camp population.<sup>2</sup>

Compounding Dering's and Hoffmann's brutal rule was the first of three successive camp elders, Hans Bruhn. A German "green" prisoner who was at Sachsenhausen and then a Kaiserwald block elder, Bruhn imposed a vicious regime at Strasdenhof. In 1949, survivor Jacob Efrat described Bruhn:

I was later transferred to Strasdenhof where, to my misfortune, Bruhn [misspelled Bruns] was put in charge at the same time, so that I had to remain under his control for a longer period. He saw to it that the conditions in the camp were so bad that many died daily of starvation and ill-treatment. He supervised any possible attempts at smuggling food into the camp so strictly by examining all incomers at the gates, that it was impossible to supplement the hopelessly inadequate ration. Besides this he instituted the custom of awaiting the prisoners on their return from work in the evening, when they were tired to exhaustion and then forcing them to take part in various exercises, marching in the grounds and generally sapping their last remaining energies. His brutality rose to such heights at the camp that he beat 2 men to death with his own hands and buried them on the banks of the Jugle [*sic*].<sup>3</sup>

Bruhn's successors were Reinhold Rosenmeyer and Rago. According to Efrat, conditions somewhat improved after Bruhn's transfer.

The conditions in this subcamp prompted many escape attempts. According to the first chronicler of the Latvian Holocaust, Max Kaufmann, the following prisoners attempted to flee: Rachil Bermann, Brudner, Luba Drujan, Liolia Gittelson, the Keile sisters, Raja (a female prisoner), Salgaller, the Seidemann brothers, and the column leader (Kolonnenführer) Morein. According to Samuel Atlas, 10 prisoners caught hiding in the factory incurred severe beatings from Hoffmann after their discovery.<sup>4</sup>

Eyewitness accounts and West German trial reports document two major selections or "operations" (*Aktionen*) at Strasdenhof, as the roundups of weakened Jews were termed at Kaiserwald. Survivor Bella Gepen Mirkin accused Hoffmann of overseeing the "Children's Operation" (*Kinderaktion*) in March 1944, which resulted in the removal of between 60 and 90 young prisoners.<sup>5</sup> Taken to "base camp command" (Stützpunktkommando), the Kaiserwald euphemism for a shooting site in the forest, the children's selection was part of an overall targeting of Jewish children in the Riga *Kasernierungen* in the spring of 1944. The second, much larger Aktion occurred in early August 1944, shortly before the camp's evacuation. Estimates place the number of victims in this selection at around two-thirds of the camp's population, as all Jews over 30 and under 18 were boarded on trucks and taken to the forests. Efrat estimated that the SS removed some 1,300 prison-

ers during this Aktion, leaving only 500 in the camp. Hoffmann allegedly coaxed the victims to cooperate by promising their imminent evacuation from Riga aboard ship.<sup>6</sup>

The SS participants in the second selection included Kaiserwald's Sanitätsdienstgrad Heinz Günther Wisner. If this selection followed the pattern found in other Riga Kasernierungen preparing for evacuation in the summer of 1944, then it is likely that Kaiserwald Lagerarzt Dr. Eduard Krebsbach was present as well. Born Heinz von Wisotzky, Wisner had served since 1939 as an SS orderly at Stutthof and Flossenbürg. Promoted to Unterscharführer in the summer of 1943, Wisner joined the Kaiserwald staff on November 1, 1943, where he subsequently advanced in rank to Oberscharführer. Known to the prisoners as "Dr. Wisner," he was sentenced in 1985 to five years' imprisonment by a Düsseldorf court, in connection with the selections committed at this and other Riga Kasernierungen, as well as homicides committed in the Kaiserwald main camp. By the time of his arrest in 1979, Wisner had retired from a mechanical engineering firm located in Düsseldorf.

When Strasdenhof (SS-Betriebe) was evacuated on August 6, 1944, the camp population stood at approximately 700. The survivors boarded the *Bremerhaven* at the port of Riga for a harrowing three-day journey to Danzig, where barges then took them to Stutthof, via the Vistula River.

**SOURCES** The Strasdenhof (SS-Betriebe) Kasernierung of Riga-Kaiserwald concentration camp is described in Max Kaufmann, *Churbn Lettland: Die Vernichtung der Juden Lettlands*, ed. Erhard Roy Wiehn, intro. by Steven Springfield (1947; repr., Konstanz: Hartung-Gorre Verlag, 1999), pp. 408–411. Kaufmann recounts the escape attempts and brutal treatment and places the estimate of the camp population at the time of the evacuation. The subcamp is briefly mentioned in Anita Kugler, *Scherwitz: Der jüdische SS-Offizier* (Cologne: Kiepenhauer & Witsch, 2004), p. 354; and in Margers Vestermanis, *Juden in Riga: Auf den Spuren des Lebens und Wirkens einer ermordeten Minderheit; ein historischer Wegweiser* (Bremen: Edition Temmen, 1995), pp. 70–71. Strasdenhof (SS-Betriebe) is listed as separate men's and women's camps in ITS, *Verzeichnis der Haftstätten unter dem Reichsführer-SS (1933–1945)*, 2 vols. (Arolsen, 1979), 1:255. The Wisner case (Lfd. Nr. 896) will be included in a forthcoming volume of *Justiz und NS-Verbrechen* but is listed cursorily on the publication's Web site at [www1.jur.uva.nl/junsv](http://www1.jur.uva.nl/junsv). The author would like to thank Dick de Mildt for furnishing supplementary biographical information on Wisner.

Primary sources for Strasdenhof (SS-Betriebe) begin with its listing in the documents compiled by Wolfgang Benz, Konrad Kwiet, and Jürgen Matthäus, eds., *Einsatz im "Reichskommissariat Ostland": Dokumente zum Völkermord im Baltikum und in Weissrussland, 1941–1944* (Berlin: Metropol, 1998), Doc. 254, pp. 265–266, which reproduces the Riga Stadtkommissar's memorandum on the Riga-Kaiserwald Kasernierung

of August 18, 1943, and copied from NARA. Investigation files for Wisner are available at ZLNW-K under heading 130 Js 2/78 (Z). Unpublished testimonies on Strasdenhof (SS-Betriebe) may be found in *Testaments to the Holocaust*, <http://159.104.6.6/testaments/en/t3h.asp>, and are based upon the collection of WL. ## SACHSENHAUSEN MAIN CAMP

Situated next to the Inspectorate of Concentration Camps (IKL, later Office Group D of the SS-Business Administration Main Office, or WVHA) at Oranienburg, just north of Berlin, Sachsenhausen stood at the center of the Nazi concentration camp system. Begun in the summer of 1936, just before the Berlin Olympics, it was the first new concentration camp built after Hitler gave full control of that system to the SS in 1934. As such, Sachsenhausen was intended to be a model facility; indeed, the Nazi press corps toured it for propaganda purposes in March 1938. Nevertheless, the camp's striking triangular layout—an unwieldy blend of art deco and Jeremy Bentham's Panopticon—proved ill-suited to expansion, and subsequent camps would follow more conventional patterns.

The SS brought the first 50 prisoners to the proposed site from Esterwegen in July 1936, followed by another 200 before the month was out. Construction began immediately. The protective detention camp, where the prisoners would be housed, took the shape of an isosceles triangle, with a narrow, rectangular headquarters area superimposed over the left side of the triangle's base. Entrance to the camp was through an imposing gatehouse, topped by a guard tower. With the camp barracks laid out below in a radial, fanlike pattern, guards in this tower had an unobstructed line of sight virtually throughout the camp. Additional towers punctuated the camp's stone perimeter wall, inside of which ran an electrified barbed-wire fence. Just inside the main gate was the camp's sprawling, semicircular roll-call area. Painted on the ends of the barracks abutting it was one of the implausibly exhortative slogans favored in the 1930s-era camps: "There is one path to freedom! Its milestones are: diligence, obedience, honesty, order, cleanliness, sobriety, truthfulness, spirit of sacrifice, and love of the Fatherland!"

At the beginning of 1937, the number of prisoners at Sachsenhausen stood at about 1,650.<sup>1</sup> Many were former inmates of Esterwegen, who had arrived when that camp closed in September 1936. By early 1938, Sachsenhausen's population had grown to over 2,500. Most inmates were either political prisoners under "protective" detention (47 percent) or criminal prisoners under "preventive" detention (40 percent). The next largest group comprised Jehovah's Witnesses (9 percent), followed by homosexuals (1 percent).<sup>2</sup> These proportions changed dramatically in June, when the arrival of 6,232 "asocial" or "work-shy" prisoners almost tripled the camp's population, pushing it above 9,200.<sup>3</sup> This number gradually receded over the next few months, until November, when the temporary presence of at least 6,000 Jewish prisoners after *Kristallnacht* caused the total to surge briefly above 14,000.<sup>4</sup> By the year's end, this number had retreated to about 8,300, with the asocials constituting an absolute majority (62 percent), the political prisoners a strong minority (32 percent), and the criminals only a relative handful (5 percent).<sup>5</sup>

With the construction of additional barracks in 1939, Sachsenhausen attained a design capacity of approximately 10,000 prisoners. The war, however, soon led to renewed overcrowding. More than 2,500 Polish prisoners arrived during the first six months of the conflict, as did some 1,200 Czech students following anti-German demonstrations in Prague in November 1939. By mid-February 1940, the total number of prisoners had reached nearly 11,900, while Sachsenhausen's first two subcamps, at Wewelsburg and Berlin-Lichterfelde, held over 300 more.<sup>6</sup> In May 1940, another 1,200 Polish prisoners arrived from the Pawiak Prison in Warsaw. Soviet prisoners of war (POWs) began to arrive in August 1941, only to be shot by the thousands. As of early December, some 1,500 remained alive. Not counting the POWs, the number of prisoners at the main camp had fallen to about 8,000 by that time, while the population of the subcamps, which now numbered eight, had risen to around 2,350. The wartime internationalization of the camp continued apace, with Poles reaching 30 percent of the civilian prisoners, and Czechs, 12 percent.<sup>7</sup>

Together with its subcamps, Sachsenhausen began 1943 with more than 16,500 prisoners and ended the year with more than 28,000.<sup>8</sup> At the conclusion of the year, 35 percent were designated as "protective custody" detainees, now a thoroughly heterogeneous, multinational category. Counted separately, Soviet civilian prisoners constituted nearly as large a group, at 32 percent (with the surviving 761 Soviet POWs another 3 percent). Polish prisoners, also counted separately, formed another significant block at 20 percent. The next largest group, amounting to 6 percent, comprised the common criminals in "preventive detention" (as distinct from an additional 1 percent who were actual convicts from the German penitentiary system being held in "security custody"). Asocials constituted another 3 percent; Jehovah's Witnesses, less than 1 percent. Other categories of prisoners were present at Sachsenhausen only in small numbers at this time.<sup>9</sup>

The year 1944 saw explosive growth in the number of subcamps throughout the concentration camp system, and Sachsenhausen was no exception. Most of its new subcamps were located either in Berlin or within the province of Brandenburg. Some of them, including several taken over from Ravensbrück late in the year, held female prisoners. The main camp, however, remained restricted to men, with the exception of the handful of inmates at the camp brothel, opened in mid-1943. Effective January 1, 1945, Sachsenhausen expanded further by taking over responsibility from Mittelbau for the SS-Baubrigaden (Construction Brigades), a group of mobile subcamps assigned to repair bomb damage. As of that date, the entire Sachsenhausen system encompassed nearly 61,000 prisoners, including over 13,200 women. Two weeks later, the total had risen to more than 66,000.<sup>10</sup> In the final months of the war, this number would swell further, with the evacuation of camps closer to the front.

An aerial view of Sachsenhausen concentration camp, revealing its distinctive triangular shape, May 19, 1944.  
USHMM WS #32064, COURTESY OF YVA

At Sachsenhausen, as at other Nazi camps, Jewish prisoners were singled out for harsh treatment. Their numbers, however, fluctuated considerably over time. On January 3, 1937, there were only 21 Jewish prisoners at Sachsenhausen.<sup>11</sup> The number remained small until the campaign against the work-shy in June 1938 brought over 800 Jews to the camp.<sup>12</sup> Of these, 457 remained by the time Kristallnacht flooded the camp with Jewish prisoners in November, creating nightmarish conditions. Releases began almost immediately in exchange for commitments to emi-

grate. As of December 31, 1938, Sachsenhausen had 1,345 Jews, some 16 percent of the camp's total population: 958 were classified as protective custody prisoners, 386 as asocials, and 1 as a homosexual.<sup>13</sup> By February 18, 1940, the number had dropped to 1,218; by December 5, 1941, to 559.<sup>14</sup> In October 1942, most of the remaining Jewish prisoners were sent to Auschwitz, after Heinrich Himmler ordered the expulsion of Jews from the concentration camps within Germany's prewar borders. Sachsenhausen retained only a few with specialized skills needed either for the se-

Sachsenhausen prisoners assemble in columns, 1938. Note the enlarged triangles symbolizing reasons for arrest. The triangle system was only standardized during the previous year.  
USHMM WS #76278, COURTESY OF NARA

cret Operation Bernhard, which counterfeited foreign banknotes, or for the so-called clock detail, which processed watches stolen from the Jews murdered at Auschwitz. The number of these prisoners grew gradually from 45 at the end of January 1943 to 159 at the end of December.<sup>15</sup> There was no large-scale return of Jews to Sachsenhausen until the second half of 1944, when labor shortages forced Himmler to bring thousands of mostly Hungarian and Polish Jews to concentration camps in Germany. Additional Jewish prisoners arrived as a result of camp evacuations.

Sachsenhausen maintained special facilities to segregate politically prominent prisoners, such as the former Austrian chancellor Kurt von Schuschnigg and the anti-Nazi pastor Martin Niemöller. Many of those seized in connection with the attempt on Hitler's life on July 20, 1944, also passed through Sachsenhausen. Politically significant POWs were held there as well, including Joseph Stalin's eldest son, who was killed by a guard in April 1943.

Early in Sachsenhausen's existence, the focus of prisoner work assignments was the construction of the camp and other facilities in the immediate vicinity, such as the large industrial and construction yards nearby. By the beginning of 1938, roughly half the prisoners were assigned inside the camp and roughly half in 47 work details outside.<sup>16</sup> In the late summer of 1938, after the SS founded the German Earth and Stone Works, Ltd. (DESt) as a moneymaking enterprise, the prisoners began construction of what was intended to be the largest brickworks in the world, the Klinkerwerk in nearby Lehnitz. Some 1,500 prisoners marched to and from the site each day until 1941, when the camp administration decided to house the prisoners there and turn the Klinkerwerk into a subcamp.

The war inevitably brought about changes in the work done by concentration camp prisoners. In March 1942, plans

were made to increase the use of the camps for armaments production, and 6,000 Sachsenhausen prisoners were designated for that work initially. By the end of the year, the camp was heavily involved in war production, manufacturing everything from fighter planes to gas masks. The prisoners at the Klinkerwerk, for example, began to produce shells instead of bricks, while an unfinished stone-processing plant was converted into a facility for recycling military wreckage. The push for increased production continued, feeding the proliferation of subcamps in 1944, as the SS increasingly hired out the prisoners to private firms.

When there was work to be done in the concentration camps, the SS generally had the prisoners do it. This principle extended to much of the organizational work within the camp, which fell largely to privileged prisoners, who carried out such important functions as determining work assignments. They were also in a favorable position to monitor the activities of the headquarters staff and in some cases to obstruct the implementation of harmful policies. At the head of the prisoner self-administration was the camp elder (Lagerältester), who answered directly to the SS officer in

"Kozioł!" (Stocks!), by Sachsenhausen prisoner, Wiktor Siminski, shows a prisoner enduring a lashing by a Kapo with the slogan of the camp gate, "Work Will Make You Free" (*Arbeit macht Frei*) in the background, nd.  
USHMM WS #26852, COURTESY OF ALEKSANDER KULISIEWICZ

charge of the protective custody camp. This difficult and dangerous post often changed hands, as different groups of prisoners schemed to obtain it for themselves. The political prisoner Harry Naujoks, who was camp elder from April 1939 to October 1942, is generally regarded, at least among his fellow politicals, as having acted with integrity and courage. Some other camp elders had less honorable records, particularly those selected from among the criminals and asocials.

Sachsenhausen had six commandants in less than nine years. The first was Karl Koch, who established the camp and then left in July 1937 to make his reputation at Buchenwald. The incompetent Hans Helwig became Sachsenhausen's second commandant, serving for one year before entering a forced retirement. The hard-driving Hermann Baranowski succeeded him, running the camp with a heavy hand from July 1938 until his death in February 1940. Taking Baranowski's place was the hapless Walter Eisfeld, who immediately fumbled a visit by Himmler, and was removed in March. His replacement, Hans Loritz, came to grief in the great concentration camp corruption scandal of 1942, which brought down the commandants of Dachau, Lublin-Majdanek, Gross-Rosen, and Flossenbürg as well. Anton Kaindl, a grimly efficient administrator, took charge thereafter, shaking up the camp headquarters staff upon his arrival in August 1942 and remaining firmly in power until the end.

Sachsenhausen's earliest guards were members of the Death's Head guard unit SS-Ostfriesland, who accompanied the first prisoners from Esterwegen. When Esterwegen closed in September 1936, the rest of that camp's guards came to Sachsenhausen as well, followed by guards from SS-Brandenburg after the closure of Columbia-Haus in November. In September 1937, the existing SS-Death's Head Units were consolidated, organized by camp, and renamed, with the one at Sachsenhausen becoming the SS-Totenkopfstandarte

II "Brandenburg." The autumn of 1939 saw a tremendous turnover in personnel, as SS reservists were called up to release active-duty guards for service in the nascent SS-Death's Head Division. The guard unit was renamed the SS-Totenkopfsturmbann Sachsenhausen in about September 1940, then renamed again the SS-Totenkopfwachbataillon Sachsenhausen in January 1943.

Gustav Wegner commanded the guard force from December 1940 until April 1945. He rebuilt the unit from the ground up, paying special attention to the military and ideological training of new recruits. By November 1941, there were 9 companies of guards, numbering over 1,400 men.<sup>17</sup> By December 1944, there were 13 companies, with nearly 2,700 guards, while the camp headquarters staff numbered another 277.<sup>18</sup> As of January 1, 1945, the total number of SS guard personnel assigned to Sachsenhausen was 3,356, including 351 female guards at the subcamps for women prisoners.<sup>19</sup>

The SS-Death's Head guards at Sachsenhausen were little different from those at other concentration camps. The war quickly mingled the prewar cadres, who had specifically volunteered for service as camp guards, with Waffen-SS personnel of every kind. Hundreds of ethnic Germans from Eastern Europe received their initial Waffen-SS training at Sachsenhausen in 1942 and 1943; others arrived already trained from different camps or from combat units. In November and December 1943, several hundred mostly Ukrainian guards came to Sachsenhausen from the Trawniki training camp near Lublin, Poland, after the WVHA took control of it and began to siphon off its personnel for use in the Reich. Sachsenhausen acted as the hub in a distribution system that fed these men to camps throughout the WVHA system. In 1944, large numbers of Wehrmacht soldiers were absorbed into the Waffen-SS and assigned to guard duty at Sachsenhausen, as at other camps. Finally, in early 1945, many middle-aged men from around Berlin were called up for guard service at Sachsenhausen.

Prisoners at Sachsenhausen were tormented and killed in many different ways. A gallows in the roll-call area was used for hangings. Shootings were more common and often took place in a special pit in the industrial yard. This shooting pit was next to the so-called Station Z, a killing facility built in 1942 to replace a wooden structure used during the shooting of Soviet POWs the previous year. Station Z held a gas chamber (built in 1943), the camp crematorium, and a room where prisoners who believed they were having their height measured were shot in the nape of the neck through a hole in the wall. Although Kaindl later testified that he ordered the gas chamber built because other killing methods were insufficient, it does not appear to have seen heavy use. Random killings, meanwhile, could take place virtually anywhere in the camp, and no prisoner was ever safe. Sachsenhausen also provided unwilling subjects for often fatal medical experiments.

Nazi concentration camps were noted for their sadistic punishments. In addition to standard techniques such as

"Lorry Fatigue-Party," by Sachsenhausen prisoner Odd Nansen, c. 1944; the sign on the barracks reads, "For freedom."  
USHMM WS #73557, COURTESY OF AGS

whipping or close confinement, Sachsenhausen had specializations of its own, most notably the “Saxon salute” (*Sachsen-gruss*), in which prisoners had to squat over a bayonet for hours with their arms outstretched. Sachsenhausen also had a special punishment detail. Initially assigned to the Klinkerwerk, its luckless prisoners later tested artificial shoe leather on grueling forced marches around a special track, an ordeal few survived.

Disease, malnutrition, and exhaustion claimed the majority of lives lost at Sachsenhausen. As bad as conditions were, however, they did not become so dire as at many other camps until late in the war. Thus, the death rate for Sachsenhausen was 0.7 percent in August 1943, compared to 2.1 percent for the concentration camp system as a whole during that month.<sup>20</sup> Sachsenhausen officially recorded 6,356 deaths from January 1, 1940, to June 30, 1942.<sup>21</sup> Another 3,807 deaths were recorded during 1943.<sup>22</sup> It was during the chaotic last months of the war, for which few statistics survive, that the death rate spiraled upward, while the final evacuation cost thousands of lives as well. When the Red Army arrived at the main camp on April 22, 1945, only about 3,000 incapacitated prisoners remained there. The rest were marching to the northwest, where those who survived were gradually liberated over the next two weeks.

It is impossible to determine the total number of dead for Sachsenhausen, but the figure of at least 100,000 reached by a Soviet Military Tribunal in 1947, and subsequently accepted by many, appears high. A more plausible estimate would be somewhere between 40,000 and 50,000.

**SOURCES** Far less secondary literature has been published on Sachsenhausen than its importance warrants, but some valuable recent studies include Hermann Kaienburg, *Der Militär- und Wirtschaftskomplex der SS im KZ-Standort Sachsenhausen-Oranienburg: Schnittpunkt von KZ-System, Waffen-SS und Judenmord* (Berlin: Metropol, 2006); and the essay in vol. 3 of *Der Ort des Terrors: Geschichte der nationalsozialistischen Konzentrationslager*, ed. Wolfgang Benz and Barbara Distel (Munich: C.H. Beck, 2006). Günter Morsch of the Sachsenhausen Memorial has also edited or coedited a number of useful volumes of collected articles for the series “Schriftenreihe der Stiftung Brandenburgische Gedenkstätten.” Full-length studies of a popular character include: *Sachsenhausen: Dokumente, Aussagen, Forschungsergebnisse und Erlebnisberichte über das ehemalige Konzentrationslager Sachsenhausen*, 4th rev. ed. (Berlin: VEB Deutscher Verlag der Wissenschaften, 1982); AOS, *Sachso: Au coeur du système concentrationnaire nazi* (Paris: Minuit/Plon, 1982); Jean Bezaud, *Oranienbourg 1933–1935, Sachsenhausen 1936–1945: Étude* (Maulévrier: Hérault, 1989); Manuela R. Hrdlicka, *Alltag im KZ: Das Lager Sachsenhausen bei Berlin* (Opladen: Leske & Budrich, 1992).

A relatively large number of records from Sachsenhausen survived the war. Most were captured by the Red Army and are now held by the RGVA in fond 1367, a collection that has been selectively microfilmed by the USHMMA. A portion of the guards’ personnel records passed from Moscow to the East German security services and now reposes at the

BA-DH. Records of the guard unit’s 7th Company fell into American hands. Some now reside at BA-BL, as collection “NS4 Sa,” and are also available from NARA, as microfilm collection T580, roll 321, Ordner 88. The 7th Company’s personnel records, however, went to the BDC (now incorporated into the BA), where they were irretrievably broken up and cataloged by personal name. Some archival materials, mostly copies, are available at the Sachsenhausen Memorial in Oranienburg. Records from postwar Soviet trials of former Sachsenhausen personnel are held at the CAFSSRF, where they remain inaccessible to the general public, although copies of some materials are held by USHMMA. For information regarding West German trials, see C.F. Rüter and D.W. de Milde, comps., *Die westdeutschen Strafverfahren wegen nationalsozialistischer Tötungsverbrechen 1945–1997* (Amsterdam: APA—Holland University Press and K.G. Saur, 1998). The 573-page verdict in the case against Gustav Sorge and Wilhelm Schubert (Landgericht Bonn 8 Ks 1/58) provides detailed information about the camp. Survivor accounts include: Arnold Weiss-Rüthel, *Nacht und Nebel: Ein Sachsenhausenbuch* (Berlin: VVN-Verlag, 1949); Harry Naujoks, *Mein Leben im KZ Sachsenhausen 1936–1942: Erinnerungen des ehemaligen Lagerältesten* (Cologne: Röderberg, 1987); Albert Christel, *Apokalypse unserer Tage: Erinnerungen an das KZ Sachsenhausen* (Frankfurt am Main: Materialis, 1987); Jan Religa, *Wspomnienia o Sachsenhausen* (Warsaw: Spółdzielcze, 1990). The Sachsenhausen Memorial has published a CD-ROM featuring six hours of interviews with 20 survivors under the title *Gegen das Vergessen: Häftlingsalltag im KZ Sachsenhausen 1936–1945*, 2nd rev. ed. (Munich: United Soft Media, 2004).

## SACHSENHAUSEN SUBCAMP SYSTEM

The “concentration camp of the Reich capital city” (KZ der Reichshauptstadt) Sachsenhausen was established in 1936 as a model and main camp in Oranienburg to the north of Berlin. The first subcamps were established as bases for future main camps—Neuengamme (1938–1940), Ravensbrück (1938–1939), Gross-Rosen (1940–1941), and Wewelsburg (1940). With the beginning of the war against the Soviet Union, the first regular subcamps were established in Berlin (Kastanienallee and Lichterfelde), in Oranienburg (Heinkel and Klinkerwerk), as well as at SS bases (Prettin, Hohenlychen, Drögen, Brandenburg); 5 of the first 7 subcamps lasted until the end of the war. In 1942, a subcamp was established at an SS position (Glaw) and another for a future main camp in Kiev (Ukraine) and at a secret research station for the Reichspost (Kleinmachnow Hakeburg). The first Construction Brigade or Baubrigade (“West”) was attached to Sachsenhausen. In 1943, the number of subcamps increased to 26. The system now ex-

Prisoners perform forced labor at the Lehnitz (Klinkerwerk) subcamp of Sachsenhausen, nd.

USHMM WS #32063, COURTESY OF AGS

panded geographically. In the area around Berlin, many camps were established that were connected to backup quarters for the Nazi Party, SS, and Reich authorities. In the area of the SS bases or SS-Standorte Bad Saarow and Jamlitz (“Kurmark”) there were established in 1943 2 larger camps (Bad Saarow and Lieberose), and in the following year, 4 other subcamps. Beginning in 1943, 5 camps were established at private armaments firms, a direction that reached its climax in 1944 when there were 32 subcamps. In 1944, Sachsenhausen had 59 subcamps. Almost all of the subcamps, which ultimately held the majority of Sachsenhausen prisoners, were located in the immediate vicinity around Berlin or in Berlin itself.

In the early subcamps, there were mostly German criminal and political prisoners. Later, the number of foreign prisoners increased. Until 1942, with the exception of Drögen, there were no Jewish prisoners in any of the Sachsenhausen subcamps. From 1944, more and more subcamps were established with Jewish prisoners. The Sachsenhausen concentration camp system of subcamps is closely connected with the history of National Socialism in Berlin, the area around Brandenburg, and the genocide of the European Jews. There were in Berlin-Brandenburg around 90 Sachsenhausen camps holding between 1,000 and up to 10,000 prisoners. The largest camp, with almost 10,000 prisoners, was the Heinkelwerk in Oranienburg. Lieberose, the second largest, was also the largest Jewish subcamp. Camps established in 1944 were mostly located near Berlin armaments producers. From the summer of 1944, increasing numbers of Jewish prisoners were brought from Berlin/Brandenburg to Auschwitz. It is known that Jewish prisoners were in 26 camps. At the beginning of 1945, there were 11,079 Jewish prisoners, of whom one-third alone were held in the Lieberose subcamp. No new camps were formed in 1945. What is important is that at the end in 15 subcamps, mostly the so-called SS-Baubrigaden, there were more than 7,000 prisoners cleaning up rubble, mostly in southern areas of the Reich. Sachsenhausen was in charge of these subcamps. In the confusion of marches and dissolutions shortly before the end of the war, Pölitz near Stettin was transferred from Stutthof to Sachsenhausen. The Reich Security Main Office (RSHA) subcamps at the troop training grounds in Döberitz and Hermsdorf appear only briefly in SS statistics. The small camps completely disappear from the statistics. The current state of research indicates that there were 92 sites for Sachsenhausen subcamps.

There were 21 subcamps for females as part of the Sachsenhausen concentration camp. All of them were either created or transferred in 1944 from the Ravensbrück concentration camp to Sachsenhausen. More than 13,000 women were held in the camps. On January 26, 1945, there were under the control of the Sachsenhausen concentration

camp 55,541 prisoners, of whom 32,347 were held in the subcamps, that is, almost 60 percent.

The degree of difficulty of labor in the camps varied according to the nature of the work. In the Berlin subcamps, the work was mostly in armaments and was performed under extremely difficult conditions. Noteworthy is that the majority of subcamps at SS sites from 1943, where mostly buildings and barracks were constructed (there were also heavy earthworks), were connected to backup quarters.

Until 1944, the majority of deaths in the subcamps were caused by mistreatment by the SS, and in many cases, the SS intentionally murdered the prisoners. Noteworthy of these camps is the Klinkerwerk subcamp, which also functioned as a punishment camp. From 1944, above all in the camps with Jewish prisoners, there were mass deaths, caused by intentionally insufficient food supplies, a lack of medical care, and the generally poor quality of the buildings. A good example is the Lieberose subcamp, where from the autumn of 1944 more than 60 percent of the prisoners died. During an extermination action at the beginning of February 1945, 1,242 prisoners were shot in this subcamp. Around 1,000 sick prisoners had already been taken to be killed in Auschwitz II-Birkenau before they could die from the work at Lieberose.

The SS camp personnel came mostly from the main camp's command office. That is, they had mostly served in the SS-Totenkopf-Wachbataillon Sachsenhausen in the main camp, from where after a certain period they were transferred to other duties within the camp. From there, mostly as block leaders (Blockführer), or in administration, they were transferred to the subcamps. A small number of camp leaders (Lagerführer) and block leaders in the subcamps were from the Security Service (SD), the Wehrmacht, or Luftwaffe. Almost all of these SS-Führer had served as SS soldiers at the front. A large number were wounded and were no longer fit for active service and for this reason served in the concentration camps. Many block and camp leaders served consecutively in different subcamps. Beginning in 1943–1944, more and more ethnic Germans from Yugoslavia, Hungary, and Romania were deployed as guards. The Lieberose subcamp had its own SS-Wachbataillon 4 “Kurmark,” consisting mostly of Yugoslavian and Romanian ethnic Germans, who answered not to the SS-Business Administration Main Office (WVHA) but directly to the SS-Leadership Main Office (FHA).

Prisoner solidarity was stronger when there were large national groups in a subcamp (such as the Norwegians in Bad

Saarow). Such solidarity could be instrumental in ensuring the survival of individual prisoners. Solidarity was weaker where the SS was able to prevent prisoner solidarity, such as by installing criminals as prisoner-functionaries. The effectiveness of the solidarity was also heavily affected by the degree of brutality by the camp personnel.

Although the source material is scant, escapes were made from all camps. Relatively little is known about sabotage in armaments firms. In Lieberose, Jewish prisoners who defended themselves during the mass murder of 1,300 prisoners by the camp leaders suffered life-threatening injuries.

Almost all of the 72 subcamps in 1945, for which there is documentary evidence, were dissolved between February and April 21, 1945, when they were pulled back into the main camp. The exceptions were Wulkow and Schwarzhöhe, which were evacuated in the direction of the Theresienstadt ghetto, or cases such as Königs Wusterhausen, Falkensee, and Belzig, which were liberated either in part or wholly by the Red Army.

**SOURCES** To date there has been no systematic research on the subcamps. The Sachsenhausen Memorial has sponsored a diploma thesis, which for the first time attempts to order known knowledge about the subcamps: Uwe Hofschläger, “Funktion und Bedeutung der Aussenlager des Konzentrationslagers Sachsenhausen” (Diplomarbeit, Freien Universität Berlin, 1997), held under file listing AG-S, D.A. 5147. Each year, the memorial organizes workshops on the subcamps in which historians and local people take part, such as the Tagungsmappe Workshop, SBG, ed., “Die Aussenlager der Konzentrationslager Sachsenhausen und Ravensbrück” (Internationale Jugendbegegnungsstätte Ravensbrück, October 17–18, 2003). For most of the larger subcamps, essays and sometimes brochures and monographs have been published. Dissertations have been written on the Klinkerwerken Oranienburg and Lieberose. A short text was recently published that gives an overview of the Sachsenhausen subcamps in Wolfgang Benz and Barbara Distel, eds., *Der Ort des Terrors: Geschichte der nationalsozialistischen Konzentrationslager*, vol. 3, *Sachsenhausen, Buchenwald* (Munich: C.H. Beck, 2006).

Source material comes for the large part from the AG-S, research material from local sources, the BA-L, court archives, and local archives. There are scarcely any primary documents other than the Veränderungsmeldungen in the AG-S. Other important new sources are the increasing number of interviews held since the 1980s with camp survivors.

## BAD SAAROW

In the summer of 1943, the SS-Main Command Office (Führungshauptamt [FHA]) began to relocate its offices from the German capital Berlin. At the same, it began, in the area of Bad Saarow, a major construction program of building a subterranean Intelligence Center (Nachrichtenzentrale) in the Rauener Mountains to the south of Fürstenwalde.

Following the removal of Admiral Canaris as chief of the Abwehr (Counterintelligence), Reichsführer-SS Heinrich Himmler ensured that the overflow subcamp for the SS, which had been in development from the autumn of 1943, was linked to the reorganization of the German secret service.

The project "Relocation of SS Offices" (*Verlagerung von SS Dienststellen*) from the capital, which was endangered by bombs, operated from the end of July 1943 under the code name "Siegfried."<sup>1</sup> Project SS-*Nachrichtenkaserne* (Intelligence Bunker) operated under the code names "Fuchsbau" (fox den) and "Dachsbau" (badger den).<sup>2</sup>

The areas administered by the SS garrison offices at Bad Saarow included, from 1943 on, these Sachsenhausen subcamps: Bad Saarow (also known, incorrectly, as Ketschendorf), Fürstenwalde, Storkow, Spreenhagen, and Kolpin.

The first record of the "SS-Branch Office Bad Saarow" is at the end of May 1943.<sup>3</sup> On August 4, 1943, the head of the SS-FHA, Jüttner, ordered the transfer of Amtsgruppe B (Office Group B) to location I in Radlow; Amtsgruppe C to location I in Radlow, Lindenberg, Glau, and Pieskow; and Amtsgruppe D to Sellendorf/Golsen. Amtsgruppe A had already been relocated.<sup>4</sup> Located in the overflow quarters were villas for Himmler's deputy Gürtler as well as Gestapo Chief Heinrich Müller and Sepp Dietrich, the commander of the Leibstandarte "Adolf Hitler." These buildings were also constructed by prisoners in the Bad Saarow area.<sup>5</sup>

Planning for the SS-Intelligence Project "Fuchsbau" began in July 1943. The SS-FHA negotiated with the State Forestry Administration over land for "Fuchsbau," including barracks in the Dubrow Mountains, to the south of Langewahl near Fürstenwalde. The subcamp would be named "Waldlager Führungsamt der Waffen-SS" (Forest Camp Waffen-SS Command Office). For the remainder of the war, the area was a restricted security zone.<sup>6</sup> In March 1944, the site became officially known as "SS-Führungs-Nachrichten-Abteilung, Ketschendorf" (Command Intelligence Section, Ketschendorf).

Construction was probably completed by the end of the war, with only the technical equipment not yet installed. According to the Military Information Office (Wehrmachtsauskunftsstelle [WASSt]), the site was known as "Führungs-Nachrichtenkaserne, Alt-Golm" (Command Intelligence Bunker, Alt-Golm).

From August 2, 1943, on, Bad Saarow functioned as the Construction Administration (Bauleitung) center. The Bad Saarow Central Construction Administration (Zentralbauleitung) was responsible for both the overflow quarters and the "Fuchsbau" intelligence center projects.

Officially, Bad Saarow, like Kurmark in Jamlitz, operated as a central Construction Administration within the Reich Nord Building Inspectorate. As of May 1944, the Bad Saarow Zentralbauleitung was in charge of the Bad Saarow, Fuchsbau, Storkow, Kolpin, and Trebnitz Construction Administrations.<sup>7</sup> The Spreenhagen construction site also reported to the Bad Saarow Zentralbauleitung. While the Building Administration of Bad Saarow, Storkow, Kolpin, and Trebnitz functioned as SS overflow quarters, the Fuchsbau Bauleitung was in the first instance responsible for the construction of the SS-Intelligence Bunker.

Beginning on January 2, 1944, the Bad Saarow SS-Zentralbauleitung in Bad Saarow was under the command of SS-Untersturmführer Hans-Gustav Bauer, who was born in Nürnberg in 1912.<sup>8</sup> SS-Oberscharführer Ernst Rapp, born in 1912 in Stuttgart,<sup>9</sup> was supervisor of the Bad Saarow Construction Administration. SS-Unterscharführer Paul Pörschmann,<sup>10</sup> SS-Rottenführer Heinrich Liese,<sup>11</sup> Meynke,<sup>12</sup> and SS-Sturmbannführer König have also been named as local construction superintendents in Bad Saarow who were also said to be in charge of the guards.<sup>13</sup>

The Bad Saarow subcamp was close to the site of the Intelligence Bunker "Fuchsbau." As early as October 1943, a detainee camp with three barracks,<sup>14</sup> in the immediate vicinity of Fürstenwalde in the Rauener Mountains south of the Berlin-Frankfurt (on the Oder) Autobahn, had been established for Fuchsbau.

The most important building site, however, was the SS-Intelligence Bunker, which was to be constructed in the Rauener Mountains.

By the end of October 1943, the prisoners had constructed 5 accommodation barracks for the SS and a building for the Intelligence Command Operation in the immediate vicinity of the camp. The construction of a further 18 buildings had been approved, and an additional 12 were planned for a later date. The subcamp was located right at the Frankfurt/Oder Autobahn in the area known as Ketschendorf.<sup>15</sup> It was constructed for 900 prisoners. The highest number of prisoners, 950, was recorded for October 1944.<sup>16</sup>

The subcamp commandant was SS-Sturmscharführer Willy Nurrek, born in 1898 in Scherpingen near Danzig. Nurrek's deputy was SS-Unterscharführer Willy Bonowski, born in 1911.<sup>17</sup> Other block leaders were SS-Rottenführer Heinrich Liese and SS-Unterscharführer Paul Pörschmann. Oberscharführer Karl Leukel, born in 1899 in Eiserfeld, was the supervisor of the guards.

In the end, the subcamp consisted of four barracks for prisoners. The prisoners came from 22 countries. There were Ukrainians, Serbs, Russians, Poles, Lithuanians, French, Norwegians, Danes, Germans, and others, including 100 young people and 200 Norwegians. It is said that there was also a half-Jewish Hungarian who had arrived as an "Aryan" at Bad Saarow via Auschwitz.<sup>18</sup>

The camp had four watchtowers and was enclosed in a charged double barbed-wire fence.<sup>19</sup> The SS daily deployed

100 SS men, who arrived each morning at the subcamp to guard the prisoners.

Survivors have reported several murders arising from the sadism of the guards and from attempts to escape. The Czech potter Fuchs, about 45 years of age, is said to have been shot because he washed himself at a spring after work.<sup>20</sup> A Ukrainian inmate is said to have fled in December 1944 and to have been hanged at the Bad Saarow subcamp, under the supervision of SS-Obersturmführer Höhn from Sachsenhausen.<sup>21</sup>

Sick prisoners were treated in barracks four by a Polish doctor and Polish dentist.<sup>22</sup> Each week 20 to 30 sick prisoners were returned to Sachsenhausen. The camp elder was reportedly Malchow;<sup>23</sup> the cook, the prisoner Wangelin, was from Hamburg.<sup>24</sup>

At the end of December 1944, there were 729 prisoners<sup>25</sup> in the Bad Saarow subcamp. On February 12, 1945, there were only 169 prisoners.<sup>26</sup> From January 1945 on, the guards at the subcamp gate were armed with hand grenades, which hung from their belts.<sup>27</sup>

The subcamp was dissolved on April 15, 1945, when the prisoners were evacuated on foot in the direction of the Erkner railway station. About one-third of the prisoners fled during a bombing raid upon their arrival at a Berlin station. This possibly occurred on April 16 and 17, 1945. According to prisoner reports, only about 70 prisoners from the Bad Saarow subcamp arrived at Sachsenhausen.<sup>28</sup>

In October 1945, the British Military Government investigated a probable member of the SS, Will Thormann, interned in the British occupation zone for the mistreatment of prisoners, especially Poles, in Bad Saarow between January 1944 and January 1945.<sup>29</sup> For unknown reasons, a former Bad Saarow prisoner, Franz Herich, was interned after the war in the British internment camp Esterwegen.<sup>30</sup> Also interned by the British was Adam Engelmann. It is not known whether he was an inmate or a member of the SS.<sup>31</sup>

Beginning in 1969, the Main Commission for the Investigation of Hitlerite Crimes in Poland began investigating camps at Fürstenwalde and Bad Saarow.<sup>32</sup>

**SOURCES** The only published source on Bad Saarow is the memoirs of Lars To, *Vi Ventet—Wir warteten . . . Nachrichtenbunker "Fuchsbau"* (Fürstenwalde, 1996).

Details of the prehistory of the subcamp and the SS-FHA are located in the BA-B, Bestand NS 33 and NS 3; and BLHA. Memoirs are kept in the AG-S and in Potsdam BLHA. Individual documents about the subcamp and SS guards can be found in the PRO and in the AG-S. The original Veränderungsmeldungen are in the CAFSSRF. Copies of them can be accessed at the AG-S.

## BEERFELDE

The Beerfelde subcamp was located in the district of Lebus to the northeast of Berlin. It existed from the summer of 1943 and was connected with an SS duty station. There are said to have been about 50 male prisoners in the camp.<sup>1</sup>

Based on Belgian sources, the International Tracing Service (ITS) first made reference to this subcamp in its 1949 catalog.

The Committee of the Anti-Fascist Resistance Fighters in the German Democratic Republic (Komitee der Antifaschistischen Widerstandskämpfer in der Deutschen Demokratischen Republik, KdAW-DDR) referred to Beerfelde in the list of work detachments and subcamps in its 1967 publication on Sachsenhausen.

Subsequent investigations by the Central Office of State Justice Administrations, in Ludwigsburg in the Federal Republic of Germany did not reveal any other details about this camp.<sup>2</sup>

**SOURCES** Secondary source references for this camp begin with its entry in *Das nationalsozialistische Lagersystem (CCP)*, ed. Martin Weinmann, with Anne Kaiser and Ursula Krause-Schmitt, prepared originally by ITS (1949–1951; repr., with new intro. matter, Frankfurt am Main: Zweitausendeins, 1990), p. 264; and DaW-DDR, ed., *Damals in Sachsenhausen* (Berlin, 1967), p. 60.

The primary sources for this subcamp begin with the ZdL investigation, now BA-L.

## BELZIG

In 1934, the Treuenbrietzen metalware factory (Gebrüder Kopp, Berlin) began to build the Roederhof munitions factory in Belzig. From 1935 on, it manufactured infantry rifle munitions; from 1938 on, 2cm anti-aircraft munitions as well. The existence of the factory all but eliminated unemployment in the region, even before a two-shift system was introduced, and from 1937 on, involuntary workers from the Rhineland, and later from Austria and the Sudetenland, came to Belzig.

When World War II began in 1939, the demand for munitions rose, and so foreign workers were also ordered to Belzig. In 1942, 1,250 forced laborers and 150 prisoners of war (POWs) were put into a labor camp. Soon the camp next to the munitions factory was being expanded.

In late 1943, construction began on a new barracks camp next to the existing one; the two were separated by an electrified barbed-wire fence. In August 1944, approximately 750 women were transported 140 kilometers (87 miles) from the Ravensbrück concentration camp. They were housed in four wooden barracks. Within the fence there was also an infirmary, a working barracks with a punishment cell (known as

the death cell), and a combination latrine and washroom. The SS barracks stood outside the fence.

The roughly 750 prisoners included approximately 250 Poles, 200 Soviet citizens, 140 Belgians, 75 French, 7 Czechs, 6 Yugoslavs, 3 Germans, 2 each Italians and Hungarians, and 1 prisoner from Britain.<sup>1</sup>

The imprisoned women had to work 12-hour shifts every day except Sundays and holidays. The Roederhof factory paid the Ravensbrück administration 0.70 Reichsmark (RM) per prisoner per day. Under the supervision of female SS overseers and German master workers, the prisoners had to carry out all the work of munitions production. They received beatings and curses for trivial things, from the guards and the German factory personnel as well. The prisoners could only use the toilets after the SS overseer sounded a whistle.

The women reported that the German overseers, such as Otto Haseloff and Hermann Gericke, also found opportunities to supply the prisoners secretly with food, medicine, and information.

The SS leadership's goal was the systematic physical and psychological annihilation of the concentration camp prisoners. The prisoners experienced inhuman living conditions and hard labor for 12 hours per day in the munitions factory. They wore striped uniforms that they received in Ravensbrück. In the barracks they slept in extremely close quarters, on straw sacks on two-tiered bunks. The rations were meager to begin with, decreased steadily, and would be withdrawn as punishment. Other punishments could include beatings with whips, punishment assemblies that lasted until prisoners collapsed, and individual punishments of the most inhuman sorts; all of this served to terrorize the victims. If a prisoner collapsed under punishment, she would be revived with ice-cold water. In winter, prisoners were also punished by being made to stand for hours in the cold. The result of all this was emaciation to the point of appearing skeletal, sickness, and depression. There was seldom any medical treatment. Assignment to the infirmary usually meant death.

Bans were announced: The arrogance of the SS guards went so far that the prisoners were not allowed to look them in the face. If it happened anyway, the prisoner was immediately punished with blows of every kind. There was no information about the world outside, although every now and then the locals could secretly slip them a newspaper.

No exact count of deaths in Belzig is possible. The commandant, SS-Oberscharführer Gerhard Lehmann, said in his last interrogation on May 5, 1965, that 50 to 60 prisoners died of exhaustion and sickness.

The transport manager for the factory, Mrs. Zimmermann, could remember very well that from the autumn of 1944 until early 1945 a wagon would come from the Ravensbrück Fürstenberg subcamp every three weeks with new prisoners to replace those who had died. In Belzig the wagon would be loaded with the dead and sent to the crematorium at Brandenburg (Havel). There is no documentary evidence on this point, but one can assume that the number of dead was significantly higher than Lehmann indicated.

From the beginning of 1945 on, the deceased prisoners were buried in the Gertraudten cemetery in Belzig. For this point, too, there is no documentation.

The SS command at Sachsenhausen provided Belzig with its commandant, 6 SS men, and 20 female SS overseers.

On November 1, 1944, Lehmann, who had the nickname “Crooked Neck” (Schiefhals), arrived. Earlier he had been in the Buchenwald, Sachsenhausen, and Lieberose concentration camps, and he brought the necessary “experience” with him. His brutality in dealing with the prisoners is perceptible in the available event reports. Belgian prisoner Auguste Lambrecht, prisoner number 10218, reported that Lehmann shot six women during the death march.

In the book, . . . und Nachts Kartoffelschälen, SS overseer Margot Kunz maintained that Belzig was only an “education camp” and that there was no factory work, only labor in the forest. This was, however, only valid for the months of March and April 1945, when there was neither material nor power for armaments production in the factory. Marie Berthier (prisoner number 10025) contradicted Kunz’s statement that she had interacted affectionately with the prisoners and that “there was only one box on the ears.” Berthier stated that, among others, her comrade Madam Sudaqua, because she was Jewish, was beaten in the forest.

On April 24, 1945, at 11:30 A.M., the city commandant of Belzig gave the order that the camp was to be evacuated in the direction of Görzke, Ziesar, Plaue, and Görden (perhaps the psychiatric clinic). The day before, armored units of the Red Army had taken Treuenbrietzen, only 20 kilometers (12.4 miles) away, and so the alarm was raised in Belzig.

That afternoon, the prisoners were briefly informed that the punishment for attempting to escape was death. Some 600 women began the march under SS guard, while 72 ill prisoners were left to themselves in the camp. By the time darkness fell, the column had traveled only 9 kilometers (5.6 miles), to the town of Dangelndorf, short of Görzke. For 6 women, this was a death march; the SS commandant shot them and left them in the ditch.

On the second day the prisoner column reached the military exercise grounds in Altengrabow. They found emergency quarters in the old sheep farm. The SS guard force diminished little by little; several overseers put on prisoner clothing and left in the direction of the Elbe River.

On May 1, 1945, the prisoners, together with other female forced laborers and POWs, declared their self-liberation.

U.S. troops arrived in Altengrabow from Zerbst on May 3, cared for the prisoners, and took the first women away. Of the 72 women who remained in Belzig, 8 died, and a French woman was shot by the guards. The survivors were freed by the Red Army on May 3, following the peaceful surrender of the city of Belzig.

Preliminary proceedings against Commandant Lehmann led nowhere. No former prisoners were called as witnesses, and the German court released him.

Kunz was sentenced to death by a Soviet military court; later a German Democratic Republic (DDR) court sentenced

her to 10 years’ imprisonment. In the Federal Republic of Germany (FRG), she was recognized as a “victim of Stalinism” in 1993 and received recompense for her imprisonment in the sum of 64,350 deutschemark (DM). Because of protests, however, especially in the media, the recognition was later canceled. The guard Frieda Werner was sentenced to 3 years’ imprisonment by the state court in Halle on April 27, 1948. Of the other guards, it is only known that they managed to get over the Elbe into western Germany before May 1, 1945, and so escaped any punishment in the East.

**SOURCES** Information on Belzig may be found in the following sources: Gerhard Dorbritz, *Schicksale—Dokumentation über das Zwangsarbeiterlager Roederhof in Belzig* (Belzig: 2001); the brochure by Dorbritz, *Rüstungsbetriebe Kopp & Co. (1924–1945)* (Belzig, 2003); Elfi Hartenstein, . . . und Nachts Kartoffelschälen: Verfolgt, Verschwiegen, Verdrängt; Frauen berichtet aus Nachkriegslagern; Annäherung an ein Kapitel DDR-Vergangeheit (Berg am Starnberger See: Verlagsgesellschaft Berg, 1992); and the brochure in Flemish by Rene Motmanns, “Mijn belevenissen tijdens de tweede wereldoorlo—Augusta Lambrecht” (n.p., n.d.).

## NOTE

1. Figures compiled by the author from interviews with survivors. All figures are approximate.

## BERLIN (ARADO)

In the fall of 1944, a subcamp of Sachsenhausen was established at the main offices of the Arado-Flugzeugwerke (Arado Aircraft Works) company in Berlin. While there has been some analysis of the Arado-Flugzeugwerke and the Sachsenhausen subcamp in Wittenberg and elsewhere, sources on the Berlin branch of this firm and the camp slave laborers it employed are generally scarce.

According to the International Tracing Service (ITS) entry for Berlin (Arado), women prisoners were incarcerated in the camp.

**SOURCES** There are few primary or secondary sources on the Berlin (Arado) subcamp of Sachsenhausen. For a basic outline of the camp, on which this entry is primarily based, see the entry for Berlin (Arado) in the ITS, *Verzeichnis der Haftstätten unter dem Reichsführer-SS (1933–1945): Konzentrationslager und deren Aussenkommandos sowie andere Haftstätten unter dem Reichsführer-SS in Deutschland und deutsch besetzten Gebieten*, vol. 1 (Arolsen: Der Suchdienst, 1979). Although not always consistent with other sources, the ITS catalog provides brief statistical information about the camp, such as opening and closing dates, type of prisoner work, and so on.

Few relevant primary source materials were found. In the AG-S, there are some file groupings that mention an “Arado” camp, although the information provided in these documents is not necessarily related to the Berlin office, and it is rather vague. See especially file groups D 30 A/8/4 C; D 30

A/7/8, Teil 1; D 30 A 7/14; D 30 A 9/1, Teil 1. Sources that mention Arado at the USHMM primarily focus on the Wittenberg subcamp. There is one oral history with survivor Irene Fleming, who was taken from Ravensbrück to work at “Arado.” Her testimony does not specify which camp or “Arado” plant this was. However, late in the interview she speaks about being in the vicinity of the Elbe, which would place her most likely in the Wittenberg camp. A history of the Arado company was also consulted at the Library of Congress, and there was no mention of any use of labor from the camps. Most analyses of Arado focus on the history of the development of aircraft, and these focus on the plants in Wittenberg, Potsdam, and Warnemünde but rarely on the Berlin office.

Christine Schmidt van der Zanden

## BERLIN (FRIEDRICH-KRAUSE-UFER)

The Friedrich-Krause-Ufer subcamp existed from the end of 1943 as a labor detachment of the Berlin-Lichterfelde subcamp. It was situated close to unused land owned by the Auer-Gesellschaft on the Friedrich-Krause-Ufer near the Moabiter Westhafen. Former prisoner Emil Kamke stated that he was held in Lichterfelde from the middle of 1942 to the end of 1943. In 1943 he was ordered to the Friedrich-Krause-Ufer subcamp.<sup>1</sup>

In the change reports (*Veränderungsmeldungen*), the camp is given a separate entry to that of the Lichterfelde camp for the first time on April 21, 1944, and is described as “external detachment Berlin” (Aussenkommando Berlin) with 300 prisoners. On May 20, it had 459 prisoners. The camp is mentioned for the last time on January 10, 1945, with 289 prisoners.<sup>2</sup>

The prisoners were accommodated in converted ships. The prisoners in the “Berlin” labor detachment removed rubble. The reclaimed building material was transported on the Spree River from the Müggelheim labor camp to Köpenick, where it was used to build emergency accommodations. There was therefore a direct functional connection between the Berlin labor detachment and the Müggelheim labor camp. Former prisoner Hans-Christian Witt stated that he worked not only at the Friedrich-Krause-Ufer but also with the SS-Baubrigade II (Construction Brigade II) in Berlin-Müggelheim, in the office for SS settlement policy (*Siedlungswesen*).<sup>3</sup>

According to the Sachsenhausen Veränderungsmeldungen, the Friedrich-Krause-Ufer subcamp with 278 prisoners was put under the control of the SS-Baubrigade II on January 11, 1945, as the sublabor detachment “IIa Berlin.” Shortly after that, it was relocated to southern Germany.<sup>4</sup> Eleven SS men from the detachment at Friedrich-Krause-Ufer remained, and their leader was probably SS-Sturmscharführer Otto Dittmar.<sup>5</sup>

The Veränderungsmeldungen refer once again to a Sachsenhausen subcamp on March 29, 1945. They refer to a subcamp on the abandoned grounds on the Friedrich-Krause-Ufer, the site of the Berlin labor detachment until the middle of January 1945. The Friedrich-Krause-Ufer subcamp with 100

prisoners existed for only a short time and is last mentioned on April 9, 1945, in the surviving Veränderungsmeldung.<sup>6</sup> It is not known when it was dissolved.

The prisoner numbers in the SS-Baubrigade II remained constant for the spring of 1945. This means that the second camp on the Friedrich-Krause-Ufer was not populated by the relocation of the Baubrigade IIa from southern Germany. The empty space on the Spree, the result of moving the Baubrigade detachment to southern Germany, was used again as a subcamp. It is not known what the prisoners were used for, but it is likely to have been to remove rubble.

According to prisoner statements, one SS-Hauptscharführer Skopnik was the camp leader (Lagerführer) of the Berlin labor detachment. It was thought that at Christmas he procured sweets for the prisoners in return for money, for which act SS block leader (Blockführer) Gustav Sorge wanted to denounce him to the camp command; Sorge had prisoners in Sachsenhausen questioned about the matter.<sup>7</sup> This could in fact have been SS-Oberscharführer Hermann Skopnik, who was camp leader in the Drögen subcamp and who was, in fact, convicted of assisting prisoners.

According to his own statements, SS-Oberscharführer Emil Rieder also claimed to have been camp leader in the Friedrich-Krause-Ufer subcamp. In 1941–1942, he had been stationed in the Glau subcamp and later in Schönefeld.<sup>8</sup> SS-Oberschütze Georg Schneider, among others, guarded the camp. He was captured by the Americans in 1945. He admitted the prisoners were guarded by police while they were working.<sup>9</sup> Other guards in the subcamp were SS-Schütze Hermann Kopfinger (September 25, 1944, to March 26, 1945) and SS-Oberscharführer Walter Schwank (September 15, 1944, to January 30, 1945); after the war, both were interned by the British in Esterwegen.<sup>10</sup>

**SOURCES** There is no secondary literature on the Friedrich-Krause-Ufer subcamp. Just about all sources are located in the AG-S and a few in the ZdL (now the BA-L).

## BERLIN (KASTANIENALLEE)

There is limited information about the subcamp of Sachsenhausen on the Kastanienallee in Berlin. A work commando was sent there to work for a police administration office from September 29 to December 31, 1941, but the work may have extended into April or June 1942.<sup>1</sup> Scholars have estimated that about 50 prisoners were sent to this commando.<sup>2</sup> Ludwig Herwig was a prisoner foreman in the camp from October 1941 until June 1942.<sup>3</sup>

**SOURCES** The main source of secondary information for this entry is an essay by Stefanie Endlich and Wolf Kaiser, “KZ-Häftlinge in der Reichshauptstadt: Aussenlager in Berlin,” *DaHe* 12 (1996), which provides an overview of subcamps in Berlin and its environs. Further information about the Kastanienallee commando of Sachsenhausen may be found in Klaus Drobisch et al., *Sachsenhausen. Mahnung und Verpflichtung* (Oranienburg: Nationalen Mahn- und Gedenkstätte Sachsenhausen, 1989). There is no record of the camp in the catalog of the ITS.

Further information about the origins of the prisoners, the kind of work they did for the police, life in the camp, or which police service employed the prisoners may be uncovered in the AG-S. Primary source material may be found at the archives of the AG-S, files D 30 A/2, 8–83; D 30 A/10/2 A, 22 A; D 30 A/10/ 2B, 5, 84–85; and D 30 A/7/4, 29–32.

## BERLIN (KOMMANDOAMT DER WAFFEN-SS)

From May 2 to December 31, 1941, a subcamp of Sachsenhausen was created in Berlin for the Kommandoamt der Waffen-SS, an office within the SS-Main Command Office (Führungshauptamt, FHA). The subcamp held male prisoners.

**SOURCES** There are virtually no sources that chronicle any information about the subcamp in the Berlin Kommandoamt. For brief information about the Berlin Kommandoamt subcamp, see ITS, *Verzeichnis der Haftstätten unter dem Reichsführer-SS (1933–1945): Konzentrationslager und deren Aussenkommandos sowie andere Haftstätten unter dem Reichsführer-SS in Deutschland und deutsch besetzten Gebieten*, vol. 1 (Arolsen: Der Suchdienst, 1979). Although not always consistent with other sources, the ITS catalog provides brief statistical infor-

mation about the camp, such as opening and closing dates, type of prisoner work, and so on.

Similarly, listings of Sachsenhausen subcamps and work commandos in the indexes at the AG-S—for example, file group I/4—provide no further information about this subcamp.

Christine Schmidt van der Zanden

## BERLIN-HAKENFELDE

The SS established Hakenfelde, a subcamp of Sachsenhausen, in the southern region of Berlin's Spandau district in July 1943. Its function was to house forced laborers. The barracks, which had the capacity to hold 1,000 inmates, stood on Streitstrasse 5–10 across from the Luftfahrtgerätewerk (Aircraft Equipment Works, LGW) firm, a subsidiary of Siemens-Schuckert-Werke (SSW) and Siemens & Halske (S&H).

Siemens, the largest electrical company in Europe, transitioned much of its business efforts to armaments production during World War II. After the Allies bombed and destroyed the major Siemens production plant in the fall of 1943, the company replaced output lost in the air raids by establishing factories near major concentration camps, such as Ravensbrück, to take advantage of forced labor from the camp inmates. Siemens also used laborers from various subcamps and outside work details (Aussenkommandos). Like other subsidiaries of Siemens, the Luftfahrtgerätewerk firm had its own personnel and organizational infrastructure. The factory used forced labor from the Hakenfelde camp, and it also employed outside work details in other sites in the Sudetenland.<sup>1</sup>

In the Berlin-Hakenfelde subcamp of Sachsenhausen, all of the inmates were women, and they worked at the nearby Luftfahrtgerätewerk factory. The prisoners assisted in producing aviation equipment for rearmament efforts. In the Siemens firms that employed prisoner workers, both civil personnel from the company and SS overseers generally supervised the inmates. In firms that used women as workers, female SS auxiliaries supervised the prisoners' work. This was most likely the case in the Luftfahrtgerätewerk factory. There are few, if any, accounts from former inmates about treatment by the guards at work or in the camp.

Further information about the subcamp in Hakenfelde is lacking. The camp was closed in April 1944. However, there is no information about the fate of the Hakenfelde inmates, especially with regard to possible survivors.

**SOURCES** For a general overview of the Sachsenhausen subcamp of Berlin-Hakenfelde, see Stefanie Endlich and Wolf Kaiser, “KZ-Häftlinge in der Reichshauptstadt: Aussenlager in Berlin,” *DaHe* 12 (1996); and Karl-Heinz Roth, “Zwangsarbeit im Siemens-Konzern (1938–1945): Fakten—Kontroversen—Probleme,” in *Konzentrationslager und deutsche Wirtschaft 1939–1945*, ed. Hermann Kaienberg (Opladen: Leske & Budrich, 1996). See also Hans-Rainer Sandvoss, *Widerstand in Spandau* (Berlin: Gedenkstätte Deutsche Wid-

erstand, 1988), for a brief description of the subcamp. The entry for the Berlin-Hakenfelde subcamp in the ITS, *Verzeichnis der Haftstätten unter dem Reichsführer-SS (1933–1945). Konzentrationslager und deren Aussenkommandos sowie andere Haftstätten unter dem Reichsführer-SS in Deutschland und deutsch besetzten Gebieten*, vol. 1 (Arolsen: Der Suchdienst, 1979), provides brief statistical information about the camp, such as opening and closing dates, type of prisoner work, types of prisoners, and so on. For similar information on Berlin-Hakenfelde (for example, its location and opening and closing dates), see Rainer Kubatzki, *Zwangsarbeiter- und Kriegsgefangenenlager: Standorte und Topographie in Berlin und im brandenburgischen Umland, 1939 bis 1945* (Berlin: Berlin Verlag, 2001). *Siemens 1918–1945* by Wilfried Feldenkirchen, the former Siemens archivist, describes the economic history of Luftfahrtgerätekwerk in relation to Siemens & Halske, although there is no analysis of the use of forced labor specifically by Luftfahrtgerätekwerk. For a general overview of forced labor used by Siemens and its subsidiaries, as well as information about postwar compensation to former slave laborers, see Benjamin Ferencz, *Less Than Slaves: Jewish Forced Labor and the Quest for Compensation* (Bloomington: Indiana University Press, 2002); as well as the USHMM Benjamin B. Ferencz Collection, 1919–1994, RG 12.004.19\*14, “Report on the Employment of Slave Labor by the Siemens Concern during World War II, 1961 Feb. 24,” and RG 12.004.19\*16, “KZ-Häftlinge bei Siemens und Osram, 1983.”

There is scarce primary source material on the Berlin-Hakenfelde camp; however, testimony, official reports, and documentation are most likely contained at the AG-S (LAG, XI/4). See especially the research of Klaus Drobisch et al., “Sachsenhausen. Mahnung und Verpflichtung” (R 62/1.) According to Kubatzki, construction files for Berlin-Hakenfelde are stored at the BA, (R4606, 4006). Various oral history and survivor testimony repositories, such as YV or the VHF, may contain witness accounts that would provide additional information about the camp.

Christine Schmidt van der Zanden

Ferencz Collection, RG 12.004.19\*16: KZ-Häftlinge bei Siemens und Osram, 1983; by Klaus Drobisch for the Hauptkommission zur Untersuchung der Naziverbrechen in Polen Internationale Wissenschaftliche Session zum Thema: Naziverbrechen gegen die Menschlichkeit in Polen und Europa, 1933–1945.

## BERLIN-KÖPENICK

The Berlin-Köpenick camp was established in August 1944 as a subcamp to Sachsenhausen. The SS created the camp to house women imprisoned in Ravensbrück who had been brought to the Berlin suburb of Köpenick to work in cable factories. Accounts from former inmates and other witnesses from Berlin-Köpenick vary, and many seem to have combined information about the men's and women's sections. Perhaps because it only existed for about eight months, there is little specific information about the Köpenick subcamp.

Two to four watchtowers as well as barbed wire or electrical fencing surrounded the Köpenick camp, which was located in a suburb of Berlin on the Spree River. There were five barracks in the camp complex altogether, although only the women's barracks were used for the Sachsenhausen subcamp. There is no information about exactly how many barracks were used for the female and the male prisoners. Regina Chmielecka-Zych was transferred to Köpenick from Ravensbrück. She was originally deported from Warsaw to Ravensbrück at age 23. In her testimony after the war, she emphasized that there was no contact between women and men.<sup>1</sup> Although witness reports on the use of the barracks vary, some witnesses have noted that there was a barracks for ill inmates and another for punishment.<sup>2</sup> According to one former inmate's testimony, men were sent on work commandos to remove unexploded shells and to clear rubble from the streets after air raids. However, some of the men's barracks may have been located in Müggelheim, a different slave labor camp in another area of the Köpenick district.<sup>3</sup>

In the late summer of 1944, women who were formerly prisoners in Ravensbrück were transported to the Köpenick camp. The women were mostly from Poland but also from Czechoslovakia, France, Greece, the Soviet Union, and Belgium. Roma and Sinti (Gypsies) women from various countries were also among the inmates. Although there is no specific demographic information about prisoners, including decreases, increases, and death rates, one study has found that the subcamp held as many as 500 women.<sup>4</sup> After the Berlin-Niederschöneweide subcamp of Sachsenhausen was destroyed during an air raid in late February 1945, some of those prisoners were absorbed into the Köpenick camp.<sup>5</sup> Henryk Cierznichowski, a former prisoner in the men's camp, has estimated that about 400 women were brought into the camp at this time; however, no further specific numbers were found.<sup>6</sup>

The women imprisoned in the Berlin-Köpenick subcamp were used as slave laborers by the Carl J. Vogel Draht- und Kabelwerke Company located at Friedrichshagener Strasse 11. Izabella Wotek, a former Polish inmate, has reported that some of the women from the subcamp were also sent to work at the large AEG-Kabelwerke Oberspree factory, which employed thousands of slave laborers from other camps in Köpenick.<sup>7</sup> Some women reported that they were taken to work on a small ship on the Spree. They generally worked in two 12-hour shifts.

There is little information about prisoner culture, such as coping mechanisms or daily life, or about key events in the history of the camp, such as resistance or escape attempts. Living conditions at the Köpenick subcamp were generally poor. The barracks were crowded, dirty, and infested with vermin. The inmates received little food with virtually no nutritional value, such as unsweetened black coffee, small portions of bread, thin soup (sometimes replete with worms), and sporadically, a bit of margarine. Their clothing was dirty (with no possibility of washing) and too thin for the cold weather, and they wore only wooden shoes without socks, even during the winter months. The inmates endured hunger

and daily beatings by the guards, and some were killed during air raids. Jadwiga Nowicka-Stankiewicz, a survivor transported to the camp at age 50, testified that she was forced to sleep out in the open, despite the freezing temperatures, because she had not made her bed to the satisfaction of the guards.<sup>8</sup>

The guard staff was composed of SS men and women hired as SS overseers (SS-Aufsehrinnen). The SS guard post leadership consisted of Oberscharführer Ernst Drews (Postenführer in Köpenick from January 1 to May 2, 1945), Oberscharführer Otto Wilke (in Köpenick from January 24 to April 18, 1945), Unterscharführer Richard Strahl (January to April 1945), and guard duty officer Unterscharführer Wilhelm Knitter (January 1 to May 2, 1945). Some of the guard staff included Rottenführer Otto Schwaz (December 7, 1944, to May 2, 1945), Rottenführer Michael Edling (September 1, 1944, to April 1, 1945), Sturmmann Hans Soremba (December 16, 1944, to April 1945), Schütze Wilhelm Bormann (January 12 to May 2, 1945), and Schütze Paul Donath (January 24 to May 2, 1945).<sup>9</sup> Witness protocols also named two other individuals associated with the guard staff, Wilhelm Fichtorn and Hermann Polz. There are no details about the names or origins of the female SS overseers.

Sources on the dissolution of the Köpenick subcamp vary. According to the International Tracing Service (ITS), the Berlin-Köpenick camp was closed in early April 1945. The Red Army occupied the area, including the C.J. Vogel Draht- und Kabelwerke Company, on April 23, 1945. Cierznia-chowski has recalled that the men were evacuated from the camp on April 21, 1945, and that the women remained and were evacuated separately. Chmielecka-Zych has noted that sometime in April the camp was bombed, and the women were transported to Sachsenhausen. They remained there for a few days and were then evacuated again. Driven out in columns of 500, American and Soviet troops liberated them on May 3, 1945. Nowicka-Stankiewicz's testimony supports this assertion: the women were transported to "a large camp" in April and were evacuated again before they were liberated on May 3. There is no further information about the number of survivors from the Köpenick subcamp.

**SOURCES** The most complete information on the Berlin-Köpenick subcamp in secondary sources can be found in Stefanie Endlich and Wolf Kaiser, "KZ-Häftlinge in der Reichshauptstadt: Aussenlager in Berlin," *DaHe* 12 (1996). The entry for the Berlin-Köpenick subcamp in the ITS, *Verzeichnis der Haftstätten unter dem Reichsführer-SS (1933–1945). Konzentrationslager und deren Aussenkommandos sowie andere Haftstätten unter dem Reichsführer-SS in Deutschland und deutsch besetzten Gebieten*, vol. 1 (Arolsen: Der Suchdienst, 1979), provides brief statistical information about the camp, such as opening and closing dates, type of prisoner work, types of prisoners, and so on (although these are not always consistent with other sources). For further information about the history of Carl J. Vogel Draht- und Kabelwerk, but not specifically the company's use of female slave laborers from the Sachsenhausen subcamp, see Bruno

Scholz and Ludwig Turek, *Es wächst die Kraft. Aus der Geschichte des Kabelwerkes Köpenick* (Berlin: Verlag Tribüne, 1964).

There is scant primary source material on the Berlin-Köpenick camp; however, testimony and official reports and documentation are stored at the AG-S (LAG, XI/4). See German translations of the testimony from the Hauptkommission zur Untersuchung von Hitlerverbrechen (Poland, Szczecin) in file XI/14 of Henryk Cierznia-chowski (Bezirkskommission in Gdańsk), Regenia Chmielecka-Zych, Jadwiga Nowicka-Stankiewicz, Stefania Rapkowska, as well as Izabella Wotek at the AG-S (R 47/8); she was a Polish slave laborer who reported on prisoners' labor in AEG-Kabelwerke Oberspree. See also file D30 A-15 Blatt 1–41: Liste mit Name von ca. 700 SS-Leuten und 8 Häftlingen aus dem KZ Sachsenhausen, Arbeitsstellen, Aussenlagern. According to Rainer Kubatzki's *Zwangsarbeiter- und Kriegsgefangenenlager: Standorte und Topographie in Berlin und im brandenburgischen Umland 1939 bis 1945* (Berlin Verlag, 2001), documents and official reports on the Berlin-Köpenick camp can be found in the BA (R4606, 4020).

## BERLIN-LICHTENRADE

The Berlin-Lichtenrade camp was established in August 1943 as a subcamp to Sachsenhausen. Like other subcamps, the Berlin-Lichtenrade camp was formed in part to spare the cost and time it would take to transport prisoners to and from various work details outside the main camps. The Lichten-

rade camp barracks structure had already been in use from 1941 to incarcerate Soviet prisoners of war (POWs) from the Ukraine. Until the SS took over the administration of the camp in August 1943, it was not so strictly guarded. Soviet POWs circulated among the population, as they were forced to work on farms and in factories; in turn, they sometimes earned a small amount of extra food.

When the SS took over Lichtenrade, the structure absorbed inmates from the Berlin-Marienfelde subcamp of Sachsenhausen who had survived the British bombing of Marienfelde on August 21 and 22, 1943. Because Marienfelde had been totally destroyed, a new holding facility was needed for the surviving prisoners. The Lichtenrade camp consisted of six or seven wooden barracks and one additional barracks that served as living quarters for the camp guards and housed the camp kitchen.<sup>1</sup> Lichtenrade became 1 of 21 subcamps in the Berlin area. It is unclear if the Soviet POWs remained at the Lichtenrade camp with this new addition of prisoners.

Before the arrival of the 400 to 450 Marienfelde prisoners, a triple-thick barbed-wire fence was erected around the Lichtenrade camp. Watchtowers were also constructed along the camp's perimeter, and their spotlights illuminated the grounds, except during air raids when they were shut off. Most of the prisoners who were transferred from Marienfelde to Lichtenrade in August 1943 were political prisoners from Germany, the Soviet Union, Poland, Czechoslovakia, Norway, the Netherlands, France, Spain, and Luxembourg. There are few sources that list the exact number, names, and origins of the inmates. Most sources indicate that the prisoners were men; and testimony files indicate that they ranged in ages from 18 to 51.<sup>2</sup>

Living conditions at the Lichtenrade camp were poor, and neither the inmates' meager diet—which consisted of ersatz coffee, bread, and beet soup—nor their thin clothing prepared them for the grueling and dangerous work they had to perform.<sup>3</sup> Lichtenrade was not a killing center; however, many inmates died from starvation, exhaustion, maltreatment from the guards, and the otherwise harsh living conditions. No exact number of prisoner deaths is available. The prisoners suffered daily cruel treatment, including long roll calls outside in inclement weather and verbal and physical abuse from the camp guards. Many inmates were sent for punishment for any slight reason to the Sachsenhausen main camp, where they were jailed, sentenced to punishment details (*Strafkompanies*), beaten with whips or sticks, or hanged.<sup>4</sup>

The prisoners in Lichtenrade were forced to work in detachments that performed various kinds of hard labor throughout the Berlin area. According to one former prisoner, work details, always supervised by camp guards, reached their destinations in trucks or streetcars.<sup>5</sup> Work detachments constructed air-raid shelters in Berlin, and they were sent to Mahlow, a village just south of Lichtenrade, to rebuild a destroyed military hospital. After air raids, Lichtenrade inmates were forced to clear rubble from the streets, and special details were sent to dismantle unexploded bombs.<sup>6</sup> Prisoners were also deployed to help residents who lived on the out-

skirts of the camp and who needed laborers to reconstruct and repair parts of their homes damaged by bombing attacks. Although it was forbidden, witnesses have asserted that some members of the Nazi administration used prisoners in their private gardens or to construct private residences.

The camp administration was under the jurisdiction of the SS, and the camp commandant, who arrived from his post at Sachsenhausen, was Oberscharführer Daida. His deputy in Lichtenrade was Unterscharführer Hans Zöllner, who came to Lichtenrade in February 1945 from the Lieberose subcamp. Both men not only supervised the administration of the camp but also assisted in punishments and conducted executions, especially of escapees. The officer in charge (*Lagerführer*) of the camp who directly oversaw the prisoners was Hauptscharführer Höhn, and the block leaders (*Blockführers*) were SS men Meierhofer, Meier, and another nicknamed "the Bone Breaker."<sup>7</sup> The Kommandoführer, who directed prisoner work details, was Hauptscharführer Theodor Mussmann. One of the SS guards on staff was Schütze Hans Bitto.<sup>8</sup>

While the SS directed the camp, the guard companies in charge of daily surveillance and supervision of work commandos consisted of reserve police battalions from Berlin-Spandau. The guards who oversaw the work commandos that were sent outside the camp were reported to have been less stringent and brutal toward the prisoners than their colleagues within the camp. Two notable officers were Richard Henneberg and Rudolf Liedtke, who allegedly had antifascist sympathies (Henneberg was a member of the German Social Democratic Party [SPD] prior to 1933).<sup>9</sup> As in other camps, some inmates, called *Kapos*, were selected to act as security police and carry out punishments; one particularly relentless and cruel *Kapo* was Johannes Puhlmann. Other prisoners who held administrative roles in the camp were camp elder (*Lagerältester*) Franz Szymalla (or Schimalla), who had worked in the Sachsenhausen crematorium; Alfred Bringmann, a political prisoner and foreman from the fall of 1943 on; Johann Baudisch, a political prisoner and kitchen foreman; and Martin Kuhnert, who worked in the infirmary office.<sup>10</sup>

There is little information about postwar trials of any of these individuals. Henneberg was active in local government, and Liedtke eventually ran a business after the war. In accounts of the 1947 trial of the Sachsenhausen camp administration conducted by the military tribunal of the Soviet Military Administration in Germany (SMAD) Daida does not appear on lists of accused individuals.<sup>11</sup> Zöllner was tried by the Düsseldorf Regional Court (*Landgericht*), although no information about the outcome of that trial could be found.<sup>12</sup>

Presumably due to the camp's close proximity to Berlin-Lichtenrade residential areas, as well as the opportunities presented by forced labor conducted outside the camp, several inmates attempted to escape. Two Polish prisoners fled from a work commando in the fall of 1943 and were later caught and executed in Sachsenhausen.<sup>13</sup> Fritz Reuter, a German political prisoner active in the Communist underground,

and another inmate, Herbert Tschäpe, fled the camp in June 1944. Tschäpe was caught in July and executed in the Gestapo prison at Prinz-Albrecht-Strasse in Berlin.<sup>14</sup> Three other prisoners attempted to escape in October 1944. Soon after, they were caught, brought back to the Lichtenrade camp, and executed by hanging in front of the rest of the inmates.<sup>15</sup>

The circumstances and timing of the dissolution of the Lichtenrade camp vary according to former prisoners' testimony. In April 1945, as enemy troops closed in, about 350 prisoners were forced to march to Sachsenhausen. About 50 to 80 prisoners remained behind. The evacuated group was sent on a death march from Sachsenhausen to Schwerin, where the SS shot many of the prisoners.<sup>16</sup> Other witnesses contend that the camp began to evacuate prisoners in early 1945 and that many were transferred to another camp at Muggelheim in Köpenick.<sup>17</sup> It is unclear if the Red Army liberated Lichtenrade or if the camp was already evacuated by the time they arrived in late April 1945.

**SOURCES** Most of the information for this entry comes from Ruth Zantow's essay "‘Das sind doch Verbrecher . . .’ Konzentrationslager Sachsenhausen Aussenlager Lichtenrade," in *Direkt vor der Haustür: Berlin-Lichtenrade im Nationalsozialismus*, by Andreas Bräutigam et al. (Berlin: Aktion Sühnezeichen/Friedensdienste, 1990). Zantow provides a concise overview of the Lichtenrade subcamp, as well as reproductions of testimony from former prisoners archived at the Sachsenhausen Memorial (see below). For further information about slave laborers—including Soviet, Czechoslovakian, and other prisoners—in Berlin-Lichtenrade, see "Die waren doch nicht freiwillig hier! Zwangsarbeiter in Lichtenrade," by Thomas Quilitzsch, in the same volume.

The most extensive primary source material is located in the AG-S. See especially file XI/15, which contains testimony from former prisoners gathered by the Hauptkommission zur Untersuchung von Hitlerverbrechen in Polen, the Bezirkskommission zur Untersuchung von Hitlerverbrechen in Szczecin, the Bezirkskommission zur Untersuchung von Hitlerverbrechen in Gdańsk, and the Öffentliche Sitzung der Strafkammer des Kreisgerichts Magdeburg; these provide broad information, details on daily camp life, and personal histories of prisoners in Berlin-Lichtenrade. The AG-S also contains general reports on the subcamps in LAG, FB 653, "Sachsenhausensammlung der 'Lagerarbeitsgemeinschaft Sachsenhausen,'" as well as letters from former prisoners sent to family members. It is unclear what kinds of reports or to which camps these reports correspond; research on-site is most likely needed to clarify this. For further information on the service record of SS officers Daida and Zöllner, see the NARA holdings of the BDC, SS Officer Personnel files, series SSO.

## BERLIN-LICHTERFELDE

The SS established the first Sachsenhausen subcamp in Berlin in 1942, in the suburb of Lichterfelde. Until its liberation, it housed over 1,400 prisoners. The prisoners had to work in more than 40 work detachments for the SS-Building Administration "Reich Nord." They mainly had to perform forced labor at SS stations, including the administration buildings for the centers for terror and persecution. The prisoners regarded Lichterfelde as a relatively "privileged subcamp" because of the living and working conditions.<sup>1</sup> The numerous work detachments gave the prisoners contact to the outside world, and some were able to escape with the help of civilians.

In 1941, what was then the SS-Main Office for Budget and Buildings (Hauptamt Haushalt und Bauten, HHB), under the command of SS-Oberführer Hans Kammler, began planning a subcamp for Lichterfelde that was on the Teltow Canal.<sup>2</sup> An SS construction site, housing for SS guards, and a service barracks for the Berlin Waffen-SS Building Administration were all located outside the subcamp. A residential estate for members of the “SS-Leibstandarte Adolf Hitler” was located very close to the subcamp. A number of SS leaders lived on the estate.<sup>3</sup>

The first prisoners were most likely transported from the Sachsenhausen concentration camp to Berlin-Lichterfelde by the SS on June 23, 1942.<sup>4</sup> Initially, the SS wanted to transfer only German prisoners to the subcamp who did not come from Berlin and who were skilled tradesmen. By 1943, Lichterfelde held about 40 percent Germans and 40 percent Poles. The remaining inmates were Belgians, French, Greeks, Luxembourgers, Norwegians, Austrians, Russians, Czechs, and Ukrainians. There are also said to have been German Sinti and Roma (Gypsies) among the prisoners,<sup>5</sup> as well as seven Russian youths between about 14 and 18 years of age.<sup>6</sup> The subcamp was expanded in March 1943. Until that expansion, according to the SS, there were between 500 and 700 prisoners there. At the beginning of April 1945, there were 1,414 prisoners in the camp.

Punishment was meted out in the subcamp. The forms of punishment included penal standing, the so-called *Sachsen Gruss* (Saxon greeting; squatting for hours with the arms crossed at the back of the head or with the arms stretched out in front), and beatings.<sup>7</sup> There was one execution. Several prisoners died from consuming drinks that the SS contaminated by adding methyl alcohol.<sup>8</sup>

There were seven known escape attempts. Two failed. The first escape attempt from the Lichterfelde subcamp took place at the beginning of July 1942.<sup>9</sup> Austrian Communist Franz Primus was able to escape in May 1944 with the help of civilians.<sup>10</sup> Rudi Wunderlich succeeded in escaping in June 1944 from the SS-Business Administration Main Office (WVHA). On the other hand, the escape attempt by 22-year-old Wilhelm Novak from the Spinnstoffwerke (Spinning Mill) work detachment failed. Novak was hanged in front of the other subcamp prisoners in August 1944. In 1943, in the inner courtyard of the WVHA, two prisoners were hanged for “looting.”

In August 1943, two camp barracks caught on fire during a bombing raid, threatening to incinerate the prisoners who had sought shelter in a shrapnel trench. The SS guards cut the barbed wire, enabling the prisoners to escape the fire.<sup>11</sup>

The subcamp inmates were taken daily by truck, special trams, or the city railway, or marched, to the work detachment sites where work was to be done.<sup>12</sup> The detainees had to construct and maintain SS buildings,<sup>13</sup> construct bunkers for the SS, and increasingly, clean up after air raids.

They worked at the WVHA in Berlin-Lichterfelde; the SS-Main Command Office (Führungshauptamt, FHA) in Berlin-Wilmersdorf; the SS-Main Hospital (Sanitätshaupt-

lager) in Berlin-Lichtenberg; a number of different Waffen-SS food depots in the districts of Wedding, Spandau, and Steglitz; the SS-Race and Settlement Main Office (Rasse- und Siedlungshauptamt); the Reich Criminal Police Office (Reichskriminalpolizeiamt); and the SS-Leibstandarte “Adolf Hitler” located in the former Prussian Main Cadet Academy. They also worked in the Nazi Party Chancellery Office, the Reich Security Main Office (Reichssicherheitshauptamt, RSHA) and its Foreign Espionage Department (Auslandsspionage), which was located in a Jewish old-age home that had been confiscated after the deportation of the inhabitants and their nursing staff in 1941, as well as in the “Neue Reichskanzlei” (New Reichs Chancellery), Hitler’s base.<sup>14</sup>

During a bombing raid on May 7, 1944, on the “terror center,” the offices of the RSHA, where they were working as forced labor, 29 prisoners from Lichterfelde died.<sup>15</sup>

Subcamp inmates had to renovate the private apartments of senior SS commanders such as Ernst Kaltenbrunner, the head of the RSHA, who had moved into an apartment in Berlin-Charlottenburg previously occupied by a Jewish person who had been deported.<sup>16</sup> They also had to construct air-raid shelters for Oswald Pohl, Hans Kammler, and Gustav Lörner.

The Alexanderplatz and Cicerostrasse detachments installed the electrical wiring and connections in the air-raid bunker on the Kurfürstendamm. The Spanische Allee detachment converted a former Jewish sanatorium in Berlin-Zehlendorf into an apartment for “ethnic Germans.”<sup>17</sup>

Prisoners from Lichterfelde were also used by private companies and research institutes: for example, in construction work at the Spinnstoffwerken Zehlendorf, which, among other things, produced parachutes and uniforms for the Wehrmacht.<sup>18</sup> Some 300 female subcamp inmates worked to produce these items. They had been transported to Zehlendorf from Ravensbrück at the end of August and the beginning of September 1944.<sup>19</sup> In November 1944, the women were transferred to Berlin-Niederschöneweide, where they were forced to work at Pertrix, a manufacturer of batteries. There is no other known case of such a transfer of a subcamp of Sachsenhausen.

Lichterfelde subcamp prisoners constructed barracks for Lankwitz, a company in Berlin.<sup>20</sup> They were also said to have worked on construction projects for the electronics company Telefunken<sup>21</sup> as well as in the Reich Mail Research Institute (Forschungsanstalt der Reichspost) at Kleinmachnow, which was developing night-vision devices for military purposes.<sup>22</sup> For the Hotel Adlon, near the Brandenburg Gate, they had to remove rubble.<sup>23</sup> The Under den Linden detachment transported exhibits out of Berlin museums.<sup>24</sup>

An open area for research is the role of other work detachments, such as Jungfernstieg in Berlin-Lichterfelde,<sup>25</sup> where inmates probably did construction work for an RSHA branch office.<sup>26</sup> Another open research topic is the use of inmates for the German Reichsbank in Berlin-Mitte.<sup>27</sup>

SS-Hauptscharführer Gustav Sorge was one of the subcamp commandants. He was known as Eiserner (Iron) Gustav

for his countless sadistic excesses also on prisoners in the main camp, for example, beating them with iron bars.<sup>28</sup> Sorge was dismissed for suspicion of corruption and returned to the Sachsenhausen main camp. He was later transferred to Latvia. He was replaced by SS-Untersturmführer August Höhn, who led the camp until August 1943. Höhn later advanced to become commander of the Labor Deployment Administration (Arbeitseinsatz-Verwaltung) at Sachsenhausen. He administered the total deployment of prisoners in the Sachsenhausen concentration camp.

SS-Untersturmbannführer Alfred Sorge, commandant of SS-Bauleitung (Building Administration) "Reich-Nord," is alleged to have beaten subcamp inmates when inspecting construction sites.<sup>29</sup> Sorge had previously led the construction of the "Small Crematorium," the "Shooting Barracks," and "Station Z" in Sachsenhausen concentration camp's industrial area.<sup>30</sup>

At the beginning of 1945, some of the Lichterfelde prisoners were combined with concentration camp prisoners transferred from Hamburg to Berlin to the SS-Baubrigade II to form the Eisenbahnbaubrigade. Upon dissolution of the camp between April 16 and April 21, 1945, the remaining prisoners were transported by the SS from the city railway station at Lichterfelde-West to Oranienburg. Lichterfelde subcamp prisoners were still arriving in Oranienburg on April 21, and they were probably the last of the prisoners who were sent on the death march toward the Baltic.<sup>31</sup>

**SOURCES** Important details on the history of the Lichterfelde subcamp have been published since the 1980s by local historians and the VVN as well as by Christan Simon, Doris Fürstenberg, and Dieter Fitterling. In 1985, Hans-Peter Sandvoss published "Widerstand in Steglitz und Zehlendorf," a contemporaneous photo that shows the barracks and possibly Rudi Wunderlich. In 1992, the Berlin-Steglitz Bezirksamt published the collection *Steglitz im Dritten Reich. Beiträge zur Geschichte des Nationalsozialismus in Steglitz* (Berlin: Edition Hentrich, 1992). Klaus Leutner published the brochure *Die Geschichte der Wismarer Strasse 26/36 oder das Aussenlager Berlin-Lichterfelde des Konzentrationslagers Sachsenhausen: Mit einem Vorwort des ehemaligen Regierenden Bürgermeisters Klaus Schütz* (Steglitz, 2001). Through the auspices of the AG-S, Rainer Potratz has published a biography of Rudi Wunderlich as part of the permanent exhibition *Die Baracke 39* and on CD, "Gegen das Vergessen." This subcamp is also listed in ITS, *Vorläufigen Verzeichnis der Konzentrationslager und deren Aussenkommandos sowie anderer Haftstätten unter dem Reichsführer-SS in Deutschland und den besetzten Gebieten*, 2 vols. (Arolsen, 1969), 1: 211.

The LA-B and private archives, like Leutner's, hold files on the history of the Lichterfelde subcamp. The AG-S holds reports by former prisoners as well as the bequest of Wunderlich. In 1957, in the GDR, author Liselotte Welskopf-Henrich published a novel, *Jan und Jutta* (Berlin [East]: Tribüne, 1957), which was based on her own life. It depicts the relationship between a young woman and an inmate from the Lichterfelde subcamp who was able to escape with the help of the woman, who later became his wife. The following

memoirs were published in East Berlin: *Zwischen Karneval und Aschermittwoch*, by the artist Hans Grundig (Berlin [East]: Deitz, 1957); and Karl Pioch's *Nie im Abseits* (Berlin [East], 1978). Franz Primus's memoirs are included in the volume published under the title *Niemand und nichts vergessen: Ehemalige Häftlinge aus verschiedenen Ländern berichten über das KZ Sachsenhausen* (Berlin: Elefanten Press, 1984). Wunderlich's memoirs, part of which were prepared underground, were published in 1997 by Joachim Hohmann and Günther Wieland under the title *Konzentrationslager Sachsenhausen bei Oranienburg 1939 bis 1944—Die Aufzeichnungen des KZ-Häftlings Rudolf Wunderlich* (Frankfurt am Main: Lang, 1997).

## BERLIN-MARIENFELDE

Berlin-Marienfelde was established as a subcamp of Sachsenhausen in late 1942 or early 1943.<sup>1</sup> The SS opened the camp as

a satellite from which to dispatch inmates to various work details in the immediate Berlin area. One former prisoner noted that the Marienfelde subcamp was previously used as a slave labor camp for the Telefunken Company and was reconstructed as a concentration camp in mid-1943.<sup>2</sup>

According to testimony from surviving inmates, the camp was situated about 4 kilometers (about 2.5 miles) from Berlin-Lichtenrade (see Sachsenhausen/Berlin-Lichtenrade) and about 500 to 800 meters (about 0.3 to 0.5 miles) from the Lichtenrade train station.<sup>3</sup> The camp consisted of six or seven wooden barracks surrounded by barbed wire. Watchtowers stood at the perimeter of the camp. An SS barracks with an underground bunker was located near the gated entrance.

The 500 to 600 prisoners in Berlin-Marienfelde came from various countries, including the Soviet Union, Poland, Czechoslovakia, Norway, the Netherlands, France, Spain, and Luxembourg, as well as German political prisoners. Some were transferred from Sachsenhausen or its other subcamps, including Berlin-Lichterfelde. A group of about 150 mainly Polish and Soviet prisoners were transferred from Sachsenhausen in the summer of 1943.<sup>4</sup> This number was augmented by 450 prisoners from Lublin-Majdanek shortly thereafter.<sup>5</sup> Most secondary sources and primary accounts have noted that all of the inmates were men.

The prisoners were sent to work in the surrounding Berlin area, clearing the streets and retiling roofs after air raids, building air-raid shelters, removing unexploded bombs, and constructing artificial ponds that were used to extinguish fires (*Feuerlöschbassins*). They were brought to their work details in automobiles or streetcars under the surveillance of reserve police battalions from Berlin-Spandau (see Sachsenhausen/Berlin-Spandau).

The prisoners were generally starved. They were fed 0.75 liters (3.2 cups) of beet soup and 250 grams (8.8 ounces) of bread daily. The Berlin city administration, rather than the Sachsenhausen main camp, provided food for the camp. The inmates endured long roll calls, and there were many incidents of abuse and beatings from the guards. Some prisoners were sent for punishment to Sachsenhausen; many of them died in the main camp.

SS men oversaw the daily administration of the camp. It is unclear who the commander of the Berlin-Marienfelde camp was, but one former inmate, Fritz Reuter, recalled that this commander was a master baker who had his private residence near the camp. Reuter also noted that the commander used materials collected by prisoners from their missions to clear bombed-out Berlin streets to build a new home for himself.<sup>6</sup> One member of the SS staff was Oberscharführer Daida, who later became the commander of the Berlin-Lichtenrade camp. An especially cruel SS officer, Unterscharführer Otto Keiser, who came from a post at Sachsenhausen, constantly abused the prisoners and hit them with the end of his pistol. The guard staff of the camp and work commandos were reserve policemen from Berlin-Spandau. Two notable officers, said to have had antifascist sympathies, were Richard Henneberg,

who had been a member of the German Social Democratic Party (SPD) prior to 1933, and Rudolf Liedtke.<sup>7</sup>

A few months after it opened, on August 21 or 22, 1943, the Berlin-Marienfelde camp was evacuated because of an Allied bombing that completely destroyed the camp. According to Henryk Cierzniachowski, a former inmate, the air raid set many of the camp buildings in flames. The prisoners panicked and ran to find shelter beyond the gates of the camp. The guard staff took shelter in their underground bunkers. The SS men, including Keiser and another guard, Unterscharführer Karl Meier, prevented the prisoners from reaching shelter by shooting at the group. One witness estimates that nearly 36 inmates were killed during the air raid, most from the shootings.<sup>8</sup> At least 4 died in the fires that ensued after the bombing, and many others were wounded with severe burns.<sup>9</sup>

After the air raid, the surviving prisoners were driven into an open field, where they stayed until the early morning of the following day. The SS block leader (Blockführer) from Sachsenhausen, Seifert, came to oversee the situation and ordered one part of the group to be transferred to the Berlin-Lichtenrade camp. The prisoners were marched there under police surveillance. Much of the police and SS staff was transferred to Lichtenrade, including SS-Oberscharführer Daida.<sup>10</sup> The other prisoners from Marienfelde, mainly Polish inmates, were transported to a work camp on Greifswalderstrasse.

There is little or no information about postwar trials of any of the SS administration or police guard staff. After the war, Henneberg was active in local government, and Liedtke eventually ran a business. In accounts of the 1947 trial of the Sachsenhausen camp administration conducted by the Military Tribunal of the Soviet Military Administration (SMAD), Daida, Keiser, and Meier do not appear on lists of accused or tried individuals.

**SOURCES** Both primary and secondary sources that describe the history of the Berlin-Marienfelde camp are scarce, most likely due to the camp's relatively short-lived existence. Most information for this entry comes from Ruth Zantow's essay "Das sind doch Verbrecher . . ." Konzentrationslager Sachsenhausen Aussenlager Lichtenrade," in *Direkt vor der Haustür: Berlin-Lichtenrade im Nationalsozialismus*, by Andreas Bräutigam et al. (Berlin: Aktion Sühnezeichen/Friedensdienste, 1990). Although Zantow focuses predominantly on Berlin-Lichtenrade, she has reproduced several written testimonies from former prisoners of both the Lichtenrade and Marienfelde subcamps of Sachsenhausen in the appendix. For a concise overview of the Marienfelde camp and a broad examination of the subcamps in Berlin (of both Sachsenhausen and Ravensbrück), see Stefanie Endlich and Wolf Kaiser, "KZ-Häftlinge in der Reichshauptstadt: Aussenlager in Berlin," *DaHe* 12 (1996). For brief statistical information, such as opening and closing dates and type of prisoner work, see the entry for Berlin-Marienfelde in the ITS, *Verzeichnis der Haftstätten unter dem Reichsführer-SS (1933–1945). Konzentrationslager und deren Aussenkommandos sowie andere Haftstätten unter dem Reichsführer-SS in Deutschland*

*und deutsch besetzten Gebieten*, vol. 1 (Arolsen: Der Suchdienst, 1979), although it is not always consistent with other sources.

Primary source material on the Berlin-Marienfelde subcamp is stored at the AG-S. Testimony from former prisoners gathered by the Hauptkommission zur Untersuchung von Hitlerverbrechen in Polen, the Bezirkskommission zur Untersuchung von Hitlerverbrechen in Szczecin, the Bezirkskommission zur Untersuchung von Hitlerverbrechen in Gdańsk, and the Öffentliche Sitzung der Strafkammer des Kreisgerichts Magdeburg, which provide some information, details on daily camp life, and personal history of prisoners in Berlin-Marienfelde, can be found in file XI/15, "Ermittlungsverfahren über das Aussenlager Berlin Marienfelde bzw. Berlin-Lichtenrade." (They are also published in Ruth Zantow's essay.) See also AG-S, file D 30 A/10/2 A, 131, for a letter from former prisoner Wilhelm Hollein, which details his experience in the camp. The AG-S also contains general reports on the subcamps in LAG, FB 653, "Sachsenhausensammlung der 'Lagerarbeitsgemeinschaft Sachsenhausen,'" as well as letters from former prisoners sent to family members. More information on the SS officers Daida, Keiser, and Meier may be located in service records in the NARA holdings of the BDC, SS Officer Personnel files, series SSO.

## **BERLIN-NEUKÖLLN ("KRUPP")**

### **[AKA BRAUNAUERSTRASSE]**

A subcamp of the Sachsenhausen concentration camp existed in the Berlin district of Neukölln from late August or September 1944 to April 1945. It held around 500 female prisoners, the majority of whom were Polish Jews. They worked as forced laborers in the armaments factory of the National-Krupp-Registrierkassen GmbH (National Krupp Cash Registers, NCR).

Most of the inmates at Neukölln had been detainees in the Litzmannstadt (Łódź) ghetto. Five or six of them were from Prague, and there were others from Slovakia, Hungary, Austria, Romania, France, the Soviet Union, the Netherlands, and Germany. German Romanies were also held in the camp. Most of the women were between 18 and 42 years of age.

After the dissolution of the ghetto, the detainees were transported to Auschwitz II-Birkenau, where most of them were murdered. Those who ended up in Neukölln remained only a few days in Auschwitz before they were transported directly to Berlin, arriving there possibly on August 26, 1944, but more likely on September 1.<sup>1</sup> On their arrival in Neukölln, they were assigned three-digit numbers.

The SS operated the subcamp under the name "Krupp." Sachsenhausen's Berlin-Lichterfelde subcamp assumed responsibility for the Neukölln subcamp. SS members from Lichterfelde occasionally inspected the Neukölln camp.<sup>2</sup> A few organizational matters, such as food for the SS, were done through Lichterfelde.

The barracks camp was located at 181–189 Braunastrasse (later known as Sonnenallee). Until 1944, it held foreign forced laborers. It was surrounded by a fence, interwoven with thin, pliable cane, which according to some prisoners was electrified. The camp was visible from nearby apartment buildings. The prisoners were housed in three barracks, each of which was divided into separate rooms. They were awakened and called to roll each morning at 4:00 A.M. A 10-minute march took them to the factory, the entrance of which had above it a sign with the word "Krupp."

NCR used the inmates for heavy labor in the armaments industry. They had to work two shifts a day, each 12 hours long, electro-galvanizing aircraft parts. The workers suffered from the heat and burns from flying sparks. On several occasions, there were work accidents in which women lost fingers from the presses. Civilian personnel supervised the forced laborers. The prisoners recall in particular the brutal supervision of one German foreman.

No work was done on Sundays, but the women were required to work in the camp. Some of them worked in the camp administration. These women were mostly from Czechoslovakia.

The prisoners were guarded by a group of around 20 female German guards. Some had worked at the Dräger factories in Lübeck where they had been recruited by the SS. Several women had volunteered. Some said that they had been forced to work at the camp by the Government Employment

Office (Arbeitsamt) or by their employers. After a training course at Ravensbrück, the majority of them were sent at first to the Berlin-Zehlendorf subcamp. After its dissolution in September 1944, they were transferred to Neukölln. The average age of the known female SS guards was 28 years. The female guards were housed outside the camp in Krupp's former sports building. The female senior guard at the Neukölln subcamp was 39-year-old former factory worker Margarete Trampenau. Several survivors have stated that Oberaufseherin Trampenau treated the prisoners properly and took steps to prevent the female guards from mistreating them.<sup>3</sup>

The camp commandant was SS-Unterscharführer Bruno Kreibich. He had been a member of the Sachsenhausen Totenkopf-Wachbataillon (Death's Head Guard Battalion) from 1940 to 1944. Two of the women who worked in the camp office stated that he was not particularly interested in the camp and was just glad not to be at the front.<sup>4</sup> He was in charge of four or five SS men, three of whom were ethnic Germans from Czechoslovakia and Yugoslavia. The SS men were housed in barracks close to the camp entrance.

Daily life for the prisoners in Neukölln was marked by hunger and inhumane living conditions. One of the barracks was equipped with washing facilities, and the women were allowed to shower once a week using cold water. Breakfast consisted solely of bread that was taken from their previous day's bread ration of 125 grams (4.4 ounces). The food was collected from a kitchen barracks outside the camp grounds by the inmates under the supervision of the female guards. Female civilian forced laborers worked in the kitchen. Additional rations were available for the women in the factory. In rare cases, local inhabitants are said to have thrown food over the subcamp's fence.<sup>5</sup> The detainees were dressed in work overalls and also wore pieces of clothing that had been handed out in Auschwitz.

Two women prisoner doctors worked in the barracks' infirmary, which was used for less serious illnesses. Sick and weakened inmates were transported to a medical station for forced laborers at Berlin-Siemensstadt or transported back to Ravensbrück.<sup>6</sup> Twice there were selections by the SS for larger prisoner transports. The survivor Helen G. stated that one night "nine sick women were selected who were in physically poor condition. . . . These detainees were transported away. I can remember to this day their terrible screams. They knew, just as we did, that they were going to be gassed."<sup>7</sup> The 9 prisoners were transferred on March 3, 1945, from Neukölln to Ravensbrück.<sup>8</sup> Another selection of 26 women followed, but it was not completed because the camp was dissolved. At least 1 inmate died from tuberculosis in the camp.<sup>9</sup>

During air raids prisoners were injured and probably several were killed.<sup>10</sup> Prisoners who were in the camp during an air raid could only seek shelter in the trenches. The cellars in the factory served as air-raid shelters.

During the last weeks of the war, the barrack camp was destroyed during bombardments, and the prisoners were held in the nearby cinema. After this was destroyed by bombs,

they were held in a cellar on the factory grounds. The order to evacuate the camp was given by the Inspectorate of Concentration Camps (IKL). On April 18, the prisoners had to walk to a nearby S-Bahn (metro railway) station where a train took them to Oranienburg. They remained one night in Sachsenhausen and were taken the following day by goods train to Ravensbrück. The prisoners remained there for a week. The Polish women, who formed the largest group, were under the care of the Swedish Red Cross and arrived on April 29, 1945, in Sweden. The non-Polish Jewish women left Ravensbrück at the end of April and were driven by the SS in a northwesterly direction. Two prisoners were able to escape.<sup>11</sup>

The commandant of the Neukölln subcamp, Kreibich, was held after the war by the British as a prisoner of war (POW) and remained interned until April 1948. Frieda Schweinhardt was the only female SS guard to be taken prisoner—she was taken by Soviet troops in Berlin and held in a Soviet internment camp until 1950. The Chemnitz State Court (Waldheim) sentenced her to 20 years' imprisonment for mistreating prisoners. She was released early in 1955 and settled in the Federal Republic of Germany. The Central Office of State Justice Administrations (ZdL) in Ludwigsburg began investigating her in 1969 for crimes she was suspected of committing in the Neukölln subcamp, but the investigations stopped in 1971.

**SOURCES** Jochen Spielmann's essay "Konzentrationslager Sachsenhausen, Aussenlager Neukölln, Braunauer Str. 187/189," in *Zehn Brüder waren wir gewesen: Spuren jüdischen Lebens in Berlin-Neukölln*, ed. Dorothea Kolland (Berlin: Edition Hentrich, 1988), and Harald B. Ramm's essay "NCR—ein KZ-Aussenlager in Berlin-Neukölln," in *Zur Arbeit gezwungen, Zwangsarbeit in Deutschland 1940–1945*, ed. Rimco Spanjer (Bremen: Edition Temmen, 1999), both provide concise overviews of the subcamp and incorporate testimony from former detainees and their coworkers. For the history of the NCR in Neukölln before, during, and after the war, see Udo Gösswald's "Memories—Eine Unvollständige Geschichte," in *Sand im Getriebe: Neuköllner Geschichte*, ed. Dorothea Stanić (Berlin: Edition Hentrich, 1990). Benjamin B. Ferencz's work *Less Than Slaves: Jewish Forced Labor and the Quest for Compensation* (Bloomington: Indiana University Press, 2002) provides a history of his persistent efforts, along with the Claims Conference, to gain reparations for former slave laborers who worked for Krupp during World War II.

Primary source material can be found in various archives, including at the KaN-AHm, which contains interviews from former fellow employees of the slave laborers in the NCR factory. Testimony from former Neukölln detainees, a postcard from a former detainee in Neukölln to a relative in Vienna, and documents related to postwar restitution issues in relation to slave laborers in Neukölln can be found at the YVA. The BA-L contains statements from the former camp commandant, Bruno Kreibich, as well as testimony from former detainees. The Benjamin B. Ferencz Collection at the USHMM contains correspondence and notes regarding the administration of the NCR factory, its use of forced laborers, affidavits that describe daily life in the camp, and a list of for-

mer detainees in the Neukölln camp who sought restitution from Krupp for forced labor. The sentence of a former SS guard by the Chemnitz District Court can be found in the BStU.

## BERLIN-NIEDERSCHÖNEWEIDE (*PERTRIX*)

Niederschöneweide is part of the Berlin southeastern district of Treptow-Köpenick. A women's subcamp of the Sachsenhausen concentration camp was located there. The subcamp was named after the Batteriefabrik (Battery Factory) Pertrix, in which the prisoners worked for seven months starting in October 1944. The 500 mostly Polish and Belgian women who were brought to Schöneweide from Ravensbrück were first housed in a converted boat shed on the Spree River bank and later in barracks on Kölnische Strasse that are now a Documentation Center on Nazi Forced Labor.

The Pertrix Chemische Fabrik AG established itself in Berlin-Niederschöneweide in 1928. It was a subsidiary of the Akkumulatoren-Fabrik AG (Battery Manufacturing Corporation AFA). The AFA group of companies was established in 1887 in Hagen by agreement between AEG and Siemens & Halske (S&H) and soon monopolized the production of bat-

teries. During World War II, under Director of Defense Economy (Wehrwirtschaftsführer) Günter Quandt, the AFA produced batteries for submarines, trucks, and the Luftwaffe in Hagen, in Hannover, in Berlin, in Posen, and with the help of concentration camp prisoners, also in Hannover-Stöcken.

The Pertrix factory located at 53a Sedanstrasse in Berlin-Niederschöneweide (present-day Bruno-Bürgel-Weg) had around 1,300 workers and produced batteries, flashlights, and from 1934 on, cartridge cases. In 1937 it was designated a defense industry; in 1939, it changed its corporate status from a public corporation (AG) to a limited liability company (GmbH) but remained a subsidiary of the AFA group of companies. Günter Quandt's son Herbert, who was manager (Betriebsführer) of the AFA-affiliated company in Oberschöneweide, was recorded in the Reich's business card index as owner or director of the Pertrix GmbH. The manager was Viktor Werner.

The use of Jewish forced labor began as early as 1938.<sup>1</sup> They were followed by French prisoners of war (POWs) and civilian forced laborers who were mostly from the Soviet Union. Pertrix was then producing mainly lead batteries for aircraft. Within the so-called Fighter Program (*Jägerprogramm*), Minister for Armaments and War Production Albert Speer gave absolute priority to the manufacture of aircraft batteries in April 1944. In the autumn of that year, the production of batteries reached its peak.

The prisoners in the subcamp were initially housed in a boat shed on the Spree River. The boat club at 101 Berliner Strasse (present-day Schnellerstrasse) was owned by the former restaurant and dance hall "Loreley" that itself housed forced laborers working at the company L'Orange Motorzubehör (car accessories; later owned by DaimlerChrysler AG).<sup>2</sup> In 1971, a former female prisoner drew a sketch of the fenced-in subcamp. The Belgian and Polish concentration camp prisoners stayed there from September 20, 1944, until February 26, 1945, when an air raid took place. The boat shed was partially hit during the air raid and could no longer be lived in.

After the air raid, the prisoners were accommodated in camps in the nearby area. Some of them, mostly Belgian women, were taken by the SS to a camp in Köpenick. Here the women had to dig trenches for the German Home Guard (Volkssturm). Although the women were no longer working for Pertrix, the Sachsenhausen concentration camp probably continued to administer them under the name "Pertrix."

About 200 women, mostly Polish women, were taken by the SS to a nearby so-called Italian Camp. The camp in Köllnische Strasse consisted of 13 stone barracks. A central administration barracks divided the site in two. Two barracks that stood empty were used by the women as housing. The subcamp, as with the boat shed, was in the middle of a residential area and could be seen by the surrounding houses.

There were always around 500 prisoners in the Niederschöneweide subcamp.<sup>3</sup> They were mostly from Belgium and Poland, but there were also inmates from other countries.

Before they arrived at Ravensbrück, most of them had spent a few years in police jails or concentration camps. The suffering the Belgian women had to go through differed from that of the Polish women. The Belgian women came directly from police arrest to the Ravensbrück women's concentration camp. From there they were transported, in several transports, at the end of September 1944 directly to Schöneweide.<sup>4</sup>

The Polish women had also been held in police prisons, but from there they were transported to the concentration camp at Auschwitz II-Birkenau and then to Ravensbrück. Finally, the Polish women arrived at the subcamp at the Zehlendorf Spinning Mill (Spinnstofffabrik). Here they were supervised by SS female guards from Ravensbrück and then transferred to Schöneweide.<sup>5</sup> The women were between 16 and 49 years of age. They included "protective custody" prisoners, "foreign civilian workers" (Ausländische Zivilarbeiter, AZA), "asocials," and professional criminals.<sup>6</sup> Although the subcamp was subordinate to Sachsenhausen, prisoners who were seriously ill were taken back to Ravensbrück.<sup>7</sup>

Even though the AFA management had been provided with medical opinions that undernourished humans were especially susceptible to lead poisoning, the malnourished non-German labor force mainly had to work with poisonous materials without any protection.<sup>8</sup> The hygienic conditions in the camp were poor. There was no soap. There was, however, a surplus of vermin. There was no infirmary. The prisoners wore black-and-white-striped clothes with a cross on the back and wooden clogs. Each of the wooden platforms that served as beds was shared by two women.

Statements by witnesses suggest that the food was distributed at the camp. It consisted mostly of ersatz coffee, watery soup, and very little bread. Sometimes there was cheese.<sup>9</sup> One Belgian witness wrote that there was nothing to eat during the night shift. Another witness stated that "we stopped working because they gave us nothing to eat," although they had been promised food. Several prisoners mention a strike that is said to have taken place in February 1945. The SS female guards had the women on a particular shift stand at roll call for hours to find out who the leaders were. Three women were punished by beating following orders from the SS at Sachsenhausen.<sup>10</sup> Now and then there were escapes from the subcamp. According to the daily variation reports (*Veränderungsmeldungen*), the last group escape attempt occurred on March 31, 1945, when eight Polish women escaped from the subcamp in Köllnische Strasse.

Neither the daily variation reports nor the statements of witnesses enable the reconstruction of murders in the Niederschöneweide subcamp. On the other hand, witnesses' statements consistently refer to shootings on the death marches. "Many people collapsed from exhaustion. They were then fatally shot by the SS men."<sup>11</sup>

On the basis of a later investigation by the West German judicial authorities, a few details on the guards have been provided. There was a woman name Hesse; an SS female guard, Käthe Bechler, who died in 1966; and the camp leader,

SS-Unterscharführer Conrad Adolf Schreiber, who was born in 1896 and whose place of residence the then-German Democratic Republic's (DDR) Ministry of State Security was unable to identify until 1971.<sup>12</sup> The former salesman was described by Polish female former prisoners as a pigeon breeder. Schreiber is said to have been particularly brutal. He beat without hesitation and "never spoke quietly but was always screaming."<sup>13</sup> The SS women also guarded the prisoners while they were working at Pertrix.

The subcamp was dissolved over a three-day period; 23 prisoners left the camp on April 18 in the direction of Sachsenhausen; another 134 and 114 women, respectively, left over the next two days.<sup>14</sup> The women remained for one to three days in Sachsenhausen and were then sent on a death march in the direction of Lübeck and Schwerin. Some of the prisoners said they escaped during the march; others were liberated by the Red Army on May 2, 1945.<sup>15</sup>

The Zentralstelle der bundesdeutschen Staatsanwaltschaften (Central Office of the Federal German State Prosecutors) in Ludwigsburg began investigations in the 1970s on the subcamp at Niederschöneweide. Witnesses' statements made to the Polish Main Commission for the Investigation of National Socialist Crimes and the Belgian Criminal Department of Military Courts did not turn up any "prosecutable crimes" in the Pertrix subcamp. The German investigations therefore ceased on June 30, 1972.<sup>16</sup>

**SOURCES** Two recent publications at the Documentation Center on Nazi Forced Labour give further details on the camp's history: "NS-Lager entdeckt": *Zwangsarbeiterlager Schöneweide wird historischer Lernort*, ed. Förderverein für ein Dokumentations- und Begegnungszentrum zur NS-Zwangsarbeit in Berlin-Schöneweide e.V. (Berlin, 2006); and *Das and Dokumentationszentrum NS Zwangsarbeit Berlin-Schöneweide. Zur Konzeption. Eine Veröffentlichung der Stiftung Topographie des Terrors*, ed. Andreas Nachama, Christine Glauning, and Katharina Sophie Rürup (Berlin, 2006).

The most important archival sources are the files of the ZdL (today BA-L). The relevant witness statements were made between 1968 and 1971 and, given the period of time, are often inaccurate. The CAFSSRF holds the Veränderungsmeldungen on the women's camp at the Sachsenhausen concentration camp. The Projekt Gedenkbuch der MGR has collected the transfer lists (*Überstellungslisten*) to and from Niederschöneweide. The ASVG-B holds the documents from the questioning of the German civilian population by the BTS immediately after the war. The interviews, made between 1946 and 1951, provide a subjective, at times, exculpatory view but nevertheless provide an overview. Research in address books, on location, and in scattered files in the former NS archive of BStU complement the knowledge base.

## BERLIN-REINICKENDORF (*ARGUS*)

### [AKA BERLIN-SCHÖNHOLZ]

The Sachsenhausen subcamp at Reinickendorf was mentioned in 1949 by the International Tracing Service (ITS). A list published in the German Democratic Republic refers to the subcamp as a "repair works" in Berlin. It is listed with many other Sachsenhausen subcamps. An inventory by the Brandenburg Memorials Foundation refers to the camp as "Reinickendorf-Schönholz." It is supposed to have existed from the summer of 1944 to April 1945 for use by the Argus Motorenwerke GmbH. According to some sources, the camp existed from July 1944 to April 20, 1945.<sup>1</sup> It is also possible that the camp was established on August 18, 1944. According to SS files, on September 5, 1944, there were 800 women in the subcamp at Reinickendorf.<sup>2</sup> They arrived in August and consisted of mostly Hungarian Jewish women from Ravensbrück, plus a few Polish women. There was a female doctor among the prisoners. The camp was located close to the Argus company at 28–42 Flotten Strasse. Survivors have also called the camp "Berlin-Schönholz." The camp, consisting of six prisoner barracks and an administration barracks, was clearly visible from the S-Bahn (metro railways) to Tegel and Oranienburg. It was situated in the triangle between the railway stations at Alt-Reinickendorf and Schönholz and between Wilhelmsruh and Schönholz. "The Argus Motoren GmbH was one of the most important companies in the German aircraft industry."<sup>3</sup>

The women worked in two shifts of 12 hours each. They had to do heavy physical work. If they did not fulfill work targets, they were threatened with a transfer back to the main camp. The food was completely inadequate. However, in acts of solidarity forced laborers in the camp were able to supplement some of the women's food. Nevertheless, the women suffered from hunger edema.

In the final weeks, they mostly worked in the vicinity of the camp, digging trenches. They were guarded by members of the Organisation Todt (OT). Some of the women had previously worked at the company Armag.

According to Sachsenhausen change of status reports, there were still 748 women in the Reinickendorf subcamp on March 30, 1945.<sup>4</sup> On April 18, 1945, the women had to march to the Sachsenhausen main camp on foot. Some of them were taken by truck. SS-Oberscharführer Max Bergholz, who had been detachment leader of the camp at Potsdam-Babelsberg until the end of 1944, later admitted that he had been “detachment leader” at “Schönholz” for two weeks from April 21, 1945. It is possible that he accompanied the evacuation to Sachsenhausen.

The camp leader was SS-Unterscharführer Andreas Vollenbruch. One of the SS overseers was Hildegrad Wenke. She beat the women in the most brutal manner. Other women overseers were Richter and Emilie Kalisch. As the war came to an end, the brutality increased. It can be documented that 15 women, including a non-Jewish Polish woman, died in the camp; 9 female Jews were transferred back to Ravensbrück.

Shortly after the war, the Waffen-SS assistant Hilde Mehner from Hohenstein-Ernstthal, who had been an overseer in the Reinickendorf subcamp from August 22, 1944, to April 22, 1945, was arrested by the British Military Administration in Berlin-Spandau. She was interned at Fallingbommel. Prior to Reinickendorf, she had been stationed at the Oranienburg subcamp at Auer.

Following a report made to the authorities by former inmate Margarete Farkas, the State Justice Administration in Cologne began investigations in 1960 into former camp commander Vollenbruch. They were still unfinished in 1964. The result of the investigations was inconclusive because the “investigations were complicated and time-consuming.” The Hungarian Jewish women had mostly moved back to Hungary. The accused could not be arrested because the statements by 30 witnesses “were too vague.” Vollenbruch was accused of having sent 30 Jewish women to Ravensbrück to be gassed and of having shot women who were digging trenches. He is also said to have ordered female guards to beat a pregnant woman to death. A Hungarian Jewish woman, Bozsi Keller, was said to have been badly mistreated by him and then forced to approach the electrified fence, where she died. Vollenbruch was also accused, together with female guards, of forcing women prisoners to stand under the water pipes as a punishment measure. Some of these women died. In winter, women had to carry snow from one place to another using their eating utensils. Another punishment, shaving the heads of the women bald, was infamous among the prisoners. Witnesses reported that during the trench-digging works a young girl, Lili Fischer, was shot by a member of the OT who was guarding the women.

SS-Oberscharführer Max Bergholz, who on his own admission was a detachment commander in Schönholz from April 21, 1945, was arrested in 1945 and interned in the British internment camp at Esterwegen.<sup>5</sup> His fate is unknown.

The Central Office of State Justice Administrations (ZdL) in Ludwigsburg in the Federal German Republic began investigations in 1969, but they ceased in 1972 after the death of Vollenbruch, the chief suspect. Other suspects could not be identified because the witnesses’ statements were too vague. Nevertheless, it was determined that Helene Borkowsky, an overseer accused by the women, had hanged herself in Soviet custody after the end of the war. The camp elder, a Hungarian Jewish woman named Gyözo Kalocsai, was accused by her comrades of beating an exhausted woman to death.<sup>6</sup>

**SOURCES** The only known article on the subcamp is the essay by Horst Helas and Henning Müller, “Das KZ-Aussenlager Argus in Berlin-Reinickendorf,” in *Zwangsarbeit in Berlin 1938–1945*, ed. Helmut Bräutigam, Doris Fürstenberg, and Bernt Roder (Berlin, 2003), pp. 269–279. This subcamp is listed in *Das nationalsozialistische Lagersystem (CCP)*, ed. Martin Weinmann, with Anne Kaiser and Ursula Krause-Schmitt, prepared originally by ITS (1949–1951; repr., with new intro. matter, Frankfurt am Main: Zweitausendeins, 1990), p. 262; and Komitee der Antifaschistischen Widerstandskämpfer in der Deutschen Demokratischen Republik, ed., *Damals in Sachsenhausen* (Berlin [East], 1967), p. 60.

Archival sources are located in the BA-L, AG-S, and YVA.

## BERLIN-SIEMENSSTADT

### [AKA HASELHORST, BERLIN-HASELHORST]

By the end of 1943, ambitious armaments targets contrasted with a sharply deteriorating labor supply. The spring of 1944 brought increased air raids culminating on the night of February 15, 1944, in massive damage to just about all the Siemens factories in Berlin. It was not possible to do without one of the most important suppliers for the navy (including submarine engines and switching devices as well as torpedo-firing

VOLUME I: PART B

mechanisms) and the air force (aircraft armaments, radar, remote control guidance mechanisms, etc.). The Einsatzstab (Operations Staff) Benkert was established immediately after the bombing raid. It was headed by a director at Siemens, Hanns Benkert, and was charged with “the reconstruction of the Siemens factories and the damaged electronics industry in Berlin.”<sup>1</sup> Benkert negotiated from the end of June with SS-Standartenführer Gerhard Maurer of the SS-Business Administration Main Office (WVHA) for more than 2,000 Hungarian Jews—thus relying on the use of prisoner labor. There was a requirement not only for 2,000 male prisoners for construction work but also for 1,000 women, as Siemens wanted to eliminate the chronic labor shortage in its factories at the same time.<sup>2</sup>

The forced labor camp “Haselhorst-Nord,” which was located on Paul Stern Strasse, was converted into the Berlin-Siemensstadt subcamp. Technicians from the construction firm Röling & Co, Charlottenburg, which had been contracted by Siemens, and the first contingent of 200 prisoners, which arrived on July 17, 1944, constructed five barracks and a fence. The fence was most likely electrified. The SS area, with its command office, accommodations for guards and prisoners, and SS kitchen, was located in the so-called Pipe just in front of the actual camp. The camp leader was a former German army captain who had been transferred to the SS, SS-Hauptsturmführer Karl Lietsch. Under his command were the roll-call leader Oberscharführer Heinrich P. and his deputy Unterscharführer Gustav S., as well as other SS noncommissioned officers as block leaders. The guards initially comprised 20 older SS men. Later the numbers rose to probably around 50.<sup>3</sup>

Living conditions in the camp were poor. There were initially only improvised washing facilities; later facilities, such as the toilets, were never anything more than extremely basic. The quarters were separated into two large “wings,” one for the prisoners and a smaller one for prisoner-functionaries such as the block elder, foremen, and orderlies. The buildings were extremely cold and were not suitable for human habitation in winter. There were heaters, but they were only effective in the prisoner-functionaries’ room. The barracks were equipped with three-level wooden bunks. Straw sacks were provided for each bunk. The inmates of the barracks varied as the number of prisoners in the camp fluctuated.<sup>4</sup>

The number of prisoners quickly increased. On August 10, 1944, an additional 500 men arrived from the Sachsenhausen main camp, and the first 500 women from the Ravensbrück main camp arrived on August 27, 1944.<sup>5</sup> The men were then moved to another part of the camp consisting of three barracks. The women occupied the first two barracks that had been built. Numbers continued to increase rapidly—on August 29, 1944, another 199 women arrived, and on August 31, 1944, another 316 men arrived in the camp.<sup>6</sup> There were more transports in the following months. On December 24, 1944, the camp reached its maximum number of 2,454 prisoners. There were 1,767 men and 687 women. The plans of the Einsatzstab Benkert in the summer of 1944 had envisaged that

most of the prisoners would be male and female Hungarian Jews. Despite these plans, the prisoners came from just about every German-occupied country. Survivors have said that there were prisoners, often of both sexes, from Bulgaria, France, Italy, Yugoslavia, the Netherlands, Poland, Russia, Czechoslovakia, and Ukraine. There were probably also a small number of German prisoners.<sup>7</sup> The transport that arrived just before Christmas probably consisted of 751 men, mostly Hungarian Jews. They were accommodated as a group, crowded into one of the wings in barrack 4, which previously had held only 400 prisoners.<sup>8</sup> With the arrival of the female prisoners, there came female SS overseers. Some reports speak of 8, others of 30. This is probably a reflection of the fluctuating camp numbers.<sup>9</sup>

The use of prisoners was of such significance for Siemens that the company took over responsibility not just for the construction of the subcamp but also for supplying food. Two of its employees were attached to the subcamp for accounting and organizational tasks. Systematic misappropriation by SS and prisoner-functionaries and the endemic corruption in the camp meant that the food supplies were inadequate for the heavy physical labor performed by the prisoners. Despite being aware of the problems, the company management did not interfere. It was only when “of hundreds of people only a few were able to work” (Benkert) and the success of the operation was endangered that Siemens intervened. It did so using a double strategy; first, it ensured that prisoners who could not work were promptly returned to the main camps without bureaucratic hindrance using Siemens’s own trucks because “the SS was incapable of handling the situation.”<sup>10</sup> Those prisoners who could achieve at least 30 percent of the “normal” work quota were issued extra food in their workshops. The return transfers are mirrored in the change of status reports. They show a constant reduction in the prisoner numbers in the camp between transports, a trend that increased markedly with the onset of frost in the winter of 1944–1945. Indeed, the onset of this cold period correlates closely with the return of prisoners to the main camp.<sup>11</sup> The fragmentary source material makes it difficult to determine the consequences of this action. This practice hardly led to any deaths at the Siemensstadt camp<sup>12</sup> since fatalities were effectively “exported” back to the main camps at Sachsenhausen and Ravensbrück. This policy meant that a stay in the Siemensstadt infirmary was dangerous for the prisoners.

There was also a close and amicable relationship between the company and the SS in organizing the use of the prisoners in work. The prisoners were usually selected by an employee of the firm based in the subcamp.<sup>13</sup> The prisoners had to do construction and cleanup work; they worked in the production of cables and switching gears and in electrical assembly. As early as August 24, 1944, 250 prisoners were digging “blast trenches” for the Einsatzstab Benkert, with the numbers finally reaching a total of around 750.<sup>14</sup> Work was done in the open air. This was difficult for the prisoners who were undernourished and whose clothing was inadequate for the weather. Indeed, the detachments Deckungsgraben I and II (covered

trenches) and Kahnentlader (barge unloading) were regarded as punishment detachments. Prisoners who had committed a “theft” or were accused of some other infraction, and above all Russian prisoners, were placed in these “punishment detachments.”<sup>15</sup> Further bombing on October 6, 1944, again caused severe damage at Siemens. For the next two weeks, even those prisoners working in production were used to remove rubble from Siemens factories. In general, managers at the firm expressed their satisfaction with the work done by the exhausted prisoners.<sup>16</sup>

The operation that used the largest number of prisoners, 1,250 at the beginning of January 1945, was the cable factory Siemens-Kabel-Gemeinschaft (SKG) in Gartenfeld. The first 900 prisoners (650 women and 250 men) were quickly deployed here,<sup>17</sup> the women working as “operators on mechanical calculating machines; examiners of lacquered cables; spinners; washers; and working on drills and assembly lines; and trimming off rubber,”<sup>18</sup> while the male prisoners were busy “trimming, mixing rubber, pressing synthetic resins, sheathing and stranding cables together, lacquering and tinsplating wire.” The work was done in two shifts each of 12 hours and was described by the prisoners as heavy labor. Siemens attempted to keep a check on each individual’s work and introduced a bonus system. There was a “performance food bonus” for good work, while for insufficient work the prisoners were beaten by the SS or Siemens employees or were reported to the camp, which resulted in punishments such as removal of food rations, standing for hours, or being beaten.<sup>19</sup> The successful escape of a prisoner at the start of the work deployment in the cable factory resulted in a series of measures: in the event of any further escapes, the “Engineer on Duty” was to report immediately to the camp command and mobilize the internal plant security and auxiliary factory security to surround the factory and search it. In addition, columns of prisoners on the move were escorted by electric carts on which searchlights were mounted—it was hoped that these devices would make escape more difficult during the darker months of the year. The extra efforts made were worthwhile: by using concentration camp prisoners, Siemens was able to introduce a second shift, thereby better utilizing the machines in accordance with the contract orders.

The demand for labor diminished in the spring of 1945 because of shortages of energy and material, prompting Siemens to want to remove the compromising presence of the concentration camp prisoners from its factories. The use of prisoners at the factory was cut back, and the prisoners were made available to clean up the city. An air raid during the night of March 27, 1945, destroyed the camp and killed a large number of guards as well as three female prisoners. The prisoners were at first taken to a nearby forced labor camp and then returned to Sachsenhausen and Ravensbrück.<sup>20</sup>

The Berlin Sachsenhausen Trial was preceded by comprehensive investigations by British and Soviet military authorities and was eventually conducted exclusively by the Soviets from October 23 to 31, 1947. It had the characteristics of a Stalinist show trial. There was no mention of what had oc-

curred in Siemensstadt. For this reason the decision of the court is of little benefit to historical research. Of more value is the material used during the trial. This material, which included the files of the camp administration and the investigation files of the British Judge Advocate General that had been handed over to the Soviets, disappeared for decades into the Committee on State Security (KGB) archives. The sources that are relevant for Siemensstadt are above all the fragmentary surviving change of status reports from the political department and stores, which permit a calculation of the number of prisoners in the subcamp.

The conditions in Siemensstadt and the use of the prisoners by Siemens were, however, the subject of detailed examination in the denazification proceedings of Siemens director Hanns Benkert. They are kept in the Berlin State Archive (LA-B). For reasons of data protection a special application to the Justice Senator needs to be made via the archive to inspect the files. The files may only be inspected for academic purposes.

The Central Office of State Justice Administrations (ZdL) investigated Siemensstadt in the mid-1960s.<sup>21</sup> The matter was then handed over to the Cologne State Attorney, which continued with the investigations.<sup>22</sup>

**SOURCES** Under contract from Siemens, Arne Hengsbach collated a detailed survey of all buildings associated with the company in Siemensstadt and at numerous other camps; Arne Hengsbach, “Barackenlager Haselhorst-Nord” and “Die Siemens Baracken-Lager im Auftrag der Zentral-Abteilung für Bauten u. Anlagen der Siemens A.G.” (unpub. MSS, Berlin, [1979]). In many ways a supplement to this work is the overview of forced labor camps and concentration camps in Berlin by Rainer Kubatzki, *Zwangsarbeiter- und Kriegsgefangenenlager. Standorte und Topographie in Berlin und im brandenburgischen Umland 1939 bis 1945: Eine Dokumentation* (Berlin, 2001). Karl Heinz Roth evaluates a number of prisoner work detachments for the Siemens concern in “Zwangsarbeit im Siemens-Konzern (1938–1945): Fakten—Kontroversen—Probleme,” in *Konzentrationslager und deutsche Wirtschaft, 1939–1945*, ed. Hermann Kaienburg (Opladen, 1996), pp. 149–168. Of particular importance is Roth’s structured typology of the use of inmate forced labor for the company. The author verified its validity in the case of Siemensstadt in his “Zwangsarbeit von Konzentrationslagerhäftlingen in der letzten Phase des Zweiten Weltkrieges: Das Beispiel Siemens unter besonderer Berücksichtigung der Aussenlager Siemens-Haselhorst und ‘Siemenslager’ Ravensbrück” (Master’s thesis, Technische Universität Berlin, 1997). Roth, however, makes the false assumption that prisoners were already being used in the Gartenfeld cable factory as early as 1943. The monograph by the former director of the AS-M appeared on the 150th anniversary of Siemens AG: Wilfried Feldenkirchen, *Siemens 1918–1945* (Munich, 1996). Worth highlighting here, as well as the monograph’s unmistakable apologia, is the detailed reference section that includes references to Siemens archives marked as “uncatalogued temporary archive” and otherwise not accessible to the public. Modernization and technical and social rationalization are of great relevance to the theme of the integration of forced, unskilled labor in modern capitalist

industries. These standard works deal with the indispensable previous history of the use of prisoners' forced labor in production at the main German electrical companies and explicitly deal with the status of female labor: Heidrun Homburg, *Rationalisierung und Industriearbeit: Arbeitsmarkt, Management, Arbeiterschaft im Siemens-Konzern Berlin 1900–1939* (Berlin, 1991); Carola Sachse, *Siemens, der Nationalsozialismus und die moderne Familie: Eine Untersuchung zur sozialen Rationalisierung in Deutschland im 20. Jahrhundert* (Hamburg, 1990); Tilla Siegel and Thomas von Freyberg, *Industrielle Rationalisierung unter dem Nationalsozialismus* (Frankfurt am Main, 1991); and Rüdiger Hachtmann, *"Industriearbeit im Dritten Reich": Untersuchungen zu den Lohn- und Arbeitsbedingungen in Deutschland 1933–1945* (Göttingen, 1989). The AS-M is believed to contain an extensive collection of documents. However, the documents are held for the most part in the "uncatalogued files in the temporary archive" and are not available to independent researchers. A number of sources relating to the use of prisoners at the cable factory in Siemensstadt have recently been released and have been referred to in the text. Researchers are therefore forced to rely on the state archives. In addition to the trial files in LA-B, there are the bequests of Bruno Baum (a former concentration camp prisoner); and other important materials are in the BPASD-B(O), which were gathered for the Sachsenhausen Trial and the campaign that was undertaken to denazify and nationalize the "war crimes-implicated Siemens company." In particular there are to be found here numerous statutory declarations by Siemens employees that cannot be seen in the AS-M. The KGB's archival material at CAFSSRF has only recently become available for researchers on microfilm in USHMMA. The denazification proceedings against Benkert are held at BA-B. For reasons of data protection, a special application to the Justice Senator needs to be made via the archive to inspect the files. The files may only be inspected for academic purposes. The Cologne investigation records are held in NWHStA-(D) ZA-K. The material seized by U.S. authorities at the end of the war relating to the administration of concentration camps was in large part—in particular, the material relating to personnel—handed over to ITS. Some of the material was microfilmed by U.S. authorities before it was handed over (NARA) and is therefore accessible at USHMMA, AG-S, and BA-B. Other important documents were collected by the Compensation Treuhand GmbH, which, beginning in the 1960s, began to pay compensation from the larger German companies to Jewish survivors and which required the companies' management files for this purpose. Extracts from these files are to be found in the investigation files of the ZdL (now BA-L). These probably very valuable files are now in Collection M32 at the YVA. The author was denied access to these files on the basis they contained confidential personal information. Other smaller archival collections have been referred to in the text. Shortly after the end of the war, Jewish concentration camp prisoner Erich Altmann compiled a detailed report about his imprisonment in the concentration camps at Auschwitz, Auschwitz/Bobrek, Buchenwald, Sachsenhausen, and Siemensstadt: *Im Angesicht des Todes: Drei Jahre in deutschen Konzentrationslagern; Auschwitz, Buchenwald, Oranienburg* (Luxembourg, 1947).

## BERLIN-SPANDAU

The Spandau subcamp was located in the middle of a large industrial area on Pichelswerder Strasse in Berlin-Spandau. The camp buildings consisted of one or two single-level factory units converted for use as lodgings; similar buildings close by had already been in use to accommodate foreign civilian workers and prisoners of war (POWs) since 1942.

The inmates, who were exclusively women, came from the Ravensbrück concentration camp. However, administratively, the subcamp was under the command of the Sachsenhausen

concentration camp. The prisoners were employed by the Deutsche Industrie-Werke AG (DIWAG) in the production of munitions. DIWAG was a state-controlled metal-processing company. Erich Purucker was head of operations. He was a senior bureaucrat in the Armaments Ministry with the rank of SS-Standartenführer.

It is reported that the prisoners were at least occasionally employed at the neighboring armaments factory Spreewerk GmbH, a concern closely related to DIWAG. At its subcamp in Kratzau in the Sudetenland, prisoners were also forced to work for DIWAG. Both companies played an important role in keeping armaments production going in the Berlin area in the last phase of the war.<sup>1</sup>

The first reliable record of prisoners at the DIWAG factory, who were presumably from a concentration camp, is dated Monday, October 2, 1944. A Belgian civilian forced laborer recorded in his diary on this day the presence of political prisoners.<sup>2</sup> Polish prisoners corroborate this date. According to their statements, they arrived in the Spandau camp at about this time in a transport of about 300 women.

Initially, Polish women made up most of the prisoner contingent; they had been arrested and deported in the course of the Warsaw Uprising in the summer of 1944. From about December 1944, a second large group of prisoners arrived in the camp: Hungarian Jewish women deported in the autumn of 1944 from Budapest and other parts of Hungary and destined for the Ravensbrück concentration camp. There were also non-Jewish Hungarian women arrested for political reasons as well as Serbian women, women from Yugoslavia, Poland, and a few women from the Soviet Union, France, Italy, and Germany. According to a number of Hungarian prisoners, the German prisoners were classified as "asocials," although they included political prisoners.

The different prisoner categories were held separately, the Jewish prisoners being kept apart from the others. The usual system of prisoner "self-administration" existed in the camp. Only the name of the female camp doctor is known—a Polish doctor named Irena Kononowicz (1910–1969). Another female camp doctor, probably from Hungary, is supposed to have died in the camp. Prisoner doctors from Sachsenhausen are also thought to have been deployed to provide medical attention. One pregnant Polish woman was returned to the Ravensbrück concentration camp after medical examination by a number of doctors.

From the end of 1944, there were on average between 1,030 and 1,040 prisoners in the Spandau subcamp.<sup>3</sup> The prisoners were mostly young women in their early twenties. There was little variation in the prisoner numbers. The subcamp received allocations of prisoners either from Ravensbrück or the Auer subcamp at Oranienburg. Those who left the camp were mainly sent to Auer. A DIWAG bookkeeper calculated the cost to his company of deploying the prisoners in January 1945 at 88,119.30 Reichsmark (RM) and in February at 88,682 RM.<sup>4</sup>

The subcamp's change of status report for 1945 recorded the deaths of eight women, aged between 18 and 37. No

reference is made to the causes of death. Survivors stated that the prisoners wasted away and died due to lack of medical attention and exhaustion. There are no documented cases of killings by guards. The dead were taken to Sachsenhausen. Hungarian Kató Gyulai told of a young woman who died a week before liberation and of corpses that were brought to Sachsenhausen around April 21, 1945. Another woman died of exhaustion on that transport. Other prisoners are said to have died soon after they were liberated from illnesses contracted during their imprisonment. The first documented death was on December 16, 1944; most deaths occurred in the months of March and April—a clear indication of the prisoners' increasing exhaustion. As the records are incomplete, it must be assumed that there were deaths in the Spandau subcamp other than those documented. All the documented cases relate to Hungarian women; all who died were categorized as Jews other than one "protective custody" prisoner. One can therefore conclude both that this group of prisoners was not in good condition when it arrived at the camp and that in the camp they were exposed to worse conditions than the other prisoner groups. These deductions are supported by the statement of a Polish prisoner.

The camp was primitive and makeshift. In a large hall there were three-level wooden bunks. The bunks were covered by cardboard mattresses and pillows, which were filled with wood shavings. There was also a blanket. Connected to the dormitory were washrooms and latrines, some of which were still being constructed when the prisoners arrived. The prisoners were clothed in worn-out, thin prisoners' garb and shoes with wooden soles.

Some prisoners had hoped that the assignment to the work details would improve their situation. They were quickly disappointed. The prisoners suffered in the cold rooms. Hygienic conditions were completely inadequate, and the camp was full of lice. The inadequate and extraordinarily poor food inflicted rapid weight loss and deterioration on the already weakened women. According to the prisoners, they received daily about 200 grams (7 ounces) of bread, beet soup, a few potatoes, a little substitute coffee, and every now and then some jam, artificial honey, or a piece of sausage. When liberated, many prisoners weighed only about 30 kilograms (66 pounds).

Unlike with other firms that employed concentration camp prisoners, the prisoners in the factory were not strictly separated from the German and foreign civilian workers. There were two shifts, each of 12 hours. After instruction by German and foreign workers, the prisoners had to work on gun molds, which weighed between 7 and 20 kilograms (15 and 44 pounds), lathes, drills, and grinding machines and accomplish related activities. Some prisoners benefited from their contact with the civilian workers because they occasionally gave them food and other necessary items.

It was difficult for prisoners to develop informal structures within their community since most had only been imprisoned

for a short period of time. It was easier for the political prisoners because of their common political beliefs and because of experiences gained during previous imprisonments. One Hungarian-Yugoslavian group aimed to organize assistance and food but also the exchange of political and military intelligence. Those who were racially persecuted, unless they had family members or friends in the camp, initially had to rely on themselves. Communication was relatively easy, as most of the prisoners came from Hungary. Cultural activities were organized as part of the survival strategy. Poems were recited, songs were sung, or there were attempts to organize "cabaret evenings." However, the demoralizing daily prisoner grind gradually put an end to such activities. Thefts also undermined solidarity.

There were apparently conflicts between the prisoners who worked in the kitchen, who were mostly "asocials" and prostitutes from Germany but who also included some Polish political prisoners. The other camp prisoners regarded them as the camp "elite," as they were able to obtain extra food and profit from barter.

There is a record of two prisoners escaping in February 1945. One of the prisoners was a woman from the Soviet Union. She was categorized as "AZA" (foreign civilian worker). The other was a German. She was categorized as "Aso" (asocial).

Little is known about the camp personnel. The female overseers were assessed in an especially negative light by the surviving prisoners. They commonly used physical violence and shouted at and insulted the prisoners. Some witnesses describe mistreatment of prisoners by guard dogs. One girl is supposed to have suffered serious bite wounds.

Former prisoners were usually able to catch names of guards only in passing. In the first weeks, an SS-Führer aged about 40 was commandant; he was called "the red dog" by Polish women prisoners because of his red hair and strict manner. He was succeeded as Lagerführer—probably as early as October 1944—by SS-Unterscharführer Eitel Faenger (1903–1950), who had previously been commandant in the Glau-Trebbin subcamp. Jewish prisoners recall a certain "Peter," who was addressed this way by a female SS overseer. This "Peter" was identified as being Faenger by Hungarian prisoners—who spoke his name phonetically as "Finger," identifying him as "Peter Finger."

Of the SS female overseers, many witnesses name a certain "Anni" who was a senior overseer and whose surname was perhaps "Roth." She was about 25 years old, dark blonde, and attractive and is described as a cruel woman. Other female overseers known for their brutality were called Helga, Hilde, and Grete. Only two SS guards could be identified by name after the war. Friede Emma B. was recruited as an SS overseer together with other female workers from the Arado factory in Wittenberg. She was sent from Wittenberg to Berlin-Spandau. According to her own statements, she was popular among the prisoners; however, the regional court in Halle sentenced her in 1949 to two years' imprisonment for crimes against humanity committed in the camp in Wittenberg. Incidents in

Spandau did not form any part of the judgment at that time. Another SS overseer known by the name Ursula K. could not be traced by the authorities.

The camp was dissolved between April 21 and 22, 1945, at the time when the Red Army began to enter Berlin. The sick prisoners and those who could no longer walk were transported by truck to Sachsenhausen. A day later, the SS drove the majority of the prisoners by foot in a northwesterly direction. These prisoners were finally liberated on either April 23 or 24, 1945, near the small Brandenburg town of Nauen.

After the war in the late 1960s and early 1970s, the state attorney made investigations into the Spandau subcamp. These were dropped in 1973 since there were no reliable statements that could form the basis of a prosecution against named individuals.

**SOURCES** In 1990, the Spandau Council published a brochure: Helmut Bräutigam, *Aussenlager Spandau. Das Konzentrationslager bei der Deutsche Industrie Werke Akiengesellschaft* (Berlin-Spandau, 1990). This subcamp is also listed in ITS, *Verzeichnis der Haftstätten unter dem Reichsführer-SS (1933–1945)*, vol. 1. (Arolsen, 1979).

The concentration subcamp Spandau at the DIWAG is one of the subcamps whose existence is barely documented. The pretrial documents of the ZdL (at BA-L) 1968 to 1971 and its investigation, which was based on these documents and dropped in 1973 by the ZSSa-K, contain only a few witness statements collected from Hungarian Jewish and Polish women as well as information about the second Lagerführer, Eitel Faenger, who had been dead since 1950. The Spandau Youth History Project (Jugendgeschichtswerkstatt Spandau) holds, besides a German translation of Kató Gyulai's memoirs, interviews from 1988 and 1989 with former Hungarian prisoners Kató Gyulai, Rosi Hazai, Blanke Horowitz, Iren Kása, Ibolya László, and Marianne Pinter. The AG-S holds copies of the Veränderungsmeldungen of the female section of the Sachsenhausen concentration camp. The originals are held by the RGVA (Call Number R 22.9 M I 42). These reports contain details of the numbers including fluctuations, nationality, prisoner categories, and deaths (Stärke- und Veränderungsmeldungen im Frauenlager des KZ Sachsenhausen from December 31, 1944, to April 18, 1945, D 1 A 1/26). The Bezirksamt Spandau holds the building files of DIWAG and the Spreewerk, which, while they do not contain any direct reference to the subcamp, are useful in reconstructing the location of the subcamp, the immediate surroundings, and living conditions (Bezirksamt Spandau, record group Bauaufsicht, records of Strasse "Freiheit"). The BA-BL holds DIWAG internal files; they contain only two minor references to the existence of the Spandau subcamp (BA-B, R 121, File Nr. 1016; to the Kratzau subcamp, No. 1035). Other documents are held by ITS. The diary of Belgian civilian worker Jan van der Avoort from Oud Turnhout, Belgium, contains notes about the concentration camp prisoners; a copy of the diary is held by ASMS. The memoirs of the Hungarian, Gyulai, written as a MSS in 1947, were published in German in 2001: Kató Gyulai, *Zwei Schwestern: Geschichte einer Deportation*, ed. Linde Apel and Constanze Jaiser (Berlin, 2001). Mrs.

Gyulai, who lives in Budapest, Hungary, has the original MSS.

## BERLIN-TEGEL

There is scarce information about the Sachsenhausen subcamp that was located in the Tegel suburb of Berlin in the Reinickendorf administrative district. Most evidence suggests that the Berlin-Tegel subcamp was distinct from the slave labor camp associated with the Rheinmetall-Borsig factory in Tegel. The subcamp existed for only a few months, from November 1944 until February 1945.

The Berlin-Tegel subcamp held about 40 to 50 men who were prisoners transported from the Sachsenhausen main camp. There is no further information about the demographics of the prisoners, but one source has noted that they were primarily foreign prisoners.<sup>1</sup> The second commando leader (Kommandoführer) of this group was SS-Rottenführer Alfons Knirsch.

The Borsig factory used the prisoners in the Berlin-Tegel subcamp to search for and sweep unexploded bombs. The work was extremely dangerous, and the mortality rate for the prisoners was high. However, because the food rations were relatively plentiful—they were the same supplied to the local police—there were numerous volunteers brought daily from the main camp at Sachsenhausen for this work.

The Berlin-Tegel subcamp was liquidated in February 1945.

**SOURCES** Sources on the Berlin-Tegel subcamp of Sachsenhausen are generally scarce. The main secondary source of information on this camp is the Berlin-Tegel entry in the ITS, *Verzeichnis der Haftstätten unter dem Reichsführer-SS (1933–1945). Konzentrationslager und deren Aussenkommandos sowie andere Haftstätten unter dem Reichsführer-SS in Deutschland und deutsch besetzten Gebieten*, vol. 1 (Arolsen: Der Suchdienst, 1979). Although not always consistent with other sources, the ITS catalog provides brief statistical information about the camp, such as opening and closing dates, type of prisoner work, and so on.

Primary source material is stored at the AG-S in Oranienburg. Limited information can be found in file group I/4, Index der Aussenkommandos und Aussenlager; III/6, Petitjean, Kleine Geschichte des Lagers; Bestand D 30 A/8/1, 52–54,

## 1290 SACHSENHAUSEN

Hellmut Bock, Bericht über das Konzentrationslager; and D 30 A/15, Blatt 1-41: Liste mit Namen von ca. 700 SS-Leuten und 8 Häftlingen aus dem KZ Sachsenhausen, Arbeitsstellen, Aussenlagern.

## BERLIN-WILMERSDORF

There is scant information about the subcamp of Sachsenhausen established in the southwestern Berlin suburb of Wilmersdorf. The few sources that do note the creation of a subcamp in Wilmersdorf provide varying information about when the camp existed. Some sources mention that from the beginning of January until early July 1943 a subcamp for male prisoners existed in Wilmersdorf, although the exact location of the camp, the company or office that used the prisoners for labor, and the number or origins of the prisoners are unknown.<sup>1</sup> However, documents at the Sachsenhausen Memorial Archives (AG-S) place the subcamp earlier, from August 1941 to an unknown date—possibly August 1943. It is unclear if the differences in the dates signify two different subcamps in Berlin-Wilmersdorf.

According to the witness statement former inmate Martin Schmidt provided to the Staatsanwaltschaft in Bonn, a contingent of about 100 men was brought from the Sachsenhausen main camp to Berlin-Wilmersdorf, where they were forced to construct offices for the SS-Leadership Main Office (Führungshauptamt) for SS-Obergruppenführer Plebsch in August 1941. The inmates were housed in a former Jewish-owned business. Schmidt recalled that SS-Oberscharführer Schröder supervised the group, although he could not remember any other details about Schröder.<sup>2</sup>

The guard staff consisted of members of the SS, including SS-Unterscharführer Emil Bentrup (September 1941 to August 1942); SS-Rottenführer Albert Hoppe (December 21, 1941, to an unknown date); and Kommando leader SS-Unterscharführer Otto Jöhnk (August 21, 1941, to August 16, 1943).<sup>3</sup>

**SOURCES** There are few sources, either primary or secondary, on the Berlin-Wilmersdorf subcamp of Sachsenhausen. A brief mention of the camp can be found in Rainer Venske, "Aussenlager des KZ Sachsenhausen auf dem heutigen Territorium von Berlin (West)," in *Niemand und Nichts Vergessen. Ehemalige Häftlinge aus verschiedenen Ländern berichten über das KZ Sachsenhausen* (Verlag für Ausbildung und Studium in der Elefanten Press, 1984). See also the entry for Berlin-Wilmersdorf in ITS, *Verzeichnis der Haftstätten unter dem Reichsführer-SS (1933–1945). Konzentrationslager und deren Aussenkommandos sowie andere Haftstätten unter dem Reichsführer-SS in Deutschland und deutsch besetzten Gebieten*, vol. 1 (Arolsen: Der Suchdienst, 1979). Although not always consistent with other sources, the ITS catalog provides brief

statistical information about the camp, such as opening and closing dates, type of prisoner work, and so on. Hans Gräfer's "Die Slaven sollen für uns arbeiten. Zwangsarbeiter in Wilmersdorf," in *Wilmersdorfer Bruchstücke. Beiträge zur Geschichte des Bezirkes Wilmersdorf*, ed. Arbeitskreis Geschichte Wilmersdorf, vol. 1 (Berlin: Omnis, 1997) may yield additional information.

Primary source materials on Berlin-Wilmersdorf are mostly located at the AG-S and the ZDL-L. In the AG-S, see especially file groups D 30 A 10/2 A; D 30 A 15; JD 2/17; and JD 21/28. Files that may be useful at the ZDL-L include IV 419 AR 3322/65 and IV 406 AR 759/69.

## BERLIN-ZEHLENDORF

With 301 female concentration camp prisoners, the Sachsenhausen Berlin-Zehlendorf subcamp was established in the autumn of 1944 on the grounds of the firm Spinnstofffabrik Zehlendorf AG, a spinning mill company in the southwest Berlin district of Zehlendorf. It was probably the only subcamp in the Berlin-Brandenburg region to have been transferred to another company within a few weeks of its opening.

The establishment of the camp on the grounds of the Spinnstofffabrik Zehlendorf AG on 3 Wupperstrasse followed a long struggle over the use of labor between the company and the Berlin Armaments Inspectorate III. A group of 189 Polish female forced laborers had been withdrawn from the spinning mill even though this resulted in production shortages that the company had warned about.<sup>1</sup> The relevant employment office was not in a position to replace the lost labor. Even the establishment of a substitute "labor education camp" (*Arbeitserziehungslager*) at the spinning mill did not, from the firm's point of view, have the desired effect. The reason for this was that there was a high prisoner turnover, meaning the prisoners could only be used for basic tasks. Besides, the ad-

ditional expenditure required for the guards was regarded as too high when the low number of useful, trained prisoners was taken into account. The solution was to construct a subcamp: "The Oranienburg Gestapo has stated that it will make available around four hundred political prisoners who are to remain in custody for a lengthy period and who, as a result, are suitable candidates for basic work training."<sup>2</sup>

However, commencement of operations at the subcamp was delayed since, according to the war diary of the Armaments Inspectorate III, "the necessary guards (forty to fifty women) must be raised from volunteers among the existing factory workforce. In the meantime the required accommodation has been arranged."<sup>3</sup> In arranging accommodation, supplies, and the training of the prisoners as well as in negotiating with the responsible authorities, the company was able to draw on its existing experience and infrastructure gained from its previous use of forced laborers: "work-conscripted" Jewish men and women from Berlin, Soviet prisoners of war (POWs), Polish civilian workers of both sexes, Italian military internees (IMIs), and male Sachsenhausen concentration camp prisoners from the Lichterfelde subcamp.

The Sachsenhausen concentration camp kept change of status reports (*Veränderungsmeldungen*) for female prisoners from the end of August 1944. On September 1, 1944, these reports list the Zehlendorf spinning mill as having 301 prisoners.<sup>4</sup> At that point in time, Zehlendorf was the smallest of the Sachsenhausen women's subcamps, having just 6 percent of the total prisoners registered. It is probable the numbers remained constant until the relocation of the camp.

The prisoners working at Zehlendorf were non-Jewish Polish women; 4 of the former prisoners, from whom statements survive, were originally arrested in various locations in Poland between 1940 and 1942 and transferred to Auschwitz. From there they were transferred in the summer of 1944 to Ravensbrück; 2 of the survivors remember that they arrived in Ravensbrück on July 24, making it most likely that they left Auschwitz on a transport on July 22, 1944, which comprised 998 women.<sup>5</sup> Another survivor has stated that she only arrived in Ravensbrück from Auschwitz at the end of August.<sup>6</sup>

The SS guards were women with an average age of about 25 years. Of the nine SS overseers whose names are known, two volunteered, as did a great many others, while a third, according to the Kassel labor office, was "conscripted" to SS duty.<sup>7</sup>

The guards whose names are known did not come from Berlin. After a four-week training period in the Ravensbrück women's concentration camp, the female SS overseers were first deployed as escorts for the transfer of the Polish prisoners to Zehlendorf. After their arrival there, they became part of the guard.

According to Polish survivors, the SS commandant at the subcamp was a 35-year-old SS man by the name of Michael.<sup>8</sup> Survivors remember that he once set his dog on a female prisoner and then beat her. The reason for the attack may have been a strike by the prisoners.<sup>9</sup> The former prisoners are not

aware of deaths in the Zehlendorf subcamp; neither do the change of status reports give any indication of fatalities.

According to the survivors, the work conditions exposed them to a special risk: the Spinnstoffabrik Zehlendorf AG manufactured, among other things, parachutes from synthetic silk for the armed forces. In the spinning department, the threads ran through basins that were filled with sulfuric acid and water. The prisoners often had to put their hands into the basins to reconnect broken threads and to fetch the so-called *Kapillar*, a small golden tube that fell into the water when the threads broke. In doing so the women injured their unprotected arms and their eyes. The women were threatened with beatings if one of the tubes was lost.<sup>10</sup> Other prisoners did less dangerous work such as weeding on the factory grounds. The work shifts were of 12 hours. The women were guarded by Germans while they worked, but it remains unclear whether the guards were SS or internal plant security.

Living conditions in the Zehlendorf subcamp were characterized by malnourishment and accommodation beneath human dignity. The subcamp consisted of a wooden barracks surrounded by barbed wire. It bordered a camp for IMIs and was separated from it by a tall wooden fence. All 301 women were held in one barrack, which was therefore very crowded. The women slept in three-tiered beds on sacks filled with sawdust. According to Janina P., "There was great hunger in the camp."<sup>11</sup> The food consisted of rotten winter vegetables and small portions of bread, margarine, jam, and horse sausage. The women were dressed in striped prisoner clothes and wore wooden clogs. Several survivors have stated that they suffered from the filthy conditions. There were only limited washing facilities.

According to Lydia R., a committee of SS men arrived in the camp one day and ordered the removal of the women. The Armaments Inspectorate's war diary reveals that partial damage to the factory by an Allied air raid prompted the committee's visit and the subsequent decision to move the prisoners: "As a result the three hundred female prisoners who had been deployed to increase production could no longer be effectively used and were again made available for reassignment by the deployment office."<sup>12</sup> However, the women did not return to the Sachsenhausen deployment post but were sent to the Pertrix-owned Akkumulatorenfabrik (Battery Factory) AG Hagen in Niederschöneweide in the Berlin district of Köpenick. The Niederschöneweide (Pertrix) subcamp first appears in the change of status reports on September 20, 1944, with the notation "formerly Zehlendorf." This leads to the conclusion that the transfer of the women to the subcamp at Niederschöneweide was not merely the transfer of a group of prisoners but of the whole subcamp to a new location. Those SS overseers known by name, however, were transferred to another subcamp. Most of them ended up at the Neukölln subcamp in Berlin. Only the senior guard among the SS overseers accompanied the prisoners to Niederschöneweide.

As a result, Zehlendorf was the most short-lived of the Sachsenhausen subcamps: according to the SS files, the camp at the spinning mill existed for just under three weeks.

The SS overseers at the Zehlendorf subcamp twice preoccupied German courts after the war. The SS overseer Frieda Schweinhardt was taken prisoner by Soviet units at the end of the war and interned in many different Soviet special camps (*Sonderlager*) until her trial in 1950. In one of the “Waldheim Trials” held in the German Democratic Republic, she was charged as one of the main accused and sentenced to 20 years’ imprisonment and confiscation of property.<sup>13</sup> She was released early from prison in 1955 and moved to the Federal Republic of Germany, where she was not the subject of any further charges.

In 1971, the State Attorney in Cologne investigated the guards of the Sachsenhausen subcamps. As part of the investigation, assistance was sought from the People’s Republic of Poland in interviewing survivors. However, the investigations did not result in any proceedings, as there was no evidence of any homicides.

**SOURCES** This contribution is based on archival documents found in five archives. Of particular importance are the Veränderungsmeldungen for female prisoners of the Sachsenhausen concentration camp. Copies are to be found in the AG-S. The originals are located in the CAFSSRF. The war diary of the Armaments Inspectorate III is held in BA-MA and provides details on the history of the formation of the Zehlendorf subcamp. The BA-L (formerly ZdL) holds the results of the investigations by the Sta. Köln into the subcamp’s former overseers. The collection contains witness statements by former Polish prisoners and by former overseers. The only court judgment relating to the subcamp was made by the LG Chemnitz and is held in the BStU.

## BERNAU

According to a schedule held at the Sachsenhausen Memorial Museum, there was a work detachment at the SD-Führerschule (Officer School) Bernau from the summer of 1943 to the spring of 1945. Bernau is about 15 kilometers (9.3 miles) from Berlin. There were up to 150 male prisoners located at Bernau. However, neither the initial list prepared after the war nor a master’s thesis written on the Sachsenhausen subcamps refers to the camp at Bernau. The camp commandant’s office does not refer to the Bernau camp in the change of status reports (*Veränderungsmeldungen*).

SS-Obersturmführer Carl Rathgeber was in command of the Sipo and SD-Führerschule in Bernau from 1942 to 1944. While stationed in Bernau, he was made a police inspector. He died in 1964. The purpose of the school was to train SD noncommissioned officers for service in special detachments in the East.

There was a Sachsenhausen work detachment in Bernau as early as the autumn of 1941. Prisoners were sent to work in a large park that included orchards and gardens; there they picked and stored apples. During bad weather the prisoners had to do demolition work at a summer residence, which was located on an island in a small lake in the park and was said to have belonged to an Englishman. There were 10 prisoners based here. They were guarded by three to four SS men. The prisoners were brought to Bernau from Sachsenhausen every day by truck. Another report stated that in 1941–1942 there was a bakery detachment (Kommando Bäckerei) in Bernau. German prisoner Karl Kunz was the foreman. At the end of 1942, there is a record of Polish prisoner Stefan Oblucki from the Bernau work detachment being treated in the Sachsenhausen infirmary.

A political prisoner has stated that he was based at the Bernau Supply Office (Versorgungsamt in Bernau) from mid-1943 to the end of March 1944. He also referred to that detachment as the Bernau construction yard (Bernau Bauhof). Most probably, the detachment had by this time become a subcamp to accommodate the prisoners at their workplace. In the summer of 1943, another prisoner arrived at Bernau. There were by this time 25 prisoners in the Bernau Castle Park (Bernau Schlosspark). They were accommodated on the first floor in the old castle.<sup>1</sup> The whole castle area was surrounded by barbed wire and mesh. The prisoners worked in the castle nursery, glassing a hothouse and cleaning the fishpond and the park. The guards were supplied by the SD-Führerschule. Head of construction was Josef Decker, a so-called Bible student (Bibelforscher, i.e., a Jehovah’s Witness) prisoner. The SS block leader Gustav Sorge stated that about a hundred prisoners were used as construction labor at the SD-Führerschule in Bernau,<sup>2</sup> Germans, Poles, Dutch, and Russian prisoners were deployed there. Later the same detachment worked at Schloss Friedenthal, another Sachsenhausen work detachment.

A Norwegian prisoner stated that there was a carrier pigeon detachment based in Bernau from the beginning of

October 1943. A German prisoner also talks of “a carrier pigeon farm” at Bernau.

There was apparently a group of Communist prisoners in Bernau. At the beginning of May 1944, a special commission of the Gestapo carrying out investigations in Sachsenhausen placed a prisoner agent in the Bernau subcamp to watch over the Communists who “were forming a cell and holding informal meetings.”<sup>3</sup>

As late as the beginning of January 1945, there is a record of the prisoner Johann Idzikowski of the Bernau work detachment being treated in the infirmary at Sachsenhausen.

According to the few statements by former prisoners, there were no deaths and no mistreatment of prisoners at Bernau. Investigations by the Central Office of State Justice Administrations (ZdL) ceased for this reason.

**SOURCES** There are no secondary sources on Bernau. All the sources are in AG-S or BA-L.

## BIESENTHAL

Biesenthal was registered as a subcamp of the Sachsenhausen concentration camp as early as 1949 in a listing of the International Tracing Service (ITS). However, the sources are unknown.

According to lists at the Sachsenhausen Memorial from July 1, 1944, there was an outside detail of 150 men at a provisional police camp in Biesenthal, 30 kilometers (18.6 miles) northeast of Berlin.<sup>1</sup> In addition, the prisoners were also deployed at a training area. The former commandant of Sachsenhausen said after the war that 100 to 150 men had been deployed by the police at Biesenthal.<sup>2</sup>

A former prisoner of the Sachsenhausen concentration camp declared after the war in an undated document on Biesenthal: “construction detail police school, approximately eighty men, adequate food initially, later bad.”<sup>3</sup>

In the documents of the East German General State Attorney’s Office, the SS office in Biesenthal is also referred to as a police training camp. Some 100 prisoners were supposedly deployed there.<sup>4</sup> This information originates from a publication of the East German Anti-Fascist Committee that had been drafted by former prisoners.

According to the change of status reports of the Sachsenhausen concentration camp, 110 male prisoners were present in Biesenthal at the end of December 1944; on February 12, 1945, there were 147. The Biesenthal subcamp is mentioned

for the last time in the daily statistics of the main camp on April 9, 1945. The number of prisoners then in Biesenthal was 129. Around this time, the subcamp must have been closed.<sup>5</sup>

As the chief of staff to the command of the Berlin Municipal Police, SS-Brigadeführer and Generalmajor der Polizei Walter Abraham was in charge of the police school at Biesenthal.

The leader of the camp from November 1944 was SS-Unterscharführer Oskar Hoffmann, originally born in Rehau and a porcelain painter by profession. According to his own account, he had previously been leader of the Werder and Ketschendorf subcamps, probably between January 1941 and March 1943. [We were unable to find any record of a subcamp in Ketschendorf.—Ed.]

Hoffmann was first detained after 1945 in the British internment camp of Esterwegen. In a written procedure in accordance with the Law Concerning the Liberation from National Socialism and Militarism of March 6, 1946, he was ranked as “minimally incriminated” (*Minderbelasteter*) in January 1948 by the camp denazification court at the U.S. internment camp Nürnberg-Langwasser. He was sentenced to a half-year’s probation and ordered to make a 500 Reichsmark (RM) reparations payment.<sup>6</sup> He also received written confirmation of the conclusion deduced from information from former prisoners that as a detail leader he had not committed any crimes against humanity, including in Biesenthal. The court released Hoffmann from the internment camp with immediate effect. Hoffmann died in 1961 in Wunsiedel.

From 1967, the Central Office of State Justice Administrations (ZdL) in Ludwigsburg investigated possible crimes in the Biesenthal subcamp, but investigations were closed without result in 1972.<sup>7</sup> East Germany also processed a judicial assistance request from the ZdL in Cologne with no results.<sup>8</sup>

**SOURCES** There is no literature concerning the Biesenthal subcamp. The subcamp is listed in *Das nationalsozialistische Lagersystem (CCP)*, ed. Martin Weinmann, with Anne Kaiser and Ursula Krause-Schmitt, prepared originally by ITS (1949–1951; repr., with new intro. matter, Frankfurt am Main: Zweitausendeins, 1990), p. 261.

Most of the records can be found at the BA-L and at the AG-S, and a few can be found at IfZ, BA-B, and BLHA.

## BRANDENBURG (HADEL)

The subcamp of Brandenburg (Havel) was first recorded in the SS daily reports with 30 prisoners on July 9, 1941, and 25 prisoners on October 29.<sup>1</sup> As of February 1944, between 50 and 65 prisoners were regularly deployed at Brandenburg, and in February 1945, between 75 and 85 were reported there. The camp was last mentioned in the daily reports on April 9, 1945.<sup>2</sup> According to prisoners' statements, they were not transferred to the main camp after the subcamp was closed but rather were marched from Brandenburg directly to Mecklenburg in the direction of Wittstock. The Red Army liberated them at Rathenow.

Other sources record that the camp existed between May 13, 1941, and April 18, 1945, at the SS-Military Depot (Zeugamt) in Brandenburg and that it had 30 prisoners.<sup>3</sup> The Central Office of State Justice Administrations (ZdL) at Ludwigsburg indicated in its investigation documents that the camp was first mentioned on March 13, 1941, with 30 prisoners.<sup>4</sup> The former commandant of the Sachsenhausen concentration camp, Anton Kaindl, stated during an interrogation by the British that 50 to 70 prisoners were deployed at the SS clothing depot in Brandenburg.

The prisoners worked in the captured materials store of the SS Brandenburg military depot and had to organize the stock, draw up lists of the existing materials, and prepare them for delivery. This included SS uniform equipment. Initially, this work was carried out on the upper floors of a cell-block wing in the Old Prison, which was the transfer and storage location for all equipment and clothing for the Waffen-SS and SS offices in Berlin.

The site of the subcamp had a long history. One of the earliest SS concentration camps had existed in the Old Prison from as early as August 1933 until February 2, 1934. About 600 prisoners had been imprisoned there in inadequate, unhygienic conditions. Communists were the principal victims of this camp. Some of them died under torture. Between February and October 1940, over 9,500 people were murdered in a gas chamber on the Old Prison grounds during the "euthanasia" operation (*Aktion T4*) that operated under the cover name State Care Institute (Landes-Pflegeanstalt) Brandenburg on the Havel.

Around 1943, a new SS clothing depot was opened half an hour's march away in a silo on a peninsula of the Havel.

French, Polish, German, Dutch, and Soviet prisoners as well as Luxembourg policeman Norbert Karels, who was killed at the beginning of 1945 in Sachsenhausen, were de-

ployed at Brandenburg. One of the German prisoners was Jewish. In August 1942, a group of Dutch prisoners from the Speer detail from Sachsenhausen was brought to Brandenburg. The SS released the prisoner Martinus Tetters from Brandenburg on February 2, 1945, and the prisoner Joh. Szi-zhinsky on March 19, 1945.

In February 1944, Polish prisoner Zygfried Siminisc tried to break into a nearby camp where a winter aid and captured goods depot was housed; on February 10, 1944, he was sent for half a year to the "shoe-testing" (*Schuhläufer*) punishment detail at the main camp. On July 28, 1944, German prisoner Heinrich Busch was also assigned for unspecified reasons to the Schuhläufer punishment detail at the main camp in connection with the investigations of the Gestapo special commission at the Sachsenhausen camp.

The prisoners' food was supplied by the clothing depot and possibly also by the Brandenburg-Görden Prison. Sick prisoners were treated in the main camp's infirmary. The living conditions were described as pleasant compared to Sachsenhausen. It is reported that soccer and boxing were allowed on Sundays. The prisoners were allowed to grow their hair and wore good shoes. The senior prisoner at the camp was German Willi Franz Rojek.

The prisoners were housed at their workplace on the first floor of the Old Prison in Brandenburg. Two prisoners slept in each cell.

Detail leader of the Brandenburg camp was SS-Oberscharführer Paul Samorey; his staff included SS-Unterscharführer Otto, SS-Unterscharführer Heinz, SS-Schütze Josef Becker, SS-Unterscharführer Kurt Einecke, SS-Sturmmann Josef Pay, and SS-Schütze Josef Mörtelbauer or Würtelbauer.

There are no reports of abuse by those responsible for the concentration camp prisoners. Prisoners confirm that the camp leader Samorey treated them correctly. A Dutch prisoner was supposedly punished for an act of theft by being made to go up and down a staircase repeatedly while carrying a sandbag. However, in March 1945, the leader of the clothing depot, SS-Hauptscharführer Edwin Fritz, a musician by trade, shot seven Soviet prisoners of war (POWs) in the neck in front of the concentration camp prisoners in the yard of the Old Prison because they had stolen food after an air raid. For a time the leader of the newly constructed SS clothing and equipment factory in Brandenburg was SS-Scharführer Friedrich Bloos.

After the war, guards SS-Rottenführer Ludwig Pella and SS-Unterscharführer Otto Schlenker, photographer SS-Hauptscharführer Bernhard Walter, and detail leader SS-Unterscharführer Paul Samorey were imprisoned in the British internment camp Esterwegen.<sup>5</sup> Samorey had been taken prisoner by the Soviets on May 3, 1945, but he had managed to escape. The British released him at the end of December 1947.<sup>6</sup>

The chief of the clothing depot, Fritz, was also imprisoned in the British internment camps at Fallingbowl and Sandbowl, and he died while still under investigation on January

5, 1948.<sup>7</sup> Another guard, Albert Andree,<sup>8</sup> and a member of the clothing depot, Kurt Einecke,<sup>9</sup> were also interned in British camps.

Former member of the SS clothing camp Anton Grössing was briefly in Soviet captivity, from which he was released due to his inability to work; he was rearrested in the American zone. He was granted amnesty in April 1948 by the Fürstentum Brandenburg denazification court after being interned for 11 months in the Dachau concentration camp.<sup>10</sup> The temporary leader of the newly constructed SS clothing and equipment factory in Brandenburg, Bloos, was also interned after the war, first in the U.S. internment camp Ludwigsburg, then in Moosburg until 1947.

The ZdL investigated possible crimes in the Brandenburg subcamp without result from 1967 until 1972.<sup>11</sup> In 1968, East Germany processed without result a request of judicial assistance from the main office in Cologne.<sup>12</sup>

**SOURCES** Except for the cited volume from the Brandenburg records archive, there is no literature specifically on the Brandenburg subcamp. Almost all archive sources are from the BA-L, the AG-S, the PRO, and BA-B.

## BRIESEN [AKA FALKENHAGEN]

The National Socialist authorities opened the camp of Briesen on October 26, 1943. It was a subcamp of the Sachsenhausen concentration camp whose prisoners had to work at a large construction site nearby. The regime planned an underground factory for the production of the poison gas Sarin. The industrial complex received the name Turon. However,

the mass production of poison gas failed because of a shortage of raw materials. Therefore, the newly built factory produced alternative chemical products necessary for the German armaments industry.

A company called Luranil-Baugesellschaft GmbH-Baustelle Falkenhagen, Briesen (Mark) was the builder of the planned factory building. Luranil was a subsidiary company of IG Farben with headquarters in Ludwigshafen am Rhein and assigned the construction project to two regional operating companies, Dyckerhoff & Widmann and Heinemann & Busse.

The construction site and the subcamp were placed in a forest next to a country road connecting the Brandenburg villages of Briesen and Falkenhagen, east of Berlin and close to the towns of Fürstenwalde an der Spree and Frankfurt an der Oder. Some sources called the subcamp Briesen, others Falkenhagen. An explanation for this variation can be found in the number of inhabitants of both communities: although closer to the small village of Falkenhagen, Briesen was larger and therefore better known.

The prisoners had to work under the supervision of foremen and were led by skilled workers. The authorities at the construction site subdivided them into 14 commandos (Kommandos)—13 construction commandos and 1 commando for metalworking. SS guards including two dog handlers observed the daily 500-meter (547-yard) march of the prisoners between the construction site and subcamp.

The camp was made up of two parts: one area was occupied by the SS, and another area was allocated to the prisoners. Both parts were divided by a wire-mesh fence. In addition, the prison camp was surrounded by two electric barbed-wire fences and secured with four watchtowers. A footpath ran between the two fences, enabling the guards to patrol. Furthermore, the whole forest was surrounded by a fence that was 2 meters (6.6 feet) high.

The prisoners lived in five to seven wooden huts—German and Jewish prisoners in separate huts—and slept in wooden bunk beds. They used a shower room with 25 to 30 shower facilities, as did the guards.

The part of the camp used by the SS had an orderly room, living space for the guards, some working areas, and the camp kitchen. The Sachsenhausen concentration camp delivered food once a week.

The SS counted about 500 prisoners on February 7, 1945. A maximum number of prisoners was reached with 700 to 800 persons.<sup>1</sup> Most of them were Soviets, Poles, southern Slavs, and French. There were about 13 Jewish, 10 Dutch, and a minimum of 7 German prisoners. The German prisoners were in most cases so-called prisoner-functionaries (*Funktionshäftlinge*). They represented a connecting link between the subcamp command and the other prisoners.

The first chief of the subcamp was SS-Hauptsturmführer Wilhelm Hermann Heidrich, who was transferred to the subcamp Oranienburg (Heinkel-Werke) at the beginning of 1944. His successor was SS-Untersturmführer Helmut Sturmhövel. He was transferred to the subcamp Berlin-Lichterfelde

on March 1944. The only ranking SS member who stayed in the Briesen subcamp during the whole period of its existence was SS-Unterscharführer Alfred Braun. He was the labor service leader (*Arbeitsdienstleiter*).

The 30 to 40 guards—including two dog handlers—were part of the 2nd SS-Wachkompanie Oranienburg and later part of the 7th SS-Wachkompanie Berlin-Lichterfelde.<sup>2</sup> They evacuated the subcamp after the Red Army had started an offensive near the town of Küstrin at the beginning of February 1945. The first deportation train, with about half the prisoners, left Briesen on February 4, 1945, and reached Sachsenhausen on February 7. The last deportation train changed direction and brought prisoners to the Buchenwald concentration camp at the beginning of February 1945. A truck transport with sick prisoners left the Briesen subcamp with the same destination at the end of January 1945.<sup>3</sup> Finally, the authorities evacuated the whole area on April 30, 1945.

Eyewitnesses remembered the murder of a young Sinti (Gypsy) because of his escape attempt in December 1944.<sup>4</sup> There was only one interviewed person by the German fact-finding committee who talked about more than one murder at the subcamp. His name was Doose, and he was a former guard. However, further investigations could not find indications of more than one murder. German authorities suspected Doose of being a liar.<sup>5</sup>

**SOURCES** Primary documentation on the Briesen subcamp is located in AG-S, especially in the Briesen box, which contains a collection of testimonies collected by ZdL (available at BA-L), under file IV 406 AR-Z 40/71.

## DAMMSMÜHLE

Dammsmühle Castle is located in Schönwalde in the district of Niederbarnim. According to documents, 25 prisoners from the Sachsenhausen concentration camp were located there in a labor detail on January 2, 1943; by July 3, 1943, there were only 20.

The camp Dammsmühle-Schönwalde is mentioned in the book on the Sachsenhausen concentration camp published in 1967 in East Germany by the Antifascist Resistance Fighters' Committee. The number of prisoners is estimated at 25. The Sachsenhausen Memorial indicates January 2, 1943, as the date of the establishment of the subcamp and July 3, 1943, as the closing date with 27 male prisoners supposedly housed at

the subcamp, which served the SD officer school in Dammsmühle Castle.

An older list held by the Sachsenhausen Memorial indicates August 1942 as the date of establishment, with 25 male prisoners deployed to do construction and excavation work.

According to the recollections of prominent former Sachsenhausen concentration camp prisoner, Communist Willy Sägebrecht, he arrived in Dammsmühle at the beginning of 1943 with 35 other prisoners.<sup>1</sup> Some 28 of his group had been imprisoned in Sachsenhausen for membership in the Communist Party, another 4 as criminal prisoners.

The former guard at Dammsmühle, Romanian-German Viktor Halicki, also confirms that about 40 prisoners were under guard in Dammsmühle.

At the time of the Nazi Party's seizure of power, Dammsmühle Castle belonged to British industrialist Harry Goodwin Hart, who was married to a Jew. During the absence of its owners, the Berlin Supreme Court awarded the castle, then designated as "enemy property," to a new owner, Reichsführer-SS Heinrich Himmler, who acquired it after a forced sale. The chief of the Security Police and of the SD, Reinhard Heydrich, was supposedly based there while he planned and led the faked attack on the Gleiwitz radio transmitter station.

The prisoners were deployed exclusively in the maintenance of the castle grounds and the garden. They ran a garden business with greenhouses and a small farm of 8 to 10 hectares (20 to 25 acres). Due to a lack of modern equipment, they worked mainly by hand. The farm produce was intended for the SS-Main Office in Berlin. At times individual prisoners would be deployed in ditch-clearing work in Basdorf and at the Schönwalde sawmill.

Rumors in Dammsmühle and the vicinity incorrectly associated the subcamp with the counterfeiting workshop in Sachsenhausen.

The food was delivered once a week from Sachsenhausen. The prisoners had to cook themselves.

The SS in Dammsmühle seem to have refrained from the otherwise usual harassment of the prisoners. The group around the Communist Sägebrecht supposedly even sang Communist songs and the "Moorsoldatenlied" (an anti-Hitler song written by a prisoner) on the occasion of a cabaret evening they had organized.

Initially, the prisoners were housed in an old building in an area that had been deforested years before; later they put up new accommodation barracks there. Sägebrecht acted as foreman. Together with Heinz Junge and Otto Heyer, he is supposed to have founded a party group among the Communist prisoners, enabling them to enlist the criminal prisoners in resistance work and to fend off the camp leader's attempts to divide the inmates. They also seem to have managed to obtain newspapers as well as other news about the situation in Germany through contact with certain guards. The group around Sägebrecht also supposedly threw their own anti-Hitler leaflets from a truck while driving through Bernau.

Heyer took over the position of foreman after Sägebrecht was transferred to the infirmary in Sachsenhausen for treatment in April–May 1943.

The camp was guarded by members of the Reich Security Main Office (RSHA), mostly SS noncommissioned officers. The leader of the detail was an SS-Obersturmführer. Only three guards are known by name—Mathias Roth, Erich Dräger, and Viktor Halicki, who said that he did his service in Dammsmühle and then was ordered to go to the front on the Oder River.

The date when the camp was finally closed is not documented. There is proof that office employees of the “RSHA Berlin, Dammsmühle subcamp” were still working at the Dammsmühle Castle until October 1944.

The Central Office in Cologne investigated possible crimes in the Dammsmühle subcamp and requested judicial assistance from East Germany. Investigations were carried out, and it was concluded that the Dammsmühle subcamp had been established for the commander of the SD-Officer School in Bernau, SS-Obersturmführer Karl Rathgeber, and that he had apparently already died. The former prisoners Erich Plumenbohm, Heinz Junge, Johann Petri, and Klaus Pieper characterized Dammsmühle as an especially good detail in which there had been no ill-treatment of prisoners.<sup>2</sup>

**SOURCES** There is little literature dealing directly with the Dammsmühle subcamp except for the booklet by Horst Hup, *Schloss Dammsmühle* (Bernau, n.d.). The subcamp is listed in *Das nationalsozialistische Lagersystem (CCP)*, ed. Martin Weinmann, with Anne Kaiser and Ursula Krause-Schmitt, prepared originally by ITS (1949–1951; repr., with new intro. matter, Frankfurt am Main: Zweitausendeins, 1990), p. 576; in KaW-DDR, ed., *Damals in Sachsenhausen* (Berlin [East], 1967), p. 61; and in the older Gedenkstätte Sachsenhausen, *Übersicht über die Entwicklung der Aussenkommandos des KZ Sachsenhausen 1940–1945* (Sachsenhausen, n.d.).

Most of the primary sources come from the archive of the AG-S and from the BA-L. Willy Sägebrecht published his memoirs of Dammsmühle as *Nicht Amboss, sondern Hammer sein: Erinnerungen* (Berlin, 1968).

## NOTES

1. Willy Sägebrecht, *Nicht Amboss, sondern Hammer sein: Erinnerungen* (Berlin, 1968), p. 277. His statement “in early 1944” is a mistake.

2. BA-B, DP 3/2015.

## DÖBERITZ

The Döberitz subcamp of the Sachsenhausen concentration camp was first mentioned in 1949 in a catalog of the International Tracing Service (ITS). The information relied on the details provided by the Belgian Tracing Service. A document published in 1969 by the ITS mentions that prisoners were

deployed in the construction and maintenance of military facilities.<sup>1</sup> According to the details held at the Sachsenhausen Memorial, the subcamp was established on June 1, 1944. About 100 prisoners were deployed at an SS military depot, at a depot of the Luftwaffe, and at the Wehrmacht camp at Dallgow.<sup>2</sup> The former commandant of the Sachsenhausen concentration camp stated after the war that the prisoners from Döberitz, about 50 to 100 men, were deployed working for the Luftwaffe. A former prisoner of the Sachsenhausen concentration camp referred to labor deployment at the Döberitz subcamp as follows: “some kind of SS military depot, camp work, only forty-five men.”<sup>3</sup> A Dutch document lists 150 prisoners working at the army facilities.

Among the prisoners there appear to have been French, Polish, Soviet, and possibly Belgians. Sick prisoners were transferred to the infirmary at Sachsenhausen. This is documented, for example, in the cases of French prisoner Georges Tessiers and Polish prisoner Stefan Czajkowski in January 1945.

According to the change of status reports of the Sachsenhausen concentration camp, there were 60 prisoners by mid-January 1945 and 50 prisoners by the end of March in Döberitz. The subcamp, by then containing 40 prisoners, was closed on April 5, 1945.<sup>4</sup> Shortly before this date prisoner Wladimir Maschenski, registered as a “BV” prisoner (*Berufsverbrecher*—a classification meaning a criminal under “preventive arrest”), escaped on March 23, 1945.

From 1967 the Central Office of State Justice Administrations (ZdL) at Ludwigsburg investigated the Biesenthal subcamp for possible crimes, but it closed the proceedings without result in 1972.<sup>5</sup> East Germany processed a request of judicial assistance from the Central Office in Cologne, also without result.<sup>6</sup>

**SOURCES** This subcamp is listed in *Das nationalsozialistische Lagersystem (CCP)*, ed. Martin Weinmann, with Anne Kaiser and Ursula Krause-Schmitt, prepared originally by ITS (1949–1951; repr., with new intro. matter, Frankfurt am Main: Zweitausendeins, 1990), p. 261.

Besides the information from the ITS lists from 1949 and 1969, there exist only a few sources held at AG-S. Other sources for this camp are held at BA-L, BLHA, and IfZ.

## DRÖGEN

In the spring of 1941 a subcamp of Sachsenhausen was established close to Ravensbrück, near Fürstenberg/Havel, at Drögen. In 1949, the International Tracing Service (ITS) put the date of the establishment of the camp, based on official documents, as May 2, 1941. The number of prisoners was reported to be 156. A former prisoner, however, has stated that he was transferred on April 1, 1941, from Sachsenhausen to Drögen. The Sachsenhausen change reports (*Veränderungsmeldungen*) refer to the camp for the first time on April 15, 1941, with a complement of 160 prisoners.<sup>1</sup> On August 1, 1941, there were 230 prisoners; at the end of October, 270; and at the end of December, 253.<sup>2</sup> The camp, which eventually held up to 350 male prisoners, only existed as a Sachsenhausen subcamp until November 30, 1942; then it was subordinated to Ravensbrück.<sup>3</sup> According to an overview of all Sachsenhausen subcamps issued in 1990 by the Sachsenhausen Memorial, the concentration camp prisoners in Drögen were used to construct a Security Service (SD) school.

Originally, it was planned to establish an explosives factory in Drögen, for which a forced labor camp would be built. In February 1941, it was half complete. The explosives factory, however, was never finished. During the same period, there were plans for an SS and SD school for the Security Police (Sipo) in the same location. The first building and facilities originated from the expansion and new construction in the new project. The prisoners constructed, for example, a command office, an entrance area, a roll-call square, typical brick buildings for housing, as well as schoolrooms, a sports field, a shooting range, and remodeled garages. A few prisoners worked in the officers' mess and as barbers in the police school. Others had to work for SS officers on their private property, working in and tending to the gardens.

Soviet prisoners of war (POWs) were also used in the police school, but they were not held as prisoners in the Drögen subcamp. It is thought that a few of them were shot by SS men in the police school, in a sand pit, not far from the laundry, which functioned as a shooting range.<sup>4</sup> Another, a Russian civilian, was shot by an SS-Hauptscharführer after escaping and being recaptured close to the camp. Before being shot, he was held for days in a cellar in the police school.<sup>5</sup>

In the summer of 1941, the personnel from the Border Police School (Grenzpolizeischule) Pretzsch were transferred to Drögen. The expansion of the school by the prisoners continued.

When the prisoners were constructing the sports field, they had to carry 3 cubic meters (106 cubic feet) of sand each hour in tipcarts. Accidents often occurred as a result of the

excessive work demands. For example, when removing gravel from a nearby gravel pit, prisoners were occasionally buried alive under the gravel and died. While working, the prisoners were guarded by members of a police unit under the command of an SS officer. The SS was said to have treated Poles and Jews in a particularly brutal manner.

The prisoners, mostly German political prisoners, Czech students, Soviet civilians, and Dutch, were accommodated in five permanent houses on the police school grounds. The accommodation was fenced in with barbed wire. It is thought that there may also have been foreign Jewish prisoners in Drögen. If so, they were few in number and were later transferred to the main camp. A few Jewish Germans were also prisoners in Drögen; they were, possibly with other Jewish prisoners, transferred in October 1942 to Auschwitz. In September 1942, prisoners were transferred from the Ravensbrück concentration camp to Drögen to work inside the school, for example, laying tiles (as well as cleaning and other jobs in the school).

The food was described as “relatively good.” It was delivered from Ravensbrück and cooked in the police school's kitchen. Sick prisoners were transferred to the main camp for treatment.

Around 180 prisoners, which probably included all Jewish prisoners, were transferred in October 1942, possibly as a result of the camp's dissolution, to Auschwitz. Around 40 remained in Drögen.<sup>6</sup>

The camp leader (Lagerführer) was initially SS-Oberscharführer Hermann Skopnik. He was replaced in June 1941 by SS-Hauptsturmführer Richard Bugdalle. He later returned to Drögen. He was arrested at the end of 1942 for theft and giving favors to prisoners and was sentenced in 1943 by the SS and Police Court (SS- und Polizeigericht) Berlin-Dahlem to three years' penal servitude. For a time, SS-Unterscharführer Erwin Seifert was sent to Drögen as camp leader. Bugdalle's successor was SS-Führer Schröder.

The head of the police school was SS-Oberscharführer Dr. Hans Trummler. The camp was guarded by a police unit, led by SS-Oberscharführer Bauer. The camp elder (Lagersältester) was a criminal, probably Eduard Besch. Political prisoner Hermann Felix was Kapo. Felix had developed a poor reputation when he was in the main camp and was called “Mad Felix.” From March 1942, he was an official orderly in the guards' rooms and was permitted to wear a uniform without markings. After 1945, he remained in the Soviet occupation zone, was convicted in 1946 for making anti-Soviet statements, and was held in a number of camps in the Soviet occupation zone, finally being released from a camp in the Soviet Union in 1953.<sup>7</sup> Another prisoner foreman was political prisoner Curt Fiesel, who was well known as someone who liked to hit others. According to others, the prisoners Felix, Besch, and Schmitz alternated as camp elder.

Although there were many cases of mistreatment, especially by the Kapo Felix, there were no deaths caused by the SS. However, one prisoner, a Pole, died after being mistreated

by SS-Unterscharführer Seifert with the broken shaft of a pick axe in the camp's office. The Polish prisoner had been reported by the construction company Riechling in Neustrelitz for unsatisfactory work and was severely beaten by Seifert. The prisoner died the next morning.

It is also reported that the temporary camp leader, Bugdalle, mistreated the prisoners, especially Poles and Jews, by beating them. A Neustrelitz firm claimed that he reported the prisoners who had not worked satisfactorily to the Kapo, who then beat them.

At the end of 1942, there was only one area left on the site to be built. Once the school for 500 to 700 trainees commenced operations, around 30 concentration camp prisoners remained in Drögen to work in the kitchen and the gardens and to undertake repairs. It was now under the control of Ravensbrück. (The camp may have operated as a subcamp of Ravensbrück until May 8, 1945. There is no information about the fate of this smaller group of inmates.)

The first camp leader, Skopnik, fell into British hands at the end of the war and at the end of 1945 returned to his family in Fürstenberg/Havel. He was arrested by the Soviets and questioned as to who was responsible for the Sipo school. He was later deported and in 1949 sentenced to 25 years in the Soviet Union for membership in the SS and espionage but not for crimes committed in Drögen. He returned from the Soviet Union in 1955.<sup>8</sup>

The head of the police school, SS-Oberscharführer Trummeler, was executed on October 22, 1948, in Landsberg.<sup>9</sup> The occasional camp leader, Bugdalle, was sentenced in 1960 by the München I Schwurgericht (Court of Assizes) to life imprisonment for homicides committed in Sachsenhausen.<sup>10</sup> In 1968, the former camp leader Seifert was charged with the murder of a Polish prisoner in May 1942 in Drögen. He was arrested and in the so-called Kaiser Proceedings was sentenced to life imprisonment on April 20, 1970, in Munich.<sup>11</sup>

Between 1969 and 1972, the Central Office of State Justice Administrations (ZdL) in Ludwigsburg investigated Drögen as a Ravensbrück subcamp. The investigations ceased as there was a lack of evidence to support the prosecution of any crimes. The German Democratic Republic assisted the Central Office in Cologne, at its request, but without any noteworthy results.

The ZdL also investigated the murder of the Soviet POWs. The results were handed over in 1970 to the Frankfurt am Main State Prosecutor.

**SOURCES** There have been no specific publications on the Drögen subcamp except for the essays by Jens Banach, "Die Rolle der Schulen der Sicherheitspolizei und des SD: Einführung" (pp. 58–81), and Florian von Buttlar, "Entstehungs- und Baugeschichte" (pp. 88–93), both published in Florian von Buttlar, Stefanie Endlich, and Annette Leo, eds., *Fürstenberg-Drögen: Schichten eines verlassenen Ortes* (Berlin, 1994). The subcamp is listed in *Das nationalsozialistische Lagersystem (CCP)*, ed. Martin Weinmann, with Anne Kaiser and Ursula Krause-Schmitt, prepared originally by ITS (1949–1951;

repr., with new intro. matter, Frankfurt am Main: Zwei-tausendeins, 1990), p. 576.

The primary source material is mostly held in the BA-L and AG-S.

## FALKENSEE (WITH STAAKEN)

At a meeting on March 4, 1943, between representatives of the Reichsbahnbaudirektion (German National Railway Construction Directorate, RBBD) Berlin and the Deutsche Maschinenfabrik (Demag) Fahrzeugwerke Falkensee GmbH (Demag Vehicle Factory Falkensee), a subsidiary of Demag AG Duisburg, the Demag representatives stated, "Demag intends as quickly as possible to use a large number of prisoners from the Oranienburg concentration camp for urgent work . . . and to accommodate them at the Reichsbahn camp at Staaken [Nennhauser Damm]."<sup>1</sup> For this purpose, Demag leased the Staaken Reichsbahn camp from the Deutsche Reichsbahn until its concentration camp at its Falkensee factory was completed in July 1943. Demag paid the Deutsche Reichsbahn a total of 30,800 Reichsmark (RM) in rent.

As early as March 11, 1943, the prisoner administration office at the Sachsenhausen main camp accounted for 302 prisoners at Falkensee.<sup>2</sup>

In a caricature by an unidentified artist, Ludwik Zuk-Skarszewski conducts the camp orchestra at Falkensee, 1944. Represented in this sketch are Ludwik Zuk-Skarszewski, conductor; Eugene Lacoste, accordion; Tadeusz Glinksi, Helicon; Zygmunt Paloszewski, trumpet; Roman Chrzanowski, trombone; Feliks Radomski, banjo. The names of the other four musicians are unknown.

USHMM WS #27634 COURTESY OF ALEXANDER KULISIEWICZ

The detail was commanded by SS-Obersturmbannführer Kurt Ludewig, formerly in command of the outside detail “Klinkerwerk.” He had been a member of the SS since 1932 and in 1940 began his career with the SS-Totenkopfverband (Death’s Head Unit). The first prisoners, mainly from Norway and the Soviet Union, arrived in March 1943. The prisoner-functionaries were exclusively German. Ludewig deliberately chose them from the ranks of prisoners classified as “professional criminals” or “asocials.” Only the Norwegians, regarded as “Aryans,” were quartered together as a group in one room, and only they could appoint an agent from among their own number.

By May 10, 1943, there were 1,254 prisoners in the camp. In April and May, additional prisoner transports arrived from France and Poland. There were German prisoners (always in the minority and estimated to number about 150), primarily “professional criminals” and “asocials,” but also “politicals,” Jehovah’s Witnesses, and “Gypsies.” There were 2 Jehovah’s Witnesses who worked in the clothing depot; they were always polite and approachable to their non-German fellow sufferers in the camp. Many male members of the Romany “Weiss” family labored in Demag’s work column number seven, which manufactured shells. They maintained a strong bond with each other.

During this period, the prisoners, working in 12-hour shifts and under the most primitive conditions, built the stone barracks of the future Falkensee concentration camp as well as a camp for forced laborers in the Falkensee district of Falkenhöh. Making the task even harder was a 3-kilometer (1.9-mile) march both to and from the building site. It was not only Demag’s construction bosses but also smaller building

firms from Falkensee that made money from hiring the concentration camp prisoners’ labor (charged per day and per prisoner).<sup>3</sup>

The death rate was high due to the hard working conditions and the inhuman regime presided over by the camp commandant, Ludewig, his roll-call leader Fritz Ficker, and their criminal henchmen, the prisoner-functionaries. The infirmary was infamous—there were only two beds. The foreman of the infirmary tortured prisoners to death, and a Polish prisoner doctor examined prisoners looking for any as-yet-undiscovered Jews.<sup>4</sup>

Prisoner statistics for the period March to July 1943 record strong fluctuations. However, since deaths were only recorded through the main camp at the Oranienburg civil registry office, there is no documentation of death rates specifically for Falkensee. (According to accounts of Norwegian and French prisoners, the death rate for the period of almost four months in Staaken was 40 percent.)

The Staaken camp was handed back to the RBBB Berlin on July 10, 1943. One can assume that no later than this date the newly built Falkensee subcamp on the Finkenkruger Weg, not far from the Demag factory, was in use. At first the wooden barracks were occupied. They later served as barracks for the SS guards and Hitler Youth flak crews. Solidly built prisoners’ barracks were first occupied on October 17, 1943.<sup>5</sup>

One of the earliest of the prisoners’ recollections, especially among French prisoners, is the murder of Polish prisoner Anton Krupa on Bastille Day, July 14, 1943. Krupa had hidden in the foundations of one of the unfinished barracks at Falkensee. He intended to flee once the prisoners had marched off from Staaken. He was betrayed and arrested. In Sachsenhausen he was interrogated for about a week. He was then hanged at the Falkensee camp during a prisoner roll call.

After the prisoners arrived at the Falkensee camp, they were put to work in various Demag assembly lines, building vehicles and manufacturing shells. They were brutally exploited in 12-hour shifts.

Some prisoners were trained to use the machines.<sup>6</sup> The company management was particularly interested in preserving the skills of these trained prisoners. Others had to do very heavy physical work in the foundry; the Kapos confiscated the extra rations prisoners were given for such work (sausage and so on) for themselves.

Column 11 was formed at the beginning of 1944. Following partial destruction of the factory, it was allocated separate barracks within the camp to repair infantry weapons.

It was at this time that column 13 was also formed. It comprised about 20 workers who were strictly isolated from the other prisoners. They were accommodated in the factory cellars. Their task was to complete the *Aggregat 4* (A4) rocket (for propaganda purposes, its name was changed to *Vergeltungswaffe* [revenge weapon, V-2]) with electrical switches. On April 22, 1944, the prisoners of this detail, mostly electricians or skilled metalworkers, were transferred to the Dora concentration camp.<sup>7</sup>

Since the days of the Staaken subcamp, an illegal organization among the political prisoners had been trying to occupy important “prisoner self-administration” posts. Their goal was to “eliminate” the influence of the “green and black triangles” (criminal and asocial prisoners).<sup>8</sup> Barrack one in Falkensee, whose barrack foreman was Christian Mahler, a Communist from Hamburg, was an “oasis” for the prisoners because of its “human” atmosphere.

Especially prisoners from the other barracks, who had experiences with German criminal prisoners regarding themselves as part of the “master race,” spoke with respect of the atmosphere in Mahler’s barrack. In contrast to Mahler, other barrack foremen or room foremen stuffed themselves with the special rations intended for those prisoners in their barrack doing heavy physical labor. Later on, the political prisoners took control of the infirmary, resulting in improved conditions.

In the summer of 1944, Demag lodged a complaint with the responsible SS authority about the poor condition of the leased prisoners, which was causing low rates of production. As a result, the worst slave drivers, commandant SS-Obersturmführer Ludwig and block leader SS-Oberscharführer Ficker, were removed. From then on, the prisoners were spared roll calls at night and similar harassments by the camp leadership.

The new commandant was Hauptmann Ernst Kannenberg of the Wehrmacht, posted for service on the “home front,” who was appointed on June 1, 1944. Kannenberg also held the rank of an SS-Hauptsturmführer,<sup>10</sup> a fact that he would later deny. This manager, of German nationalist outlook, constantly hoped that he would be demobilized because of a war wound. A new work column (860 men for the RBBD Berlin-Grunewald) was formed in August 1944.<sup>11</sup>

The camp’s eight prisoner barracks held 880 prisoners on May 31, 1944. On November 22, 1944, there were 2,475 prisoners.<sup>12</sup> On average, 77 people were crammed into each room. For every two rooms, there were eight washbasins and as many latrines.

In August 1944, a large number of Polish prisoners, survivors of the Warsaw Uprising, arrived at the camp. In November 1944, the Alkett firm took over the armaments factory.

In February 1945, the prisoners got a taste of what could lie ahead for them: the arrival at Falkensee of “more dead than alive” Jewish prisoners from the evacuated subcamp of Lieberose who had survived a murderous eight-day march, sleeping in the open (in February!). They were given some warm soup and slept in the buildings. Norwegian prisoners were able to make contact with the Jewish prisoner Wolfberg. Disguised, he was added to the list of prisoners to be handed over to the International Red Cross. The Scandinavian prisoners from Norway and Denmark left the camp in the direction of the main camp in February–March 1945 as part of *Aktion Bernadotte*.

The concentration camp commandant, Kannenberg, who was influenced by his cook Max Reimann, a Communist, delayed and finally prevented the evacuation of the camp in the

chaotic month of April. He secretly fled the camp during the night of April 25, 1945. The camp administration was then taken over by a camp committee chosen by the prisoners.

On April 26, 1945, a unit of Red Army soldiers appeared at the camp. The camp was evacuated within two hours, as around the camp persistent fighting was taking place with Wehrmacht and SS troops.

In 1947, Kannenberg was sentenced for war crimes to 25 years in a labor camp by a court of the Soviet military administration in Potsdam. Investigations by the Senior State Attorney’s Office in Cologne on the “subcamp Staaken-Falkensee” and the role of Ludwig and others did not result in any prosecutions.<sup>13</sup>

**SOURCES** Former prisoner Kristian Ottosen has published in Norwegian a history of the Falkensee subcamp: *Liv og død: Historien om Sachsenburg-fangene* (Oslo: Ascheburg, 1995). The book has an addendum listing all the names of the Norwegian prisoners in the Sachsenhausen concentration camp.

The AG-S holds the original of the barrack book of barrack one of the Falkensee subcamp. Christian Mahler, the barrack foreman, kept the book, recording a list of the prisoners in alphabetical order including details of their nationality, prisoner number, prisoner category, surname, first name, birth date, place of birth, profession, date of arrival (the departure date was struck through), room, and work detail. In addition, there is a collection of reports of former prisoners, mostly prepared for the Lagerarbeitsgemeinschaft Sachsenhausen, a section of the Komitees der antifaschistischen Widerstandskämpfer in der DDR. The reports were to assist in court proceedings against National Socialist perpetrators and serve as an educational tool. They contain details about the German political resistance and SS crimes. Fritz Bredemeier, Gustav Buttgeit, Christian Mahler, Bruno Schulz, Herbert Simon, and Karl Stenzel have written about their experiences in Falkensee. This group of records also contains a “seit-heriges Ermittlungsergebnis betr. die Nebenlager Staaken-Falkensee Demag zu Hermann-Göring Werken,” with the results of the investigation by Osta. Köln by 1969. In the 1980s, a comprehensive questionnaire with 30 questions was sent to surviving French prisoners. About 100 replies can be viewed in AG-S. Since the middle of the 1990s, the AG-S has collected copies of documents relating to Sachsenhausen held by other archives—there are the below-mentioned daily Veränderungsmeldungen for the prisoners’ money and personal effects administration held at the USHMMA and the Falkensee survivors’ accounts (Peter Farun) from the YVA. The verdict of the LG Münster in the trial of Dr. Baumkötter, Dr. Gaberle, and Dr. Adam discusses the public hanging of Pole Anton Krupa at Falkensee on July 14, 1943. At the USHMMA, in Record Group RG-06 War Crimes Investigations and Prosecution, .025 CAFSSRF, are records of war crimes trials held in the Soviet Union between 1939 and 1992 (bulk dates 1945–1947), and \*26 Sachsenhausen, 1939–1951 (N-19092, vol. 100), and daily Veränderungsmeldungen on the money and personal effects administration from the years 1944 and 1945. The BA-BL holds details on the perpetrators, particularly the commandants of the Falkensee subcamp. The

details are to be found in the Collection BDC, SS Personnel Card Index—Kurt Ludewig and Ernst Kannenberg. The BA also holds records of the Reich Corporate Index; Collection R 3101 of the RWM includes the card index “Demag-Fahrzeugwerke G.m.b.H. Falkensee” and the card index “Alkett-Altmarkische Kettenwerk G.m.b.H, Werk Spandau.” The BA-DH contains some of the records of Section IX/12 of the BStU: Ernst Kannenberg’s personnel files (Negative No. P89,A 5; ZB 2969, Obj. 4 with a denazification certificate in Russian, Polish, and German; MM 1367-1-114; StVE K.220, A.12); and Kurt Ludewig’s personnel files (ZB II 1103, A.1, p.96; ZB 150/56, Obj.5; ZM 1514, A 1, S. 177; Negative No. P93 D9; MM 1367-1-121; ZR 924, A. 1, S.58; sowj. DAL; ZM 1502, A.24, S.21). The HM-F holds a bundle of documents on the subcamp. It contains building drawings of the camp barracks and the construction instructions of Frickel Architects, Hannover, dated March 24, 1943. There is also a copy of an almost contemporaneous report by Hermann Stickelmann, a political prisoner, dated April 20, 1947, and a copy of the diary of political prisoner Bruno Schulz, relating to the history of an infirmary for seriously ill former concentration camp prisoners established after the liberation in Falkenhöh. The LA-B, Collection RBBD Berlin, SU 18663, contains the building file for the Staaken camp for the period March to June 1943. It also contains the lease between Demag and the DR for the lease of the camp. This collection also contains the building files for the RAW, Falkensee (12 volumes), classification SU 18669. Demag’s firm archives are now held in the archives of the MA-M. The Alkett archives are now in possession of ZAR-D. These documents contain slivers of information about the history of the factory. The Markali family holds some documents, including a hand-illustrated songbook from Falkensee written by Norwegian songwriter Dagfin Rimestad. The author holds videos of interviews with Sigurd Syversen (Norway); Karl Stenzel (Germany); Leo Van Deene (the Netherlands); Jean Sabut, Robert LaGorce, Andre Izaguirre, Guy Lesimple, Yves Parranaud, all from France; and the written memoirs of Sofus Tofte (Norway). The memoirs of French-speaking author Roland Picart (prisoner number 65478) have been published as *Falkensee*, 2 vols. (Vauluse: Imprimerie Meffre, Vaison-la-Romaine, n.d.); they contain a list of the French prisoners in the Falkensee camp. Also noteworthy is AOS, *Sachso: Au couer du système concentrationnaire nazi* (Paris: Minuit, 1982).

## FALLERSLEBEN

The history of the short existence of this camp remains somewhat vague but is closely connected to the construction of the Volkswagen (VW) factory in Fallersleben in 1942. Hitler issued an order to the SS in January 1942 to “complete, extend and start the operation of a light metal foundry at the Volkswagen factory in Fallersleben.” Professor Porsche, the head of the operation, considered the task of the SS to be the “provision of a work force and related material.” The Volkswagen works promised the Waffen-SS the preferred delivery of light field cars (*Kubelwagen*) in return. The work detail Fallersleben was at this time still subordinated to the Neuengamme concentration camp.<sup>1</sup>

It seems that the first prisoners came from Neuengamme, possibly shortly before or at the same time as the ones who arrived from Sachsenhausen on April 26, 1942 (or already on April 8).<sup>2</sup> More prisoners were transferred from Buchenwald to Fallersleben on June 23, 1942. The camp was mentioned in the letter exchange with the SS-Business Administration Main Office (WVHA) as the “KL Arbeitsdorf.” The task was supposed to have been the construction of a large factory.

It is not easy to throw light on the relationships between the different camps. Although the first prisoners came from Neuengamme and they considered the camp to be a subcamp of Neuengamme, other former prisoners stated clearly that the camp was subordinated to Sachsenhausen. The release of prisoner Gustav Thorun on May 22, 1942, can count as an indisputable support for this fact: the prisoner had been transferred from Sachsenhausen to Fallersleben in April 1942. “The release documents were issued by the KL Sachsenhausen.”<sup>3</sup>

It has been determined that the labor leader of the subcamp was SS-Hauptscharführer Karl Hecht, who was born in 1909 in Leese, in the district Nienburg. Before that Hecht was block leader and later head of the mail censorship office in Sachsenhausen. The prisoners confirm that he “beat prisoners inhumanely and that he often deprived them (especially the Jewish prisoners) of food.”<sup>4</sup>

SS-Hauptsturmführer Wilhelm Schitli, born in 1912 in Osnabrück, was named the SS leader of the camp. He is recorded as missing from the end of March 1945. He was possibly also the camp leader. SS-Obersturmführer Walter Ernstberger from Pforzheim was probably the deputy or acting camp leader. SS-Oberscharführer Thieme, who was deployed at Fallersleben, was accused of “physical and psychological torture.”<sup>5</sup> August Kolb was promoted in No-

vember 1941 to SS-Obersturmführer and was deployed on March 1, 1942, at “Concentration Camp Fallersleben near the City of the Strength through Joy Car” (KL Arbeitsdorf b. Stadt der K.d.F. Wagen Fallersleben).

The prisoners’ camp is supposed to have been located “in the foundry within the factory premises in Wolfsburg.”<sup>6</sup> Mainly German prisoners, but also Polish, Dutch, and French prisoners, were housed here. A total of 500 to 600—although according to other sources, only 200—prisoners were deployed at Fallersleben, among them Jewish prisoners.<sup>7</sup>

The camp had at least nine prisoners’ huts, a former prisoner reported. However, three other former prisoners have testified that the prisoners were supposedly not housed in huts on the premises of the light metal foundry that was under construction but in underground air-raid shelters.

All working sites for the prisoners were located within the VW factory premises. The prisoners in the metal buckling detail and the concrete labor detail were engaged in excavations and the erection of an enormous factory building for the light metal foundry. The work was suspended and “the work detail transferred to Sachsenhausen”<sup>8</sup> because of the frost that started in October 1942.

The prisoner Houber from Cologne was supposedly shot and killed by a guard during outside work as a punishment for illegal trafficking with cigarettes and food. This supposedly happened when he was chased outside the guards’ duty line by another SS man. However, only one former prisoner has testified to this.

There are also reports of harassment and brutal acts committed by SS-Hauptscharführer Hecht during work, including testimony that he left “five Gypsies” “to die” completely exhausted after he had subjected them to protracted labor accompanied by his slave driving. An SS man called Sachse supposedly punished prisoners with 25 blows after suspecting them of planning to escape. In addition, one Sunday prisoners were made to landscape a garden 200×150 meters (656×492 feet) in size under blows from SS-Hauptscharführer Hecht and Kapos. The overall mortality in the camp was apparently high.

The Fallersleben subcamp was supposedly closed with the transfer to Sachsenhausen of 85 prisoners on October 5, 1942, and of other prisoners to Buchenwald on October 11, 1942.<sup>9</sup> Most of the prisoners brought to Sachsenhausen were immediately transferred to the Berlin-Lichterfelde subcamp.

One of the SS men in charge of the Sachsenhausen subcamp, SS-Obersturmführer Walter Ernstberger, became a prisoner of war (POW) or was interned in a Soviet camp. He committed suicide in the POW camp in Sagan, Poland, or in the penal camp Workuta in the USSR in the summer of 1945.

The Central Office of State Justice Administrations (ZdL) in West Germany investigated the subcamp Fallersleben as early as 1967.<sup>10</sup> A second procedure was handed over to the State Attorney’s Office in Braunschweig in July 1975. It was closed without result in March 1976.<sup>11</sup>

**SOURCES** There is no literature concerning the subcamp Fallersleben as a branch of Sachsenhausen. For the opening and closing dates of the Sachsenhausen subcamp, see *Das nationalsozialistische Lagersystem (CCP)*, ed. Martin Weinmann, with Anne Kaiser and Ursula Krause-Schmitt, prepared originally by ITS (1949–1951; repr., with new intro. matter, Frankfurt am Main: Zweitausendeins, 1990), pp. 257, 485, 493, 628.

The archives for Sachsenhausen/Fallersleben can be found mainly at BA-L and AG-S.

## FÜRSTENBERG (ODER)

From the outbreak of war in 1939, an armaments industry based on forced labor developed in the town of Fürstenberg/Oder. The Sachsenhausen subcamp there existed from the summer of 1944 to the beginning of February 1945. It stood on the grounds of an abandoned glass factory, the Neue Hütte (New Glass Factory), which had ceased production in 1930. The site can be found on present-day Beeskower Strasse at the corner of Oderlandstrasse.

The prehistory of the camp is still somewhat vague. According to information from the company Rheinmetall-Borsig AG Berlin, it took over from Degussa AG a facility for the manufacture of airplane gun mountings and automatic

weapons in the district of Schönfliess, which manufactured for a branch of a factory based in Guben.<sup>1</sup> However, Degussa at this time did not own a factory in Fürstenberg/Oder.

The bombing of the Reich capital prompted Rheinmetall to find alternative sites outside Berlin. In August 1943, the aircraft armaments division of the Frankfurt/Oder Armaments Command (Military District III) allocated to “Rheinmetall-Borsig AG Berlin-Tegel” the site known as “Neue Glashütte, Vereinigte Glashüttenwerke AG” Werk F, Fürstenberg/Oder” (United Glassworks), located immediately to the north of the Degussa site. Once production was relocated from the capital to Fürstenberg/Oder, Rheinmetall also relocated the manufacture of *Maschinengewehr-131* (MG-131) parts from Litzmannstadt (Łódź), which was under threat from the Red Army, westward to the city on the Oder River.

Also in 1944, production from the Guben factory was relocated to Fürstenberg/Oder. It was in this factory at Schönfliess that Rheinmetall began to use concentration camp prisoners, from September 30, 1944, at the latest. That female concentration camp prisoners were used, as in Guben, is revealed in a situation report from the Guben factory for the period July 1, 1944, to September 30, 1944, which records the transfer of production from Fürstenberg/Oder. The report, however, does not state exactly when in this period the female concentration camp prisoners began production in Fürstenberg/Oder. The formerly Guben-based production in Fürstenberg/Oder was carried out under the trade name Oder-Gerätebau Aktiengesellschaft (Oder Tool Manufacturing Company Ltd.) and involved the manufacture of parts for the MG-131 machine gun and small parts for the *Maschinenkanone-103* (MK-103). The site consisted of barracks and warehouses. Organisation Todt (OT) built many permanent structures for storage and production purposes for Oder-Gerätebau on land put up for sale by the Fürstenberg/Oder municipality and that Oder-Gerätebau wanted to buy from OT after completion of construction.

The female concentration camp prisoners were put to work dismantling and sorting airplane scrap. Aircraft wrecks were stored at the Neue Glashütte. The roughly 150 to 350 Jewish female prisoners from the Ravensbrück concentration camp had to extract raw materials and scrap metal from airplanes that had either been shot down or crashed. The raw materials and scrap metal were melted down at the nearby aluminum smelter at Finkenheerd. According to an undated report of the German Democratic Republic’s Vereinigung der Verfolgten des Naziregimes (Association of Persecutees of the Nazi Regime, VVN), an external detail of 350 mostly female Jewish concentration camp prisoners from Sachsenhausen were at Fürstenberg/Oder. Their task was to “reclaim raw materials, scrap metal, aeroplane parts.” It was “heavy work.”<sup>2</sup>

Other groups of prisoners were apparently put to work building a power station on the Oder River for the state-owned Märkische Elektrizitätswerke. It is possible that male prisoners were involved in this project. However, this has not been substantiated.<sup>3</sup>

The use of male concentration camp prisoners at Fürstenberg is documented solely by their inclusion in the death lists

drawn up for the change of status reports in Sachsenhausen. Records of the deaths of male prisoners in the Fürstenberg/Oder subcamp start at the beginning of 1945 and list four Hungarian prisoners (who died on January 3, 4, and 12, 1945), two Dutch Jews (January 8 and 23, 1945), as well as a Latvian (January 25, 1945) and three Poles (January 7, 10, and 17, 1945), the latter being political prisoners. However, there is no separate reference to a male camp at Fürstenberg/Oder in the change of status reports.

The women were apparently quartered in the Neue Glashütte, the evacuation site for the Guben-based Rheinmetall operations. Plans for a camp for about 400 female concentration camp prisoners on the site of the Neue Glashütte dated from the beginning of November 1944. In December 1944, the Fürstenberg company Wilke & Streckebach, working on behalf of the Arbeitsgemeinschaft der Baugeschäfte Fürstenberg/Oder (Working Cooperative of Fürstenberg/Oder Building Firms) carried out extensive conversion work on a half-timbered building. The building had previously been used by the Oder-Gerätebau as a storage depot. The documents recording the costs for the “penal camp” or “concentration camp” for “female prisoners” indicates that the quarters were equipped by Oder-Gerätebau with beds, stools, and other pieces of furniture that were the property of the firm. Toilets were built, a kitchen was put in, and six large stoves were installed in the open-plan rooms. The windows were made compatible with blackout regulations, and 30 windows were nailed across with barbed wire. The building was surrounded by a 2.6-meter-high (8.5 feet-high) barbed-wire fence. In addition, barbed-wire barriers were put in place. The roll-call area was in an open warehouse on the site.<sup>4</sup>

The first mention of the Fürstenberg/Oder prisoners in the Sachsenhausen change of status reports is on October 30, 1944, when a record of 50 prisoners appears. At the end of December 1944, following the apparently successful conversion of the storage depot building into lodgings, the number of prisoners rose considerably to 200. At the end of January 1945, the SS statistics recorded the highest number of prisoners—650.<sup>5</sup> At the end of November 1944 and the beginning of January 1945, the SS transferred 3 Latvians and 4 other prisoners, most probably sick female concentration camp prisoners, to the Ravensbrück concentration camp.

Anton Knirsch was a member of the camp guard. He was born in 1905 in Pirkelsdorf. Following the dissolution of the camp, he was transferred to Ravensbrück.<sup>6</sup> Willy Schenk, born in 1892 in Vieselbach, was also a member of the guard. Prior to Fürstenberg/Oder, he was stationed as a guard at the Sachsenhausen/Briesen subcamp.<sup>7</sup> Both were interned after 1945 in the British occupation zone.

The Fürstenberg/Oder subcamp is last mentioned in the Sachsenhausen change of status reports on January 29, 1945. The camp was dissolved on February 1, 1945, and the prisoners were marched to Sachsenhausen. According to records of the VVN, the camp “was evacuated in February 1945. Survi-

vors of the march were liquidated in the Sachsenhausen crematorium.”<sup>8</sup>

On either February 18 or 20, 1945, 149 prisoners of unknown gender from the Fürstenberg/Oder subcamp were shot in Sachsenhausen. SS-Unterscharführer Horst Hempel, the roll-call leader at Sachsenhausen, participated in the shootings. In 1946, a Soviet military tribunal became interested in the transport of the prisoners from the Fürstenberg/Oder subcamp to Sachsenhausen. An accused SS leader at the main camp, Emil Sauter, confirmed that he was aware that the prisoners from Fürstenberg/Oder had been exterminated in the crematorium.<sup>9</sup> Although Hempel admitted his participation in the crime to the Soviet secret service, the People’s Commissariat for Internal Affairs (NKVD),<sup>10</sup> the murders were mentioned neither in the indictment nor in the verdict of the Soviet Sachsenhausen Trial in Berlin in 1947. Neither were the murders of the Jewish prisoners from the Fürstenberg/Oder subcamp taken into consideration when Hempel was sentenced to five years’ imprisonment by the regional court in Düsseldorf for crimes committed in Sachsenhausen.<sup>11</sup> The execution squad in Sachsenhausen was under the command of SS-Hauptscharführer Otto Moll, who was condemned to death by a U.S. military court in 1946 and hanged in Dachau.

**SOURCES** The only work specifically about Fürstenberg/Oder is the recently published essay by Thomas Irmer, “Spuren nach Sachsenhausen. KZ-Häftlinge, Kriegsgefangene und Zwangsarbeiter in Fürstenberg/Oder,” *Eisenbüttelstadt. Erste sozialistische Stadt Deutschlands*, ed. Arbeitsgruppe Stadtgeschichte (Berlin-Brandenburg, 1999), esp. pp. 39n.21, 40–42. The topic is also mentioned by Joachim Hübner, “Rüstungsbetriebe in Fürstenberg,” in the same volume; in Bundeszentrale für politische Bildung, ed., *Gedenkstätten für die Opfer des Nationalsozialismus: Eine Dokumentation*, vol. 2, Berlin, Brandenburg, Mecklenburg-Vorpommern, Sachsen-Anhalt, Sachsen, Thüringen (Bonn, 1999); as well as in Andreas Ludwig, *Eisenbüttelstadt: Wandel einer industriellen Gründungstadt in fünfzig Jahren* (Potsdam, 2000). On the transfer of Jewish women from Ravensbrück, see Bundeszentrale für politische Bildung, *Gedenkstätten für die Opfer des Nationalsozialismus*, 2:260.

There are relatively few archival sources. A description of the camp drawn up in the DDR is to be found in the SAPMO collection at BA-BL. Individual reports about the hunt for the perpetrators are found in the PRO and in the AG-S (copies are from the CAFSSRF), and the daily reports are in the AG-S. The SM-E holds references to the construction of the camp in the Wilke & Streckebach collection in the file “Kosten- voranschläge für die Fa. Rheinmetall-Borsig.”

## FÜRSTENWALDE

In July 1942, in an unused joinery at 31 Lindenstrasse, the SS established a subcamp in Fürstenwalde for the SS company Deutsche Ausrüstungswerke (German Equipment Works, DAW). At first the camp was administered by the Buchenwald DAW and therefore came under the auspices of the Buchenwald concentration camp.<sup>1</sup> According to another source, the camp was founded on January 2, 1943. From April 15, 1943, the Fürstenwalde subcamp fell under the control of the Sachsenhausen concentration camp.<sup>2</sup> The initial 10—and, by July 1943, 79—prisoners were accommodated in a barrack. They made windows for bomb-damaged houses in Berlin and windows for a number of concentration camps as well as kitchen furniture and lockers for prisoners in the Lieberose subcamp.<sup>3</sup> The working day for all concentration camp prisoners in DAW factories was increased from December 3, 1943, from 10 to 11 hours.<sup>4</sup> There were German, Polish, Ukrainian, Norwegian, French, and Belgian prisoners in Fürstenwalde. The German prisoners consisted of political, criminal, and so-called asocial prisoners.<sup>5</sup>

The detail leader was at first SS-Unterscharführer Willi Riemenschneider (born in 1905 in Hannoversch Münden) and from January 1944, SS-Obersturmführer Büttner. In the DAW factory at Fürstenwalde, Herr Saeger was the sales manager, and Herr Heuhausen was the foreman. Herr Kropp was also employed as a technical salesman.<sup>6</sup> The guard was under the command of SS-Oberscharführer Karl Leukel (born 1899 in Eiserfeld). The head of the kitchen was SS-Rottenführer Toni Feisthammer. Both of these men were dismissed in the spring of 1943 for corrupt dealings.<sup>7</sup> The successor detail leader was SS-Sturmscharführer Willy Nurrek (born 1898 in Scherpingen near Danzig). The roll-call

leader was SS-Unterscharführer Willi Bonowski. SS-Rottenführer Emil Klatt, Walter Hempel, Paul Weisner, Georg Mayer, Franz Wennemoser, Ferdinand Lindtner, and Kurt Wenzel were all members of the guard. Lindtner, Weisner, Wennemoser, and Wenzel were transferred to the Briesen [aka Falkenhagen] subcamp on the dissolution of the camp.<sup>8</sup> According to Klatt, he served with the SS-Nachrichten-Regiment 500 in Ketschendorf following the dissolution of the Fürstenwalde subcamp.<sup>9</sup>

Other SS functionaries were SS-Rottenführer Alfons Knirsch, Hartmann Blasius Schrittwieser, Herbert Kopiska, Mücke,<sup>10</sup> SS-Unterscharführer Neuhaus, Schmidt, and SS-Scharführer Oskar Hofmann.<sup>11</sup>

Knirsch was interned after 1945 in the British internment camp at Esterwegen. He admitted that from January 7 to May 22, 1943, he had been a guard at the Fürstenwalde and thereafter at the Glöwen subcamp. SS-Sturmmann Ferdinand Lindtner, who from May to June 1944 was a member of the guard at the Fürstenwalde subcamp, was with him at Esterwegen, as was SS-Unterscharführer Oskar Hofmann, who was first stationed in the Sachsenhausen subcamps of Werder and Biesenthal, and from March 1943 was in Fürstenwalde as detail leader of that camp.<sup>12</sup> Klatt, Mayer, Weisner, Wennemoser, and Wenzel were also interned after 1945 in British internment camps. While in the British internment camp at Neuengamme, Walter Hempel was registered as a war criminal for serving with the SS-Totenkopfwachbataillon (Death's Head Guard Battalion).<sup>13</sup>

Prisoner numbers remained relatively constant. In the middle of May 1944 there were 80 prisoners in the Fürstenwalde subcamp. Survivors stated that rations were 300 grams (10.6 ounces) of bread per day, 0.75 liters (3.2 cups) of white cabbage or Swede soup per day at the noon meal, and 0.25 liters (1 cup) of coffee each morning and evening.

The foreman from the end of 1943 or the beginning of 1944 was Fritz Busching, a criminal prisoner.<sup>14</sup> Political prisoner Karl Schmellentin was foreman from March 1944 to the dissolution of the camp, when he was returned to the main camp.<sup>15</sup> Schmellentin stated that in addition to Poles, French, and criminals, there was one other German prisoner in the camp apart from him. This man worked in the outside detail in the hall of the "Reichshallen" entertainment center where, under guard, he painted kitchen cupboards and was even allowed to meet his wife.<sup>16</sup>

In June 1944, a significant contract for prisoner lockers for the Lieberose subcamp was completed. The wooden lockers were delivered unpainted and untreated.<sup>17</sup>

Criminal prisoner Ernst Pfeiffer, who escaped and was recaptured near Halle, was hanged in the industrial yard of Sachsenhausen on July 7, 1944. A Czech prisoner who fled with him was also recaptured near Halle; his fate is unknown.<sup>18</sup>

The completion of the work was part of the reason for the dissolution of the camp on July 31, 1944. Some of the prisoners were then transferred from Lindenstrasse to the Sachsenhausen main camp and others to the Bad Saarow (Fuchsbau) subcamp, which had existed since 1943, with SS-

Führer Nurrek and Leukel accompanying the Bad Saarow contingent.

**SOURCES** The secondary sources on this camp consist of the work of student Claudia Bär: "Recherchen zum KZ-Aussenlager Fürstenwalde/Ketschendorf," in *InBe*, ed. Regionalarbeitsstelle für Ausländerfragen, Jugendarbeit und Schule e.V. (Brandenburg, 1995). Henrike Hoffmann recently wrote "Konzentrationslager Sachsenhausen—Die Aussenlager in Fürstenwalde" (unpub. Diplomarbeit, Freie Universität Berlin, 2001), which is available at the library of the Sachsenhausen Memorial, Collection 6320.

The BA-B (Collection NS 3) holds documents on the DAW. Memoirs of former prisoners and perpetrator details are to be found in the AG-S and the PRO. Also available are the memoirs of political prisoner Karl Schmellentin: *Arbeiter Schutzhäftling Staatsfunktionär* (Berlin, 1986).

## GENSHAGEN

As early as 1934, the board of Daimler-Benz AG planned to build a plant for the mass production of engines, in the ex-

pectation that its establishment would place the company in the leading role for engine manufacturing for the German military. In 1935, Daimler-Benz and the Reich Air Ministry decided to establish a factory for the mass production of aircraft engines in the Genshagen Heath, a forested area 20 kilometers (12.4 miles) south of Berlin. The factories, spread over a 4-square-kilometer (1.5-square-mile) area, were designed so that in the case of war production they could quickly be stepped up to mass-produce aircraft engines for fighters and bombers.

The 6,828 “workforce members” in Genshagen produced 1,427 aircraft engines in 1938. In 1939 an increase to only 6,860 workers was enough to raise output to 2,249 engines. In 1940 the Deutsche Arbeitsfront (German Labor Front, DAF) awarded the factory the Goldene Fahne (Gold Flag), its highest award. It was a National Socialist model factory. At the same time, the first prisoners of war (POWs) and laborers from occupied countries in Western Europe were brought to Genshagen. At the end of 1942, among the 13,146 factory employees in Genshagen were 6,011 foreigners of whom 2,778 were Russian forced laborers. Annual production had increased to 4,920 engines. Production was further increased enormously and in the spring of 1944 reached a monthly output of 1,000 units—and this with a slightly reduced labor force.

British historian Neil Gregor has described this process of production increase, carried out above all at the expense of civilian forced laborers, as factory work was increasingly made to resemble work in a concentration camp. In the fall of 1944, the managers at Daimler-Benz obtained female prisoners from the concentration camp for women at Ravensbrück as forced laborers for work in their National Socialist model factory.

In early 1944, the threat of air raids to the Genshagen factory and the government designation of air armaments as a priority prompted the relocation of a substantial part of the facilities to southern Germany, specifically the caverns of the gypsum mine “Friede” at Obrigheim am Neckar. A heavy bombing raid on Genshagen on August 6, 1944, which caused 150 deaths and the destruction of several factory buildings, resulted in the evacuation of further sections of the factory with their skilled labor forces and expensive and, in wartime, irreplaceable special machinery. All that remained in Genshagen were the more basic engine assembly lines, which were equipped with more simple machinery. Production on these lines was so piecemeal that although the high speed at which these repetitive tasks had to be performed left the prisoners exhausted, the work could quickly be learned by people who had never had any experience with factory work or even skilled metalwork. The workers could be women and even young girls; neither did they have to be fluent in German. Indeed, it was of advantage to peace on the home front if the few remaining German foremen and skilled tradesmen in the factory buildings could not communicate with their subordinates and discuss how they had ended up in this forced labor, where they

came from, and what they had experienced at the hands of German occupying troops and special detachments at home.

So the Daimler-Benz Genshagen factory management acquired female labor from one place where it was still to be found in abundance in the last year of the war: in the fall of 1944 representatives of Daimler-Benz combed the female concentration camp at Ravensbrück for the strongest and healthiest candidates. The most suitable women appeared to be those that had most recently arrived, in special transports from Warsaw and Budapest, where they had been abducted just a few weeks before from their homes, schools, and streets. Between September and December, Daimler-Benz selected more than 700 Poles, 125 French women, 80 Hungarian Jewish women, about 50 “criminal” or “asocial” German prisoners, a group of Ukrainian women, and a few Russian, Serbian, Belgian, and Greek women from the roll-call square at Ravensbrück to assemble its famous aircraft engines, which for years had powered the Messerschmitt (Me) fighters and Heinkel (He) bombers that had brought death to the homelands of these same women.

A total of 1,100 women from Ravensbrück had to work as forced laborers from the fall of 1944 in the largest aircraft engine assembly line in Europe, proudly called the Deutschlandhalle, or Great Hall of Germany, by the people at Daimler. About 30 SS female overseers accompanied the women from Ravensbrück: some of whom had themselves previously worked in armaments factories and had undertaken a two-week training course in Ravensbrück to prepare them for their new assignment. An electric fence was installed around the factory. Eight SS men provided external security. They had undergone a short training course in the Sachsenhausen concentration camp, a shorter course (two weeks) than the SS women in Ravensbrück. The camp commander was 32-year-old SS-Unterscharführer Friedrich August Wilhelm Mantzel. He had served in the business administration of the Waffen-SS between 1940 and 1944. On January 29, 1944, he was transferred to the SS-Totenkopf-Wachbataillon in Sachsenhausen.

The outside detachment was placed under the command of the closest main concentration camp, Sachsenhausen. This had become the practice from September 1, 1944, irrespective of the origin and gender of the prisoners. Driven on by the SS women overseers, the prisoners initially had to work a 12-hour day. This was later increased to 16 and then 24 hours, and if by the end of the month the production targets had not been reached, the prisoners had to work 36 hours without sleep. The dormitories were air-raid shelters and cellars located under the factory buildings. They were equipped with several-tiered bunk beds. The result was that the women did not see daylight for months. It was a concentration camp in a factory.

Those who thought of escape were stopped by the electric fence. Once the women were made to march past a section of fence in which hung the charred body of a Russian woman holding a pair of pliers in her hand. Whether this was an

escape attempt or a scene staged by the SS remains unclear. The effect on the prisoners was nevertheless the same.

It certainly made it easier for the women to survive Genshagen that they could see ever more signs that the end of Nazi rule was getting closer and that it would only be for a relatively short time that they would have to live and work in concentration camp conditions. However, although production began to fall due to the failure to deliver parts from Obrigheim or from power cuts, this did not mean that the women were able to get any more rest. On the contrary, they were tormented even more by being made to do senseless cleanup work on the site even in the bitter cold.

Another factor helping the women to survive was that among their number were women who had been in the resistance in their home countries and that the camp clerk, Frieda Franz, a German Communist, had been in camps for years and had experience in subverting the system. All the surviving women thankfully tell how important assistance from Franz was.

Hungarian Jewish woman Edit Bán, later Edith Kiss, a sculptress and painter from Budapest, was saved by Franz from being transported back to Ravensbrück even though Bán had been placed on the retransfer list because she was so undernourished that she could no longer work. Franz, who had to type the list, changed Bán's name to "Banke," the name of a German woman who had recently died. In doing this, she saved unique testimony to the feelings of the women throughout their abduction, concentration camp imprisonment, and sufferings in forced labor: within a few weeks of Bán's return home, she painted the 30 gouaches of her "deportation album."

After the SS had burned all the camp files on April 19, 1945, the evacuation of the Genshagen subcamp to the Sachsenhausen main camp began. The Jewish women were not, unlike the other Genshagen prisoners, driven on a death march but were transported to Ravensbrück in closed rail wagons. The intention was to murder them in the camp's gas chambers. However, when they arrived in Ravensbrück, the SS had already murdered the prisoners in the gas chamber detachment and blown up the gas chambers so that the advancing Red Army would not find any traces.

In April 1947, a mass grave was found near Ludwigsfeld on the Berlin Ring Autobahn. It contained the corpses of 500 "Eastern workers" and 19 female concentration camp prisoners. Witnesses to the exhumation say they were probably Czech women. Some had clearly been shot in the nape of the neck. Despite years of research as part of a project at the Ravensbrück Memorial, these women have not been identified.

**SOURCES** The Genshagen subcamp essay is based on the research the author has done over the course of two decades and the books and films that have appeared in this time. The results of that research will come together in his work *"Innere Bilder wird man nicht los." Edit Kiss und die Frauen im KZ-Nebenlager Daimler-Benz-Genshagen* (Berlin: Metropol-Verlag, 2007). The Genshagen factory was first comprehensively described in *Das Daimler-Benz-Buch* (Nördlingen,

1987); and the accompanying file and documentary publication *Die Daimler-Benz AG 1916–1948* (Nördlingen, 1987). Originally, his dissertation at the Georgia Institute of Technology, Bernard P. Bellon's book appeared as *Mercedes in Peace and War* (New York: Columbia University Press, 1990). As a result of the facts that appeared in these books on Daimler's role in the war and the use of forced labor, the Daimler-Benz concern commissioned its own research through the GUG, which after several years of research and interviews published its results in 1994 under the title "Zwangsarbeit bei Daimler-Benz," *ZfU* 78 (1994). This volume remains today the most comprehensive analysis of the forced labor system in a German armaments company. One failure in the book is that survivors from Eastern and Central Europe are insufficiently represented even though they made up by far the largest proportion of slave laborers at the Daimler-Benz enterprise. The MBAG-A (now DCAG-UA) commissioned a work on the Genshagen factory, *Daimler-Benz-Motoren-GmbH-Genshagen: Eine Flugmotorenwerk bei Berlin* (Stuttgart, 1990). This work was not designed for public presentation; however, it uncritically reproduces the depiction of the factory in the German Labor Front's (DAF's) *Leistungsbericht* 19 (1940). There are two copies of this volume in the DCAG-UA and one copy in the NARA. Neil Gregor in *Daimler-Benz in the Third Reich* (New Haven: Yale University Press, 1998), German title *Stern und Hakenkreuz* (Berlin: Propyläen Verlag, 1997), focuses on economic developments and company decisions that cumulatively barbarized the treatment of the Russian forced laborers between 1942 and 1944. Between 1997 and 1999, the Ravensbrück Remembrance and Memorial Site (MGR) ran an exhibition on the Genshagen factory and history of its concentration camp prisoners and forced laborers under the title "Wir waren ja Niemand." Two young German researchers have published the following works: Linde Apel, "Zwangsarbeit jüdischer Frauen im Aussenlager Genshagen"; Apel, *Jüdische Frauen im Konzentrationslager Ravensbrück 1939–1945* (Berlin, 2003); pp. 276–280; Doreen Eschinger, "Ungarische Jüdinnen in Ravensbrück am Ende des Zweiten Weltkriegs—Überlebenschancen und Überlebensstrategien im Lageralltag" (master's thesis, Humboldt University Berlin, 2003), pp. 87–95. Since 1990, the author has interviewed women who once worked as forced laborers in Genshagen and has followed them in their struggle for moral and material recompense. Seven documentary films have appeared as a result by 2004, including, with Rainer Burmeister, *Für Lohn und Würde: Zwangsarbeiterinnen klagen gegen DaimlerChrysler* (30 minutes; BRD, 1999).

The author's private archive holds an extensive collection of memorabilia, photos, pictures, documents, and recordings of interviews (both sound and film). The other most important archival collections are the DCAG-UA (Collections Kriegswerke 1, Forstmeier, GUG-Interviews, Leistungsbericht Goldene Fahne, vol. 19); and the IWM (Speer Collection on the Relocation from Genshagen to Obrigheim/Neckar). The AG-R and AG-S hold little material. The transfer lists "Oktober 1944 KZ Ravensbrück—Aussenlager Genshagen" are of particular importance as they contain the names of 900 prisoners transferred to Genshagen as well as the list of the transfers back, the names of the sick, and

those women who could no longer work, some of whom died in Ravensbrück or were murdered. The file collection NL Genshagen/KL Sachsenhausen 406 AR-Z 21/71 of the ZdL at BA-L contains a collection of files relating to investigations into prisoner deaths in the Genshagen subcamp. The files of the proceedings against former Genshagen factory security officer William Knoll (born October 25, 1899) at the Bergedorf denazification tribunal are held at the BA-K (Z 42 III/3781).

## GENTHIN

The Silva GmbH, a branch of the Magdeburg-based Poltewerke, was the owner of a camouflaged ammunition factory. It was hidden in a forest near Genthin, a village that is about 120 kilometers (74.6 miles) west of Berlin and 29 kilometers (18 miles) west of the town of Brandenburg. The factory building was located close to Reichsautobahn Nr. 1 connecting the towns of Magdeburg and Brandenburg.

The Genthin subcamp, whose prisoners were forced to work in the production of ammunition for tanks and anti-aircraft guns, existed from March 16, 1943,<sup>1</sup> to May 6, 1945. At the beginning about 300 prisoners,<sup>2</sup> most of them women and girls from the Soviet Union and Poland, made up the permanent workforce at the ammunition factory. In September 1944 and following the Warsaw Uprising, SS authorities deported another 300 to 400 Polish women to the Genthin subcamp. At first it was a subcamp of the Ravensbrück concentration camp whose authorities handed over command to the Sachsenhausen concentration camp on October 29, 1944.

Although the command changed, neither prisoners nor guards were affected by this measure. The number of prisoners continued to increase, and SS guards counted about 1,000 prisoners in 1945, who were not only Polish and Russian by origin but also Czech, French, Yugoslav, and Ukrainian. They were guarded by 10 SS female and 10 SS male members. SS-Scharführer Steffen was the first Truppen-Kommandoführer of the subcamp and led it between March 1943 and December 1944. His successor was Unterscharführer Otto Wahl, who commanded guards and prisoners from January 1945 till the liberation of the subcamp in May 1945.<sup>3</sup> He was supported by Hermine Braunsteiner, a Vienna-born Lagerführerin of the subcamp who worked in Genthin from the beginning of 1944 until the day of the subcamp's liberation.

The prisoners were surrounded by a wooden fence that was secured with electrified barbed wire. Moreover, the guards used two watchtowers for better control and guarded the prisoners on their 10-minute walk from and to the nearby factory building. The SS Unterscharführer Wahl drew a plan of the subcamp. The prisoners slept in two-story or three-story plank beds and were forced to work in 12-hour shifts in a factory building that produced ammunition for the Wehrmacht until May 5, 1945.

The SS authorities decided to evacuate the Genthin subcamp on May 6, 1945, after the U.S. Army had reached the Elbe River. The destination of the forced march was the Sachsenhausen concentration camp more than 100 kilometers (62 miles) away. However, the convoy was stopped about 3 kilometers (almost 2 miles) outside Genthin by a group of higher SS members who argued that the prisoners would hinder military traffic on the roads. They sent them back to the subcamp, where the guards left them alone.<sup>4</sup> One day later, on May 7, 1945, a group of Red Army soldiers reached the subcamp and liberated the prisoners.

There were no murders reported in the subcamp itself. However, one woman was deported from Genthin to the Ravensbrück concentration camp and hanged because of sabotage.

On November 22, 1949, a Vienna court gave SS-Lagerführerin Hermine Braunsteiner a prison sentence of three years because of her strict and brutal regime at the Ravensbrück concentration camp. After her release in April 1950, she made friends with U.S. soldier Russell Ryan. They emigrated to Canada and in October 1958 to the United States. Due to the so-called Majdanek Trial, she was extradited from New York to the Federal Republic of Germany in May 1973, where the trial ended at a Düsseldorf court in 1981. Braunsteiner was sentenced to double life imprisonment. Johannes Rau, the prime minister of North-Rhine Westphalia, pardoned her, and she was released in April 1996. She died three years later, on April 19, 1999, in the town of Bochum.

**SOURCES** For further information relating to Lagerführerin Braunsteiner, see Deutsches Historisches Museum at [www.dhm.de/lemo/html/biografien/BraunsteinerRyanHermine](http://www.dhm.de/lemo/html/biografien/BraunsteinerRyanHermine).

Primary documentation on the Genthin subcamp is located in AG-S, especially in the box Genthin, which contains a collection of testimonies collected by ZdL (now BA-L).

## GLAU

As with Lieberose, the Glau subcamp centered on the use of prisoner labor by the Waffen-SS. Since December 1941, the Waffen-SS had maintained SS-Artillery Targeting School I near an artillery practice range at Glau, near Trebbin, in the district of Teltow. In the Glau Mountains there was an SS gunnery school and a facility to jam radio transmissions. A prisoner-of-war (POW) camp was located at the southern

edge of the Glau Mountains.<sup>1</sup> A photo of the camp shows seven barracks along a camp road.<sup>2</sup>

Glau was also an SS garrison administrative center, headed by an SS-Obersturmführer from Austria.<sup>3</sup> The center was owned by Reinhold Ludwig, born in 1909 in Eisenach. He was interned by the British after 1945.<sup>4</sup> The Glau project was identified by the Nazi Party leadership with the code number "RFSS 2431."<sup>5</sup>

The subcamp, which was established either at the end of 1941 or 1942, was next to the POW camp (a prisoners' barrack<sup>6</sup> was separated from it only by barbed wire),<sup>7</sup> between the villages of Glau and Blankensee. In 1935, the SS compulsorily acquired land owned there by Josef Weissberg's Christliche Siedlungsgesellschaft (Christian Settlement Society), after Weissberg had been convicted and banished.<sup>8</sup> The camp's external security was a double barbed-wire fence. There were no guard towers.<sup>9</sup>

The prisoners were put to work on expanding the practice grounds by constructing roads and barracks for between 200 and 300 men, a shooting range, a sewer system, and a 1.5-kilometer (almost 1-mile) entrance road to the barrack, as well as on transport operations.<sup>10</sup> Here there is a further parallel with Lieberose. The work had to be completed double-quick. At times, the prisoners had to work on the building site, standing in water with bare feet.<sup>11</sup> The prisoners also had to pull dummy tanks, which were fired at as part of the training exercises.<sup>12</sup> There was a construction office at the Glau troop training area. It consisted of an SS-Hauptscharführer, SS-Untersturmführer, two or three SS-Unterführer, as well as a number of civilians.<sup>13</sup> Prisoners were also said to have been put to work in the garages of the SS school. The prisoners constructed a tower for anti-aircraft defense on a hill in a forest. The work detachments were under the command of "professional criminal" prisoners, who are described as the "worst sort."<sup>14</sup> The prisoners probably also worked on a rabbit farm.<sup>15</sup>

The conditions, including the food, are said to have been better in Glau than in the main camp. The prisoners possessed two blankets each.<sup>16</sup> However, it was reported that the German prisoner cook, Hansen, sold meat from the prisoners' kitchen to the detail leader.<sup>17</sup>

SS-Scharführer Krämer took command of the detachment prior to May 1942.<sup>18</sup> He acted humanely.<sup>19</sup> From May to the end of August 1942, SS-Oberscharführer Martin Knittler was in command of the Glau subcamp. During this period there were about 50 Soviet, Polish, and Czech prisoners in the camp.<sup>20</sup> (The Soviet Union sentenced Knittler to lifelong forced labor. In 1958, he committed suicide in prison.) After Knittler, the detachment leaders were frequently changed. They were SS-Oberscharführer Albrecht Djuren, described as "the most rabid persecutor of intelligence,"<sup>21</sup> missing and presumed killed since 1945; SS-Unterscharführer Wilhelm Rett from Kaiserslautern (killed in action on January 4, 1944); SS-Oberscharführer Grossman; SS-Scharführer Schneider; SS-Scharführer Mussmann; SS-Oberscharführer Emil Rieder; and SS-Unterschar- or Oberscharführer Fänger.<sup>22</sup> SS-

Sturmscharführer Georg Müller stated that he was in command from July 11, 1944, until the dissolution of the camp. In 1945 he was interned by the British in Esterwegen.<sup>23</sup>

There were between 15 and 18 guards, mostly young German SS but later ethnic Germans (Volksdeutsche), who were based at the Glau troop training ground as part of the SS training unit. The names of the brothers Klein, who came from Batschka in Hungary (possibly Josef and Jakob), are known. Survivors described them as being brutal and barbaric. It is claimed that they shot a Dutch prisoner named Jan van der Klein and two Russian prisoners on the way to work. The shootings were condoned by the detachment leader,<sup>24</sup> Fänger. Another Hungarian ethnic German, Hack, also a member of the SS personnel, is said to have mistreated the prisoners for no reason while they were working and also to have shot two Russian prisoners.<sup>25</sup> Valentin Jaromir, born in 1918 in Kobier, Upper Silesia, was also a member of the guard. He had previously served at Dachau and the Sachsenhausen subcamps at Potsdam and Rathenow. He claimed, however, to have served primarily as a gunner. He was interned in 1945 in the British occupation zone.<sup>26</sup>

The former head of the SS-Bauleitung Berlin and later head of the SS-Bauinspektion Reich Nord, SS-Hauptscharführer Alfred Sorge<sup>27</sup> was a frequent visitor to the Glau subcamp. Sometime in the summer of 1944 while he was at Glau, a Russian prisoner, Wladimir Sikorskij, was shot by the detail leader (SS-Sturmscharführer Müller) because he had stolen potatoes from the cellar of an SS dormitory.<sup>28</sup>

The camp elder was a German political prisoner, Will Rutat, who had previously fought in Spain and later worked in the Ministry of National Defense in the German Democratic Republic. The camp clerk was until the spring of 1944 Georg Stein from Luxembourg, followed by René Trauffer, also from Luxembourg.<sup>29</sup> It is likely that Trauffer was returned to Sachsenhausen in November 1944.<sup>30</sup> Paul Koch then became the camp clerk, and Hermann Bertram became foreman.<sup>31</sup> Polish prisoner Sbiczek Kajie worked as an assistant clerk in construction management, and Polish prisoner Tadeusz Kowalski was used as a technical draftsman.<sup>32</sup> The prisoner Stein is said to have obtained an illegal radio, which could receive Allied news broadcasts, which he passed on to the main camp.<sup>33</sup>

A list of names of 65 prisoners working on the Glau building site on August 5, 1942, has survived.<sup>34</sup> At the beginning of 1943, the Glau work detail included 177; in the middle of February 1944, 139 prisoners. In the spring of 1944, half of the detail was transferred to the Sachsenhausen/Grünheide subcamp.<sup>35</sup> In the summer of 1944, no more than 180 prisoners were put to work at the troop training ground in Glau. On February 12, 1945, there were still 31 prisoners at the Glau subcamp.

It was reported that the detail leader intended to shoot the prisoners before they were evacuated but that the Sachsenhausen main camp commandant decided otherwise.<sup>36</sup>

In 1968, the Central Office in the State of North Rhine-Westphalia in Cologne (ZLNW-K) investigated the homicides in the Glau subcamp. The Polish-based Main Commission

for the Investigation of Nazi Crimes also investigated these homicides. The investigations did not result in any prosecutions.<sup>37</sup>

**SOURCES** The only work specifically written on Glau is a school paper by Nadine Sachse, “Das Konzentrationslager Sachsenhausen mit seinem Aussenkommando Glau bei Trebbin (unpub. MSS, Luckenwalde, 2003). Photographic evidence may be found in Helmut Bräutigam, “Fremdarbeiter in Brandenburg in der NS-Zeit,” *InBe* 17 (1996): 71.

Memoirs of former prisoners and details about the perpetrators are to be found in the AG-S, BLHA, and PRO. A published prisoner testimony on Glau is Georg Stein, *Die Cäsar der Entscheidung* (Luxembourg, 1946).

## GLÖWEN

The Glöwen subcamp was one of six Sachsenhausen subcamps to which only Jews were transported in 1944. It was only in Glöwen that there existed a number of larger groups that together numbered more than 770 male and female Jewish prisoners. The subcamp was established in the summer of 1944 at a munitions and machine storage area of the Dynamit Aktien Gesellschaft (DAG). It was located between Berlin and Magdeburg, not far from Havelberg.

The DAG installation, originally known under the name of “Roland” for security reasons and located in a 500-hectare (1,236-acre) forest, was planned as a large facility for the production of nitrocellulose. Construction began in October 1938, and around 50 construction firms from the region were involved in the work. Some 175 foreign laborers and 50 German Jews, as part of the “self-contained labor deployment” (*Geschlossenen Arbeitseinsatz*), were used as forced laborers.<sup>1</sup> French prisoners of war (POWs) were also used.

In 1942, the camp was converted to a regional storage facility for captured weapons and machines and was known as “Lager Glöwen.” A disassembly installation (*Entlaborierungsanstalt*) was established for the Cologne explosives factory Meissner & Söhne, to recycle explosives from munitions left over from World War I and from captured munitions.<sup>2</sup> The production of detonators was planned.

The buildings erected at the facility were covered with earth for camouflage purposes. The earth in turn was planted with fir trees. Aircraft buildings were painted with camouflage paint, and when they were used as munitions stores, they were surrounded by earthen walls.

Glöwen had a rail connection, and railway equipment was located on the site. At the beginning of 1945, around 10 to 12 cars were turned around daily. It was planned to increase that rate to between 50 and 70 cars.

At times it was planned to relocate other facilities to Glöwen: for example, the Deutsche Maschinenfabrik AG (Demag) tank tracks assembly from Falkensee and the Arado aircraft factory from Rathenow in Brandenburg, both of which used prisoners from Sachsenhausen.<sup>3</sup>

In August 1944, around 300 Polish Jewish men and women were transported from the Pionki forced labor camp near Pionki in the direction of Glöwen. In Pionki, they worked as forced laborers for the largest explosives factory, which after the occupation of Poland had been taken over by the Westfälisch-Anhaltinische Sprengstoff AG (WASAG). Around 3,000 Jewish prisoners from Radom were held on the factory site as forced laborers. Many of them were held there after the evacuation of both Radom ghettos in August 1942.

When the Red Army pushed into the Radom area in July 1944, it was decided by the armaments factory and the Armaments Ministry's Main Committee for Gunpowder and Explosives (Hauptausschuss Pulver und Sprengstoff) to relocate the gunpowder factory to Glöwen.<sup>4</sup> Once the factory had been disassembled, the majority of the Jewish forced laborers were deported to Auschwitz. Raul Hilberg has pointed out that, as in Pionki other Jewish forced laborers in German occupation industries, such as Steyr-Daimler-Puch (SDP), or Hugo Schneider AG (HASAG), were pulled out and deported.<sup>5</sup>

Around 300 Jewish forced laborers from Pionki, including 30 women, were transported in four rail cars via Tschenschau (Częstochowa) to the Sachsenhausen concentration camp. They were to rebuild the factory in Glöwen. They were chosen largely because of their tradesmen's skills, but some were arbitrarily chosen. Eventually, the SS transferred the women to the Ravensbrück concentration camp. The men were first held in "quarantine" in the Sachsenhausen concentration camp and only later were they taken to Glöwen.

On August 16, 1944, 499 Hungarian Jewish women were transported from the Stutthof concentration camp near Danzig to Glöwen.<sup>6</sup> The women had been arrested after the occupation of Hungary and transported to Auschwitz II-Birkenau. From there the SS transported them to the Rigakaiserwald concentration camp and, when that was evacuated, then to the Stutthof concentration camp.

The male and female prisoners at Glöwen were taken to the subcamp's barracks, which in part were located in a "community camp" (*Gemeinschaftslager*) constructed for German civilian workers. The barracks were surrounded by an electrified barbed-wire fence. There were four watchtowers. The subcamp included a camp kitchen that was supplied by DAG, an infirmary, and a workshop. The prisoners made sure that a fellow prisoner, aged 10, worked in the kitchen and repairing the prisoners' wooden shoes. They wanted to protect him from the more physically demanding work.<sup>7</sup>

The men and women were separated. If they made contact through the barbed wire that separated them, they could be

punished by being forced to stand for prolonged periods or by being beaten. Survivor Abraham B. recalled, "It was not only forbidden to speak with other inmates but also to look out of the camp. I was punished because while on the way to work I had said to the women who were marching by 'good morning.' I had to stand the whole day at attention for several hours wearing a rucksack filled with stones."<sup>8</sup> Nevertheless, the prisoners were able, for example, to make their own candles and a cloth bag. They exchanged these outside the camp for Sabbath candles. The women had asked the men for candles, which the men had made from paraffin that was available in the camp. In return, the women sewed the cloth bag.

Hunger, the cold in the particularly cold winter of 1944–1945, and the persecution by a number of SS men were the greatest dangers in the Glöwen subcamp. The SS man who was the camp's economic officer and in charge of supplies for the camp is remembered by survivors as being a particularly brutal SS man. It was he who implemented the punishment of 25 blows with a cane.<sup>9</sup> Another method was used to make the prisoners comply. This was the threat to return the prisoners to the Sachsenhausen main camp. "Transport back to the main camp at Sachsenhausen was always a threat that we heard from the SS men: 'If you continue like that you'll be back in Sachsenhausen.'"<sup>10</sup> Survivors have stated that four male prisoners died in the Glöwen subcamp through exhaustion and hunger.<sup>11</sup> At least two prisoners who could no longer work and who were ill were taken back by rail to Sachsenhausen. Three female prisoners became ill from typhus, and one of them died.<sup>12</sup> In the spring of 1945, a woman gave birth, and she and her infant were taken back to Ravensbrück where they were probably murdered.

There were 16 SS male guards at the Glöwen subcamp<sup>13</sup> and around 10 young SS wardresses. Investigations carried out in 1967 by the Central Office of State Justice Administrations (ZdL) in Ludwigsburg into the former camp leader and other members of the guard at the Glöwen subcamp were stopped because it was not possible to prove any homicides.<sup>14</sup>

Inside Glöwen, the prisoners for the most part were supervised by DAG factory security officers.<sup>15</sup> At the beginning of 1945, the factory and work security supervisor noted that factory security had "become more lax with the Jews, especially the Jewesses." The factory security officers "should not be allowed to engage in any form of conversation or transaction with the Jewesses. Regardless of the position of anyone involved the matter will be immediately reported to the police."<sup>16</sup>

Inside the camp grounds, the concentration camp prisoners were divided into work groups. Some of the groups were supervised by German engineers who had previously been based in Pionki.

The male prisoners, dressed in inadequate clothing, basically did unloading work without tools. At first they had to unload the machines from Pionki and later machines from other firms. Some prisoners did carpentry and electrical installation work. In addition, work was to be done on extracting gunpowder.<sup>17</sup>

The female prisoners also had to work on disassembling munitions and manufacturing detonators. The head and chief engineer of the DAG technical department, Heinrich Schindler, planned to produce 150 million detonators each month.<sup>18</sup> However, the requisite production facilities were never finished. Instead, the women worked in a variety of work detachments, working in the fields, gardens, or small workshops such as a bakery in the area.

In September 1944, the “Special Gunpowder Committee” (Sonderausschuss Pulver) of the Main Committee, Gunpowder and Munitions (Hauptausschuss Pulver und Munition), which consisted of representatives of the munitions firms, called a meeting of the committee representatives in Glöwen.<sup>19</sup> As a result, the Pionki factory facilities were divided between the munitions’ firms.

In October 1944, the DAG Berlin construction office, which had been relocated to the town of Glöwen, demanded an additional allocation of 15 accommodation barracks, as it was possible that the use of prisoners to manufacture detonators would be expanded.

On December 16, the SS administration in the Sachsenhausen concentration camp indicated to DAG that a withdrawal of prisoners from Glöwen was planned for January 15, 1945.<sup>20</sup> This was objected to by the Army High Command (OKH), which wanted the prisoners to remain to work on transporting machines and goods and in production.<sup>21</sup> A demand was also made that the male concentration camp prisoners, who were still formally part of the Pionki Gunpowder Factory, transfer to the DAG.<sup>22</sup> The DAG wanted to continue to use the concentration camp prisoners in the production of detonators, which was supposed to begin in February 1945. Planning envisaged the use of prisoners in a DAG factory in Allendorf<sup>23</sup> or in two other factories in Thüringen.<sup>24</sup>

Most probably the SS dissolved the male camp on February 14 and then the female camp on April 14, 1945.<sup>25</sup> In mid-February 1945, the SS divided the male prisoners into three groups. More than 100 were transported to the Sachsenhausen subcamp at Rathenow. There, they riveted aircraft wings at the Arado aircraft factory. The factories were located above-ground and had no protection against air raids. Working with air pressure devices in 12-hour shifts in such facilities meant that the prisoners often suffered from frostbite. The concentration camp prisoners were not allowed to enter the underground production facilities that would have offered protection from the cold and air raids. The SS guards fled in April 1945 shortly before the arrival of the Red Army.

The second group was transported to Bergen-Belsen, where most of them died from starvation. The third group was transported back to Sachsenhausen in February 1945 and, following its dissolution, was sent on a death march in the direction of the Baltic.

The female prisoners remained in Glöwen until its dissolution in mid-April 1945. They then set out on a weeklong march to the Ravensbrück subcamp at Malchow. A DAG factory was also located here. They were freed in Malchow by the Red Army on May 2, 1945.

**SOURCES** The history of the Sachsenhausen subcamp at Glöwen was researched by the author for the GMS exhibition “Die Baracke 38—Jüdische Häftlinge im KZ Sachsenhausen 1936–1945” and described in the following two essays. “Zwangsarbeit im Beutelager—Das KZ Aussenlager Glöwen,” in *Havelberg: Kleine Stadt mit grosser Vergangenheit*, ed. Stadt Havelberg (Havelberg: Mitteldeutscher Verlag, 1998), pp. 169–187; and “Zwangsarbeit von jüdischen KZ-Häftlingen in der Rüstungsproduktion in der Region Berlin-Brandenburg in der Schlussphase des Zweiten Weltkrieges—Die Aussenlager Glöwen und Schwarzheide des KZ Sachsenhausen,” in *Zwangsarbeit während der NS-Zeit in Berlin und Brandenburg—Formen, Funktion und Rezeption*, ed. Winfried Meyer and Klaus Neitmann (Potsdam: Verlag Berlin-Brandenburg, 2001), pp. 163–175. Earlier research did not follow the Pionki transports beyond Tschenstochau. See Sebastian Piatkowski, “Oboz pracy przymusowej dla Żydów w Pionkach,” *NaZag* 21 (n.d.): 14.

The SS was supposed to destroy the “Lager Glöwen” files at the beginning of 1945. Dynamit Nobel AG states it no longer has the relevant files. During the author’s research, he located handwritten documents of the factory and work security supervisor for the “Lager Glöwen,” which had been discovered by the Bundeswehr when removing ordnance and which are now located in the BLHA (Bestandssignatur: BLHA Pr. Rep. 75 Dynamit AG). The AG-S holds seven files of documents that are the results of research the author did in the BA-B, BLHA, WWA-D, IPN, AMS, and APR, as well as research done on location in Pionki, Havelberg, and Glöwen. The AG-S holds the interviews that the author’s colleagues Eva Brücker, Maïke Leffers, Anneke de Rudder, and Monika Schmidt and he made in 1996 with the Glöwen survivors Irachmil Bahir, Jizack Flekier, Abram Lancman, Amek Mandel, Joseph Rotbaum-Ribo, Mordechai Rozenczaig, Morris Rubinstein, and Marika Weinberger. The interviews were made in Israel, the United States, Britain, and Australia. Survivor Abraham Lancmann published his memories of Pionki, Glöwen, and Rathenow in *Młodość w czasie Zagłady*, trans. Anna Przedpelska-Trzeciakowska (Warsaw: “Rytm,” 2002).

An initiative by local pupils in 2005 to erect a monument at the former subcamp is documented in Thomas Irmer/Ulla Seeger, *Erinnerung an eine “geliebte Zeit”* (Berlin, 2007).

## GRÜNHEIDE

The Grünheide subcamp located on the eastern edge of Berlin, not far from Erkner, is not mentioned in the International Tracing Service’s (ITS) catalog of camps and prisons published in 1949.<sup>1</sup> A 1960s publication on Sachsenhausen lists the camp with the notation “barracks building.”<sup>2</sup>

According to a listing by the Stiftung Brandenburgische Gedenkstätten, the camp existed from the spring of 1944 to January 1945. Around 70 male prisoners were deployed as a construction detail at an SS station.<sup>3</sup>

A diploma thesis, prepared under the auspices of the Sachsenhausen Memorial, lists the camp as existing from the summer of 1944 to the beginning of 1945. The prisoners were used by the SS or the Wehrmacht.<sup>4</sup> Following the listing “according to camp statistics,” there were as many as 180 prisoners in the camp.<sup>5</sup> In an overview of all subcamps produced by the Sachsenhausen Memorial before 1990, it stated that the use of the prisoner labor was: “Barracks construction for SS war reporters, Wehrmacht buildings.”<sup>6</sup> A committee of former prisoners compiled a postwar list that mentions Grünheide as having 180 prisoners working at the “2. SS-[Bau]-Brigade.”<sup>7</sup> Another document prepared by a former prisoner states the following: “Grünheide: Small detachment thirty-five men. Barrack construction for SS war reporters. Center for propaganda reports.”<sup>8</sup>

It is said that in the summer of 1944 a transport of around 50 men from the Glau subcamp was sent to Grünheide.<sup>9</sup> The prisoners at first had to camp under the open sky before they established their first accommodation barrack in a forested area. The barrack was surrounded with barbed wire. SS-Unterscharführer Rausch of the Reich Security Main Office (RSHA) was in charge of construction.

It is thought that later another 100 prisoners were transferred from the Sachsenhausen main camp to Grünheide.<sup>10</sup> The Sachsenhausen change of status reports state that on June 1, 1944, there were 50 prisoners in the Grünheide subcamp. The highest number of prisoners is recorded for the end of October 1944 when 70 prisoners are registered at the camp. On February 12, 1945, there were still 65 prisoners at Grünheide.<sup>11</sup>

The prisoners went on to erect three more barracks, an air-raid bunker for the SS, and trenches made out of prefabricated slabs. The site was said to be overflow quarters for war reporters, where women also worked, although only one of the finished barracks is supposed to have been used.

The prisoners were Germans, Russians, Ukrainians, French, Belgians, and Norwegians. The camp elder was for a short time the criminal prisoner Curt Reuter. He was chosen

because he spoke French. He was a barrack elder in the main camp and from September 1943 worked on operations in the prisoners' infirmary.

The prisoners saw the camp at Grünheide as a subsidiary camp of the Berlin-Lichterfelde subcamp—they were supplied from there, and inspections were made from that camp. The camp was also controlled by the camp command in Lichterfelde through SS-Oberscharführer Erwin Seifert and SS-Obersturmführer Ludewig.

Security at the camp was provided by 12 to 15 SS from the RSHA. The camp leader was SS-Unterscharführer Rudolf Finger, who admitted to being the only SS man from the Sachsenhausen concentration camp based in Grünheide. He had been based at Sachsenhausen from the beginning of 1941, followed by three years at the Berlin-Kaiserallee commando and, from the end of August 1944, at the Berlin-Lichterfelde subcamp. He was transferred on August 28, 1944, to Grünheide, where according to his own statement he remained until February 1945.

There are no known instances of prisoner mistreatment in Grünheide, and no accusations were later made against the construction chief, the camp leader, and the SS guards. Finger, who later lived in the German Democratic Republic, denied being the camp leader in Grünheide when questioned by the General State Prosecutor of the German Democratic Republic. He stated that he was only a member of the guard. Finger was a member of the Seventh Sachsenhausen SS-Totenkopfwachbataillon, which was stationed in Berlin-Lichterfelde.

As the front approached, the whole Grünheide prisoner detachment was evacuated to Lichterfelde. In April 1945, some of the prisoners were sent via the Heinkel subcamp and then on the death march from the main camp to Mecklenburg.<sup>12</sup>

All that is known about criminal proceedings against those in charge is that the supposed camp leader, Finger, was interned as a "guard" in 1945 in the British internment camp at Esterwegen and was, according to his own statement, convicted by a jury in Bielefeld in December 1947.<sup>13</sup> His sentence was considered already served because of the time he spent as an internee in Esterwegen and Eselsheide.

Investigations begun in 1967 by the Central Office of State Justice Administrations (ZdL) in Ludwigsburg ceased in 1971, as there were no grounds for any charges in respect to crimes of violence at Grünheide.<sup>14</sup> A request for legal assistance by the Zentralstelle in Cologne to the German Democratic Republic resulted in the former camp leader, Finger, being questioned in the German Democratic Republic. He was not a member of the Socialist Unity Party (SED) or any community organization but was nevertheless given a certificate of good character. He was said to be quiet, industrious, and willing to help. The West German investigating authorities were merely told that Finger had only been a member of the guard. The file was then closed.

**SOURCES** There are no known secondary sources on the Grünheide subcamp. The archival sources are found in the

BA-L and AG-S. There are a few archival sources in the BA-B and PRO.

## HENNIGSDORF

The Sachsenhausen subcamp at Hennigsdorf was established in October 1944 near the Hennigsdorf factories of the second-largest German electrical concern, the Allgemeine Elektrizitäts-Gesellschaft (AEG). About 650 female concentration camp prisoners, most of them Polish women, were used for forced labor in the armaments production at Hennigsdorf, located to the northwest of Berlin. The first use of concentration camp prisoners in an industrial firm in the Berlin-Brandenburg region was probably planned in Hennigsdorf in 1940.

By 1940–1941, between 20 and 45 male prisoners from the Sachsenhausen concentration camp worked in a rolling mill of the Mitteldeutschen Stahl- und Walzwerke (Central German Steel and Rolling Mill) in Hennigsdorf. The company had been a part of the Flick concern since 1926. In May 1940, the board of directors of the rolling mill negotiated with SS-Hauptsturmführer Wilhelm Burböck of the Inspectorate of

Concentration Camps (IKL) in Oranienburg about details regarding transport, food, accommodation, and payment.<sup>1</sup>

The concentration camp prisoners were taken daily by truck to Hennigsdorf. On top of the work, which was physically demanding and done in 12-hour shifts, the prisoners had to unload scrap metal as well as clean the melting pots and change the fire clay stones in the blast furnaces.<sup>2</sup>

The Hennigsdorf factories of AEG to the northwest of Berlin, established in 1909–1910, produced in 1934–1935 some 10 percent of the total production of all AEG factories.<sup>3</sup> They manufactured products such as electric locomotives and industrial ovens and household devices such as refrigerators and insulation. With the beginning of the war, Hennigsdorf supplied components for air armaments, munitions, and tank construction. In Hennigsdorf the AEG used countless foreign workers from Western and Eastern Europe, as well as French and Soviet prisoners of war (POWs).<sup>4</sup> As part of the 1942–1943 “camp construction project” (*Lagerbauaktion*), around 20 barracks for more than 4,000 people were built to the west of the Hennigsdorf factory on the Hohenzollern Canal.

In July 1942, representatives of the AEG Hennigsdorf insulation material factory and the German occupation administration at the Łódź ghetto agreed on the use of 200 ghetto inmates for the process used to separate glimmer. The AEG representatives in Łódź stated: “As this work is a very simple process needing neither technical skill nor strength, children and youths can be used.” Glimmer, a mineral composition found in rocks deep under the earth, was used in the electrical industry as an insulation material. The glimmer supplied by AEG Hennigsdorf had to be cut by the ghetto inmates with knives and molding tools into three different sizes. The ghetto administration informed AEG that “in view of the specificities of the Ghetto and due to measures for the solution of the Jewish question no responsibility could be assumed for the actual use of the labor.” At the beginning of August 1942, an AEG skilled tradesman from Hennigsdorf taught 150 ghetto inmates how to separate glimmer. According to details from the Elder’s Council, there were 650 ghetto inmates at the end of 1942 and 500 in April 1943 involved in the production of glimmer, 45 percent of whom were youths. When production stopped because of AEG delivery problems, the ghetto administration threatened to withdraw the Jewish forced labor. It was reduced in June 1943 by about 50 percent, and in November 1943, AEG terminated the production contract supposedly because “the use of machines in cutting glimmer had progressed to such an extent that it was no longer profitable to split glimmer by hand and no longer responsible to use labor for such purpose, especially given the importance of labor for the war economy.”<sup>5</sup>

The Hennigsdorf subcamp, as with another subcamp at the AEG operations in Berlin-Köpenick, was one of the last subcamps established by the Sachsenhausen concentration camp in 1944 at an industrial enterprise. The majority of the 650 female concentration camp prisoners, who were transferred on October 10, 1944, from Ravensbrück to Hennigsdorf,

were Polish women arrested after the Warsaw Uprising. At the end of 1944, Hungarian Jewish women were transferred to Hennigsdorf.<sup>7</sup> There were probably also female prisoners from the Soviet Union,<sup>8</sup> as well as from Bulgaria, Yugoslavia, and France. During that same time period between September 28 and October 9, 1944, around 680, mostly Polish female prisoners, were transferred to the subcamp established at the AEG-Kabelwerk Oberspree in Berlin-Köpenick.<sup>9</sup>

The Hennigsdorf subcamp was surrounded by two barbed-wire fences. It was located in former barracks for foreign workers located to the west of the AEG factory grounds. It included an infirmary, kitchen barracks, washing and toilet facilities, as well as rooms for the female SS guards.<sup>10</sup> “Hennigsdorf,” according to the then-25-year-old Janina Krafczyk from Warsaw, who together with her mother had been transported to the subcamp, “appeared luxurious in comparison to Ravensbrück because everyone had their own bed.”<sup>11</sup>

The SS initially gave the women civilian clothes, which were marked with a white-painted cross. The clothes probably originated from Jewish women who had been deported.<sup>12</sup> At the beginning of 1945, prisoner overalls were handed out to the women.

For some of the women, daily religious observance in the camp gave them a reference point for sticking together. Krafczyk stated, “We made a beautiful altar between the windows. . . . An altar with little flowers made from cable and a small cross. We turned to it when we prayed or sang.”<sup>13</sup>

The altar was constructed by the women out of bits of cable and plastic that they smuggled out of the factory. Some scratched into leftover materials drawings depicting, for example, the daily march to work. Those pieces were used as jewelry items to make presents or else for barter purposes.

While SS men guarded the external camp from the outside, inside the camp the female prisoners were watched by 32 SS women. The female SS also guarded the women on their daily 3-kilometer (1.9-mile) march to the factory and while working. They divided the women into different work detachments. It is said that some female SS treated the women brutally.<sup>14</sup>

Kept separately in a specially constructed building of the screw factory, the female concentration camp prisoners did skilled work in a variety of departments. They had to produce the mechanical detonators for mines and flak grenades, assemble aircraft engines, and execute drill and soldering work. The women were also involved in the production of gramophone records and processing glimmer.<sup>15</sup> They were taught by AEG civilian workers during the weekly, alternating 12-hour day and night shifts. The civilian workers treated the women differently: Krafczyk recalled that she “was drilling deep holes into the metal plates. . . . At one moment I lowered my head too low. The foreman jumped over to me, grabbed my head and pulled me up from behind. Apparently my hair had come very close to the drilling machine. When he saw that . . . he was very attentive, he seized me by the head. . . . He did not talk a great deal, indeed I never heard him talk. I

never saw him talk with the wardresses. But now how he scolded the wardress! Why did we not have scarves! The next day we all had scarves, which we wore only when in the factory.”<sup>16</sup> There were other AEG civilian workers who would not get involved: “There were two engineers, one for each shift. One hardly looked at me. Once the other noticed that the pistons were smoking because tin residue had made them filthy. . . . It was only he who would clean the pistons for me and would be friendly to me. The other one did nothing. I could have fallen over dead and he would not have noticed.”<sup>17</sup>

At the beginning of 1945, the shifts were reduced to eight hours because of material shortages. When the factory buildings were severely damaged during an air raid on March 18, 1945, the forced labor stopped completely. Instead, the female prisoners had to clean up rubble and later work on fortifications.<sup>18</sup>

When the subcamp was dissolved in April 1945, the women were forced on a death march to the Ravensbrück concentration camp. Some of the prisoners, including Krafczyk and her mother, remained at the village of Sommerfeld and were later liberated by a Polish detachment of the Red Army.<sup>19</sup> Others died along the way from exhaustion or were shot by the SS.<sup>20</sup> The remainder of the prisoners were forced to march to Ravensbrück.<sup>21</sup>

**SOURCES** Due to only fragmentary sources being available, all the more valuable are the details supplied by former female prisoners. The biography of Janina Krafczyk was put together by the author for the Sachsenhausen Memorial permanent exhibition “Die Baracke 39—Der ‘Alltag’ der Häftlinge des KZ Sachsenhausen” and the CD-ROM *Gegen das Vergessen*. For forced labor and AEG, see Thomas Irmer, “. . . eine Art Sklavenhandel—Zwangsarbeit bei AEG/Telefunken in Berlin und Wedding,” in *Zwangsarbeit in Berlin 1938–1945*, ed. ABR (Berlin: Metropol Verlag, 2003), pp. 154–166. On Berlin-Köpenick, see Irmer, “Zwangsarbeit von jüdischen KZ-Häftlingen in der Rüstungsproduktion in der Region Berlin-Brandenburg in der Schlussphase des Zweiten Weltkrieges—die Aussenlager Glöwen und Schwarzhöhe des KZ Sachsenhausen,” in *Zwangsarbeit während der NS-Zeit in Berlin und Brandenburg—Formen, Funktion und Rezeption*, ed. Winfried Meyer and Klaus Neitmann (Potsdam: Verlag Berlin-Brandenburg, 2001), pp. 163–175. On forced labor in Hennigsdorf, see Helmut Fritsch, *Zwangsarbeit in Hennigsdorf 1940 bis 1945: Eine Dokumentation* (Hennigsdorf, 2001).

Documents on forced labor at AEG Hennigsdorf are kept in the ASt-Hen, the BLHA, and BA-L. The AG-S contains the interviews with former female prisoners from the Hennigsdorf subcamp, including that of Krafczyk. YVA holds the correspondence with the Łódź ghetto administration.

## KIEW

From July 1942 to spring 1943, a subcamp of Sachsenhausen was created in the city of Kiev, which was then part of the Soviet Union (today it is in the Ukraine). There is little information about this camp, perhaps because there were only four

or five prisoners transported to Kiev for work. According to the International Tracing Service entry for this camp, the inmates, all men, were brought to Kiev to assist in the opening of safes that belonged to Soviet authorities. They were employed for this activity by the Higher-SS and Police Leader (Höherer-SS und Polizeiführer, HSSPF).

**SOURCES** There are few primary and secondary sources on the Kiev subcamp of Sachsenhausen. Information for this entry comes from the Kiev entry in the ITS, *Verzeichnis der Haftstätten unter dem Reichsführer-SS (1933–1945). Konzentrationslager und deren Aussenkommandos sowie andere Haftstätten unter dem Reichsführer-SS in Deutschland und deutsch besetzten Gebieten*, vol. 1 (Arolsen: Der Suchdienst, 1979). Although not always consistent with other sources, the ITS catalog provides brief statistical information about the camp, such as opening and closing dates, type of prisoner work, and so on.

The Kiev subcamp is mentioned in one primary source stored at the AG-S in Oranienburg, in file group I/4, Index der Aussenkommandos und Aussenlager. However, no additional information, besides the fact that there was a work commando sent to Kiev, is provided.

Christine Schmidt van der Zanden

## KLEINMACHNOW

In the summer of 1944, a subcamp of Sachsenhausen concentration camp for female prisoners was established at Kleinmachnow, near Berlin. It was located right on the factory premises of the Dreilinden Maschinenbau GmbH, a subsidiary of Robert Bosch GmbH. Organizationally, it reported to the main Sachsenhausen camp. The women in the camp were from the Ravensbrück concentration camp and had been selected by employees of the Dreilinden Maschinenbau GmbH to do forced labor for the armaments factory.

About 800 female prisoners, mostly young women, were transferred in September and October 1944 in two transports from the Ravensbrück women's concentration camp to the Kleinmachnow subcamp. As of March 30, 1945, precisely 749 prisoners, who with very few exceptions came from Poland, were interned there. They had been brought to Germany after the German occupiers crushed the Warsaw Uprising by the Home Army (Armia Krajowa). Among the prisoners were a number of Jewish women from Poland. They lived and survived in the camp using pseudonyms, revealing their Jewish origin only to a few fellow prisoners.

The subcamp consisted of an approximately 6,700-square-meter (72,118-square-feet) large factory floor, which was separated from the rest of the works by a double fence of barbed wire, the inner one of which was electrified. The air-raid shelter below the floor served as accommodation for the prisoners. At any given time, about 30 women had to stay in each of the unheated, dark and damp rooms. Working around the clock in 12-hour shifts, they carried out primarily precision work. What exactly they produced, the prisoners did not know; they were only told that they were making aircraft engine parts for Bosch. Their sole employer was the Dreilinden

Maschinenbau GmbH, which had been founded on behalf of the Reich Air Ministry and produced fuel injection pumps, magneto ignitions, starters, and other equipment especially for aircraft engines, all in accordance with Bosch designs.

As a rule, survivors reported that the German foremen and overseers treated them well, although the female SS guards hit them and tortured them, with roll calls lasting hours. Gynecological experiments were carried out on some of the prisoners at the Sachsenhausen main camp (according to other statements, also at Ravensbrück); one woman is said to have died from them. Other deaths are not known. One pregnant woman was sent back to Ravensbrück, and from there she was taken to Bergen-Belsen, where she gave birth to a child that died a few days later. Numerous survivors had gynecological problems after the detention, which they ascribed to a drug that had been added to their food to prevent menstruation.

The commandant of the Kleinmachnow subcamp was Walter Dankworth from Berlin, born April 4, 1903, who belonged to the Seventh SS-Wachbataillon Sachsenhausen. From 1941 to the end of the war, he was a member of the SS-Totenkopfverbände (Death's Head Units). Before that he had worked at Siemens as an engineer and had then volunteered to provide technical assistance to the police. After three months of military training, he was assigned to the guard company of Sachsenhausen and held guard duty in various subcamps. In December 1944, having been promoted in the meantime to SS-Unterscharführer, he took over the Kleinmachnow subcamp, which he ran up until its evacuation to the Sachsenhausen main camp. Eight guards were assigned to him, probably likewise members of the Seventh SS-Wachbataillon Sachsenhausen, as well as the camp's female guards.

Evidently there existed in the camp a small-scale barter system through which some women were able to get additional clothes and food. They sewed shopping bags from cleaning rags for the machines and also made jewelry from metal shavings. They exchanged these articles with some of the foremen and fitters for bread.

In April 1945, as the Red Army approached, the Kleinmachnow subcamp was evacuated, and the women were sent back to the Sachsenhausen main camp. Paul Vogelgsang, a manager at the Dreilinden Maschinenbau GmbH, had a train of streetcars made available for the transport, escorted by the female guards and watched by camp leader Dankworth. On April 22, 1945, the women, together with all other prisoners of Sachsenhausen, were driven to the infamous death march in the direction of Schwerin.

**SOURCES** Very little is known about the approximately 170 concentration camp subcamps in Berlin and its surroundings. The first study of the subcamp Kleinmachnow, Angela Martin, *„Ich sah den Namen Bosch.“ Polnische Frauen als KZ-Häftlinge in der Dreilinden Maschinenbau GmbH* (Berlin: Metropol, 2002), contains a substantial chapter about the previously unknown history of Dreilinden Maschinenbau GmbH and its deployment of forced laborers.

For Martin's report, 45 survivors were interviewed, while other eyewitnesses have recorded their memories of forced labor and relocations in writing. These sources can be seen at the Berliner Geschichtswerkstatt e.V. Preliminary Inquiry Files in the Sta. Köln, part of an effort to prosecute unidentified SS members suspected of murder and provide additional information about the living and working conditions in the camp and can be found in NWHStA-(D), Rep. 118/2109,2110. They contain numerous testimonies from survivors as well as records of depositions of the camp leader and a female guard. The proceedings were abandoned in May 1972 because the suspicion of violent crimes at the Kleinmachnow subcamp was impossible to prove even after all of the investigatory possibilities had been exhausted. The AG-R and AG-S have only lists of intakes and transfers that give indications of the occupancy of the Kleinmachnow subcamp and the prisoners' origins.

## KOLPIN

Alongside the establishment of the SS military training camp "Kurmark" in the Jamlitz region, only 100 kilometers (62 miles) from Berlin, the density of SS duty stations in the area surrounding the capital of the German Reich increased further from the summer of 1943 on with the emergence of the SS garrison headquarters Bad Saarow.

It was likewise in the summer of 1943 that the SS-Leadership Main Office (SS-Führungshauptamt, FHA) started two related projects in the Fürstenwalde/Bad Saarow/Scharmützelsee area east of Berlin.

Simultaneously with the relocation of its offices to the Bad Saarow area from Berlin, which was in danger of bombardment, the FHA began a large building project, the construction of an underground intelligence center in the Rauener Mountains south of Fürstenwalde.

The two projects were apparently connected. Both an overflow camp for SS duty stations and a large intelligence bunker were built in the space, which was in use from the second half of the year 1943 onward.

The project "relocation of SS duty stations" (*Verlagerung von SS-Dienststellen*) out of the Reich capital was carried out from the end of July 1943 under the code name "Siegfried."<sup>1</sup>

The SS garrison headquarters that was established for these two projects, Bad Saarow, encompassed an area from Fürstenwalde to south of Beeskow as well as from Storkow to the Schlaubetal (Schlaube valley).<sup>2</sup> As of August 9, 1943, there also existed an "SS-Standortverwaltung Bad Saarow." Several subcamps of the Sachsenhausen concentration camp—Bad Saarow (also mistakenly called Ketschendorf), Fürstenwalde, Storkow, Spreenhagen, and Kolpin—were located from 1943 on within the jurisdiction of this garrison headquarters.

The Kolpin subcamp was closely connected with the Bad Saarow subcamp. The SS-Zentralbauleitung Bad Saarow was

headed by SS-Untersturmführer Hans-Gustav Bauer, who had been born in Nürnberg in 1912. As of May 1944, project offices for the central construction administration were located adjacent to the main building sites at Bad Saarow, as well as at Storkow, Trebnitz, and Kolpin,<sup>3</sup> each of which was also a subcamp of the Sachsenhausen concentration camp.

The camp leader was SS-Unterscharführer Karl Jüngling, who had previously been briefly in command of the Lieberose subcamp.<sup>4</sup> After 1945, while in the British internment camp at Esterwegen, he stated that he held this position from October 20, 1944, to February 2, 1945.<sup>5</sup> The camp was guarded by 25 to 30 ethnic Germans.<sup>6</sup>

One SS-Hauptscharführer Müller, said to have been responsible for Kolpin, reported "good and friendly treatment" of the prisoners. He also claimed to have tried to get additional food for them. His actual role, however, is unknown.<sup>7</sup> The block elder in block one was political prisoner Wilhelm Kottkamp.<sup>8</sup> The foreman in Kolpin is said to have been the prisoner Blutschuth.<sup>9</sup>

According to German ethnologist Hellmut Draws-Tychsen, who was roll-call clerk at the Bad Saarow subcamp until April 1944, the subcamps at Bad Saarow, Storkow, Spreenhagen, and Kolpin were considered one unified labor camp. SS records term Bad Saarow a work camp, and Trebnitz, Storkow, and Spreenhagen as labor details.

The Kolpin outside detail, however, was not listed separately in the SS records. It may have been a sublabor detail of the Bad Saarow subcamp.

According to accounts given by former prisoners, the camp was established in the summer of 1944 and accommodated between 150 and 400 prisoners. Other sources, however, suggest that the Kolpin subcamp was set up only in the fall of 1944.<sup>10</sup>

It is documented that the prisoners were deployed in the building of overflow quarters for the Office of Foreign Affairs/Counterintelligence of the Wehrmacht, later absorbed in the Military Office of the Reich Security Main Office (RSHA).

The camp was dissolved on February 15, 1945.

**SOURCES** Scant documents on the prehistory of the camp are found in the BA-B (Collection NS 33). Memoirs of former prisoners and information on the perpetrators are preserved in the AG-S and at BLHA.

## KÖNIGS WUSTERHAUSEN

“Besides the clearance detail, which remained in Łódź until it fell to the Russians, there are also other people who survived for much stranger reasons. With the help of Biebow and his deputy Seifert, about five hundred Jews, mostly foremen and their families (there were even thirty children among them) were kept in a tailor's shop under the pretext that they had to dismantle the workshops. This enabled the five hundred to remain in Łódź until October 20, 1944, at which point the women were taken to Ravensbrück, while the men followed the workshops to Königs Wusterhausen, a labor detail of the Sachsenhausen concentration camp.”<sup>1</sup>

Thus reads the concise history of the origins of the Sachsenhausen subcamp at Königs Wusterhausen, as recorded by Gerald Reitlinger.

In connection with the large-scale deportation of Jewish and non-Jewish forced laborers to the so-called Old Reich to strengthen the struggling National Socialist war economy, a subcamp of the Sachsenhausen concentration camp was established in the fall of 1944 in the Brandenburg city of Königs Wusterhausen, southeast of Berlin.<sup>2</sup>

Its origin can be traced back directly to the Führer's decree to the German Housing Relief Service (Deutsche Wohnungshilfswerk, DWH), from September 9, 1943. Reichswohnungskommissar Robert Ley was in overall charge of the DWH, the last of the emergency housing programs in National Socialist Germany, intended to create temporary homes to accommodate “national comrades” who had been bombed out.<sup>3</sup>

On November 19, 1943, Reichsminister Albert Speer, in his dual capacity as commissioner for the Four Year Plan and plenipotentiary for the building industry, issued for the Berlin firm Kelterborn & Stenvers the “War Contract No. 160—Urgency level domestic 43 Y w 1,” for the construction of 4,500 temporary homes made of light concrete in the Litzmannstadt (Łódź) ghetto.<sup>4</sup> Although production hardly advanced beyond the testing and preparation phase in the time remaining prior to the evacuation of the ghetto in August 1944, the number of Jewish men and women sent there to do the work grew constantly.<sup>5</sup>

When the approaching Red Army made the liquidation of the ghetto unavoidable, the German ghetto administration

official responsible for the construction of temporary homes, Franz Seifert, searched for a production site in the Old Reich and finally decided on Königs Wusterhausen.<sup>6</sup>

As Reitlinger suggests, it is in fact unusual that a large number of the prisoners (approximately 500 Jewish men, women, and children) working to produce temporary homes in the Litzmannstadt ghetto, after dismantling and loading production facilities and raw materials onto freight trains, were taken directly to the Old Reich, thus avoiding the more usual—and life-threatening—selection process at the Auschwitz concentration and extermination camp.<sup>7</sup> However, the information available suggests that pragmatic rather than humanitarian motives were at play here. Both the ghetto official Seifert, who was pressing ahead with the relocation of the temporary homes factory, and Fritz Stenvers, the partner at the Berlin firm Kelterborn & Stenvers responsible for the construction of the temporary homes, were very interested in utilizing the experience and knowledge of the Jewish prisoners already working in the Litzmannstadt ghetto producing temporary homes. They were joined by the head of the labor department in the ghetto, Aron Jakubowicz, who was the deputy of the Jewish elder there, Mordechai Chaim Rumkowski.

Whereas the men were first taken to the so-called quarantine at Sachsenhausen, women and children were brought to the Ravensbrück women's camp. Eventually, they were transferred to Königs Wusterhausen in what appears to have been a total of three transports. In November 1944, after civilian construction workers had prepared the terrain, a first group of approximately 150 men from Sachsenhausen was brought to Königs Wusterhausen to erect the buildings on the site. A second transport followed just before Christmas 1944, and finally, on February 27, 1945, approximately 250 women (among them several Hungarian Jews) were transferred from Ravensbrück to Königs Wusterhausen. As a result, families that had initially been separated by the transport from the dissolved Litzmannstadt ghetto were reunited at Königs Wusterhausen. Still, due to the chaotic conditions, the effective production of temporary homes was no longer possible. Instead, the prisoners were used to do other jobs such as manufacturing ammunition boxes and fieldwork outside the camp.

Statements collected in Israel in 1971 from former prisoners unanimously contend that there were no intentional murders in the Königs Wusterhausen subcamp. Nevertheless, even here at least four women and a small child died due to the inhumane conditions, lack of hygiene, poor nutrition, and insufficient medical care. There are additional indications that others died from exhaustion or were murdered on the death march from the Sachsenhausen concentration camp to Rostock following the evacuation of the camp in April.

The camp commandant at Königs Wusterhausen was Willi Seifert from East Prussia. He was in command of about a dozen SS supervisors from the Seventh SS-Wachbataillon Sachsenhausen, who were responsible for guarding the camp. The supervision of the female prisoners was the responsibility

of three female SS guards, one of whom was accused of particular cruelty in several witnesses' statements.

The evacuation of the camp by the SS guard forces in April 1945 apparently could not be carried out as planned. It had been intended to be accomplished in several stages, but it seems that only the first group (about one-third of the prisoners) was taken to Sachsenhausen and then forced to take part in the infamous death march toward Schwerin. After the SS guard forces had fled the camp in haste, the remaining prisoners were freed by the Red Army on April 26, 1945. Because of the confusion, however, the camp appears to have been shelled mistakenly by Soviet tanks, resulting in further deaths.

The subcamp was not the only forced labor camp in Königs Wusterhausen. Several other camps of different kinds for foreign workers existed in the city and the surrounding area. This was revealed through investigations by the Central Office of State Justice Administrations (ZdL) in Ludwigsburg in 1966. During the course of these investigations, the former camp commander, Seifert, declared himself insane in order to avoid prosecution. In June 1971, the case was closed, as the depositions of former prisoners in Israel did not allege any homicides, which at this time were still within the statute of limitations and therefore would have been legally pursuable.<sup>8</sup>

**SOURCES** The only historical account of the Sachsenhausen subcamp at Königs Wusterhausen is Frank Stier, *Kriegsauftrag 160: Behelfsheimbau im Ghetto Litzmannstadt (Łódź) und im KZ-Aussenlager Königs Wusterhausen durch das Deutsche Wohnungshilfswerk* (Berlin, 1999). This article is based on Stier's book. According to Stier, the city council of Königs Wusterhausen commissioned research into the history of the subcamp 50 years after the end of the war, acting on the initiative of David Grünstein, who as a young man had been held prisoner at Königs Wusterhausen. For the earliest reference to the Königs Wusterhausen subcamp, see Gerald Reitlinger, *Die Endlösung: Hitlers Versuch der Ausrottung der Juden Europas 1939–1945*, German trans. by J.W. Brügel, 4th ed. (Berlin, 1961), p. 342n., citing Bendet Herschkovitch, "The Ghetto in Litzmannstadt," *YAJS* 5 (1950): 85–122.

The few primary sources discovered to date on the Königs Wusterhausen subcamp are preserved at the ASt-KöW, AG-S, APŁ, BA-B, as well as ZdL (now BA-L) and others. They are cited in the above-mentioned publication. Probably the most important of them are the testimonies of former prisoners, recorded at Tel Aviv in the early 1970s and now held in BA-L.

## KÜSTRIN

According to a survey on the subcamps of the Sachsenhausen concentration camp, there was one at Küstrin-Fasterheide from May 16, 1943, to April 30, 1945, for 300 male prisoners who were deployed at the Deutsche Zellwerke AG, Phrix-Werke, IG Farben.<sup>1</sup> Likewise, the former commandant of Sachsenhausen, Anton Kaindl, stated while interned in a British camp that there were approximately 300 prisoners at Küstrin.<sup>2</sup> Similar details were published by the Antifakomitee (Anti-Fascism Committee) of the German Democratic Republic, which speaks of 300 prisoners at the "labor camp Fasterheide, cellulose factory (Phrix-Werke) IG Farben."<sup>3</sup> The Sachsenhausen Memorial, on the other hand, lists a total of 500 prisoners for the camp.<sup>4</sup> A list put together by former prisoners, meanwhile, gives the number as about 400 prisoners, who they state were used for the erection of army buildings.<sup>5</sup> Another prisoner recalled immediately after the war: "Building project (armaments factory), approximately four hundred men, mostly French, physical condition satisfactory, as the French frequently received care packages from the ICRC (International Committee of the Red Cross). Evacuated to Buchenwald in February 1945."<sup>6</sup> The French survivors' organization for the Sachsenhausen concentration camp, however, only gives the names of 18 French prisoners for Küstrin. In the official list of the International Tracing Service (ITS), the Küstrin subcamp is referred to as "labor camp Fasterheide." It was mentioned on May 17, 1943, for the first time as having 30 prisoners, but on May 25, 1943, that number was already put at 300.<sup>7</sup> Whatever the case, there were still 282 prisoners in Küstrin in early July 1943.<sup>8</sup> The name Fasterheide was not actually known to the prisoners because the same camp had previously accommodated foreign forced laborers and was then called Fasterheide. The forced laborers, like the later concentration camp prisoners, were deployed at the Zellulose- & Zellwolle AG. It is possible that the concentration camp prisoners were accommodated in two separate camps because a number of the eyewitnesses do not recall any Soviet prisoners or a deployment in the tank factory. The camp was located about 5 kilometers (3.1 miles) north of Küstrin, directly at the mouth of the Warthe River. The factory was 1 kilometer (0.6 miles) from the camp. A Soviet prisoner-of-war (POW) camp also existed close by the subcamp.

According to SS records, the number of prisoners remained relatively constant between July 1943 and July 1944 at just under 300. The camp reached its highest occupancy, probably with 373 prisoners, in early September 1944, whereas in early October 1943, there were only 283 prisoners at Küstrin. The camp must have been dissolved between January 13 and February 12, 1945.<sup>9</sup> In fact, a survivor later stated he had been held prisoner at Küstrin from June 1943 to January 1945.<sup>10</sup> Wachmann Eduard Weigelt mentions January 30, 1945, as the end of his assignment at Küstrin.<sup>11</sup> When the camp was dissolved, one group of prisoners was evacuated on foot to Sachsenhausen. Whether or not prisoners were killed during this march is a controversial question among the survivors. Other prisoners were brought to Buchenwald upon evacuation from Küstrin. No evidence exists to prove the assumption of the Zentralstelle in Cologne that the prisoners had to march to Lübben, perhaps to the Sachsenhausen subcamp there, from which point they were taken on trains to Buchenwald.

Apparently, there existed two additional labor details beyond the deployment of prisoners in a paper mill of the Zellwerke AG, where the prisoners, divided into four groups, were assigned to concrete work and occasionally to the construction of temporary homes outside the factory.

For one, according to an account by Soviet prisoner J.F. Potapow, the prisoners worked with the most primitive means, even for building a tank factory and for the repair of vehicles and tanks in a small mechanical workshop. The erection of the tank factory was stopped in the summer of 1944. Repair of the tanks was sabotaged. It seems that prisoners were also used for unloading wood at the port. The camp, consisting of four barracks and a kitchen, was secured by barbed wire and guard towers. One of the block elders was named Stephan. The camp elder was political prisoner Erich Czechor, who enjoyed the confidence of the camp command and was even allowed to go on leave to the town of Küstrin with an escort. He helped the Soviet prisoners get additional food, shoes, and cigarettes. The cigarettes made it possible to put the guards in a lenient mood. Within the camp, perhaps in a separate part of it, there were Ukrainians, Russians, and Poles alongside the Germans. The working conditions were particularly bad for the Russians, and the guards were cruel to them. A bond of solidarity existed among Soviet and German political prisoners in the camp, which the camp elder Czechor called the "illegal camp committee." There were also French, Belgian, and Dutch prisoners at Küstrin.

Czechor was the camp elder from the late summer of 1943 to 1944 and also served this duty later at the subcamp Briesen. In his capacity as block elder at the main camp, he behaved sadistically toward Polish prisoners. It is believed that he had been an SS member earlier and was demoted because of his Communist activities and brought to the concentration camp. According to his statements, he was Obertruppführer at the Reich Labor Service and was suspected of maintaining contacts with subversive persons in Kassel. Ac-

cording to a 1933 document from the Hannover Police, Czechor, who joined the Nazi Party in the same year, stated that he went undercover as "Commander of the anti-fascists at Hann[ersche] Münden" in order "to gain valuable elements from the communist movement for the National Front."<sup>12</sup> Within the Nazi movement, he belonged to the group around the Strasser brothers. In Küstrin, he appointed at first only Germans as block elders and foremen but eventually also allowed Russians as barracks elders and foremen. Later, Paul Wolf of Magdeburg is said to have been camp elder. According to his own account, Karl Heinz Lorenzen was camp elder for six to seven weeks immediately after the departure of Czechor. He said he later acted as foreman of the temporary home building detachment in Küstrin.

In December 1944, a group of prisoners left Küstrin and marched south on foot, ostensibly in the direction of Lübben, where they were allegedly brought to Buchenwald in railroad cars.<sup>13</sup>

The camp's first leader, from the summer of 1943 to the turn of the year 1943–1944, is supposed to have been SS-Sturmbannführer Wilhelm Hermann Heidrich, who was born in 1886 in Idar-Oberstein. He is also referred to as commander of a guard detachment and later became leader of the Briesen subcamp. One SS-Unterscharführer Möckel, who has not been precisely identified, demonstrably acted as "detachment commander" at the "Küstrin labor camp" at the end of 1944. Various prisoners testified that he did nothing that deserves particular blame. A prisoner, who was at Küstrin from December 1943 to December 1944, named a certain Novotny, who hailed from the Sudetenland, as camp leader. On the other hand, he identified SS-Führer Ernst Möckel as head of the labor detail at Küstrin.

Several other SS leaders are known by name, including the chief of the guards, Gustav Berndt, who stated he served at Küstrin from May 1943 to February 1, 1945; the Wachmänner Hans Bitto, who claimed he was at Küstrin until March 1945; Willi Dalügge; Eduard Weigelt, who specified his exact dates for Küstrin as May 28, 1943, to January 30, 1945; Rottenführer Hans-Eduard Poppe; Josef Fells; and a cook, the ethnic German SS-Oberschütze Johann Kriks. Some 25 to 30 privates belonged to the guard forces.

Wachmann Poppe was denazified in 1948 in Bielefeld in a court proceeding and fined 500 Deutsche Mark (DM) because of his affiliation with the SS. He had previously been interned in the British-occupied zone, as were the Wachmänner Dalügge, Weigelt, Berndt, and Bitto.

The presumed first leader of the camp, SS-Sturmbannführer Heidrich, probably died in 1946 in a British internment camp.

From 1967 to 1970, the Central Office in Ludwigsburg and Cologne inconclusively investigated those responsible for the camp. The investigators considered the excesses associated by a Soviet survivor with Küstrin to have been confused with the motor pool detachment Wald of the Sachsenhausen main camp.<sup>14</sup> The German Democratic Republic also processed a

request for judicial assistance from the Central Office in Cologne, but their investigations did not result in any evidence of the killing of prisoners.<sup>15</sup>

The Central Office of State Justice Administrations (ZdL) in Ludwigsburg also briefly investigated accusations against the former camp elder Czechor for abusing prisoners at the main camp.<sup>16</sup>

**SOURCES** Aside from the occasional mention in more general surveys, there is no specific literature on this subcamp. Documents are to be found above all at the BA-L and AG-S. The memoirs *Die unsichtbare Front*, and Karl Heinz Lorenzen, *Haltungen haben einen Preis* (Flensburg, 2002), contain references to Küstrin.

## LEHNITZ [AKA KLINKERWERK]

Beginning in August 1938, the SS assigned prisoners from the Sachsenhausen concentration camp to build what was to be the world’s largest brickworks (*Klinkerwerk*), close to a lock just north of Lehnitz, near Oranienburg. The location was chosen both for its proximity to the main camp, which provided the labor, and because it was possible to transport the bricks at low cost on the Hohenzollern Kanal (the

present-day Oder-Havel Kanal), which was part of the Gross-Schiffahrtsweg Berlin-Stettin (main Berlin-Stettin shipping route). A section of the site had already been in use since 1936 as a firing range by the SS-Totenkopfstandarte (Death’s Head Regiment), which was stationed at Oranienburg Castle.

The rationale behind the project was the National Socialist desire to promote its image through monumental architecture, particularly the redevelopment of Berlin into the projected world capital of “Germania.” There was to be a north-south axis leading to a “Great Square” with a “Great Hall” that was to have a capacity of 180,000 people, the creation of which would have destroyed all of the historic fabric in its path. Responsible for the realization of Hitler’s megalomaniac ideas was Albert Speer in his capacity as Generalbauinspektor für die Reichshauptstadt Berlin, an authority created in 1937. The necessary bricks were to have been produced at the Lehnitz brickworks. To this end, the SS founded the Deutsche Erd- und Steinwerke GmbH (German Earth and Stone Works, Ltd., DEST). The clay came from a pit at nearby Zehlendorf. The large-scale brickworks with its modern tunnel kilns and drying presses was to have been a model SS enterprise with the highest economic and technical stan-

Undated photograph of prisoners performing forced labor at the Lehnitz (Klinkerwerk) subcamp.

USHMM WS #19179, COURTESY OF AG-S

dards. However, since the wrong clay was chosen for this process, the project turned out to be an expensive mistake, demonstrating the inability of the SS to achieve efficient production in their concentration camp enterprises. To cover up the fiasco, they switched to the traditional wet-press method with artificial drying for the bricks. The rebuilding effort, which dragged on for years, was managed by the engineer Erduin Schondorff, whom the SS subsequently entrusted with running all of the brickworks throughout the German Reich and in the occupied countries. The prisoners had to rip out the tunnel kilns with their hands. In 1942, a policy was adopted for the whole German Reich—not least because of this experience—to bring the prisoners to the factories rather than, as in the early phase of the concentration camp system, to bring the factories to the concentration camps.

In the early years, about 1,500 prisoners marched daily from the Sachsenhausen main camp to the wooded area at the Klinkerwerk for construction of the enormous workshop halls, laying out the docks, and erection of the pertinent factory buildings and dwellings. They had to do the construction work in a primitive manner, with only wheelbarrows and shovels. The Klinkerwerk outside detail was seen as a particularly frightening punishment and even a death sentence. “Every prisoner would rather accept any other labor detail than being sent to the brickworks. . . . The fact is that the brickworks has gotten a bad reputation among the prisoners, because the wastage of human lives is so huge. . . . As the prisoners are available in unlimited numbers and are so incredibly cheap (after all, a dead man costs nothing more than a telegram to his mother or some other person), it really doesn’t matter if today there are only three dead bodies and tomorrow thirty. Indeed, in the end the brickworks is little more than a regular execution site.”<sup>1</sup>

The average survival time for the deployment at the Klinkerwerk was estimated at six months. Every day prisoners died there from exhaustion or committed suicide. They were shot dead “while attempting to escape” if they crossed the chain of sentries in their despair. They sank into the moor or the ditches, fell into the water while unloading barges, or were dragged to their death by the carts. “A turning platform was intentionally prepared so that the carts overturned and it was impossible for the four members of the crew to lift it up again. Many prisoners were beaten to death with clubs while doing this job. The so-called chain of sentries was drawn so tight that no prisoner was able to take more than two steps from the cart. Those who collapsed from exhaustion and hunger were killed by sharpshooters standing by with shots in the head.”<sup>2</sup>

It was a place of suffering, particularly for Jews, Sinti and Roma (Gypsies), homosexuals, Jehovah’s Witnesses, and those individuals classified as asocial who had been arrested in 1938 as part of the operation “Arbeitsscheu Reich” (Reich work-shy) but also for political prisoners rated as “recidivist,” prisoners from occupied regions, and all other groups of prisoners that were supposed to be subjected to particularly oppressive measures and disrespect. After 12 hours of work, which in

principle had to be done at double time, the returning prisoners pulled a cart with the day’s deceased and injured back to the main camp. In particular, among the workers in the clay pits, there were hardly any survivors. According to the reminiscences of prisoner Harry Naujoks, one of the camp commandants, SS-Obersturmbannführer Hermann Heidrich, was fond of repeating the phrase: “People here are either healthy or dead.” On the firing range, SS privates used prisoners who had to do construction and earthworks in adjacent areas as living targets. “We had soon found out that the SS privates were far less interested in shooting at the targets than they were at us prisoners, and directly ‘hunted’ individuals pushing wheelbarrows.”<sup>3</sup> In one 1942 massacre, between 180 and 200 homosexuals were killed.

In 1941, the Klinkerwerk was given the status of an independent subcamp of Sachsenhausen, with its own administration. The prisoners had to build a barrack complex southeast of the workshop hall, which was surrounded by an electrified fence. After its completion in April 1941, only the prisoners of the Speer detachment came each day from the main camp. The stone-processing works, which was constructed by this detachment from 1940 on, was to hew Swedish granite and other valuable stones in order to produce clinker stones. It was, however, never completed, because the planning for the monumental “Germania” was deferred due to war developments. Instead, beginning in 1942, the prisoners of the Speer detachment had to disassemble salvaged material such as cables and mines from the occupied countries and to load any precious metals of military importance regained onto ships.

In 1942–1943, the brickworks was partly adapted for arms production. By the middle of 1944, 10,000 mortar shell slugs were produced in Lehnitz every day. To achieve that, a foundry was built, where the prisoners had to carry the molten metal in so-called bags from the smelters to the molds. This “bag carrying” resulted in horrible burns and was also calculatedly used to murder prisoners. The brick laboratory, which had initially developed alternative methods of processing clay to replace the failed dry-press concept, experimented now—in the interest of Speer, who since 1942 was also armaments minister—with the use of ceramics for explosives in order to save steel.

The exact number of prisoners at the Klinkerwerk subcamp, and likewise the number of deceased, is unknown. At the beginning, 1,600 to 2,000 prisoners worked in the factory and in the clay pit. About 80 prisoners were deployed in the bakery, established in 1939 next to the brickworks, which produced bread and baked goods for the SS troop camp and the SS duty stations in Oranienburg and the surrounding area, as well as for the Sachsenhausen and Ravensbrück concentration camps. These prisoners were also housed in the Lehnitz barracks. In 1944, the SS counted 3,600 prisoners in Lehnitz. The camp had been planned for 1,500 people. In 1943, however, about 3,000 prisoners were crowded together in the 10 lodging barracks. Early in 1944, a two-story brick building was added to the camp for the prisoners working in the mortar-shell foundry.

In the Cologne Trial against SS-Oberscharführer Otto Kaiser (1963–1965 and 1967–1970), it was established that there were two to three deaths every day in Lehnitz, although the dying who could still be carried back to the camp were not included in this figure. Many victims were buried on the spot; however, most of the corpses were cremated in the crematory of the main camp. Following an order issued in December 1944, stating that all traces of the cremated remains around the crematory were to be hidden, in late January 1945, 8 to 10 tons of human ashes were scattered into the canal in front of the brickworks. On April 10, 1945, an Allied bombing raid destroyed most buildings at the brickworks. More than 200 prisoners, perhaps even more than 270, lost their lives that day; the dismembered bodies in the bomb craters were never recovered. For this reason, the site of the brickworks became a large cemetery.

Following the bombing raid, the SS dissolved the Lehnitz subcamp and sent the prisoners back to the main camp. Upon its evacuation on April 20 and 21, 1945, the prisoners were forced to set out on a death march; the weak and sick remained behind and were liberated by the Soviet and Polish Army on April 22.

In the October 1947 Berlin Sachsenhausen Trial before the military tribunal of the Soviet military administration in Germany, the former commandant of the Lehnitz subcamp, Heinrich Fresemann, was sentenced to life imprisonment, together with 13 other principal defendants. They were sent to the Soviet Union, to Workuta on the Arctic Ocean, and used as forced laborers in the coal pits. Fresemann died there in the spring of 1948.

**SOURCES** The most intense research on the Lehnitz Klinkerwerk subcamp has been done by Joachim Müller. In the book that he and Andreas Sternweiler edited, *Homosexuelle Männer im KZ Sachsenhausen* (Berlin, 2000), one of the contributions deals with the cruel events at the brickworks: Müller, “‘Unnatürliche Todesfälle’: Vorfälle in den Aussenbereichen Klinkerwerk, Schiessplatz und Tongrube,” pp. 216–258. In two editions of the *GeRU*—10–11 (2001): 103–104—Müller summarized the results of his research: “Das Klinkerwerk Oranienburg: Aussenlager und Vernichtungsgelände des Konzentrationslagers Sachsenhausen.” There is also brief information in the pamphlet offered by the Sachsenhausen Memorial, Kerstin Engelhardt, *Strafkommando und Aussenlager Klinkerwerk 1938–45* (Sachsenhausen, 1997). It is based upon the investigations by Müller. An open-air documentary prepared by Bernd Graff and sponsored by the Sachsenhausen Memorial, shown 2000–2001 in the courtyard of the Oranienburg Castle, presented the history of the Klinkerwerk in text and image; it will be shown at the memorial as *Geschichtspark KZ-Aussenlager Klinkerwerk*. Further information is to be found in Heinz Heger, *Die Männer mit dem Rosa Winkel*, 3rd ed. (1973; Gifkendorf, 1989); Albert Christel, *Apokalypse unserer Tage: Erinnerungen an das KZ Sachsenhausen*, ed. Manfred Ruppel and Lothar Wolfstetter (Frankfurt am Main, 1987).

Documents on the Klinkerwerk, both originals and copies, as well as eyewitness reports, were collected by the AG-S. Important documents are to be found above all at the BLHA. A

published prisoner testimony on the subcamp is Harry Naujoks, *Mein Leben im KZ Sachsenhausen 1936–1942: Erinnerungen des damaligen Lagerältesten* (Cologne, 1987), chapter 24.

## LIEBEROSE [AKA "LIRO"]

Documents show that in June 1943 plans for four new training grounds were developed for the Waffen-SS. With a local garrison administration and headquarters in Jamlitz, a village with 300 inhabitants and the Lieberose state railway station, the SS training area “Kurmark” was only about 100 kilometers (62 miles) from Berlin.<sup>1</sup> According to his own account, Reichsführer-SS Heinrich Himmler wanted to set up the new SS garrison this close to Berlin so that in the event of a coup he would have been able to arrive quickly at the center of power of the SS troops.

A provisional SS development camp had existed since November 9, 1943, in a dance hall in Jamlitz. Technically, it reported to the section for “Häftlingseinsatz bei SS-Dienststellen”—deployment of prisoners at SS duty stations in the SS-Business Administration Main Office (WVHA). In practice, however, it reported to the SS-Standortkommandant (garrison commander) and thus to the SS-Führungshauptamt (Leadership Main Office, FHA). The first prisoners arrived there from Sachsenhausen and were mostly German or foreign political prisoners and so-called professional criminals (BVs).<sup>2</sup> From the very beginning, the prisoners worked under the command of the Zentralbauleitung der Waffen-SS (Central Construction Administration of the Waffen-SS, ZBL) “Kurmark,” which reported to the SS-Standortverwaltung (Garrison Administration). The first project, completed by the end of March 1944, was to build 6 lodging barracks, a kitchen, and an infirmary between the railway station and the village. By December 1944, there were 18 barracks built. On April 12, 1944, the SS transferred 400 Soviet prisoners of war (POWs) and Polish political prisoners from the Gross-Rosen concentration camp to the camp, now called the Lieberose labor camp.<sup>3</sup> The prisoners called Lieberose “Liro.”<sup>4</sup> On June 5, 1944, the first transport of Jewish prisoners from Auschwitz arrived at Jamlitz, consisting of 2,400 Hungarian Jews.<sup>5</sup> Within the six months leading up to December 1944, an estimated 6,000 to 10,000 Jewish prisoners from more than 10 European countries were taken to Jamlitz, either directly or via Sachsenhausen. They were joined there by a total of

about 1,000 non-Jewish prisoners. They had to build roads, railway embankments, air-raid shelters, barracks, and firing ranges. Among their other tasks, they were also put to work at an SS-owned estate at Leeskow, in the fishery, at the sawmill, or with farmers. In the final stages of the war, they worked on the camp grounds and at an SS contractor's yard in a small workshop, manufacturing electronic products. The biggest labor detail, Unterkünfte Ullersdorf (Ullersdorf lodgings), meant walking about 5 kilometers (3.1 miles) north every day. The work, which had to be done with the most primitive tools and without proper rations, was lethal. The method of killing was "extermination by work." For example, the prisoners had to march barefoot to the construction site, carrying a hollow block on their shoulders. Survivors also reported that hangings took place in the roll-call area as punishment for turning cement sacks into underwear. The sick prisoners were gathered in recovery wards and periodically taken to Auschwitz II-Birkenau, where they were exterminated. Lists exist with the names of about 1,000 Hungarian Jews who suffered this fate.<sup>6</sup> It is estimated that 80 percent of the Jewish prisoners had lost their lives by the time the camp was dissolved, either because of exhaustion from work or at the gas chambers of Birkenau.

Prisoners from the Waffen-SS detachment at Jamlitz were deployed by companies from Berlin (Elektrolux Ltd., Hans Lautenbach Betonbau, Otto Quade Strassenbau, Bims- und Faserstoffbetonwerke Anton Racz), Cottbus (Richard Reckmann Gleis- und Tiefbau, Hermann Kircher Elektrotechnische Spezialwerkstätten, Hans Thiemann Sanitär und Heizung), Guben (Arno Schaefer Ingenieurbüro für Licht, Kraft und Radio), and Lieberose (Kölling Elektrikermeister, Wunderlich Bauingenieur), as well as by the firm Schnepfer & Isphording in Hamm/Westphalia. Those in Jamlitz viewed the Reckmann company as a "death detail." In the spring of 1944, the same company built the "ramp" for the arrival of the Hungarian Jews at the extermination camp Birkenau.<sup>7</sup>

Inside the Lieberose camp, the prisoners were subject to the whims of the camp leader, SS-Hauptscharführer Wilhelm Kersten, and his block leaders, whereas during work they reported to the ZBL and therefore to the FHA. SS block leaders as well as members of the ZBL supervised both the camp guards and the work of the individual detachments. The camp guards from the SS-Guard Battalion 4 Kurmark were recruited mostly from ethnic Germans in the Banat, who had been drawn to the SS-Freiwilligen-Division "Prinz Eugen." The guard force also reported to the Standortkommandant SS-Standartenführer Alexander Fick.<sup>8</sup>

The functionary positions among the barrack elders were divided roughly equally between political prisoners and professional criminals. The infirmary was dominated by the political prisoners and the kitchen by the BVs.

The activities of a small group of political prisoners at the infirmary created an element of solidarity. The group consisted of the Soviet camp doctor Dr. Viktor Brachnikow; the block elder Siegmund Sredzki, a German

Communist; the writer Gunther R. Lys; and a Jewish doctor, Dr. Hans Landshut. Among other things, they made an effort to limit the influence of the criminals on the camp leader. Improvement of the conditions for the Jewish prisoners was only partially possible (getting medicine from the main camp or letters attesting that prisoners were unfit for work and the double-edged establishment of the above-mentioned recovery wards in the summer of 1944, which for the SS were a collecting point for extermination transports to Birkenau). Some of the Jewish prisoners celebrated forbidden religious holidays. Singing and services for Shabbat, as well as a Sukkoth, are documented. Survivors reported that on Jewish holidays the SS block leaders were meaner and more cynical.

According to the accounts of former political prisoners, an attempted escape by Soviet prisoners was prevented by the activists around Sredzki, above all because the mass of Jewish prisoners would have suffered from the additional terror by the SS. On July 20, 1944, for fear of a mass jailbreak, the SS surrounded the camp with flamethrowers.<sup>9</sup>

A special case of solidarity among the Jewish prisoners was the so-called bread association (Brotbund), which consisted above all of Polish Jews who were brought to Jamlitz from the mason's school (*Maurer Schule*) at Auschwitz I in December 1944. These young people had complained about the unjust distribution of bread, and some of them got 25 lashes on their backs. Schmuël Cohn was almost beaten to death. He was able to survive only with the help of the group, which now shared their bread with him. The bonds among the members of the mason's school still exist.

Upon the camp's dissolution on February 2, 1945, about 1,200 convalescent prisoners began to be murdered. In an act of desperation, a Jewish ear specialist from Budapest, Dr. Erdősz, managed to seriously injure the camp leader, Kersten, with a spoon handle.<sup>10</sup>

Hugo Gryn, who later became a rabbi in London, reported that a small group of Jewish prisoners at Jamlitz killed an SS private from the guard force during their work.<sup>11</sup>

On February 2, 1945, approximately 1,600 prisoners were forced to march to Sachsenhausen. At least 40 weakened prisoners were killed by Rottenführer Erich Schemel, and dozens more died from exhaustion.<sup>12</sup> Of the about 1,200 Jewish prisoners who arrived at Sachsenhausen, the murder of 400 is documented.<sup>13</sup> In the course of the month, some Jewish prisoners from the Lieberose subcamp were taken from Sachsenhausen above all to the Mauthausen concentration camp in Austria but also to Bergen-Belsen, Neuengamme, Flossenbürg, and Dachau.

The approximately 1,350 sick prisoners that had been left behind in Jamlitz were shot dead on the camp grounds between February 2 and 4, 1945, by SS guards, block leaders, and members of the SS-Bauhof, as well as camp leader Kersten and garrison commander Fick.<sup>14</sup> A mass grave with the bones of 577 dead bodies was found in 1971 a few kilometers east of Jamlitz in a gravel pit. The skeletons were exhumed and cremated, while the gold in their teeth, which

the SS had not been able to recover in 1945 in their rush, was then extracted by authorities of the German Democratic Republic.

Eight judicial inquiries were made on the Lieberose subcamp, both in the West German zones of occupation and in the Federal Republic of Germany. These resulted in five judgments from the denazification court and three at the regular court. Poland twice made petitions for extradition, which were refused, and once investigated on its own. The German Democratic Republic responded to two requests for information by the Federal Republic of Germany, and after the discovery of the mass grave, the Ministerium für Staatssicherheit (Ministry for State Security, MfS) investigated between 1971 and 1975. There were five proceedings altogether against camp leader Kersten. For 22 months, he was held in the British internment camp Neuengamme, and in 1954 in Lübeck, he was sentenced to 7 months on probation. A second trial resulted in his acquittal in 1965, but he died during a procedure in 1970. At a trial in 1965 in Fulda, it was possible to sentence Corporal Schemel to four and a half years' imprisonment; however, he was released early. Even the investigations by the State Attorney's Office in Cottbus since 1998 could not solve the murder of about 1,200 Jewish prisoners at the Lieberose subcamp in Jamlitz.

In late 1945, the People's Commissariat for Internal Affairs (NKVD) arrested the electrician Otto Maass from Cottbus, an eyewitness to the shootings between February 2 and 4, 1945, and interned him at Jamlitz and Buchenwald, although he had stood up for the persecution of the murderers by the Cottbus antifascism committee. In 1946–1947, at the Sachsenhausen Trial in front of a Soviet military tribunal in Berlin, Lieberose played almost no role. On the contrary, the prosecution of the perpetrators was neglected, although the NKVD knew several of the murderers by name and the Nuremberg War Crimes Tribunal was interested in the crimes committed at Jamlitz.

## LÜBBEN

The Lübben subcamp was established in April 1944. At the time, there were five prisoner-of-war (POW) camps known by name in the city. French prisoners were accommodated at inn Zum Wendenfürsten, while two POW camps for officers were located on the grounds of the state hospital and at Frauenberg Mountain. Soviet POWs were lodged in camps at the Südbahnhof (south railway station) and at the Wendt ammunition factory.<sup>1</sup>

Beginning in April 1944, the concentration camp prisoners of the Lübben subcamp were deployed at the Spiegelberge Mountains in Ostergrund, where they had to do heavy construction and concrete work for the Wehrmacht. They built bunkers for overflow bases of the headquarters, including a series of bunkers in the Bergstrasse in Lübben. In 1945, the bunkers were blown up by the Red Army, but their remnants still exist.

The subcamp itself, however, was located in Lubolz, about 5 kilometers (3.1 miles) from Lübben. By late April 1944, 60 concentration camp prisoners were accommodated there,<sup>2</sup> a number that remained relatively constant until October 1944. According to other statements, the subcamp was established only on July 1, 1944.<sup>3</sup> It appears that 200 prisoners at most were deployed in Lübben. In a later card index, the Association of Persecutees of the Nazi Regime (Vereinigung der Verfolgten des Naziregimes, VVN) in the German Democratic Republic termed the food provided by the Wehrmacht as

“tolerable.”<sup>4</sup> On April 25, 1944, the construction officer of the army personnel branch petitioned the industrial inspection board at Cottbus for a raise for heavy work, which was granted on the grounds that it was a matter of “prisoners of war.” In doing so, the army personnel branch suppressed the fact that the prisoners reported to the Sachsenhausen concentration camp and were administered from there. The June 8, 1944, letter of approval from the industrial inspection board at Cottbus to the army personnel branch based at Lübben, Jägerkaserne (Huntsmen’s Barracks), referred to the 60 concentration camp prisoners as Russian POWs who had to do concrete and earthworks as part of a special duty (z.b.V.) company.<sup>5</sup>

In November 1944, work on the bunkers at Lübben was included in the “minimum building program” of the Defense Ministry, which promised the delivery of 300 tons of cement in order to complete the bunkers as soon as possible. This was communicated by Armaments Minister Albert Speer to SS-Obergruppenführer Hans Jüttner on November 9, 1944.<sup>6</sup>

The guards probably were supplied by the Sachsenhausen concentration camp. In September–October 1944, 17 SS privates were transferred from the SS-Standortzug Lübben to the Waffen-SS Totenkopf-Wachbataillon Sachsenhausen at the main camp, while another group was transferred in the opposite direction from Sachsenhausen to Lübben.<sup>7</sup> It is not known whether this refers to members of the camp guard. On September 29, 1944, two Soviet prisoners escaped from the camp. Another Soviet prisoner, who managed to get away on October 2, 1944, was picked up again on October 3.<sup>8</sup>

It is not unthinkable that concentration camp prisoners were also deployed for the expansion of the branch office of the Göring Research Office (Forschungsamt). Located in the Postbauten in Lübben, not far from the Lieberoser Strasse, the office was part of the intelligence service for reconnaissance of enemy and neutral (nonmilitary) radio communications. The “B” and “C” offices had existed in Lübben since 1933 and intercepted Soviet radio transmissions in particular. In 1943, one of the main divisions of the Research Office was transferred from the Schillerstrasse in Berlin-Charlottenburg to Lübben. Early in 1944, they were searching for a site in Lübben to build the new main office of the Research Institute, and allegedly 130 barracks for it, a project that was not finished by the end of the war. In late 1944, Lübben was considered the most important radio reconnaissance office for the surveillance of the United States and Japan.

On February 12, 1945, there were still 45 prisoners at the Lübben subcamp.<sup>9</sup> The camp was dissolved on April 23, 1945, shortly before the Soviet Army entered the city.<sup>10</sup>

In the course of numerous judicial inquiries conducted in the Federal Republic of Germany on various subcamps of the Sachsenhausen concentration camp, it was only determined that little was known about the Lübben subcamp.<sup>11</sup>

**SOURCES** Sparse archival documents on the history are located in the BA-B, ASt-Ctb, and AG-S. Records with infor-

mation on escapes and daily reports are preserved at the AG-S (CAFSSRF).

## NEUBRANDENBURG

The 1949 International Tracing Service (ITS) catalog of SS camps listed a Sachsenhausen subcamp for male prisoners at Neubrandenburg, based on Belgian and German postwar accounts. According to a list drawn up by the Sachsenhausen Memorial, the subcamp existed between the summer of 1943 and the spring of 1945 and held about 300 male prisoners who were deployed at the Mechanische Werkstätten GmbH Neubrandenburg (MWN) armaments factory.<sup>1</sup> According to other information, though, the camp had already existed in 1942.<sup>2</sup> An investigating authority, meanwhile, determined that the camp was not established until December 1944;<sup>3</sup> however, the daily variation reports of the Sachsenhausen concentration camps for the years 1944 and 1945 do not mention the subcamp.

A subcamp of the Ravensbrück concentration camp for female prisoners at Neubrandenburg had already existed since the late fall of 1942. These women, up to 2,500, worked—as did other female forced laborers since 1939—at the MWN, which had been relocated from Berlin-Britz to Neubrandenburg in 1934. In March 1944, Heinrich Himmler intended to increase the number of prisoners to 4,000 women, but this goal was only partially met. Both groups of prisoners, the men from Sachsenhausen and the women from Ravensbrück, were held in the overcrowded barracks camp east (Barackenlager Ost) about 800 meters (875 yards) from the camp. The subcamp for women was in existence until April 27, 1945.

The workshop hall for the women adjoined the one for the men.

A transport of between 100 and 150 male prisoners is documented from the Ravensbrück concentration camp to Neubrandenburg in the late fall 1944.<sup>4</sup> It is possible that this was the first transport. Likewise, a transport from Sachsenhausen is documented for December 1944.<sup>5</sup> In late 1944, about 30 prisoners from Buchenwald arrived at the Neubrandenburg subcamp of the Sachsenhausen concentration camp, apparently all metalworkers.<sup>6</sup> According to statements by the former commandant of the Ravensbrück concentration camp, Suhren, a total of 500 or 600 men were deployed at Neubrandenburg.

The prisoners were held day and night in two factory buildings near the east entrance, which they were permitted to leave only to receive supplies or for a short walk in the yard during the midday eating break. According to other statements, there were additional lodgings outside the workshop halls. This could refer to the former laundry next to the factory's east entrance.

The prisoners produced aircraft parts in several manufacturing halls. Allegedly, these included parts for the retaliatory weapons V-1 and V-2. According to a survey, bomb-release devices and "Fz. G. 76" were produced at Neubrandenburg. The work was done daily in two 12-hour shifts. Certain prisoners, particularly Jews, were also deployed at the metallography division in a chemical laboratory.

Except for 1 Czech, the prisoner-functionaries were Germans. There were prisoners of diverse nationalities and also Jews. Around January 10, 1945, 120 prisoners arrived at Neubrandenburg, mostly Polish and Soviet prisoners as well as Hungarian and Romanian Jews from Buchenwald, some of whom had previously been in Auschwitz.<sup>7</sup> At an unknown date, 65 of them were selected and then transported to an undetermined destination. By this time, there were apparently between 100 and 200 French, Dutch, Italian, and Belgian prisoners at the camp.<sup>8</sup> Some of the Poles who arrived there from Buchenwald had taken part in the August 1944 Warsaw Uprising.

In March 1945, one detachment disassembled metalworking machines at the MWN and reassembled them at the Ravensbrück subcamp for female prisoners at Neubrandenburg. This appears to have functioned as an alternative manufacturing site for a new program to produce control and regulator systems for the Fi 103 (piloted V-2). Construction had already started on it before June 1944.

Also in March 1945, a last transport arrived at Neubrandenburg, probably from Gross-Rosen.<sup>9</sup>

The block elder was German political prisoner Georg Flohr. He abused prisoners and stole food. Some of the foremen were Poles. A Sudeten German criminal who arrived from Gross-Rosen in March 1945 became first Kapo. He is likewise described as a sadist. It is said that he whipped Soviet prisoners who had tried to escape. It is possible that his name was Hans Wolfe. Through the barbed wire, women observed that as a punishment, on Sunday mornings, prisoners were drilled to the point of exhaustion.

It seems that the SS camp leader, who held the rank of *Sturmbannführer*, was simultaneously head of production at the aircraft factory.

It is said that the guards were supplied by the Wehrmacht, but it has not been possible to confirm this. The factory building was surrounded by an electrified barbed-wire fence and guard towers. According to other accounts, the guard force consisted of SS privates who originated from Croatia, Bessarabia, and Moldavia. They seem to have been particularly cruel to the prisoners.

Compared with Auschwitz and Buchenwald, the prisoners who arrived in January 1945 in particular regarded the conditions in Neubrandenburg as bearable, considering that there were heated accommodations and short roll calls. However, the food provisions, which were delivered from the women's camp, were insufficient even though civilian employees in the kitchen tried to give the men additional food. The barracks had bunk beds.

A Jewish prisoner died from stomach cramps in the sleeping area set up in the workshop hall after the guards had refused to help, even though there was a small infirmary in a factory building where a French prisoner served as orderly. Seriously ill prisoners seem to have been transferred to Ravensbrück.

Shortly before the camp was dissolved, the deputy camp leader punched and kicked a Russian who was bound with barbed wire. Because of the lack of health care, the prisoners fell ill with typhoid and phlegmon. It is believed that every week, about four prisoners died from the hardship of the work.

A few days before the dissolution of the camp, a Soviet officer and a Polish prisoner made plans to escape but were betrayed and arrested. However, nothing was done to them. Before the camp was evacuated, the Jewish prisoners appear to have been taken away.

On April 27, 1945, the male and female prisoners were forced by SS guards, who had just arrived, to march in the direction of the town of Lübz in Mecklenburg. Numerous prisoners were shot dead along the way, but some managed to escape. Prior to the march, the prisoners had been ordered to destroy the chemical laboratory and all of the documents in the factory. On May 6, 1945, the march was liberated by the Red Army in the area of Malchow.<sup>10</sup>

Hugo Zahn, born in 1904 in Erfurt, was interned in the British zone of occupation after 1945 and stated that he had been a concentration camp guard in the Neubrandenburg guard battalion.<sup>11</sup>

Criminal investigations in the early 1970s by the Central Office of State Justice Administrations (ZdL) in Ludwigsburg in the Federal Republic of Germany brought no convictions, first, because it was not possible to identify the camp personnel, and, second, because no murders had been ascertained.<sup>12</sup>

## NEUDAMM

According to the International Tracing Service (ITS) catalog, a subcamp of Sachsenhausen was created in Neudamm (formerly Kreis Königsburg/Neumark), which was then located in Germany. Today “Neudamm,” or Dębno, is located in Poland, south of the city of Szczecin (Stettin).

**SOURCES** There are virtually no sources that chronicle any information about the subcamp in Neudamm. The listing for Neudamm in the ITS, *Verzeichnis der Haftstätten unter dem Reichsführer-SS (1933–1945): Konzentrationslager und deren Auslenkcommandos sowie andere Haftstätten unter dem Reichsführer-SS in Deutschland und deutsch besetzten Gebieten*, vol. 1 (Arolsen: Der Suchdienst, 1979), provides no additional information except that a subcamp of Sachsenhausen existed in the town.

Similarly, listings of Sachsenhausen subcamps and work commandos in the indexes at the AG-S, for example, File

Group I/4, also provide no further information about this subcamp.

Christine Schmidt van der Zanden

## NEUHAMMER

The Neuhammer subcamp is not listed by the Sachsenhausen concentration camp as one of its subcamps. Nevertheless, it did exist, albeit for a short period of time. The Sachsenhausen change reports (*Veränderungsmeldungen*) refer to the camp for the period between January 20 and February 18, 1944. There were 54 prisoners, but on February 11, there were 63 recorded prisoners.<sup>1</sup>

Neuhammer in Silesia, not far from Sagan, was the site of the Wehrmacht troop training ground. Reichsführer-SS Heinrich Himmler delivered a speech there on January 11, 1944, in the Führerheim Westlager to the commanders of the 13th SS-Freiwilligen-Gebirgsdivision (Kroatien) shortly before its deployment to Croatia.<sup>2</sup> It is possible that the prisoners were somehow connected with construction work for this or other SS units.

A few publications refer to the training ground as an SS troop training ground. After Himmler took over the Reserve Army following the failed assassination attempt on Hitler on July 20, 1944, Ukrainian and Hungarian SS divisions gathered there. They were reorganized, and from there they were sent to the front until the site was closed in the middle of February 1945.

There were many forced laborers and prisoners of war (POWs) working on the troop training ground. There is a report on the liberated POW camp in Neuhammer. On February 15, 1945, the Red Army discovered in a forest close to Neuhammer two graveyards for Soviet POWs. It found out that the graveyards held 18,000 Soviet soldiers. The prisoners had been shot. They included officers of the Red Army. An investigating commission exhumed bodies and questioned witnesses. Photos are included in the report. One shows a wooden fence at one of the cemeteries on which there is a large sign. The sign written by the Germans has the words: Russian Cemetery (Russien Friedhof). The Red Army added in Russian the following words: “The Fascists tortured here thirteen thousand Soviets to death.” Other photos show Soviet soldiers inspecting the cemetery and the exhumation and reinterment of Soviet soldiers. The material gives no clue how the investigations proceeded against the perpetrators.<sup>3</sup>

The International Tracing Service (ITS) refers to Neuhammer, Kreis Sprottau, Lower Silesia, for the period from June 9, 1944, to the beginning of March 1945. The camp is referred to as a subcamp of the Gross-Rosen concentration camp. The prisoners were used by the 13th Gebirgsdivision and at the beginning of March 1945 were evacuated to Stolzenhain near Karlsbad. A later ITS catalog does not refer to Neuhammer.

**SOURCES** There is no specific literature on the Neuhammer subcamp. The subcamp is listed in ITS, *Vorläufiges Verzeich-*

*nis der Konzentrationslager und deren Aussenkommandos sowie anderer Haftstätten unter dem Reichsführer-SS in Deutschland und besetzten Gebieten*, 2 vols. (Arolsen, 1969), 1: 120; but not in *Das nationalsozialistische Lagersystem (CCP)*, ed. Martin Weinmann, with Anne Kaiser and Ursula Krause-Schmitt, prepared originally by ITS (1949–1951; repr., with new intro. matter, Frankfurt am Main: Zweitausendeins, 1990).

The only sources are held in AG-S.

## NIEMEGK

The subcamp at Niemegk, about 60 kilometers (37 miles) southwest of Berlin, was established in the summer of 1944. Initially, the prisoners were temporarily accommodated in a village gymnasium, but later a wooden barrack was built for them.<sup>1</sup> It appears that at the beginning between 40 and 50 prisoners were deployed at Niemegk, including 20 Norwegians as well as Dutch, Poles, French, and Czechs (including 1 “Gypsy”), Russians, and Germans (including 1 Jehovah’s Witness). Homosexual prisoners were held captive at Niemegk as well. A peculiarity among the prisoners was the British pilots who had crashed between Magdeburg and Genthin and who were imprisoned for a short time at the gymnasium and the Niemegk subcamp.<sup>2</sup> It seems that they were later shot in the forest.

Criminals and “asocials” served as prisoner-functionaries. The camp elder, Georg Pfriem, was transferred to the Kolpin subcamp in January 1945. Other prisoners termed him a “slave-driver” who would beat them. The camp recorder was a criminal from Berlin, Arthur Sasse, who stated that he had been in Niemegk since May–June 1944. The foremen were Rudolf Nawrotzki, an asocial prisoner, and Alfred Berger, a Jehovah’s Witness. A homosexual prisoner, Leo Classen, was the doctor.

In late August 1944, the camp was recorded for the first time in the main camp statistics as having 50 prisoners.<sup>3</sup> It reached its highest occupancy, with 60 prisoners, shortly before Christmas 1944.<sup>4</sup> This number remained constant until mid-February 1945.<sup>5</sup> Half of the prisoners were political, while others were Sinti and Roma (Gypsies), and 1 was a Jehovah’s Witness. There were also many petty or even dangerous criminals. According to statements made by their fellow prisoners, the Norwegians shared their Red Cross packages with the other inmates.

Between January and March 1945, there were 10 to 20 Polish children at Niemegk, the youngest of whom was seven years old. They were accommodated in a barrack that was separated from the subcamp by barbed wire. They were to be “Germanized” and adopted by German families.

The task of the Niemegk subcamp was to construct an overflow camp for the SS-Hauptamt (Main Office). Of 24 projected barracks, 12 were built, but only half of them were ever ready for occupancy. The barracks were set up in the forest behind the then sports field, and at this point the prisoners were also held there. Food was stored in 2 completed barracks, while in 3 others relatives who belonged to the Hitler Youth, or women in SS uniform, were accommodated as well as members of the so-called Germanische Legion of the SS. In 2 other barracks, regular SS members were quartered, possibly while recovering after various inpatient treatments. The leader of this overflow quarters appears to have been a certain SS-Obersturmführer Clausen. It is also reported that members of the “Vlassov” Army were transferred to this base for training purposes.

Due to the heavy labor, which included woodcutting, there occurred numerous injuries and illnesses. One Norwegian, Bergkvist, had an accident while felling trees and died from his injuries because the SS provided help too late. Of the 20 Norwegians, altogether 8 had to be taken to the infirmary at Sachsenhausen during the first months. From time to time, the camp elder ordered big piles of wood to be shifted from one place to another and then back again. He beat the prisoners as they did this work.

The camp leader was SS-Unterscharführer Johann Herfurth, who was born in Koblenz in 1902. He was shot dead at the end of the war by U.S. soldiers in Grieben.

The head of the SS training camp was SS-Hauptsturmführer Brockmann, who was also in charge of the German soldiers defending Niemegk.

Another officer belonging to the camp command is said to have been a former captain of the Wehrmacht from Hamburg who was transferred to the SS and who in 1946 was sentenced to death by a Soviet court.<sup>6</sup> This could refer to Hauptmann Gattermann, who was shot in Grieben on May 8, 1945, together with the camp leader, Herfurth. His adjutant was Hans Georg Schmidt, a factory owner from Pforzheim who held the rank of an officer. The guard force consisted of 30 SS privates, Hungarians, and Romanian Germans from the Banat region. The only prisoner barrack was secured with barbed wire and two guard towers.

According to statements from survivors, there were no abuses by the SS in the camp. A Polish child who was accommodated nearby, however, witnessed the killing of a prisoner at work by an SS-Unterrührer with the first name of Hubert. This same child also observed that during a roll call eight Russians and Ukrainians were hanged on gallows.<sup>7</sup>

According to statements from the camp recorder, the camp was dissolved on April 25, 1945, as the front approached. The prisoners were released with papers that had already been issued two days earlier by SS guards who led them across the German front line and let them go.<sup>8</sup> The above-mentioned document was signed by the foreman Rudolf Nawrotzki. According to other accounts, April 22 was the last day the camp existed. Only on May 2, 1945, did the Red Army take over Niemegk. In the meantime, the prisoners

either tried to get through with the release certificates or hid themselves.

Beginning in May 1945, the camp barrack was used for the imprisonment of alleged and actual former National Socialists. Responsible for this camp were the former foreman of the subcamp Niemegk, Nawrotzki, who also served as chief of police, and the former camp recorder (and by this time mayor), Sasse. It was planned that the camp would house up to 2,000 German prisoners.<sup>9</sup>

The preliminary investigations on the Niemegk subcamp by the Central Office of State Justice Administrations (ZdL) at Ludwigsburg were handed over after three years to the Central Office at Cologne, on April 30, 1970, for further action. But because of the “lack of sufficient factual evidence” and the death of the main suspect on October 14, 1970, the case was dismissed.<sup>10</sup> A corresponding request for assistance to the attorney general of the German Democratic Republic did not lead to any inquiries there.

**SOURCES** The only known publication on this subcamp is the report by Pierre van Kraay, in *Niemegk meldet Panzeralarm*, ed. Siegfried Dalitz (n.p., 1995).

Archival documents are located primarily at the BA-L and at AG-S.

## ORANIENBURG (AUER-WERKE)

The Auer-Werke was the owner of two large factory buildings in the town of Oranienburg, 35 kilometers (22 miles) north of Berlin. One property was located close to Oranienburg's main station, and the other one was situated near Lake Lehnitz and close to a railroad track at the southeastern outskirts of the town. Initially organized as a limited liability company (GmbH) and led by the Jewish family Koppel, who

fled from Germany to Switzerland during the National Socialist era, Auer-Werke became a subsidiary of the Frankfurt am Main-based Degussa AG in 1933.

During World War II, scientists of the Auer-Werke were involved in a project to develop an atomic bomb. Nevertheless, their main products were military equipment for the navy and Luftwaffe as well as gas masks for civilians and the Wehrmacht.

The SS authorities connected the factory near Lake Lehnitz, the “Auerwerk II Seegelände,” with a subcamp of the Sachsenhausen concentration camp. This subcamp on the grounds of the factory existed from July 1, 1943, to March 15, 1945. At first it was under the administrative control of the Ravensbrück concentration camp but only provided with Sachsenhausen prisoners. Sachsenhausen took command of the Auer-Werke subcamp in October 1944.

An electrified barbed-wire fence, about 2 meters (6.6 feet) high and under voltage, prevented escape attempts out of the camp, which was made up of about 10 wooden huts, including a separate hut for Jewish prisoners. The prisoners lived in 7 or 8 of these huts and slept in bunk beds of plain wood with shavings instead of mattresses. The subcamp also had a hut that was used as a kitchen and a laundry. In September 1944, workers built an infirmary with a capacity of 100 beds, where a Russian doctor, a Polish doctor, and a Russian first-aid attendant were on duty.

The first prisoners, about 50 in number, arrived from the concentration camps of Sachsenhausen and Ravensbrück. Most of them were women and girls from the Soviet Union, Poland, Czechoslovakia, and Hungary. The number of prisoners increased steadily: the guards counted 1,841 prisoners in February 1945. They were not only from Eastern Europe but also from France, Italy, Yugoslavia, and the Netherlands—only a few prisoners were German by origin.

The first chief of the approximately 20 female guards, who stayed in a separate hut outside the camp, was a woman called Gertraud Steisslinger, whose maiden name was Schöber.<sup>1</sup> She gave orders until July 1944, when she was relieved by her successor, a woman called Hesse who was chief of the female guards until the destruction of the Auer-Werke and parts of the neighboring subcamp by an Allied air raid on March 15, 1945. Hesse led the subcamp together with the Oberscharführer Karl Meinhardt, who commanded six to eight male guards.<sup>2</sup>

The prisoners had to work 72 hours a week, mainly in the production of gas masks. After the destruction of the Bygk-Guldenwerke chemical factory, which was situated nearby, SS authorities forced subcamp prisoners to help with clearing-up operations. They classified the work the prisoners were forced to do as easy manual work and underlined the reason why most prisoners were girls or physically weak women.

Eyewitnesses remembered 5 deaths in the subcamp until March 1945.<sup>3</sup> More than 300 prisoners died during the air strike of March 15, most of them because they did not have permission to leave their places of work during the attack. The Polish doctor and eyewitness Irena Cirsinska counted 60

dead and 120 injured prisoners.<sup>4</sup> Some women and girls tried to escape from the factory buildings and the subcamp area after the air strike had destroyed parts of the industrial and housing complex. SS guards collected survivors who could not flee and led them to the Sachsenhausen concentration camp, which was about 3 kilometers (1.9 miles) away. The prisoners were sent to an area of the camp called “Kleines Lager,” which had previously been used for the isolation of Jewish prisoners until the end of 1942.

On April 21, 1945, SS authorities decided to evacuate the Sachsenhausen concentration camp, whose 3,000 unmovable sick prisoners—including a few women from the Auer-Werke subcamp—were liberated one day later by Red Army soldiers. The SS forced about 33,000 prisoners, including the majority of the former Auer-Werke subcamp, to march toward the Baltic Sea. This undertaking cost the lives of about 6,000 prisoners. On their march to the coastline, SS guards constructed a provisional camp in a forest near the town of Wittstock. Finally, they disbanded the camp and released the prisoners on April 29, 1945, because of dominant Allied military operations in this area. Within the following days and weeks, Soviet and U.S. soldiers picked up former Sachsenhausen prisoners from a territory stretched over the rural districts of the Mecklenburg towns of Parchim and Schwerin.

**SOURCES** Secondary references useful for this essay are Monika Knop, “Jüdische Häftlinge in den Aussenlagern 1944 bis 1945,” in Günter Morsch and Susanne zur Nieden, eds., *Jüdische Häftlinge im Konzentrationslager Sachsenhausen 1936 bis 1945* (Berlin, 2004), for an updated overview of the status of research on the subcamp and with a focus on Jewish prisoners.

Primary documentation on the Auer subcamp is located in the AG-S, especially in the Box Auer, which contains a collection of testimonies collected by the ZdL (now at BA-L), and also in Sammlung Thomas Irmer, Inhalt Auer. Ordner No. 9.

## ORANIENBURG (HEINKEL-WERKE)

The Heinkel-Werke GmbH had its headquarters in the town of Rostock at the Baltic coastline. But there was also a branch in the town of Oranienburg, about 35 kilometers (22 miles)

north of Berlin, which was established in 1937. The Oranienburg branch constructed two aircraft factories called “Werk I” and “Werk II” in the southeastern districts of the town. In the autumn of 1941, Heinkel Oranienburg was the first German aircraft company to start a close cooperative association with the SS. The SS sent small groups of prisoners from the Sachsenhausen concentration camp as temporary workers to the factory buildings. At first, the prisoners were forced to work during the day at the Heinkel factories and returned every evening to the concentration camp.

During the summer of 1942, authorities constructed a prison camp on the grounds of the Heinkel factory Werk I and ordered 15 SS members to guard its prisoners. The number of SS guards increased over time and reached 130 in the spring of 1943. Responsible for the guarding of the prison camp was the SS-Totenkopfsturmbann Sachsenhausen with Sturmbannführer Johannes Hassebroek as the first subcamp’s chief. He led the prison camp from August 29, 1942, to October 10, 1943, and was relieved by his successor Sturmbannführer Wilhelm Hermann Heidrich, who led the camp until its evacuation.

The increasing number of guards corresponded with the increasing number of prisoners: the Heinkel statistics included a count of 800 prisoners in September 1942; 1,900 prisoners in December 1942; 3,707 prisoners in March 1943; 5,479 prisoners in June 1943; 6,012 prisoners in September 1943; 6,026 prisoners in December 1943; 6,240 prisoners in March 1944; and 6,966 prisoners in June 1944. The Heinkel camp thus developed into the biggest of the approximately 96 Sachsenhausen subcamps and Kommandos that were all founded between 1938 and 1945.

The first prisoners had to live temporarily in the basement of a former dining hall near factory building number 8 and in converted changing rooms. Later, huts were built next to the factory buildings, each with a capacity of 500 prisoners. Most prisoners originated from the Soviet Union, Poland, and France, with fewer coming from Norway and Germany.

The prisoners were forced to work in the construction of the Heinkel (He) 177 fighter plane. They worked together with German workers and about 600 foremen. On December 31, 1943, the number of prisoners reached 43.8 percent of the whole workforce.

An Allied air strike destroyed the factory buildings on April 18, 1944, and killed 400 to 500 prisoners. From this time on, the SS authorities forced about 1,000 survivors to work at the so-called Klinkerwerk, a large brickworks that produced bricks for Albert Speer’s building projects in Berlin. Furthermore, the Heinkel subcamp developed into a reception camp for evacuated camps from the eastern regions. Most prisoners were first penned up in assembly shop number 8. The SS started a selection and an execution campaign aimed at those persons who were sick and worthless in the eyes of the authorities and guards.<sup>1</sup>

A huge number of prisoners were murdered, but it is not possible to give exact numbers. When Sturmbannführer Johannes Hassebroek was chief of the subcamp till October

1943, acts of sabotage were rare and punished with a minimum of three executions.<sup>2</sup>

On April 20, 1945, the SS organized the so-called evacuation<sup>3</sup> and led the prisoners to the communities of Kremmen, Löwenberg, Reinsberg, Buetzow, Parchim, and Krywitz, where the prisoners were liberated by Soviet soldiers on May 4, 1945.

**SOURCES** Primary documentation on the Heinkel subcamp is located in the AG-S, especially in the Box Heinkel, which contains a collection of testimonies collected by the ZdL (now at BA-L). For a broad overview of the SS cooperation with German aircraft companies, see Lutz Budrass, *Flugzeugindustrie und Lufttrüestung in Deutschland 1918–1945* (Düsseldorf: Droste Verlag, 1998); and Rainer Fröbe, “Der Arbeitseinsatz von KZ-Häftlingen und die Perspektive der Industrie, 1943–1945,” in *Europa und der “Reichseinsatz”*: *Ausländische Zivilarbeiter, Kriegsgefangene und KZ-Häftlinge in Deutschland 1938–1945*, ed. ## POTSDAM-BABELSBERG

The International Tracing Service (ITS) catalog from the summer of 1949 states that the Potsdam-Babelsberg subcamp was assigned to Berlin and cites the Belgian Tracing Service as a source, thereby suggesting that Belgians were held there. According to information supplied at the time by the Berlin Office for the Registration of War Victims (Amt für die Erfassung der Kriegsoffer), the subcamp was described as a “camp for political.”<sup>1</sup>

A list of subcamps of the Sachsenhausen concentration camp prepared after the war describes Potsdam-Babelsberg as follows: “Red Cross, eighty men, bunker construction, weakened prisoners often brought to the camp in exchange for stronger ones, accommodation adequate, food the same.”<sup>2</sup> Other records estimate up to 200 prisoners.<sup>3</sup>

The existence of this subcamp can only be confirmed as of August 1944. At the end of August 1944, 100 prisoners were assigned to the camp, a number that did not change until the end of 1944. In mid-February 1945, only about 90 prisoners remained in the camp.<sup>4</sup> In addition to working at the headquarters of the German Red Cross (Deutsches Rotes Kreuz, DRK), prisoners also worked in the studios of Universum Film AG (Ufa) Babelsberg. Both had contracted the private

construction company Bunkerbaufirma Polensky from Berlin to build bunkers. The prisoners were housed on the grounds of the German Red Cross depot, located at the intersection of the Berlin-Potsdam and Wetzlar railway lines.

A former German Red Cross employee has reported on the camp inmates’ work for the German Red Cross. Prisoners fared “relatively well,” guards did not interfere when they took food from the German Red Cross kitchen, and they “also all emerged well” from the camp.<sup>5</sup>

On September 8, 1944, German prisoner Otto Schenk was sent for six months to the “shoe-runner” (*Schubläufer*) punishment detail of the main camp. Though part of the detachment working at the German Red Cross, he had stolen items from a camp barracks.

According to German prisoner Walter Heinold, “Foreman Kurt as well as certain criminal prisoners” particularly stood out, in that they “beat Poles, Ukrainians, and political prisoners.”<sup>6</sup> This report underscores the tensions that existed between different groups of prisoners.

German prisoner Paul Felder was released on March 16, 1945. A few weeks thereafter, on April 27, 1945, the camp is thought to have been finally disbanded.<sup>7</sup> In the daily reports, the last reference to the camp dates from April 9, 1945, when it held 88 prisoners.<sup>8</sup>

The SS, who were in charge, are said to “have helped all prisoners who fell ill and needed food” inasmuch “as the [higher camp] administration had not fairly distributed [the supplies].”<sup>9</sup>

The names of the following SS camp personnel are known: SS-Oberscharführer and Kommando leader Max Bergholz (June to December 31, 1944); and the guards SS-Schütze Karl Bischof (May 1944 to March 1944), SS-Sturmmann Lorenz Bittenbinder (May 1944 to April 1945), SS-Schütze Anton Belt (October 1944 to April 1945), Rottenführer Michael Edling (June 1 to August 1, 1944), SS-Rottenführer Alexander Kiss (July 22, 1944, to May 3, 1945), Rottenführer Emil Offenhammer (November 12, 1944, to May 2, 1945), SS-Sturmmann Johann Schramm (July 1944 to March 1945), Johann Glatz, Valentin Jaromin, Erich Offenhammer, and Wilhelm Wiest. SS-Oberscharführer Bergholz, who served as Kommando leader of the Potsdam-Babelsberg subcamp until the end of 1944, later stated that he was commando leader of Schönholz, a subcamp located at the Argus Motorenwerk in Berlin-Reinickendorf, for two weeks starting on April 21, 1945. He may have accompanied the evacuation from that camp to Sachsenhausen.

While in British internment, former SS-Rottenführer Kiss, a Romanian guard at the subcamp in Babelsberg, said he had been a member of the Babelsberg Honor Company (Ehrenkompanie) from July 22, 1944, to May 3, 1945. Guards Bischof, Schramm, Glatz, Jaromin, Erich Offenhammer, and Wiest were also interned by the British.

In 1971 and 1972, the Central Office of State Justice Administrations (ZdL) in Ludwigsburg undertook an investigation of Babelsberg. However, even the ITS was unaware of the names of any prisoners. As a result, the investigation was dropped in 1972.

**SOURCES** An unpublished study that mentions Potsdam-Babelsberg is Uwe Hofschläger, “Funktion und Bedeutung der Aussenlager des Konzentrationslagers Sachsenhausen” (Diplomarbeit, Freien Universität Berlin, 1997), and is available in AG-S, D.A. 5147. This subcamp is listed in *Das nationalsozialistische Lagersystem (CCP)*, ed. Martin Weinmann, with Anne Kaiser and Ursula Krause-Schmitt, prepared originally by ITS (1949–1951; repr., with new intro. matter, Frankfurt am Main: Zweitausendeins, 1990), p. 262.

Archival material is mostly to be found at AG-S. Prisoner Paul Wittig is interviewed in the film *Missbrauchte Helfer: Das Deutsche Rote Kreuz 1921–1945*, Ein Film von Wolfgang Bergmann (45 minutes), at [www.lichtfilm.de](http://www.lichtfilm.de).

## PRETTIN (LICHTENBURG)

The Lichtenburg camp in Prettin on the Elbe (Saxony-Anhalt), established at the sixteenth-century Lichtenburg Castle, was originally one of the first early camps in the German Reich. Established in June 1933, the early camp had held male prisoners in “protective custody” until it was dissolved in 1937. A women’s protective custody camp (*Frauenschutzhaftlager*) was created in Lichtenburg from December 1937 to May 1939 (see Early Camp/Lichtenburg). A subcamp of Sachsenhausen was established there in early October 1941.<sup>1</sup> [For additional information on the evolution of the concentration camp system and the early camps, see Karin Orth’s introduction “The Genesis and Structure of the National Socialist Concentration Camps.”] The number of prisoners allocated to the subcamp was relatively low, and although it remained in operation for nearly three years, there is little official documentation pertaining to the subcamp.

Prior to its use as a camp during the Nazi era, the Prettin Lichtenburg Castle had a long history of serving as a deten-

tion facility. Plans for the castle date from the fourteenth century, and by 1582, it was fully constructed. During the Napoleonic wars, the French built a prison cell for about 800 prisoners on the grounds of the castle; another cell block was erected there in the late 1870s. Later, during the political turmoil of the 1920s, hundreds were imprisoned at the castle for their participation in left-wing armed uprisings in the district.

Prior to its establishment as a Sachsenhausen subcamp, Lichtenburg Castle operated as an early camp for political prisoners, homosexuals, Jews who had committed “race defilement” (*Rassenschande*) crimes, and other “enemies of the state.” In 1937, during the Nazi government’s attempts to reorganize and consolidate the camp system, they transferred the inmates from the men’s camp to Sachsenhausen and Buchenwald. Following this liquidation, women, mostly Jehovah’s Witnesses, were brought to Prettin from a camp in Moringen. The women were transferred to Ravensbrück in 1939, and the camp remained empty until 1941.

The Second Replacement Battalion (Ersatzbataillon) of the SS-Death’s Head Formations (Totenkopfverbände), elite units of the SS that guarded the camps, was then stationed at the Lichtenburg Castle. The unit remained there until it was summoned to Prague to prepare for combat on the Eastern Front in the winter of 1941. About 10 SS men stayed behind to staff the clothing production camp (*Bekleidungs-lager*) that had been established for the troops at the castle.<sup>2</sup> In early October 1941, the SS were allotted 15 prisoners from Sachsenhausen to work at clothing production. Independent from the clothing plant, there were 40 more SS officers stationed at the castle in the main administrative Arsenal Office (Hauptzeugamt).

By March 1942, an additional 50 inmates from Sachsenhausen were transported to the Lichtenburg Castle to be used for labor in the Arsenal Office. The inmates were housed in the *Zellenbau*, a cell block on the grounds of the castle located near the SS quarters. Most testimonies from former prisoners from the Sachsenhausen Memorial Archives (AG-S) have emphasized that they received decent treatment. The prisoners were permitted to circulate around the Lichtenburg area throughout the day, and at night they were locked in the block. The same kitchen that provided for the SS men also supplied the inmates’ food. The prisoners were occupied with loading and unloading work, workshop, and office duties. One exception to the general reports of fair treatment can be found in the testimony of former inmate Oskar Blömer, who recalled that during an inspection of the camp, SS-Scharführer Otto Kaiser beat a prisoner to death. Kaiser was tried in 1967.<sup>3</sup>

There is little information about the prisoner culture or demographics of this camp’s population, if it changed over the course of the camp’s three-year existence. From a short list in the judge’s final injunction (*Abschlussverfügung*) in the AG-S, many of the prisoners were from the German Reich and ranged in ages from 35 to 45.<sup>4</sup>

Moreover, there is scant information about individual SS men who staffed the clothing production camp and the

armaments office. The chief of the clothing camp was Obersturmführer Germann Cristel, who was appointed in September or October 1941. After he was transferred to another SS division on an unknown date, Cristel was replaced by Sturmführer Hans Koch. Hauptscharführer Ludwig Viehmeyer acted as adjutant to the chief of the armaments office; he also supervised the prisoners' living quarters. Rottenführer Willi Thiessen oversaw the prisoner work division of the armaments office. Sturmscharführer Kaspar Wallner was appointed head of the clothing production camp, and he remained in this position until the end of the war. Unterführer Anton Blobner oversaw the prisoners' work in the clothing production camp; he died in January 1945. Rottenführers Josef Echle, who died in June 1948, and Fritz Pedeyn also guarded the prisoners while they worked. The SS guard staff at the Prettin subcamp ranged in ages from 31 to 46.

The subcamp at Lichtenburg Castle functioned until late April 1945, when the Soviet Army invaded the area and the SS guards retaliated and were forced to evacuate. The remaining prisoners escaped, although there is no record of how many inmates survived this ordeal.

**SOURCES** The main secondary source of information for this entry is Klaus Drobisch, *Konzentrationslager im Schloss Lichtenburg* (Wittenberg: Kreisverwaltung Wittenberg, 1997), which focuses predominantly on the history of the castle and its uses as an early camp. Drobisch also provides a brief overview of the subcamp. For similar broad information and a brief description of the subcamp, see also Stefanie Endlich, "Das Konzentrationslager Lichtenburg," in *Verfolgung, Terror und Widerstand in Sachsen-Anhalt, 1933–1945: Ein Wegweiser für Gedenkstättenbesuche* (Berlin: Metropol, 2001); and the Lichtenburg entry, this volume. Further analysis of the shift in administration and restructuring of the Lichtenburg camp prior to World War II can be found in Charles W. Snyder Jr., *Soldiers of Destruction: The SS Death Head's Division* (Princeton, NJ: Princeton University Press, 1990); and Jan Erik Schulte, *Zwangsarbeit und Vernichtung: Das Wirtschaftsimperium der SS: Oswald Pohl und das SS-Wirtschaftsverwaltungshauptamt 1933–1945* (Paderborn: F. Schöningh, 2001). Information about the opening and closing dates of the Prettin subcamp, the types of prisoners, and nature of prisoner work can be found in the (ITS), *Verzeichnis der Haftstätten unter dem Reichsführer-SS (1933–1945). Konzentrationslager und deren Aussenkommandos sowie andere Haftstätten unter dem Reichsführer-SS in Deutschland und deutsch besetzten Gebieten*, vol. 1 (Arolsen: Der Suchdienst, 1979).

Primary source material about the Lichtenburg concentration camps and the Sachsenhausen subcamp is located in the archives of the AG-L in the Museum Schloss Lichtenburg (Prettin). Photographs from these archives are reprinted in the accounts of both Drobisch and Endlich. Information about the WVHA, which most likely administered the work in the clothing production camp, can be found in the records of the BA-K—for example, File Group 415, Verwaltungschef SS: "Neubau des FKL-Ravensbrück—Anregungen des Direktors des FKL Lichtenburg, March 1939." The LHSA-Ma

contains files related to the establishment of a concentration camp at Lichtenburg Castle. Other primary documentation can be found in the AG-S, especially in the general reports on the subcamps in LAG FB 653, "Sachsenhausensammlung der 'Lagerarbeitsgemeinschaft Sachsenhausen,'" in particular, File XII/9, which contains partial copies of investigations conducted by the ZdL.

Christine Schmidt van der Zanden

## NOTES

1. The ITS catalog lists the opening date of the subcamp as October 3, 1941. Klaus Drobisch, in *Konzentrationslager im Schloss Lichtenburg* (Wittenberg: Kreisverwaltung Wittenberg, 1997), has cited the date October 4, 1941.
2. Abschlussverfügung des Kölner Staatsanwaltes Pfeufer (n.d.), reproduced in the AG-S, LAG XII/9, p. 1.

4. Ibid., pp. 3–4.

## RATHENOW

The town of Rathenow an der Havel is situated about 60 kilometers (37 miles) west of Berlin. A subcamp of the Sachsenhausen concentration camp existed there between September 20, 1944, and April 25, 1945. The prisoners—at first about 500 in number—worked in the nearby Arado airplane factory. The company was founded in Warnemünde at the Baltic coast in 1917 and established a branch in the town of Brandenburg in 1934. The National Socialist authorities nationalized the whole company one year later. A new headquarters in the town of Nowawes (present-day Babelsberg) and a factory building in Rathenow/Heidefeld were founded in the fall of 1936. Workers of the Rathenow factory manufactured Heinkel aircraft under license. The Rathenow branch specialized in the construction of wings for fighter planes up to 1944. During World War II, the Arado company established 24 new production centers all over Europe.

After the evacuation of more than 2,000 prisoners from the Herzogenbusch concentration camp (Dutch: Kamp Vught) in the Netherlands to the Sachsenhausen concentration camp at the beginning of September 1944, SS authorities deported nearly 300 of these prisoners to the Rathenow subcamp, who then made up the majority of the subcamp prisoners. Most Rathenow prisoners had a Dutch, Belgian, or French background, although there were also prisoners from Poland, the Soviet Union, Norway, and Germany. On February 20, 1945, about 150 to 200 Polish Jews from the evacuated Glöwen subcamp were deported to Rathenow, and guards counted nearly 1,000 prisoners altogether. About 50 of the 250 Dutch prisoners were Jehovah's Witnesses, and between 12 and 15 prisoners were German. The average number of prisoners was between 500 and 800, while a maximum figure was reached with about 1,000 to 1,200 prisoners in February 1945. The Jewish prisoners were housed in a separate hut. They also had to work under extremely hard conditions: the SS au-

thorities did not allow them to work inside the factory building, which had an underground production center. Even during the cold winter, the Jewish prisoners had to rivet wings with air pressure outside the factory building.

Authorities usually transported sick prisoners to the Sachsenhausen concentration camp or created so-called Kartoffelschälkommandos in the subcamp, where sick persons had to do the housework instead of working in the factory.

The subcamp included about 4 hectares (10 acres) and was located south of the town of Rathenow in a district called Heidefeld. The subcamp was made up of one large hut, eight medium-sized huts, and two small buildings placed in a five-cornered area. They included a hut for the prisoner-functionaries (*Funktionshäftlinge*)—mostly Germans who represented a connecting link between other prisoners and the subcamp command as well as the kitchen hut. The subcamp was surrounded by two electrified barbed-wire fences with a footpath 4 meters (13 feet) wide between the fences. Five wooden watchtowers marked the corners of the subcamp. Two huts outside the camp were reserved for the guards.

The prisoners were forced to work in two 12-hour shifts. They had to work not only in the construction and planking (*Beplankung*) of wings for fighter planes but also in the construction of wings for rockets of the “revenge weapons” (*Vergeltungswaffen*) and in the production of screws.

About 30 to 50 SS guards controlled the camp as well as the prisoners on their way from and to the factory building, which was 500 meters (547 yards) away. The chief of the subcamp was Otto Schulz (other sources said that the chief of the subcamp was a man called Vahle).<sup>1</sup>

An Allied air strike destroyed large parts of the factory building on April 18, 1945. Up to this time, camouflage battle dresses were produced there until the liberation of the subcamp by Red Army soldiers on April 26, 1945.<sup>2</sup>

Eyewitnesses reported the murder of 12 prisoners, but beyond all doubts, 2 prisoners from Belgium were shot dead because of sabotage,<sup>3</sup> and about 40 prisoners died because of malnutrition in the last weeks of the subcamp’s existence.

**SOURCES** For an updated overview of the status of research on the subcamp with a focus on Jewish prisoners, see Monika Knop, “Jüdische Häftlinge in den Aussenlagern 1944 bis 1945,” in *Jüdische Häftlinge im Konzentrationslager Sachsenhausen 1936 bis 1945*, ed. Günter Morsch and Susanne zur Nieden (Berlin, 2004).

Primary documentation on the Rathenow subcamp is located in AG-S, especially in the Box Rathenow, which contains a collection of testimonies collected by ZdL (now at BA-L).

## SCHÖNEFELD [AKA AL HENSCHEL]

The Schönefeld subcamp with about 600 female prisoners existed from July 1944 to April 1945 on the grounds of today’s Berlin-Schönefeld airport. The women had to do forced labor in the Henschel-Flugzeug-Werke (HFW), a company founded by Oskar R. Henschel in 1933. The site of the main aircraft works and test runway were at Schönefeld, then a suburb located at the southeastern outskirts of Berlin.

After Allied air raids in the fall of 1943 had led to losses in production, the central goal of National Socialist armaments policy became to redouble efforts and force increased production, particularly in aircraft armaments. In the summer of 1944 and as part of this effort to compensate for production losses caused by the air raids, the HFW asked for female prisoners from the Ravensbrück concentration camp in order to deploy them in the Schönefeld works.

In July 1944, part of the Schönefeld factory was converted into a Ravensbrück subcamp.<sup>1</sup>

Under the supervision of SS-Scharführer Fritz Giese, a group of 12 male concentration camp prisoners set up a kitchen, washroom, and living quarters in Production Hall No. 7. Prisoner quarters, initially with 150 beds but later increased, were located on the first floor of the factory building (No. 7a). It would eventually be surrounded by an electrified fence, and in addition, a detention cell was installed in September 1944. The SS took over the new camp on July 26, 1944, once the installation was complete.

Soon thereafter, about 500 female prisoners were transported by truck to the subcamp from the Ravensbrück concentration camp.<sup>2</sup> At the end of August, another group of 120 female prisoners was brought by the SS from the Ravensbrück subcamp at Barth near Rostock, arriving at Schönefeld on September 1, 1944.<sup>3</sup> On the same day, Schönefeld came under the jurisdiction of the Sachsenhausen concentration camp and was thenceforth called the “Henschel external camp” (AL Henschel) in the SS.<sup>4</sup> When, on March 1, 1945, 14 more women were brought from Ravensbrück to Schönefeld, the total number of prisoners employed at HFW reached its high point of 634. Most of them came from France, Poland, and Russia, though there were also German Roma (Gypsies), Yugoslavs, a Belgian, a Latvian, and a German woman labeled by the SS as “asocial” and “political.” There may have been at least 7 Jews among the women prisoners.<sup>5</sup>

The first SS-Lagerführer, Giese, aged 34 in 1944, was ordered to Eberswalde to again assume command of the construction of a Ravensbrück subcamp soon after the female prisoners arrived. He was replaced by 45-year-old SS-Oberscharführer Emil Rieder.<sup>6</sup> He was replaced in January 1945 by SS-Oberscharführer Schulz, who was about 35.

The SS guard staff consisted of about 10 SS men, most of whom were said to have been ethnic Germans from Romania and Hungary.<sup>7</sup> Most of the female SS guards, in the summer of 1944, had been assigned to do service with the SS by the companies for which they previously worked. In all, there were at least 15 female SS guards who saw service at the Schönefeld subcamp, under the command of a senior female guard, of whom 12 are known by name. SS personnel were probably accommodated in a barracks outside the camp proper.<sup>8</sup>

The female prisoners primarily produced wings for the Messerschmitt (Me) 109 aircraft. Half the women were awakened around 5:00 A.M. and had to work a 12-hour shift. According to survivors, those women who had to work the night shift from 7:00 P.M. to 7:00 A.M. hated it more because of the cold.<sup>9</sup> The survivor Henriette Cartier-Worms described her working conditions in a statement she made for the trial against the major war criminals that was held at the International Military Tribunal in Nürnberg: "My work involved drilling eight-mm holes in steel or hardened aluminum with a heavy, seven kilo [15.4-pound] steam hammer. I had to use this steam hammer for the entire shift, which means twelve hours long. . . . We worked on an assembly line whose output was continually being increased. At the beginning, the line came around every three hours, but at the end of our stay, it was every forty minutes, which left hardly a free moment. . . . I was forbidden to sit down in the factory. . . . We could only go to the latrines at fixed times. That was especially bad for us, because we all suffered from diarrhea."<sup>10</sup> A duralumin alloy was applied to harden the airplane wings, which ate into the skin on the women's hands and caused abscesses. Cartier-Worms also mentioned that while at work the women prisoners suffered at the hands of the German civilians who worked for Henschel.

By the end of 1944, much of the production in other areas of the HFW Schönefeld had either stopped or had stagnated, but the "camp in assembly hall 7 was a last bastion of what could be called conventional industrial production."<sup>11</sup> In its report for the month of October 1944, the HFW notes how "good has been the production of Me 109 wings by concentration camp prisoners."<sup>12</sup> However, according to survivors, production ceased in mid-January 1945 due to breakdowns in energy supply and the lack of raw materials and was not resumed. From then on, the women were used for heavy and dangerous physical work outside the camp, including cleanup work in Berlin and digging antitank ditches to defend the city.

Rations sank dramatically once production at HFW ceased in January 1945. The hygienic conditions also dramatically deteriorated, as the water supply system broke down.

"Many young women died very quickly of tuberculosis. Usually the ill, and those whose performance at work was insufficient, were sent back to the camp and I subsequently learned of their deaths,"<sup>13</sup> Cartier-Worms reported. There was a sick ward in Assembly Hall 7, attended to by two women prisoners, but it only dealt with minor illnesses and injuries.

The seriously ill were taken at first to Ravensbrück and, beginning in 1945, to the women's subcamp of Sachsenhausen called Oranienburg (Auer-Werke).

There were probably multiple deaths on the grounds of the Schönefeld subcamp, and a former female guard remembers at least one. The SS change of status reports noted that on March 6, 1945, 21-year-old German Roma Anna Baramysi had died in the subcamp. Those who had died were to be cremated at the Baumschulenweg crematorium in Berlin-Treptow.

The total number of inmates in the subcamp sank dramatically in its last weeks, as larger groups of female prisoners were either evacuated or escaped. A female Polish prisoner was transferred to Sachsenhausen on April 8, 1945, and from there she and 5 other prisoners were released two days later. On the same day, 2 female Soviet soldiers whose prisoner-of-war (POW) status the SS had converted into concentration camp detention, managed to escape from the subcamp. On April 18, 1945, 65 women prisoners were taken to the Sachsenhausen concentration camp.<sup>14</sup>

When the Red Army reached the Berlin city limits on April 21, 1945, the SS camp commander ordered the subcamp dissolved. That afternoon, the remaining 537 women were divided into several groups and forced to head in the direction of Oranienburg. The first stage involved a night march through bombed-out Berlin. According to a French survivor, prisoners who during the march remained behind out of exhaustion were shot by the SS. Close to Nauen, the SS abandoned the majority of the women, and it is here that they were liberated by Soviet soldiers on April 24, 1945.<sup>15</sup>

At least four SS members of the Schönefeld subcamp were interned by the Allies after the war. They were all released by 1947. A former female SS guard was extradited to Poland and sentenced to a three-year prison term for being a member of the SS.<sup>16</sup> The only sentence that was explicitly related to crimes committed in the subcamp was handed down on December 22, 1949, by a French military court in Rastatt. The former camp guard Hildegard Glimpel was sentenced to a three-month jail term for mistreating prisoners.<sup>17</sup> Investigations by the Central Office of State Justice Administrations (ZdL) in Ludwigsburg ceased investigating in 1971, as there was no evidence of the premeditated murder of camp inmates.

**SOURCES** The principal secondary source of information for this entry is an essay by Lutz Budrass and Manfred Grieger, "Die Moral der Effizienz: Die Beschäftigung von KZ-Häftlingen am Beispiel des Volkswagenwerks und der Henschel Flugzeug-Werke," *JWg* 2 (1993): 89–136, which provides a brief overview of the camp and an in-depth analysis of the history of HFW, its use of slave labor, and a history of its administration in relation to the Nazi government.

Primary source materials about the Schönefeld subcamp of Sachsenhausen are stored at the AHFW and at AG-S. For a detailed account of life in the Schönefeld camp complex, see the second volume of Christian Bernadac's *Le camps des femmes: Ravensbrück*, vol. 2 of *Mannequins nus* (Paris: France-

Empire, 1971–1973), which is based on the unpublished manuscripts of two former inmates. Testimony from another former inmate, Henriette Cartier-Worms, has been published in Peter Neitzke and Martin Weinmann, *Konzentrationslager Dokument F321 für den Internationalen Militärgerichtshof Nürnberg* (Frankfurt am Main: Zweitausendeins, 1988); however, Cartier-Worms's testimony is edited and separated under thematic headings, and therefore it is not a straight narrative about her experience in the Schönefeld camp (she was also interned in Ravensbrück). For detailed information about work conditions at the HFW factory, see the USHMMA, RG-02.038, J.H., "Montluc-Ravensbrück: A Record of Imprisonment Testimony" (October 15, 1945). This is a memoir written by an anonymous survivor who, although she did not necessarily live in Halle 7 at Schönefeld, performed slave labor for Henschel and describes the work conditions there.

## SCHWARZHEIDE

In the summer of 1944, the SS set up a subcamp of Sachsenhausen at Schwarzheide, close to the Dresden-Berlin autobahn. It held 1,000 Czech Jewish prisoners from Auschwitz, and they worked at the Braunkohle-Benzin AG (Brabag) lignite hydrogenation factory. It is likely that less than half of the prisoners survived the Schwarzheide subcamp and the subsequent death marches.

The Schwarzheide factory was located in southern Brandenburg at the edge of the Lausitz coal-mining district. It was the third of four hydrogenation plants built by Brabag, an enterprise founded in 1934 at the request of the Reich Economics Ministry but with the compulsory cooperation of the coal and mineral oil industry. The conversion of lignite into gasoline, into diesel oil, and in particular into high-octane aircraft fuel was to be forced so as to reduce dependence on imported oil, the key raw material needed to arm for war.

According to Fritz Kranefuss, the spokesman for the Brabag board of directors, plans were laid by the end of 1943 to use concentration camp prisoners as forced laborers in the hydrogenation plants.<sup>1</sup> Production was to be relocated underground, but the expertise provided by Prof. Carl Krauch, IG Farben director and designated specialist for chemistry, concluded it was technically impossible.<sup>2</sup>

In June 1944, the Armaments Ministry, following increased Allied air raids, established a working group to coordinate the reconstruction of those hydrogenation works that had been destroyed.<sup>3</sup> Concentration camp prisoners did the work.<sup>4</sup> After May or June 1944, about 10,000 concentration camp inmates, mainly Hungarian Jews, were forced to do the cleanup and construction work just at the four Brabag plants.<sup>5</sup>

By the end of 1944 or the beginning of 1945, the Schwarzheide works had become the most important supplier of fuel to the Wehrmacht's Army Group Center, hence also a "main strategic target" in Brandenburg for Allied long-distance bombers.<sup>6</sup> The first air raid on the Schwarzheide works took place on May 28, 1944. After six additional raids during the summer of 1944, production at Schwarzheide fell by 30 percent, according to the Armaments Ministry.<sup>7</sup> By early 1945, shortly before Germany's defeat, it was thought about 75 percent of the works had been destroyed.

In June 1944, the SS disbanded the "Theresienstadt Family Camp" in Auschwitz II-Birkenau. This block of the camp

was in sector B II b, an area where Czech Jews from the evacuated Theresienstadt ghetto were held. Several thousand men and women under 40 were selected to do forced labor; the remaining 10,000 or so (comprising older men, women, and children under 16) were murdered in the gas chambers. Some 1,000 Czech Jews were sent, in boxcars, to Schwarzheide to do forced labor and arrived on July 1, 1944.

The Schwarzheide subcamp was established in a former housing barracks near the Dresden-Berlin autobahn. In May 1944, the SS transferred an advance work detail to it, composed of non-Jewish prisoners, mainly German Communists, who had been held at the Sachsenhausen concentration camp. They assumed leading positions among the prisoners, including camp elder and chief of the infirmary.

The SS camp leader and certain SS men were deemed particularly brutal. One SS man wanted to shoot a concentration camp prisoner who had been injured outside the grounds of the camp during an air raid. A prisoner foreman was shot by a different SS man because he interceded on behalf of weakened fellow prisoners in his work detail.<sup>8</sup> Another concentration camp prisoner was beaten to death by an SS man because he had picked up a cigarette butt off the ground.

Approximately 20 different work Kommandos were employed at the Schwarzheide works, constructing bunkers and production facilities as well as a power plant. The work included lugging 50-kilogram (110-pound) cement sacks or loading and unloading trucks. Each Kommando worked a 12-hour shift, either day or night, and per shift were allowed only one half-hour break.<sup>9</sup> To shield weaker prisoners, camp elder Paul Bergmann assigned those of a stronger constitution to the more physically demanding work.<sup>10</sup> Prisoners were also used to clear rubble and do repair work after air raids, with one Kommando laying new cables and lines. There were bomb disposal details that had to disarm many of the 113 duds among the approximately 3,000 bombs dropped on the works, and each detail consisted of 10 concentration camp prisoners.<sup>11</sup>

In addition to persecution by the SS and the exhausting or deadly dangerous work, air raids themselves also endangered prisoners, as they were wholly unprotected and not allowed to enter the air-raid shelters. Instead, they were locked in the subcamp's barracks. Aerial photos taken by the Royal Air Force at the beginning of March 1945 clearly show that during the carpet bombing of the grounds, efforts were made to spare the nearby subcamp.<sup>12</sup> Nevertheless, it was hit once.

Yet prisoners had ambivalent feelings about air raids, for though they were dangerous, they also were a symbol of coming liberation. Survivor Pavel Stransky said: "We looked forward to the next air raid! It meant a sweet rest for us. We had reached a point where we no longer feared the bombs. It was more important to have a break from the work, though we underestimated the danger. . . . Shrapnel bombs were dropped at the time, and a few prisoners were injured by them in the legs."<sup>13</sup>

At times, as many as one-third of the prisoners were in the subcamp's infirmary, though it had no medical equipment. Prisoner doctor, and gynecologist, Herbert Lewin later said: "We had to carry out emergency amputations with a disinfected carpenter's saw, and instead of an anesthetic, we held the prisoners down."<sup>14</sup> Lewin was one of the few Berlin doctors active in public health matters during the Weimar Republic and was particularly concerned to improve the basic health care and nutrition of underprivileged women.<sup>15</sup> Lewin founded the Association of Jewish Workers (Bund Jüdischer Arbeiter), though it would be banned by 1934. In 1941 he was deported from Cologne, where he had worked since 1937 as head of the Jewish Hospital's Gynecology Department, to the Łódź ghetto and from there, in 1944, to Auschwitz. That same year, Lewin was moved from Auschwitz to the Sachsenhausen Heinkel subcamp and from there to the Schwarzheide subcamp.

The SS transported the corpses of 114 concentration camp prisoners to the city crematorium at Dresden-Tolkewitz.<sup>16</sup> Dead prisoners also had been hurriedly buried in mines and bomb craters. It is possible that the SS began, as they probably also did at the Falkensee subcamp, to construct a crematorium on the grounds of the subcamp. Survivors suspect it could also have been a gas chamber.

At the beginning of February 1945, the SS had the concentration camp prisoners begin constructing tank traps in the area around the Brabag works and transferred certain prisoners to other work assignments at the Sachsenhausen concentration camp. At the end of February or the beginning of March 1945, about 300 Jewish concentration camp prisoners "incapable of working" were transported to the Sachsenhausen concentration camp and were replaced by about 300 non-Jewish prisoners from the Heinkel subcamp. It is also alleged that exhausted concentration camp prisoners were brought from Schwarzheide back to Auschwitz and to Bergen-Belsen in February and March 1945.

In March 1945, SS-Gruppenführer Hans Kammler ordered the former commander of the SS-Central Construction Administration (Zentralbauleitung, ZBL) Auschwitz, SS-Sturmbannführer Karl Bischoff, to implement Special Measure (*Sondermassnahme*) I/7 (Schwarzheide).<sup>17</sup> This special project probably had something to do with the use of prisoners by Bischoff for construction, though it never came to pass.

During the disbanding of the Schwarzheide subcamp, 40 concentration camp prisoners who could no longer walk were taken in two buses, on April 17, 1945, to Sachsenhausen—and then forced on the death march from there; 1 inmate who remained behind in the Sachsenhausen infirmary was freed by the Red Army on April 22.<sup>18</sup>

The remaining 500 prisoners from the Schwarzheide subcamp, Jews and non-Jews alike who could still walk, were forced from Schwarzheide on a death march in the direction of Theresienstadt. Prisoners marched in rows of five and to begin with; those in the outside positions had to carry a

fence made of palings and rope.<sup>19</sup> During this death march, which went via Kamenz, Sebnitz, and the mountainous region of the Sächsische Schweiz, about 80 men died either from exhaustion or at the hands of SS men who shot prisoners who tried to escape or who could no longer walk.<sup>20</sup>

When the SS seized a starving French prisoner who had stolen food, they shot—as “punishment”—4 other prisoners.<sup>21</sup> In the Czech town of Varnsdorf, the SS hanged a Polish prisoner after he unsuccessfully tried to escape into a factory building.<sup>22</sup> On April 28, 1945, in Varnsdorf, Jewish and non-Jewish prisoners were separated, and the non-Jewish prisoners later were freed near Langenau. The Jewish prisoners had to climb into open freight cars that otherwise transported coal and were taken, standing, to Leipa (Ceska Lipa in Bohemia). Along the way, some exhausted prisoners even drowned in the water that had pooled at the bottom of the cars after several days’ rain;<sup>23</sup> 17 prisoners starved to death during the two days the train stood in Leipa, as they were given no food to eat.<sup>24</sup> From Leitmeritz (Litomerice), on May 7, 1945, the prisoners had to march in the direction of Terezin, though a few kilometers before reaching it, the SS guards fled.<sup>25</sup> About 227 concentration camp prisoners had at this point survived the death march;<sup>26</sup> 3 former prisoners would still die between May 8 and 10, after liberation, due to the aftereffects of the death march.<sup>27</sup>

**SOURCES** The author researched the history of the Schwarzheide subcamp and a number of individual concentration camp biographies to prepare the permanent exhibits at the Sachsenhausen Memorial titled “Die Baracke 38—Jüdische Häftlinge im KZ Sachsenhausen 1936–1945” and “Die Baracke 39—Der ‘Alltag’ der Häftlinge des KZ Sachsenhausen 1936–1945.” Some of this work appeared in the essay “Zwangsarbeit von jüdischen KZ-Häftlingen in der Rüstungsproduktion in der Region Berlin-Brandenburg in der Schlussphase des Zweiten Weltkrieges—Die Aussenlager Glöwen und Schwarzheide des KZ Sachsenhausen,” in *Zwangsarbeit während der NS-Zeit in Berlin und Brandenburg—Formen, Funktion und Rezeption*, ed. Winfried Meyer and Klaus Neitmann (Potsdam: Verlag Berlin-Brandenburg, 2001), pp. 163–175.

The AG-S holds interviews with the survivors Jacov Tsur and Jiri Lom as well as five ring binders containing the results of the author’s research. They include biographical documents and survivors’ letters to the research group “Internationale Spurensucher,” detailing the death march. Other documents can be found in the AG-T and at Beit Terezin in Israel. Documents on the Brabag-Werk Schwarzheide are held in the BHLA and the A-BASF (BASF is the owner of the former Brabag factory). An unpublished memoir by Tsur and Richard Svoboda, “Das Aussenlager Schwarzheide des KZ Sachsenhausen,” can be found in USHMM, Schwarzheide Collection, Acc. 2001.214. The archival collection was put together in the A-VEB-S in the DDR. In *The Book of Alfred Kantor. An Artist’s Journal of the Holocaust*, preface by John Wykert (1971, repr., New York: Schocken Books, 1987), Auschwitz and Schwarzheide survivor Alfred Kantor shows in impressive colored drawings, completed

after liberation while he was in the Deggendorf DP camp, the persecution and everyday life in Theresienstadt, Auschwitz, and Schwarzheide. Former Schwarzheide prisoner Jiri Fränkl published his account *Der brennende Himmel* (Prague, 1995), which concentrates on Auschwitz. The autobiography of Pavel Stransky, *Als Boten der Opfer: Von Prag durch Theresienstadt, Auschwitz, Schwarzheide und zurück. Tschechisch-jüdische Schicksale 1939–1997* (Konstanz, 1997), gives a forceful depiction of Schwarzheide. Tsur’s biography also figures in the CD-ROM the author compiled for the AG-S, titled *Gegen das Vergessen—Der Alltag der Häftlinge im KZ Sachsenhausen 1936–1945*. Tsur also published the report “Der Transport” about the transport from Theresienstadt to Auschwitz; it can be found in the narrative written by Nea Wiessberg-Bob and Thomas Irmer, *Heinrich Richard Brinn (1874–1944): Fabrikant-Kunstsammler-Frontkämpfer. Dokumentation einer ‘Arisierung,’* with Michel Friedman, Hermann Simon, and Jacov Tsur (Berlin: Lichtig Verlag, 2002), pp. 214–219.

## SPREENHAGEN

Beginning in the summer of 1943, the network of SS duty stations in the area around the German capital became more dense, both through establishing the SS garrison headquarters at Bad Saarow and with setting up an SS troop training area called "Kurmark" in the Jamlitz region about 100 kilometers (62 miles) from Berlin. That same summer, the SS-Leadership Main Office (Führungshauptamt, FHA) also began two institutionally interconnected projects in the Fürstenwalde/Scharmützelsee area east of Berlin.

One of the FHA projects was to relocate SS offices out of the bomb-endangered capital city and move them to the region of Bad Saarow. The other was to begin building a large subterranean intelligence center in the Rauen Mountains south of Fürstenwalde. The two projects were apparently linked. In the second half of 1943, in this area, an overflow camp for SS duty stations was established as well as a large intelligence bunker. As of the end of July 1943, the project to relocate the SS duty stations out of the capital city of the Reich was known by its cover name "Siegfried."<sup>1</sup>

The SS garrison headquarters Bad Saarow was established for these two projects and included the area from Fürstenwalde to south of Beeskow, as well as from Storkow to the Schlaubetal.<sup>2</sup> The SS garrison administration Bad Saarow existed as of August 9, 1943, and the Sachsenhausen subcamps of Bad Saarow (also known as Ketschendorf), Fürstenwalde,

Storkow, Kolpin, and Spreenhagen fell within the area this garrison headquarters administered.

The Spreenhagen subcamp was closely connected to the Bad Saarow subcamp. The administrative office Bad Saarow for SS construction was headed by SS-Untersturmführer Hans-Gustav Bauer (born 1912) from Nürnberg. Administrative suboffices for construction were located at Storkow, Trebnitz, Kolpin, and Spreenhagen, as well as at the main location near Bad Saarow. These were also subcamps of the Sachsenhausen concentration camp. SS statistics show Bad Saarow as a labor camp, while Trebnitz, Storkow, and Spreenhagen are reported as labor Kommandos. According to German ethnologist Hellmut Draws-Tychsen, who recorded roll calls at the Bad Saarow subcamp until April 1944, the Bad Saarow, Storkow, Kolpin, and Spreenhagen subcamps were called a "unified labor camp."

The Spreenhagen subcamp was probably established in May 1944, initially with 50 prisoners, though by August this number had nearly doubled, and by the end of 1944, 133 prisoners were housed at Spreenhagen.<sup>3</sup> The prisoners were employed to construct the SS overflow duty stations. In the autumn of 1944, the SS-First Armored Infantry Training and Reserve Battalion (Panzergrenadier-Ausbildungs- und Ersatzbataillon) was stationed in Spreenhagen.<sup>4</sup> On September 23, 1944, 2 Soviet prisoners and a Polish prisoner successfully escaped from the camp.<sup>5</sup> By February 12, 1945, the camp was no longer mentioned in the SS statistics.

Labor Kommandos that most likely came from this camp worked to build SS provisional quarters, following three designs, on Spreenhagen communal land during 1944–1945. In part, however, construction could not be completed.<sup>6</sup>

## STORKOW

Beginning in the summer of 1943, the network of SS duty stations in the area around the German capital became denser, both through establishing the SS garrison headquarters at Bad Saarow and with setting up an SS troop training area called "Kurmark" in the Jamlitz region about 100 kilometers (62 miles) from Berlin. That same summer, the SS-Leadership

Main Office (Führungshauptamt, FHA) also began two institutionally interconnected projects in the Fürstenwalde/Scharmützelsee area east of Berlin.

One of the FHA projects was to relocate SS offices out of the bomb-endangered capital city and move them to the region of Bad Saarow. The other was to begin building a large subterranean intelligence center in the Rauen Mountains south of Fürstenwalde. The two projects were apparently linked. In the second half of 1943, in this area, an overflow camp for SS duty stations was established as well as a large intelligence bunker. As of the end of July 1943, the project to relocate the SS duty stations out of the capital city of the Reich was known by its cover name "Siegfried."<sup>1</sup>

The SS garrison headquarters Bad Saarow was established for these two projects and included the area from Fürstenwalde to south of Beeskow, as well as from Storkow to Schlaubetal.<sup>2</sup> The SS garrison administration Bad Saarow existed as of August 9, 1943, and the Sachsenhausen subcamps of Bad Saarow (also known as Ketschendorf), Fürstenwalde, Storkow, Kolpin, and Spreenhagen fell within the area administered by this garrison headquarters.

The Storkow subcamp was closely connected with the Bad Saarow subcamp. The administrative office Bad Saarow for SS construction was headed by SS-Untersturmführer Hans-Gustav Bauer (born 1912) from Nürnberg. Administrative suboffices for construction were located at Trebnitz, Kolpin, Spreenhagen, and Storkow,<sup>3</sup> as well as at the main location near Bad Saarow. These were also subcamps of the Sachsenhausen concentration camp. SS statistics show Bad Saarow as a labor camp and Trebnitz, Storkow, and Spreenhagen as labor Kommandos. According to German ethnologist Hellmut Draws-Tychsen, who recorded roll calls at the Bad Saarow subcamp until April of 1944, the Bad Saarow, Storkow, Kolpin, and Spreenhagen subcamps were called a "unified labor camp." Former prisoners have estimated the number of prisoners at the Storkow subcamp at 250.

The Storkow subcamp existed as of April 1944. As with Spreenhagen, it was first intended as a branch of the Bad Saarow subcamp and only later became an independent subcamp.<sup>4</sup> In mid-April 1944, the subcamp held 120 prisoners, though that number continued to be reduced until there were only 69 left by the end of the year.<sup>5</sup> Prisoners worked to build the SS overflow duty stations. One of the offices known to have been relocated to Storkow was Department XVII of Office Group D of the SS-FHA.

From March 15, 1944, to February 2, 1945, SS-Unterscharführer Karl Schlote (born 1912), a member of the SS-Totenkopf-Wachbataillon Sachsenhausen, commanded the Storkow subcamp.<sup>6</sup> After war's end in 1945, Schlote was held by the British at the Esterwegen internment camp together with former SS-Rottenführer Josef Kranebitter, who admitted to having been a guard at the Storkow subcamp between September 6, 1944, and February 3, 1945.<sup>7</sup> His statement suggests the camp may have been established already on March 15, 1944, and one must assume the camp was closed on February 2 or 3, 1945, inasmuch as the subcamp is no longer men-

tioned subsequently in the Sachsenhausen change of status reports.

In the 1960s, West German judicial authorities investigated crimes potentially committed at the Storkow subcamp.<sup>8</sup>

## STRAUSBERG

A camp for female prisoners existed in Strausberg, Oberbarnim District, Brandenburg Province (present-day Märkisch Oderland District in the State of Brandenburg), between November 15, 1944, and April 20, 1945. It was administered from the Sachsenhausen concentration camp, and the prisoners worked at the Märkische Walzwerk GmbH (Mark [Brandenburg] Rolling Mill, Ltd.) in Strausberg.

The Fritz Werner AG machine factory in Berlin-Marienfelde had been founded in 1914 and developed out of a small firm that primarily manufactured technical equipment for munitions factories. Once the arms limitations imposed by the Versailles Treaty were lifted, the company specialized in making machines that manufactured light arms, as well as machine-tool and munitions machines. In 1934, Fritz Werner AG complied with a request from the Army Armaments Office that it build its own munitions factory. The Berlin machine company established a subsidiary with the cover name Märkische Walzwerk GmbH and by the end of 1934 began building a munitions factory at the southeastern edge of Strausberg, on Hegermühlenstrasse. Between 1935 and 1939, this became an efficient factory, producing ammunition for 7.92mm-caliber guns as well as munitions parts up to 2

centimeters (0.8 inches) in length. Modern munitions machines built in the Berlin-Marienfelde plant were used for this production, and the Strausberg munitions factory served as a testing ground for these newly developed munitions machines.

During World War II, the Märkische Walzwerk substantially increased its production. Foreign forced laborers particularly from the Netherlands, Poland, Italy, and the Soviet Union began to be used by 1941 to help manufacture munitions. By the fall of 1944, the works employed approximately 1,500 foreign forced laborers, 720 of whom were women; by the end of 1944, a total of about 3,200 workers were employed in the munitions factory.

The ever-increasing demands for ammunition led to an expansion of the production plant at the works. After mid-1943, the Märkische Walzwerk took over the property and the manufacturing building of the neighboring shoe factory Wilhelm Reichenwallner KG. This shoe factory had been acquired in 1931 by Berlin manufacturer Herman Diamant and, until 1938, operating under the name Herman Diamant-Schuhfabrik (HEDIA), had made evening and luxury shoes for women partly for the domestic but primarily for the export market. Diamant was a Jewish entrepreneur, however, and the Deutsche Arbeitsfront (German Labor Front, DAF) of the Gau administration Kurmark forced him to sell his factory to the Wilhelm Reichenwallner KG, with SS-Hauptsturmführer Wilhelm Reichenwallner, from Munich, taking over control of the enterprise. Herman Diamant emigrated in 1939 to the United States, via Copenhagen.

The Märkische Walzwerk established a materials depot and quarters for foreign female forced laborers in the former shoe factory. The lower floors were converted into a production area, used after mid-1944 for the manufacturing of 7.92mm short ammunition for the Sturmgewehr 44 (assault rifle). However, neither German nor foreign forced laborers were available for this new production area, so Fritz Werner AG demanded female labor from a concentration camp through the SS-Business Administration Main Office (WVHA).

The Sachsenhausen concentration camp established a subcamp for 100 women in the Märkische Walzwerk in mid-November 1944.<sup>1</sup> The prisoners had begun to arrive by transports from the Ravensbrück concentration camp beginning in April 1944 and, by the beginning of November, were transferred to the administrative control of the Sachsenhausen concentration camp.

The national composition of the prisoners cannot be definitively established, though on the basis of available information, the Strausberg subcamp held prisoners from the Soviet Union, Germany, and Poland.

Within the complex of the munitions plant, the prisoners were housed in the main building of the former shoe factory. The munitions and loading machines had been installed on the lower two floors of the shoe factory; a room where the prisoners slept was located immediately above the production halls. The prisoners' kitchen was located on the first floor,

right next to the munitions machines. Prisoners did not need to leave the building to get from their quarters to the munitions machines or to eat. Most workers at the plant were not allowed to enter this production area, so as a result what went on in the former shoe factory remained hidden to them as well as to the inhabitants of Strausberg. Only foremen, suppliers, and technicians were permitted to enter this isolated part of the munitions factory.

The commander of the Strausberg subcamp was SS-Oberscharführer Hellmut Stahl (born 1892), a clerk from Berlin. In May 1944, he was transferred from the Wehrmacht to the Sachsenhausen SS-Totenkopf-Wachbataillon and, after training, was appointed leader of the Kommando.

Beginning in 1943–1944, the most important production sections of the Strausberg munitions factory worked two 12-hour shifts a day, and one can assume the female prisoners in the subcamp were not exempt. However, the production targets for the Märkische Walzwerk in the old shoe factory evidently were not met, inasmuch as additional labor was called for. On March 10, 1945, the Sachsenhausen concentration camp transferred an additional 52 prisoners from the Oranienburg (Auer-Werke) subcamp to the Strausberg subcamp, which now held 150 prisoners.<sup>2</sup>

One contemporary witness reported on the extreme lack of medical care for the women. He recalled that a makeshift sickroom had been installed next to the dormitory where the prisoners slept. The room also served to isolate patients so as to prevent the spread of infection and thereby to avoid losing further working hours. A female prisoner had the task of providing care but had no medical equipment or medicine at her disposal; the factory doctor forbade the SS from providing any sort of medical care for the prisoners. The woman prisoner charged with providing care built her own electric cooker from bits of electrical material lying around the factory so as to be able at least to prepare hot tea for the sick women. The female guards would not enter the sickroom because, in their opinion, "the plague" raged there.<sup>3</sup>

By April 1945, the front was getting closer to Strausberg every day. The munitions factory had removed some of its machines to Berlin, but munitions production continued in Strausberg. The order to evacuate the city was given on April 19 or 20, 1945. No reliable information remains on what then happened to the 150 female prisoners. According to statements by the director of the munitions factory, the Nazi administration at Eberswalde gave orders to march the women to Wandlitz, north of Berlin. The Strausberg subcamp is last mentioned on April 19, 1945, in the Sachsenhausen concentration camp reports of total daily strength.

**SOURCES** In the literature, one finds the camp mentioned but without further information. There are brief mentions of the Strausberg subcamp in Rolf Barthel's *Geschichte der Stadt Strausberg* (Berlin, 1987), p. 198; and in Günter Matthes's "Zwangsarbeit in Strausberg während des zweiten Weltkrieges," *VRDA* 12 (2002): 6–7.

There is very sparse primary information about the Sachsenhausen subcamp at Strausberg. No surviving prisoners have contacted the AG-R or AG-S. No former prisoners have written their memoirs. No postwar trials are known in which male or female guards were charged, or in which former prisoners at Strausberg gave statements. There are no surviving written records of the former Märkische Walzwerk in Strausberg. Only scattered references to the existence of the subcamp or to individual, mostly foreign prisoners can be found in the museums and at the memorials at Sachsenhausen and Ravensbrück.

## TREBNITZ

Beginning in the summer of 1943, the network of SS duty stations in the area around the German capital became more dense, both through establishing the SS garrison headquarters at Bad Saarow and with setting up an SS troop training area called “Kurmark” in the Jamlitz region about 100 kilometers (62 miles) from Berlin. That same summer, the SS-Leadership Main Office (Führungshauptamt, FHA) also began two institutionally interconnected projects in the Fürstenwalde/Scharmützelsee area east of Berlin.

One of the FHA projects was to relocate SS offices out of the bomb-endangered capital city and move them to the region of Bad Saarow. The other was to begin building a large subterranean intelligence center in the Rauen Mountains south of Fürstenwalde. The two projects were apparently linked. In the second half of 1943, in this area, an overflow camp for SS duty stations was established as well as a large intelligence bunker. As of the end of July 1943, the project to relocate the SS duty stations out of the capital city of the Reich was known by its cover name “Siegfried.”<sup>1</sup>

The SS garrison headquarters Bad Saarow was established for these two projects and included the area from Fürstenwalde to south of Beeskow, as well as from Storkow to the Schlaubetal.<sup>2</sup> The SS garrison administration Bad Saarow existed as of August 9, 1943, and the Sachsenhausen subcamps Bad Saarow (also known as Ketschendorf), Fürstenwalde, Storkow, Kolpin, and Spreenhagen fell within the area administered by this garrison headquarters.

While not part of the SS garrison administration Bad Saarow, the Trebnitz subcamp in the Seelow district was part of the project to relocate SS offices to locations east of the capital city. The Trebnitz subcamp was closely connected with the Bad Saarow subcamp.

The administrative office Bad Saarow for SS construction was headed by SS-Untersturmführer Hans-Gustav Bauer

(born 1912) from Nürnberg. As of May 1944, administrative suboffices for construction were located at Storkow, Trebnitz,<sup>3</sup> Kolpin, and Spreenhagen, as well as at the main location near Bad Saarow. These were also subcamps of the Sachsenhausen concentration camp. SS statistics show Bad Saarow as a labor camp, while Trebnitz, Storkow, and Spreenhagen are reported as labor Kommandos.<sup>4</sup>

The subcamp was probably established in May 1944. As of the end of March 1944, 120 prisoners were put to work at Trebnitz, a number that had increased to 301 by the beginning of October 1944.<sup>5</sup> A few prisoners had been transferred from the Fürstenwalde subcamp to Trebnitz.<sup>6</sup> In forested areas, the prisoners had to construct alternative quarters for an SS office. They were housed in a camp surrounded by four guard towers. One of the barracks contained a two-room infirmary as well as a storeroom. The kitchen and toilets were in two, separate wooden buildings.

Many Norwegians, who were used as workmen or craftsmen, were among the prisoners, along with Poles, Germans, and Soviets. One of the prisoner foremen was Erich Reuter, probably there as a Special Detachment Wehrmacht (Sonderabteilung Wehrmacht, SAW) prisoner.<sup>7</sup> According to other sources, three barracks for the prisoners existed inside the camp, and a guards’ barracks and the camp office were located outside the camp. A Polish prisoner doctor and medical orderly were also said to have worked in the camp.

After September 1, 1944, the leader of the camp was SS-Untersturmführer Albert Dallwitz.<sup>8</sup> According to survivors, he was in command of about 20 SS men, ethnic Germans from Yugoslavia, Romania, and Hungary.<sup>9</sup> Known names of guards include SS-Schütze Wilhelm Gutermuth, Alfred Münker, and Josef Padberg; Oberschütze Andreas Rutter-schmidt and Julius Schiff; Sturmmann Karl Assmuss and Johann Pelger; Rottenführer Heinrich Philipp and Daniel Rossmann;<sup>10</sup> as well as Jakob Grag, Jakob Sumser, Martin Trontch, and Johann Zink.<sup>11</sup> Other guards included Franz Heist, Paul Marzahn, Mathias Schäfer, and Franz Steiner.<sup>12</sup>

At the end of December 1944, there were still 264 prisoners in the Trebnitz subcamp. Once the Red Army broke through German defenses at Küstrin at the beginning of February 1945, the camp was evacuated to Sachsenhausen. According to statements by the SS guards held after 1945 at the British internment camp at Esterwegen, the last date for the Trebnitz subcamp most often mentioned was February 1.<sup>13</sup> The prisoners were to have been marched by foot, but after one day they were brought by train to the Sachsenhausen concentration camp.<sup>14</sup> The Sachsenhausen daily reports no longer mention the Trebnitz subcamp after February 12, 1945. For the most part, by then the prisoners had been moved to the Heinkel Works subcamp in Oranienburg.<sup>15</sup>

On March 15, 1945, one prisoner was transferred from Trebnitz to the SS-“Dirlewanger” Division in Jamlitz for training. This was the location of the Lieberose subcamp that had been dissolved at the beginning of February 1945. That prisoner saw action at the front at the Oder River and was captured and imprisoned by the Soviets until 1949.<sup>16</sup>

After the war, the Bielefeld denazification court investigated camp commander Dallwitz. However, there was insufficient evidence to start a prosecution.<sup>17</sup>

Investigations by the Central Office in the State of North Rhine-Westphalia in Cologne carried out from 1968 to 1970 in Belgium, the Netherlands, Norway, Czechoslovakia, Poland, and the Soviet Union remained unsuccessful. No grounds were found to suspect that prisoners had been killed.<sup>18</sup>

## USEDOM

From January 15, 1945, to April 23, 1945, a subcamp of Sachsenhausen was established in the northern Pomeranian town of Usedom, on the coast of the Ost-See. The subcamp or Kommando may have also been known as the Kommando

Ongart, although it is unclear if this refers to a specific locality, company, street, or person.

**SOURCES** There are few primary or secondary sources on the Sachsenhausen subcamp established in Usedom. The principal source of information for this essay is the Usedom entry in ITS, *Verzeichnis der Haftstätten unter dem Reichsführer-SS (1933–1945)*, 2 vols. (Arolsen, 1979). Although not always consistent with other sources, the ITS catalog provides brief statistical information about the camp, such as opening and closing dates, type of prisoner work, and so on. For brief mention of the “Kommando Ongart,” see *Sachsenhausen: Dokumente, Aussagen, Forschungsergebnisse und Erlebnisberichte über das ehemalige Konzentrationslager Sachsenhausen* (Berlin [East]: VEB Deutscher Verlag der Wissenschaften, 1986), p. 74.

## VELTEN

Soon after the National Socialists took power in 1933, the SA set up a torture center at the Meissnershof, an uninhabited manor lying between Velten and Hennigsdorf in the Hohenschöpping forest district. To hide the brutal treatment of prisoners, it was given the cover name “SA Driving School.” It was one of the early concentration camps established by the SA that later became part of the Oranienburg concentration camp. The Meissnershof center lasted only from March until December 1933, at which point the remaining prisoners were transferred to the Oranienburg concentration camp.

By April 1943, 14 camps housing forced laborers from throughout Europe existed in Velten. They had been established as part of the program to support armaments production during World War II. In the summer of 1941, an additional camp was set up next to the Velten Maschinenbau GmbH Ikaria to house approximately 1,000 forced female laborers from the Soviet Union.<sup>1</sup>

The latter Velten subcamp, a women’s camp, was first under the control of Ravensbrück, but control was later transferred to the Sachsenhausen concentration camp. Depending upon the source consulted, this camp was set up either in March 1943 or only in October 1944 and was located between Berliner Strasse and the Hohenschöpping commuter railroad station, close to the Velten Maschinenbau, an armaments producer.

Female prisoners were used at this plant to assemble airplane parts, and they also manufactured the aircraft cannon Oerlikon for the Heinkel airplane works in Leegebruch.<sup>2</sup> Prisoners worked in Hall G, right next to the street, and were supervised by female SS guards.<sup>3</sup> Another place prisoners worked, according to the literature, was the Havelschmelzwerk GmbH on Berliner Strasse 8. Prisoners worked 12-hour days.<sup>4</sup>

About 125 women were crammed together in a single barracks.<sup>5</sup> Between 500 and 800 women are said to have been in the camp, and they came from the Soviet Union, Romania,

Hungary, France, and Germany.<sup>6</sup> The camp elder was a Pole named Wanda.<sup>7</sup>

A Communist resistance group operating inside Maschinenbau had taken up contact with the Soviet forced laborers in the Velten women's subcamp. Young women who belonged to this resistance group could listen to Radio Moscow at the home of Fritz Meissner, a Communist member, and they translated the news. Meissner, who had access to one of the concentration camp barracks, was able to pass the information on to the female inmates. In addition, the resistance group was said to have collected money and rations and brought them into the camp.<sup>8</sup> The group was also supposedly successful in helping a woman named Lydia to escape, either in March or April 1945.<sup>9</sup>

At the beginning of October 1944, the Sachsenhausen records showed 669 women at the Velten subcamp.<sup>10</sup> On March 30, 1945, it held 709 women.<sup>11</sup>

SS-Unterscharführer Loose headed the Kommando; his deputy was a certain de Ries.<sup>12</sup> At least in part, the guards were ethnic Germans. One of them was SS-Schütze Hans Bitto (born 1900 in Julwes, Romania), who served at Velten from August 1943 to September 1944 and then at the Sachsenhausen subcamps at Briesen [aka Falkenhagen] and Berlin-Lichtenrade.<sup>13</sup> Siegfried Schubert was part of the Kommando and remembers serving with Rottenführer Paul Bloss, Balzer, and Bürger, men named Wlepinski and Grawschewski, and an ethnic German from Croatia, Robert.<sup>14</sup>

The prisoners are said to have been evacuated on April 20, 1945, in the direction of the Lübeck Bight. They were liberated by the Soviet Army on May 11, 1945.

**SOURCES** The secondary sources are contained in the essays in Bundeszentrale für politische Bildung, ed., *Gedenkstätten für die Opfer des Nationalsozialismus: Eine Dokumentation*, vol. 2, Berlin, Brandenburg, Mecklenburg-Vorpommern, Sachsen-Anhalt, Sachsen, Thüringen (Bonn, 1999); and Siegfried Katzorreck and Günter Wehner, *Der illegale Kampf in den Jahren 1933–1945 auf dem Territorium des heutigen Kreises Oranienburg* (Oranienburg, 1973).

The few archival sources dealing with the history of the camp are in BA-B (Collection NS 33). Other documents relating to the perpetrators and with details of the daily rates are in the AG-S (CAFSSRF) and in the PRO.

## WERDER

The Werder subcamp was one of the smallest of the Sachsenhausen subcamps. It was first identified in the International Tracing Service (ITS) catalog of 1949. The subcamp is first mentioned in contemporary records on March 20, 1943, with 4 prisoners, and the same information also appears in a Sachsenhausen daily report of March 22, 1943. A publication assembled by former prisoners also refers to only 4 prisoners at Werder. The Sachsenhausen Memorial states that Werder was an outside Kommando with 10 male prisoners and that it existed from March 20, 1943, to June 27, 1944.<sup>1</sup> The Sachsenhausen change of status reports for the period between May and June 1944 always refer to 6 male prisoners at Werder, though the camp is no longer mentioned in these reports by the end of August 1944.<sup>2</sup>

Local inhabitants say the prisoners were housed in the so-called Lichau-Keller on the Friedrichshöhe and on a barge on the Havel River.

The camp leader was SS-Unterscharführer Oskar Hoffmann (born 1908 in Rehau), a porcelain painter. According to his statement, at other times he also had been detachment leader of the subcamps at Biesenthal and Fürstenwalde.

After 1945, Hoffmann was at first held at the British internment camp at Esterwegen. In 1948, pursuant to the Law on the Liberation from National Socialism and Militarism (Gesetz zur Befreiung von Nationalsozialismus und Militarismus) of March 6, 1946, a denazification court at the U.S. internment camp at Nürnberg-Langwasser categorized him as “less incriminated” (*Minderbelasteter*), fined him 500 Reichsmark (RM) in reparations, and gave him a six-month sentence on probation.<sup>3</sup> It stood in his favor that former prisoners attested that as head of various Kommandos, and in Werder as well, he had not committed any crimes against humanity. Hoffmann was immediately released from the internment camp by order of the court.<sup>4</sup> He died in Wunsiedel in 1961. No court proceedings were ever conducted against those responsible for the Werder subcamp.

**SOURCES** The Werder subcamp is mentioned only in Regina Scheer's *Der Umgang mit den Denkmälern. Eine Recherche in Brandenburg* (Potsdam, 2003); and *Das nationalsozialistische*

*Lagersystem (CCP)*, ed. Martin Weinmann, with Anne Kaiser and Ursula Krause-Schmitt, prepared originally by ITS (1949–1951; repr., with new intro. matter, Frankfurt am Main: Zweitausendeins, 1990), p. 62. For the number of prisoners, see KaW-DDR, ed., *Damals in Sachsenhausen* (Berlin, 1967).

The few other details here came in part from BA-L and from the AG-S.

## WITTENBERG

By the summer of 1944, the Arado Aircraft Works had a severe labor shortage. Many of the men had been called up to serve in the Wehrmacht, and 20 percent of the civilian women had quit because the work was too heavy. Management decided to replace them with about 1,200 prisoners from Ravensbrück, the women’s concentration camp. However, 30 women already working at Arado had to be recruited first to serve as guards for the concentration camp prisoners; once selected, they were sent to Ravensbrück and there were trained for about 14 days.

Two barrack camps were set up in August 1944. One camp, directly next to the factory, was fitted out for 750 prisoners. Beforehand, it had held forced laborers who were transferred to another camp. The second camp, intended for about 500 prisoners, lay in an open field about half an hour away by foot. A nearby housing development had a good view into the camp, and residents would have seen from there how a woman was found on the electrified perimeter fence. Both camps were encircled by two electrified fences. The three prisoner barracks in the camp on the open field had no flooring, just bare earth. There was only one toilet and one sink for 500 women.

Ernst Schmaedig, the National Socialist works manager at Arado, was in overall command and determined what work the women did. Life in the subcamp itself was determined by its commandant, Rudolf Schneider.

In September 1944, about 750 prisoners arrived at the Arado subcamp; in October, 500 more, about 250 of whom were Jews. Kurt Kummer, the Arado Aircraft Works’ doctor, selected the women himself at the Ravensbrück roll-call grounds, though administratively this camp was under the control of the Sachsenhausen concentration camp. The daily reports on the numbers of prisoners, arrivals and departures, and reports of deaths were sent to Sachsenhausen.

The approximately 250 Jews came overwhelmingly from the Łódź ghetto, having been sent to Ravensbrück after the ghetto was disbanded. They arrived in August 1944 and were then sent on to subcamps. The other prisoners came from Germany and 12 other nations, mainly Eastern Europeans, though some Western Europeans as well.

Under the direction of a civilian foreman, the women worked in a large production hall, assembling aircraft parts, or they dug trenches as protection against shrapnel during bombing raids. Shifts were 12 hours long, the day shift lasting from 6:00 A.M. to 6:00 P.M.

Regardless of the weather, a group of about 120 female prisoners was forced to march the 12 kilometers (7.5 miles) to the Faserfabrik (Fiber Factory) Mühlanger. There, they worked on aircraft parts machine presses; one female German prisoner lost three fingers while working here. She was taken to Dr. Kummer at the works’ infirmary, where, without anesthetizing the woman, he gave the orderlies he was training (young anti-aircraft artillery helpers) a didactic presentation in first aid.

Camp prisoners included those labeled political, criminal, “asocial,” and Gypsy. (There was no underground organization within the camp itself.) The prisoners’ only thought was to survive, and in that they were encouraged by a few of the civilian workers who would keep whispering, “Hold out—the Russians are coming!” to the exhausted prisoners, a message that was a great boost to their morale. Survivors have said that a few civilian workers even secretly helped them by hiding food or socks or underwear in the aircraft parts at the factory.

As was generally the case in the subcamps, a great deal of mistrust existed between the prisoners, as the women barely knew one another. The strongest solidarity existed between the Jewish prisoners, as they were acquainted from their time in the ghetto. On one occasion, the SS accused the Jews of having stolen something and as punishment deprived them of food for a whole day. Two of the women who spoke a little German were chosen, in the name of all the Jewish prisoners, to complain to the head engineer in the factory building they labored in, for without food they would be completely unable to work. The engineer thereupon ordered a ration of soup to be served, and because of the complaint, the SS guards did not punish the workers on that day. The engineer in charge was responsible for meeting production targets for Arado, Heinkel, Junker, and Messerschmitt aircraft, and he did not care to have unproductive workers simply because they were being punished. On the part of a courageous skilled worker, this example indicates that prisoners could have been helped more often than they were.

However, prisoner solidarity at Arado was made difficult due to the system of informers the concentration camp leaders had put in place. Franziska Bellrich, a woman convicted several times for engaging in fraudulent marriages, had assumed the role of camp elder, among other things administering punitive beatings in the evenings to those prisoners the female guards indicated. Bellrich also was accused of em-

bezzling prisoners' money, did a lively trade in laundry and clothing, and organized the informers among the criminal prisoners. Even in 1994, Bellrich was still being sought by the Central Office of State Justice Administrations (ZdL) in Ludwigsburg for the crimes she had committed against the prisoners; she went underground after 1945 in West Germany and was not located.

The camp commandant Schneider and head guard Margarete Kässner also regularly administered punishments in the evenings. The female guards also took the opportunity to punish the women brutally during the day for the slightest misbehavior, such as drinking water in the toilet room or talking while at work. The female guards reported such infringements in the evenings, or after the night shift, so prisoners were then often punished a second time. Collective punishments for all prisoners, such as standing at roll call regardless of the weather or being deprived of food, were also common.

One shooting, of a Russian prisoner who tried to escape, also took place while the camp was in existence, though it occurred outside its grounds. Another prisoner died as a result of a beating he received from Dr. Kummer. No exact death statistics exist, though the Sachsenhausen concentration camp files show 10 deaths between January and April 1945. My own research showed 18 deaths, overwhelmingly through exhaustion. The files also indicate that small groups of two to five women were periodically being sent back to Ravensbrück, with new women replacing them.

In January 1945, a truck transport took 23 women to Ravensbrück, where they were murdered in the gas chamber. Deaths were not to take place in the subcamp, however, since for every dead prisoner, forced laborer, or prisoner of war (POW), the Arado management had to pay 16 Reichsmark (RM) to the mortuary. To keep payments at a minimum, a mobile crematorium was built at Arado. It was discovered after liberation, though it never went beyond the experimental phase. The subjects of the experiments were dead Jews and maltreated Russian POWs; their bodies showed signs of mistreatment.

The Arado camp had another peculiarity. The works' medical doctor, Dr. Kummer, was also the doctor for the forced laborers, POWs, and concentration camp prisoners. He established an infirmary but did not treat any of the Jews. To ensure that the prisoners would remain productive, he selected a Polish Jew, the pediatrician Dr. Miriam Litwin (born January 1, 1914), as the camp doctor. She had to work in the infirmary and took responsibility for caring for the sick and in that manner could also help the Jewish prisoners.

By the end of April 1945, the Red Army was getting close to Wittenberg. By this time, the managers had fled, and the aircraft works had shut down. Before he fled, camp commandant Schneider discharged the concentration camp personnel, and only a few guards remained to watch over both camps.

The water was turned off in both camps, but the electrified fences remained live. There was nothing left behind to eat. On April 21, the camp in the field was liberated by the

Red Army. They found three dead prisoners in the camp. All the barracks were taken over by the Russian soldiers, who needed to use them either as a hospital or as a base of operation. The women were ordered to make their way east, into liberated territory, though they did so under constant attack by the Wehrmacht, as it still believed Wittenberg could be defended successfully.

The camp immediately next to the Arado works liberated itself. A courageous skilled tradesman from the factory was permitted by a guard to disconnect the electrified fence so that the prisoners could seek their freedom. A few prisoners remained in the camp, as they did not know where they should go. In August 1945, these women lodged complaints with the Wittenberg police against the concentration camp personnel.

Interrogations of the female concentration camp guards, to the extent they could still be found in the Wittenberg area, began in early 1946. In 1949, the so-called Wittenberg Concentration Camp Guards Trial was held before the Halle District Court. The accused at this trial included camp commandant Rudolf Schneider (born January 5, 1891), head guard Kässner (born June 5, 1904), and seven other female guards. Schneider, a fish merchant by trade, was married with two children and had been transferred as a guard on May 14, 1943, to Sachsenhausen and then to Wittenberg, where he was promoted to *Sturmscharführer* on February 1, 1944. According to the Berlin Document Center, he had no blemishes on his service record and was described as a good leader. Though charged in 1949, the search for him proved unsuccessful.

Kässner, a housewife, had been employed at the Arado Aircraft Works and was a member of the SS. She was sentenced by the court in 1949 to two years' imprisonment for beating the prisoners. The other seven female guards on trial were given lesser sentences, and one was acquitted, as she had behaved properly toward the prisoners.

Supervisor Margot Kunz (born June 21, 1921), charged with administering aggravated beatings, was tried by a Soviet military tribunal in Berlin and given a 25-year sentence. She remained in jail for 10 years during the German Democratic Republic and was released following an amnesty.

Kunz subsequently married, becoming Mrs. Pietzner, and following German reunification in 1990, she sought to be formally recognized as a victim of Stalinism. In 1993, this rehabilitation was granted by then German Justice Minister Kanther. Mrs. Pietzner was thereupon granted compensation amounting to 63,000 Deutsche Mark (DM). Ongoing protests in Germany and abroad forced a rescinding of this rehabilitation by 1996, when she was again declared guilty. She died in 1998.

Camp doctor Kummer (born December 1, 1910) had become a member of the SS in 1937. He fled Wittenberg in 1945. The Soviet Military Administration found him living in a village; he was taken to the jail at Bautzen and died there.

Works manager and engineer Schmaedig (born July 2, 1900) was unmarried and lived in a hotel. Witnesses at the

trial said “Schmaedig was a pig” whom even the civilian workers feared. In 1945, he fled to the West and committed suicide.

**SOURCES** There is one book by Renate Gruber-Lieblich, “... und morgen war Krieg...”: *Arado Flugzeugwerke GmbH Wittenberg, 1936–1945; Ein KZ-Lager entsteht* (Wittenberg: Self-pub., 1995). This subcamp is listed in *Das nationalsozialistische Lagersystem (CCP)*, ed. Martin Weinmann, with Anne Kaiser and Ursula Krause-Schmitt, prepared originally by ITS (1949–1951; repr., with new intro. matter, Frankfurt am Main: Zweitausendeins, 1990), p. 573.

The author worked up the history of the subcamp between 1991 and 1995, the first time it had been researched. The ZdL (now BA-L) had the protocols of 36 interviews with Jewish survivors—IV 40 6 AR 857/67 (November 5, 1970). The BA-B holds the files that formerly were part of the BDC. Here one can find the SS personnel files for those who served at the Arado factory and the concentration camp. The archive also contains documents about the armaments production at the Arado Flugzeugwerke GmbH. The BA-B holds the papers of MfS, and there one can find documents related to the trial of supervisor Kunz/Pietzner as well as the files of the 1949 Wittenberg Concentration Camp Guards Trial before the Halle District Court. The AG-S has a list of arrivals and departures from the Wittenberg subcamp as well as lists of the deaths. The AG-R has lists of those recruited as female guards as well as the movements of the prisoners. The private archive of Renate Gruber-Lieblich has records of interviews with Dr. Miriam Litwin, the camp doctor, who lives in Israel, and the prisoner Genia Zonabend, who worked in the factory and lives in Sweden. Both women came from the Łódź ghetto, and the interviews were conducted in 2000.

## WULKOW

At different times, two subcamps existed near Wulkow, a village close to the Oderbruch, former marshlands about 50 kilometers (31 miles) to the east of Berlin. From 1942 on, a subcamp that was probably part of the Sachsenhausen complex existed on the road to Hermsdorf. Prisoners held there had to load and unload airplanes at the nearby Neuhardenberg airfield.

A second camp was established in March 1944 in the forest between Wulkow and Neuhardenberg. Starting in April 1944, a group of about 40 Jewish prisoners from the Theresienstadt ghetto was used to construct a secret, partly subterranean barracks complex for the Reich Security Main Office (RSHA).<sup>1</sup> The RSHA administrative offices were to be relocated and secret documents stored here. One of these offices was Adolf Eichmann's Gestapo bureau. At his trial in Jerusalem, Eichmann testified that he took “a whole group of engineers, architects and workers with [him] from Theresienstadt to the Mark Brandenburg in the summer of 1944, when it became

necessary to build an overflow office for the Gestapo (Amt IV).”<sup>2</sup>

Eichmann was known to the Wulkow prisoners, though one can assume they were unaware of the full extent of his activities. He was seen a few times together with the camp leader, Stuschka, and spoke with prisoners, using Yiddish expressions only the initiated would know. “One part of the camp, with its additional buildings, was soon called just ‘Eichmannndorf.’”<sup>3</sup> The project, initially planned as Gestapo overflow quarters, later was expanded to be able to accommodate the Führer's headquarters, as a replacement for the “Wolf's Lair” (Wolfsschanze) located in East Prussia.<sup>4</sup> The project was known by its cover name “Barracks' Construction Zossen” (*Barackenbau Zossen*), even though Zossen itself lay south of Berlin.<sup>5</sup>

Two Wehrmacht sites also existed near the RSHA alternative quarters and the prisoners' camp. One was a secret building site for a subterranean bunker, located to the south of the RSHA overflow quarters, probably intended for the Wehrmacht. Workers at this site were prisoners from the Sachsenhausen concentration camp. The other site, north of the prisoners' camp, was constructed in the winter of 1944–1945.

On March 2, 1944, the first group of 50 male prisoners was brought to Wulkow, via the Trebnitz railway station, from the Theresienstadt ghetto. These were German and Czech Jews; some accounts put their number at 200 or 235. The men had volunteered to work in the Reich proper. The talk in Theresienstadt had been of working at “Zossen,” with assurances given that dependents of these workers would not be deported. According to witnesses, the Gestapo kept its promise. The Czech engineer E. Kosiner was the leader of this group of prisoners, and it is said that these workers brought a tractor, a field kitchen, and parts of barracks with them from Theresienstadt.<sup>6</sup>

The camp was finished in five and a half weeks, and when completed, an additional 40 men were then sent from Theresienstadt.<sup>7</sup> Altogether, 235 workers, mostly skilled tradesmen, were said to have been brought from Theresienstadt to Wulkow in three transports. According to other reports, the high point was reached in August 1944, when the camp held 360 men and 20 women.<sup>8</sup> In the summer of 1944, 25 women arrived from Theresienstadt; their task was to keep the barracks clean and wash the prisoners' clothes. The first prisoners apparently enjoyed a degree of freedom and even guarded themselves.

SS-Obersturmführer Franz Stuschka (born 1910), from Graz, Austria, and a member of the SD, was the brutal camp leader and building foreman. Oberscharführer Stiasny, Hanke, and Proschek and an SS-Unterscharführer were in charge of security; all four of them came from Vienna.<sup>9</sup>

Camp leader Stuschka persecuted the prisoners above all on their free Sunday afternoons, granted only once a fortnight. The men had to carry tree logs from one part of the camp to the other, and the women were forced to carry rocks for no purpose. Stuschka would have the prisoners stand for

hours, and for no reason, at the roll-call area. He later placed a metal cage in the shape of an egg here and would punish prisoners by locking them in it, regardless of the weather. On one occasion, using only their bodies and without implements, women were forced to clear the mud from the roll-call area. Stuschka had about 45 prisoners sent to Berlin and to the Sachsenhausen concentration camp for punishment. About nine youths, apprehended for stealing food, were first imprisoned in the bunker and mistreated by Stuschka, then transferred to Sachsenhausen in late November 1944, and shot there.

The prisoner Leo Neumann was also murdered at Sachsenhausen. As an adolescent, he had forged his documents in order to pass as an "Aryan" and later joined the Waffen-SS. A chance inspection of the records showed discrepancies, and he was dismissed from the SS and sent as a Jew to Wulkow, via Theresienstadt.

It is also reported that Stuschka, angered at being denied a promotion, took it out on the prisoners on November 9, 1944, and there was mourning for the "dead and the many injured."<sup>10</sup> Stuschka had a room, known as the "Chamber of Laughter," located in one of the barracks near his command office, and he mistreated prisoners there. Stuschka also shot a Berlin Jew, Horst Prinz, whom he had first beaten because Prinz had defied Rafaelsohn, the camp elder. Prinz overpowered Stuschka while he was being tortured and fled the room; Stuschka shot him down, in full sight of the other prisoners. Stuschka also had an earthen bunker constructed next to his barracks, and there he imprisoned up to 20 half-naked prisoners for more than a week.

SS-Oberscharführer Hanke, on the other hand, was described as the complete opposite, never verbally abusing prisoners or modifying the word "Jew" with any vile descriptors. He addressed prisoners formally ("Sie" rather than the informal "Du") and indirectly saved their lives.<sup>11</sup> It is said that he later committed suicide out of a sense of guilt and shared responsibility for the crimes perpetrated by the SS.<sup>12</sup>

There were 10 SS guards, ethnic Germans from Romania (Siebenbürgen). They were commanded by SS-Obergefreite Schmidt.<sup>13</sup>

There were successful escapes from Wulkow. In the winter of 1944–1945, two men and a woman escaped, during a heavy frost, and were successfully hidden by friends in the Niederlausitz region until the end of the war. A Jew from Stettin who had escaped was recaptured and taken to Sachsenhausen. He did not survive. Other prisoners killed themselves on the electrical fence.<sup>14</sup> It is thought that of all the prisoners brought to Wulkow, a total of 50 died, whether through murder, suicide, as a result of being transferred to Sachsenhausen, or during escape attempts.<sup>15</sup>

Prisoners were brought supplies by a freight car that came twice a month from Theresienstadt. Average rations were said to be 10 percent higher in Wulkow than at Theresienstadt. Flour was brought at least once from nearby Letschin. There was occasional contact, arranged by private firms, between prisoners and relatives from Berlin or the surrounding area.

Initially, the SS deployed a camp guard composed of prisoners, and they were first commanded by Georg Einstein, a nephew of Albert Einstein. Perhaps partly due to this, prisoners were not fearful of "being transported to Auschwitz." Einstein was later succeeded by Willy Görner. The Wulkow guard staff was augmented, in April 1944, by a troop of Theresienstadt ghetto guards. In the fall of 1944, Paul Rafaelsohn, from Gelsenkirchen, was appointed head of the prisoner guards; he had been living in a "privileged mixed marriage." He became Stuschka's assistant, and for that reason, he was condemned to death in Prague in 1947.

In the first days of August 1944, a second construction site, known as "Building Site Z—Intelligence," was opened by the SD, using a "Jewish work detail."<sup>16</sup> The Nazi Party Chancellery had issued the construction order to build this alternative site for the Berlin office. Intelligence-gathering equipment was to be housed here, and intelligence gathering was to continue unabated: "This site was to ensure as high a degree of protection from incendiary bombs and near misses as possible." It was surrounded by an earthen wall, and the roof was protected by a layer of sand. The site itself consisted of living, working, and kitchen barracks, as well as a bunker for the files and an intelligence bunker made entirely of concrete.

The central construction here was the intelligence barracks called "Bärau," also known as "alternative camp Bärau." The firm Max Treder & Co, Berlin-Charlottenburg, was the main contractor for the electric installations.<sup>17</sup> The Building Site Z is said to have been occupied by October 1944, among others by a Berlin architect named Zeichner.<sup>18</sup> A Berlin police unit assumed the responsibility to guard this construction site by the beginning of October 1944.<sup>19</sup>

The RSHA began to transfer its offices, in part, to Wulkow in the fall of 1944 but never completed the transfer due to the advance of the Red Army. SS-Obergruppenführer Heinrich Müller, head of the Gestapo, is said to have commanded from here. One prisoner who had to repair exterior blackout coverings described Müller's quarters as a room with a large writing table in the middle, a life-size picture of Hitler behind it, and numerous paintings with Jewish religious themes. Martin Bormann, head of the party Chancellery, inspected Building Site Z on numerous occasions.

Work apparently ceased for the Wulkow prisoners by the end of 1944, and the SS were withdrawn from Building Site Z. On January 10, 1945, the thunder of the artillery on the front at the Oder River could be heard in Wulkow.

On January 18, camp leader Stuschka gave the order to nail the windows of the prisoners' barracks shut. Prisoners now could only leave the barracks to relieve themselves. On January 19, all the prisoners were forced to march into a section of the forest, where an execution squad awaited them. But at that moment, a Wehrmacht unit appeared, and the planned massacre could not be carried out. The prisoners had to march back into the camp.

In the night from February 2–3, 1945, 198 male and 17 female prisoners were sent back to Theresienstadt in railway

## 1352 SACHSENHAUSEN

cattle cars, via Trebnitz, Jüterborg, Halle, and Würzburg. They arrived on February 10, 1945.

**SOURCES** The Wulkow subcamp is listed in BPB, ed., *Gedenkstätten für die Opfer des Nationalsozialismus: Eine Dokumentation*, vol. 2, Berlin, Brandenburg, Mecklenburg-Vorpommern, Sachsen-Anhalt, Sachsen, Thüringen (Bonn, 1999), p. 374.

Unpublished memoirs about Wulkow can be found at YVA. The BA-B holds documents dealing with the construction at Wulkow. The following memoirs have been published: Klaus Scheurenberg, *Ich will leben: Ein autobiographischer Bericht* (Berlin, 1982) and Walter Grunwald, *Drei Vergangenheit: Autobiographie eines jungen Menschen. Erster Teil 1919–1947* (n.d.). Former prisoners have also published a brochure titled *Das Konzentrationslager Wulkow 1944–1945* (Prague, 1995). Excerpts of the Eichmann Trial quoted in this essay are from Jochen von Lang, *Das Eichmann-Protokoll* (Vienna, 1991).

## **SS-BAUBRIGADEN AND SS-EISENBAHNBAUBRIGADEN**

SS-Baubrigade II prisoners remove debris from the destroyed residence of a Nazi Party leader in Bremen after an Allied bombing raid, 1944.

USHMM WS #29406, Courtesy OF BPK

The SS-Baubrigaden and SS-Eisenbahnbaubrigaden should be viewed as particular types of subcamps. First established in the autumn of 1942, they were the first larger prisoner detachments deployed in major cities of the German Reich, thus exposing for the first time the living conditions of the concentration camp prisoners to a broader German public. As a rule, an SS-Baubrigade consisted of 1,000 prisoners, while an SS-Eisenbahnbaubrigade consisted of around 500 prisoners, each having SS leaders and guards. Table 1 (p.1357) lists all 13 Baubrigaden existing at the end of the war. There were around 9,500 prisoners in the Baubrigaden before the evacuation transports and death marches began in the spring of 1945. The total number of those who went through the Baubrigaden between 1942 and 1945 is estimated to be at least 17,000 male prisoners.

Prisoners and SS personnel came mostly from the Buchenwald, Neuengamme, and Sachsenhausen concentration camps. While administratively the SS-Baubrigaden remained subordinated to these three camps, in the early summer of 1944 four of the five existing SS-Baubrigaden at this time were concentrated in the area around what was to become the Mittelbau [aka Dora] concentration camp. The SS-Eisenbahnbaubrigaden, which were established in the late summer of 1944, utilized prisoners mostly from Auschwitz and Dachau. The transfer of control of all Baubrigaden to the Sachsenhausen concentration camp in the summer of January 1945 was of a purely formal nature and did not alter the relationships between the main camps and the subcamps.

The conceptual origins for the Baubrigaden can be traced back to planning in the SS office "Haushalt und Bauten" (budget and buildings) at the end of 1941. Heinrich Himmler, in view of the successful war of conquest in the East, gave the order to develop a plan for a peace-building program (*Friedensbauprogramm*), with a view to supporting his plan to "Germanize" the East.<sup>1</sup> The SS would largely rely on its own resources when constructing SS and Police bases, including settlements, camps, and supply depots in the conquered territories. On February 10, 1942, the head of the Amtsgruppe C-Bauwesen in the recently formed SS-Business Administration Main Office (WVHA), doctor of engineering and later Generalleutnant der Waffen-SS Hans Kammler, submitted his "Suggestions for the Establishment of SS Construction Brigades" (*Vorschlag für die Aufstellung von SS-Baubrigaden*). According to this paper, an SS-Baubrigade, each consisting of 4,800 "prisoners, prisoners of war [POWs], Jews and foreign auxiliary labor," would be established in each area under the control of a Higher-SS and Police Leader (HSSPF). Kammler assumed a construction volume of between 20 and 30 billion Reichsmark (RM) and the need for 175,000 prisoners, which as mobile labor detachments would be dispatched to construction sites.<sup>2</sup>

As a result of developments in 1942—the Wehrmacht's advance in the East had come to a halt, the murder of the European Jews had begun, and the armaments industry had started to prepare itself for a long war of attrition and demanded prisoner labor—the SS construction program had to

be changed radically. In light of the intensified bombing of German cities, reaching its first climax in the summer of 1942, Himmler changed the nature of the SS-Baubrigaden project for defensive purposes. At the end of August 1942 and the beginning of September 1942, he personally inspected the extent of the destruction. Convinced of the threatening crisis of legitimacy for the National Socialist regime, he ordered that SS-Baubrigaden be put together, to be deployed in cities targeted by aerial attacks.<sup>3</sup>

The establishment of prisoner detachments to clean up the destroyed cities was closely coordinated with Reich Minister for Armament and Munitions (Reichsminister für Bewaffnung und Munition) Albert Speer, who had been in office since February 1942. On September 15, 1942, under Speer's chairmanship, high-ranking representatives from the Armaments Ministry and the WVHA discussed the year's pressing problems: the destruction of the Jews, the increase in armaments production, and the management of the damage in the bombed cities. A day later, Speer's representatives worked out with the chief of the WVHA, Oswald Pohl, the details for the establishment of an initial three SS-Baubrigaden, each with 1,000 prisoners.<sup>4</sup> Speer kept both Adolf Hitler and Himmler constantly informed about the plans. Until the end of the war, Speer repeatedly intervened in the use of the Baubrigaden.

Starting in September 1942, the first Baubrigaden, each with 1,000 prisoners, were sent to Bremen, Osnabrück, Düsseldorf, Duisburg, and Cologne. Close cooperation between the cities' administrations and the SS became the camps' characteristic element. The cities not only supplied the necessary infrastructure; in addition, "leaders of the immediate measures" (*Leiter der Sofortmassnahmen*) attached to the municipal construction administrations coordinated the rubble removal and the use of the prisoners. In so doing, the cities accepted the visible brutality with which the SS treated the laborers and at times expressly praised the SS terror. The Bremen construction senator (*Bausenator*) wrote to the WVHA in January 1943: "I will not miss the opportunity to state my recognition of the extraordinary work done by the Baubrigade in removing the air-raid damage in Bremen. I especially would like to emphasize the appropriate work deployment, which I attribute in the first instance to the strict supervision by the SS leaders and men."<sup>5</sup> The strong demand by mayors and regional party leaders (*Gauleiter*) for prisoner laborers resulted in the deployment of the Baubrigaden being extended several times and the establishment of the first subcamps in larger cities.

The SS-Baubrigaden were commanded by SS officers, who for the most part had the rank of Obersturmführer and who had similar powers to those of camp commanders. These SS-Führer were mostly trained architects or engineers and had worked already for a long time in SS construction projects, reporting to the Amtsgruppe C. Additionally, there was a Lagerführer, 5 SS noncommissioned officers (Unterführer), and 25 men from the Amtsgruppe D who acted as guards. They were complemented by guards from the local police and Auxiliary Police and, from 1943 on, by Wehrmacht soldiers.

SS-Baubrigade III, Köln, takes a break from clearing rubble in October 1943, taken by Josef Fischer. The annotation reads: "View from our kitchen window. A work column takes a rest. They are inmates from one of the concentration camps, which were erected en masse. Ca. Oct. 1943."

NS-Dok

The prisoner detachments moved into the cities for up to a week at a time. They mostly did heavy physical labor such as breaking up and transporting away the rubble, loading and unloading, and recovery of reusable materials, or they constructed bunkers or emergency accommodations. They were often assigned to the physically demanding Corpse Detachments (*Leichenkommandos*) that had to recover bodies from the rubble and place them in coffins. Work in the bomb detonation detachments (*Bombensprengkommandos*) was feared because many prisoners were killed while recovering unexploded bombs. With inadequate tools and poor clothing, working up to 12 hours a shift, lack of food, and almost nonexistent medical care, the prisoners in the Baubrigaden were also subject to a high degree of terror from the SS guards and *Kapos*.

In 1943, the emphasis for the Baubrigaden shifted from working for the cities' administrations to benefiting German industry. Indicative of this transformation was the establishment of the SS-Baubrigade IV, which was sent in August 1943 to Wuppertal following an aerial offensive against the Ruhr. The Armaments Ministry had determined that it was less the

damage than the absence of workers after bombing raids that caused a decline in armaments production. The SS-Baubrigade IV would create dwellings for the workers in the Ruhr as well as reestablish the companies' infrastructure.<sup>6</sup>

Since the autumn of 1942, shootings and execution of concentration camp prisoners for real or supposed escape attempts or for looting took place increasingly under the eyes of the German public. The Düsseldorf poet Emil Barth is one of the few to document in writing the prisoner columns. He noted in his diary on December 7, 1943, on the prisoners in an SS-Baubrigade: "Out of the silence of those rooms built almost air-tight into the social structure and to which Dostojewsky in his time gave the name of the charnel house . . . already for a long time a gloomy army has been drawn into our cities to clean up the rubble: a cursed shadow people, dishonored, enslaved, lost, like figures in the twilight of the underworld, swaying on the rubble and stones, almost melting into the colorless mass of the ruins."<sup>7</sup> The surrounding community reacted with a mixture of disgust, fear, and withdrawal to the SS-Baubrigaden camps, which were mostly established in the center of the cities. To be sure, there were gestures of sympathy vis-à-vis the prisoners, such as secretly giving them food. However, substantial help during an escape or direct intervention during visible acts of violence was an exception. The attitude toward the SS-Baubrigaden shows that the city population had to a large degree accepted the concentration camp system, thereby providing a basic factor for the preservation and expansion of the central instruments of National Socialist rule.

Nevertheless, the prisoners regarded the majority of the SS-Baubrigaden as better camps. The work in the deserts of rubble was difficult to guard and gave the prisoners an opportunity to find food, which was of central importance to survival. In addition, in the largely destroyed cities there were better opportunities to escape, especially during bombing raids. Information on events at the front was easier to gather, and illegal communication much easier to organize in the Baubrigaden than in the main camps, due to outside contacts. Escape attempts were supported by those who were determined opponents of the regime, above all by male and female foreign forced laborers who would organize false papers or refuge.

The SS-Baubrigaden consisted as a rule of male non-Jewish prisoners. An exception is the SS-Eisenbahnbaubrigade X, which consisted overwhelmingly of Hungarian Jewish men who had escaped destruction in Auschwitz II-Birkenau. Based on the system of prisoner self-administration (*Häftlingsselfverwaltung*) in the main camps, German prisoners usually formed the thin layer of leaders as prisoner-functionaries, while the large majority of the prisoners were of Polish or Soviet nationality. There were often internal struggles in the SS-Baubrigaden, lasting for months, over who would occupy one of the functionary positions. To the extent that the prisoners were able to act with solidarity and to remove violent or especially collaborative functionaries, they managed to limit abuses and lower the death rate.

An analysis of the death rate in the SS-Baubrigaden shows that at times it was higher than the death rate in the main camps. There were also considerable differences between individual SS-Baubrigaden camps. At one extreme was the sub-camp of the SS-Baubrigade II in Osnabrück, where 86 out of 250 prisoners died within six months; the other end of the scale was the SS-Baubrigade IV in Wuppertal with only 1 recorded death within a nine-month period, out of 600 prisoners.<sup>8</sup> Diverse death rates resulted from the behavior of the SS leadership, the type and length of the work, the prisoners' food supply, the internal relationships of violence, and the behavior of the outside community.

The more the German Reich was pushed into a defensive position, the more the SS-Baubrigaden were deployed in areas crucial to the war effort. The SS-Baubrigade I took the lead in March 1943, when it was relocated to the occupied British Channel Island of Alderney. Hitler had ordered that the Channel Islands, the westernmost German outpost facing Great Britain, were to be converted into unconquerable fortresses. The prisoners worked with Wehrmacht soldiers, Organisation Todt (OT) units, and forced laborers on the inhabited island in converting it into a fortress. The first plans were developed here to murder all prisoners in the event of an Allied advance. In August 1943, Himmler instructed the leaders of the SS-Baubrigade I: "If during an attack the prisoners give the slightest indication of creating difficulties, you are to intervene immediately and shoot the guilty ones. If turmoil persists, then without a moment's hesitation you are to shoot all the prisoners."<sup>9</sup>

In the spring of 1944, Kammler relocated just about all SS-Baubrigaden to his new areas of responsibility, the V weapons construction program and the underground relocation of the armaments industry. From March 1944, 2,500 prisoners of the SS-Baubrigade I and IV had to build sites for the V weapons at various locations in northwestern France,

under the direction of the Army and Luftwaffe. Beginning in May 1944, the SS-Baubrigaden III and IV, and later the SS-Baubrigaden I and V after being recalled from the West, worked on relocation projects in the Harz Mountains and were subordinated to the Dora concentration camp, which became independent in October 1944.

In the autumn of 1944, Kammler appointed the commander of the SS-Baubrigade V, SS-Sturmbannführer Gerhard Weigel, as Inspector of All Baubrigaden (Inspekteur sämtlicher Baubrigaden), as Kammler was no longer capable of fulfilling this role due to his many special tasks. At this time, the Allied offensive had substantially damaged the rail network, especially the marshaling yards. The Amtsgruppe C with its SS-Baubrigaden was in a position to react quickly. In close cooperation with the Armaments Ministry and the local railway directorates, the SS established nine SS-Eisenbahnbaubrigaden by the end of the war, whose prisoners had to live in converted goods wagons. In these concentration camps on rails, the prisoners were sent to strategically important railway junctions to restore destroyed facilities. The guards included a range of railway employees who underwent a short training course in Dachau.

The first signs of the dissolution of the SS-Baubrigaden appeared with the last phase of the evacuation of the concentration camps in the Reich, although the functioning of the SS-Baubrigaden was to be maintained until the end. Kammler directed the SS-Baubrigaden to the area of the planned Alpine Fortress (Alpenfestung), where the Germans meant to make a last stand to hold Bavaria, Upper Italy, and Upper Austria. The objective of the weeks-long evacuations, which began in March 1945 and were marked by shootings and mass escapes, was the Mauthausen subcamp system, but not all of the 10 SS-Baubrigaden sent there would reach their destination. The dissolution of the remaining 3 SS-Baubrigaden occurred as part of the evacuation of Mittelbau (III, IV) and Neuengamme (V).

None of the SS leaders commanding SS-Baubrigaden were convicted after the war. They argued, successfully, that as architects or engineers they had only been in charge of technical matters. Some convictions occurred as part of denazification proceedings for membership in the SS. For crimes committed in the SS-Baubrigaden, mostly lower SS ranks or a few prisoner-functionaries were sentenced in cases in which their direct involvement could be proven.

**SOURCES** Before becoming the subject of a dissertation—Karola Fings, *Krieg, Gesellschaft und KZ: Himmlers SS-Baubrigaden* (Paderborn: Schöningh, 2005)—the SS-Baubrigaden were, for the most part, only referred to briefly in monographs on concentration camps. Only a few construction brigades have been dealt with in regional studies; for the SS-Baubrigade I: Andreas Kussmann, *Ein KZ-Aussenlager in Düsseldorf-Stoffeln* (Düsseldorf: Landeshauptstadt Düsseldorf, Bezirksverwaltungsstelle 3, Stadtarchiv, 1988); SS-Baubrigade III: Karola Fings, *Messelager Köln. Ein KZ-Aussenlager im Zentrum der Stadt* (Cologne: Emons, 1996); for a few SS-Eisenbahnbaubrigaden: Bernd Boll, "Konzentrationslager auf

SS-Baubrigade, Kriegsgefangenen- und 'Arbeitserziehungslager,'" *Antifa-Bericht* 6(1982): 23–29; Rainer Fröbe, "Hans Kammler. Technokrat der Vernichtung," in *Die SS. Elite unter dem Totenkopf. 30 Lebensläufe*, ed. Ronald Smelser and Enrico Syring (Paderborn: Schöningh, 2000), pp. 305–319; T.X.H. Pantcheff, *Alderney. Fortress Island-The Germans in Alderney, 1940–1945* (Sussex: Phillimore & Co., 1981).

In addition to the fact that subcamps became the subject of research only relatively late, and that local camps were taboo topics for local city histories for a long time, the poor state of

research is largely due to the extreme lack of primary sources. In the absence of a coherent central collection on the SS-Baubrigade, there are only a few conceptual sketches and reports in the BA-B (NS 19/14, NS 19/771, NS 19/1572, NS 19/2065, NS 4 Buchenwald). In the archives at German memorial sites one can find only memoirs of former prisoners of the SS-Baubrigaden. For the Buchenwald concentration camp, the THStA-W holds a relatively detailed contemporary report (KZ Buchenwald und Haftanstalten). One of the most important sources comprises the investigation files and court proceedings at the BA-L, which holds not only problematical interrogation records but sometimes also diary sketches by former prisoners or copies of prisoner lists. The files in the former BDC as well as the files of the denazification proceedings (*Spruchgerichts-* or *Entnazifizierungsverfahren*) in the BA or in German state archives are of importance in reconstructing administrative relationships. Also useful are holdings of city archives, especially those dealing with building construction as referred to in the notes to this entry.

## ALDERNEY (KANALINSEL) (SS-BB I)

The only concentration camp on British soil existed between March 1943 and June 1944 on the Isle of Alderney, one of the Channel Islands lying off the coast of Normandy. The Wehrmacht occupied these islands at the end of June 1940, and Alderney was the base for the SS-Baubrigade I. Adolf Hitler paid special attention to the military fortifications of the islands and ordered that they should be made into impregnable fortresses as part of the “Atlantic Wall.”

The SS-Baubrigade I was assigned to Alderney as a result of an agreement between Hans Kammler, head of the SS-Business Administration Main Office (WVHA) construction bureau, and Xaver Dorsch, head of the Organisation Todt (OT) and under Albert Speer.<sup>1</sup> The background to the use of concentration camp prisoners was the decision made in mid-1942 that, if possible, only those foreign workers would be deployed on the Channel Islands who could be placed under particularly close guard, thereby eliminating the possibility of sabotage or espionage. As it was, the harsh living and working conditions on Alderney meant that many forced workers from the East soon died or became incapacitated and had to be replaced.

Alderney, which is only eight square kilometers (three square miles) large, is the third largest Channel Island after Jersey and Guernsey. Other than a handful of locals, all 1,500 inhabitants had been evacuated to Great Britain before the German troops occupied the island. In the spring of 1943, around 3,800 Wehrmacht soldiers and 4,000 workers from the OT lived on Alderney. Of the latter, as many as 3,000 were foreigners, most of them Soviet forced laborers, and they were quartered in four barracks camps distributed across the island. Each camp was named after an island in the North Sea.

Sylt, one of these barracks camps, was constructed in August 1942 for workers from the East and was occupied by the prisoners of SS-Baubrigade I. They had been sent from Düsseldorf on February 22, 1943, in a transport holding 730 prisoners from Sachsenhausen and 270 from Neuengamme, and they arrived on the island on March 5, 1943. The barracks camp construction, located on the grounds of the former British airfield, was not completely finished, so many prisoners had to live outside for a longer time. In the first months, the water supply was very inadequate.

When the SS took control of the Sylt camp, they strengthened the security measures, enclosing the interior of the camp, which included the prisoners' barracks, with an electrified barbed-wire fence. Around that was a fenced-in exterior ring, and the SS barracks and offices were in the western part of this exterior ring.

Camp commandant Maximilian List lived in a newly constructed building outside the fences. More than 60 SS men were assigned to guard the construction brigade, half of them Germans from the Reich, the other half SS men recruited from Alsace, Croatia, Poland, the Sudetenland, and Slovakia.

Dr. Otto Panzer, the OT-Frontführer and head of construction administration for the OT-Section “Adolf,” coordinated the work deployment of the forced laborers and thereby also the deployment of concentration camp prisoners on the island. The engineer Leo Ackermann, an OT construction supervisor, replaced him, most likely in September 1943. Such supervisors allocated the prisoners to the work sites, while the SS was responsible only to guard them.

Concentration camp prisoners had to work 12 hours a day and once a month had a half-day on Sunday off. They were almost exclusively employed in heavy physical labor, building tunnels or roads, and excavating material used for construction purposes. When they worked on building fortifications during 1943, their work was supervised directly by OT companies.

The prisoners were terrorized at their work by the SS, certain violent Kapos, workers of the OT, and Wehrmacht officers. In a November 1943 report from Kammler about the SS-Baubrigade I, one reads: “During the construction of the fortifications, there was a sixty percent increase in productivity during the first nine months of 1943 as compared to 1942. This was accomplished with the concerted and combined efforts of all participating parties.”<sup>2</sup> Kammler attributed this to the high productivity shown by the concentration camp prisoners, in which he had a vested interest, though it is also true that the presence of these prisoners increased the pressure on the other forced laborers. The OT used the Sylt camp as a labor education camp (*Arbeitserziehungslager*) once the sub-camp was in place.

The SS-Baubrigade I was Germany's westernmost sub-camp and, in the case of an invasion, would have fallen into the hands of the British and the Americans. Already in August 1943, Commandant List was given directions from Heinrich Himmler personally on how he was to deal with the prisoners to avoid this eventuality at any cost. A secret order of August 19, 1943, reads: “In the event of an attack, if there are prisoners who give the slightest signs of making difficulties, you are immediately to intervene and shoot the guilty parties. If this does not quell the disturbance, then you are to shoot all the prisoners without hesitation.”<sup>3</sup>

The situation for the concentration camp prisoners was oppressive on this island, occupied as it was solely by military personnel and members of the paramilitary OT. Aid to prisoners was expressly forbidden, and one could not even consider trying to flee from this heavily mined island. Poor hygienic conditions, malnutrition, and heavy physical labor led to the quick spread of disease. A number of sick prisoners are said to have been taken out of the infirmary by SS men and shot dead. In June 1943, 200 prisoners were classified as unfit for work, and on instruction from the military commander of the island, List ordered that they be returned to the Neuengamme concentration camp.<sup>4</sup> In early July 1943, about 150 prisoners were taken to Cherbourg, and several of them were able to escape once they reached French soil. Himmler opened disciplinary proceedings against List, as well as

against Kurt Klebeck, head of the guard troop, but dropped them again by October 5, 1943.<sup>5</sup>

List and Klebeck were replaced in the spring of 1944, as they were needed for other tasks, and SS-Obersturmführer Georg Braun took command of SS-Baubrigade I in March 1944.<sup>6</sup> Braun was 32 at the time, a surveyor by profession, and had served at the French and Polish front before being transferred for a 4-month stint at the central construction office in Lublin. In April 1942, he was transferred to Oranienburg (Amtsgruppe C), where he worked in various departments, including for 10 months as adjutant to Hans Kammler. A former prisoner described Braun as an unpredictable, mostly drunken SS officer who remained a fanatical Nazi to the very end.<sup>7</sup>

At the end of 1943, the construction brigade was assigned to help build launching ramps for the V-2 rocket at St. Omer and, to that end, was transferred on December 17, 1943, to the “Rommel Barracks” in Cherbourg on the French mainland. However, Dorsch successfully intervened with Himmler, and the construction brigade was transferred back to Alderney on January 7, 1944.<sup>8</sup>

When, during the night of June 24–25, 1944, the SS-Baubrigade I was finally withdrawn from the island, only 636 of the 1,000 original prisoners remained.<sup>9</sup> Some 54 had escaped during the transport to Alderney, and about 210 prisoners had been selected to be transported back to Neuengamme. About 100 deaths can be reconstructed from the surviving records, many of which can be ascribed to malnutrition and epidemics. But other killings can be identified as the result of violent crime: numerous prisoners were shot.<sup>10</sup> Among the dead, one also finds the victims of a “prisoners’ war” that raged on Alderney. Several prisoner-functionaries turned out to be particularly brutal and corrupt; some were murdered by other prisoners, others by the SS.

After an odyssey through the English Channel lasting several days, the construction brigade reached St. Malo on July 1, 1944.<sup>11</sup> From there, they continued on by train on July 4, 1944. As rail transport in France had come almost to a standstill due to precision bombing attacks, the train had to make a wide detour around Paris and travel via Rennes, Nantes, Angers, Tours, Dijon, Nancy, Toul, Namur, and Ghent to its final destination at Kortemark, Belgium. The SS officers in charge, Georg Braun and Otto Högelow, showed ruthless severity during this flightlike relocation. Will Kreuzberg wrote of the evacuation: “Yes, we got to know the bloodhound and his sidekick in their naked form during the following weeks.”<sup>12</sup>

Högelow threatened that for every Russian who escaped he would shoot another Russian, and for every escaped German, another German. Yet the prisoners were encouraged in their resolve to escape by the openly sympathetic French population they encountered. In Angers, where the train rolled slowly through and where a prisoner who had died was buried at a railway embankment, the French had yelled out to the SS: “You murderers! Take your corpses with you!”<sup>13</sup> When the train finally arrived at Kortemark on July 28, 1944, only 572

prisoners of the original 634 remained; 27 had managed to escape, 9 had died during the trip, and 26 had been shot, 17 of them during an escape attempt in the Toul area on July 26, 1944.

Because Alderney was “the only concentration camp on British soil,” speculation about unimaginable acts of cruelty, even of gas chamber killings, that might have taken place on this Channel Island began in Great Britain soon after the war. T.X.H. Pantcheff, a military intelligence officer, was sent by the British War Office to the liberated Channel Islands already in May 1945 to investigate, and his subsequent publications indicated the subcamp was not an extermination camp. In fact, a comparison of the Düsseldorf and Alderney locations is particularly instructive, as the key members of the SS were identical in both places, and the replacement of List and Klebeck did not lead to any qualitative changes at Alderney. Every sixth prisoner died in Düsseldorf, while it was every tenth prisoner who died on Alderney. That means significantly fewer prisoners died in a relatively closed-off area populated only by German military units than did in a camp in the middle of a large German city.

After the war, not a single SS member was convicted for crimes committed on Alderney. List lived on, undisturbed, in the Federal Republic of Germany, into the 1980s.

**SOURCES** T.X.H. Pantcheff published a study that paid particular attention to the Alderney subcamp: *Alderney, Fortress Island* (Sussex: Phillimore & Co., Ltd. 1981); and also an article about his subsequent research, “Britain’s Only SS-Concentration Camp,” *WWII-I* (May 1988): 31–35. In 1982, Solomon H. Steckoll collected a series of articles that had been published in the newspaper *The Observer* into a book, *The Alderney Death Camp* (London, 1982). It would only be 20 years later that a German publication addressed this subcamp in more detail, and this permitted some of the factual errors in earlier works to be corrected: Karola Fings, *Krieg, Gesellschaft, und KZ: Himmler’s SS-Baubrigaden* (Paderborn: Schöningh, 2005).

The archival sources are relatively plentiful. Former prisoner Willi Kreuzberg published his memoirs about Alderney just after the war, *Schutzhäftlinge erlebten die Invasion* (Weimar: Thüringer Volksverlag, 1947). In addition to the reminiscences collected by Pantcheff after the war, the ZdL (now BA-L) also holds numerous eyewitness reports (IV 404 AR-Z 57/67 and 410 AR 63/77). Other reports are held at the Hans Schwarz Archive in the FGNS-H, and here one can also find the originals of the reports of prisoner deaths. This information and a list of burials, which can also be found at the ASM and the AG-NG (which contain data on deceased prisoners), provide important sources of information.

## AUMALE ("INGA") (SS-BB V)

Between April and August 1944, there was a subcamp for the SS-Baubrigade V stationed in Doullens in Aumale, which lies between Rouen and Amiens in northwestern France. The prisoners worked for the Luftwaffe constructing launch pads for V-1 rockets. The code name of the Aumale subcamp was "Inga."

The guards, the majority of whom were soldiers, were quartered in an abandoned castle. A barracks' camp was constructed on the grounds of the castle. In July 1944, there were 571 prisoners in the camp; in August there were 541.<sup>1</sup> The prisoners were taken to work daily in the surrounding forests by truck, at times traveling distances of up to 50 or 60 kilometers (31 to 37 miles).

Władysław Wikler, the prisoner's doctor in Aumale, reported that the sick from the Hesdin and Rouen subcamps were also brought to Aumale. He also stated that prisoners committed acts of sabotage so that the V-1 rockets could not be launched. A few prisoners were killed detonating the rockets, and some prisoners were hanged for sabotage.<sup>2</sup>

Numerous prisoners in Aumale, as in the other camps of the SS-Baubrigade V, tried to escape and make contact with the French resistance. Kazimierz S. remembers that as a result the SS implemented punishment actions in the camp: "I would also like to add that I often saw prisoners' bodies at the camp gate in Aumale. I heard they were the corpses of prisoners that had been shot because others had escaped from the

camp. As a result, the prisoners, fearful of being shot, kept an eye on each other to make sure no one tried to escape from the camp."<sup>3</sup>

Toward the end of August 1944 the camp was dissolved. The prisoners were transported, via Doullens, to the Harz, where, in October 1944, they were placed under the control of the newly established Mittelbau concentration camp.

**SOURCES** There are only a few files and survivors' reports that provide information about the Aumale camp, which can be found in THStA-W, NS-Dok, and BA-L. The Doullens subcamp's archival and secondary sources offer some starting points for further research.

## BERLIN (SS-BB II)

In the spring of 1944, Amtsgruppe C of the SS-Business Administration Main Office (WVHA) relocated all SS-Baubrigaden to the Harz Mountains. From this point on, the emphasis was to be on the construction of subterranean armament facilities and no longer on removing rubble in the larger cities. Only SS-Baubrigade II was sent to a metropolis—to the capital of the Reich, Berlin.

Preparations for relocating this brigade began in March 1944. On March 30, Amtsgruppe D of the WHVA ordered the relocation of the SS members of this brigade from the SS-Death's Head Unit at Neuengamme to Sachsenhausen.<sup>1</sup> The construction brigade arrived in Berlin in mid-April 1944.

Though he was being investigated on charges of corruption in Hamburg at the time, Johannes Karger remained SS commandant of this construction brigade until at least the end of 1944.<sup>2</sup> Shortly before the brigade left Berlin on February 14, 1945, SS-Obersturmführer Karl Raab assumed command.<sup>3</sup> The SS guard contingent was augmented by reservists made available by the city of Berlin.

The Sachsenhausen concentration camp remained responsible for the prisoners even after their transfer to Berlin, and they were assigned new numbers without having to be processed through that camp. According to the final quarterly report of the SS-WVHA, the SS-Baubrigade II comprised 1,055 prisoners at the end of March 1944.<sup>4</sup>

The construction brigade moved into the bombed-out administrative offices of the Auergesellschaft AG, located at 24/25 Friedrich-Krause-Ufer in the Moabit district of Berlin.<sup>5</sup> SS-Oberscharführer Anton Stockmeier was head of the Kommando, and his room and the guards' office were on the ground floor.<sup>6</sup> Prisoner dormitories were on the first floor,

and accommodation for the guards was on the second. Windows facing the street or the Berlin-Spandauer-Kanal were bricked up to prevent escapes.<sup>7</sup>

From this location, prisoners were taken into the city, under guard and by tram, to remove piles of corpses and to clean up rubble, principally at the Hansa-Ufer (embankment) on the Spree River. Prisoners pulled down buildings that had been destroyed and reinforced walls that were threatening to collapse—dangerous and difficult work, according to survivors. Stones or bricks that could be reused were sorted from the rubble, cleaned, and then loaded onto ships. Pawel Wasiljewitsch Pawlenko remembered the advertising slogans he had read in the Berlin trams even more than 50 years later: “Respecting others in traffic reduces your cares” and “Well lathered is half-shaved.”<sup>8</sup>

Gradually, more and more prisoners were transferred to a construction site at Müggelheim, and by October 1944 at the latest, the SS-Baubrigade II was divided. Some prisoners, the so-called Auer Kommando, remained at the building of the Auergesellschaft AG and were formally designated as SS-Baubrigade IIa, while others were part of the Müggelheim Kommando, formally designated as SS-Baubrigade IIb, under the command of SS-Oberscharführer Christan Thode. Two smaller subcamps existed at Ferch and Spreenhagen.<sup>9</sup>

Müggelheim lies in the Köpenick district of Berlin, and according to survivors, prisoners had to build makeshift housing and small apartments for soldiers and SS members, and their dependents, who had been bombed out of their homes. Thus, one can conclude that this construction brigade was acting on behalf of the Berlin SS-Bauinspektion. In June 1944, the SS-WVHA (Amtsgruppe C) had issued an order, following a directive from Heinrich Himmler, according to which the Waffen-SS and Police Construction Inspection Offices were to build makeshift housing for bombed-out or evacuated members and dependents of the Waffen-SS, the general SS, and other “loyal followers.”<sup>10</sup> To save on men and matériel, such housing was to be self-constructed when at all possible, and the use of prisoners was only permitted if “important war-related construction programs” would not thereby be hindered.<sup>11</sup> Amtsgruppe C apparently intended to employ this particular construction brigade for its own purposes.

Prisoners in this brigade lived in Müggelheim in a barracks camp, lit at night, that was encircled by barbed wire and guard towers. Food was brought from Sachsenhausen, and the guards lived in small houses around the camp, some of which were still under construction. Even civilians lived in these small houses.<sup>12</sup> Smaller groups of prisoners were continually deployed for special projects, including building a bunker at Gosen or doing carpentry work at a shipyard.<sup>13</sup>

But the main work of the brigade was to build houses, using stones or bricks reclaimed from the rubble as construction material. These were brought from the Hansa-Ufer down the Spree River. Some prisoners used what strength they had left to sabotage this work that was being done for the benefit of SS families. According to a report by Georg M., his work

detail diverted so much cement and lime that the work almost came to a standstill for a prolonged time period.<sup>14</sup>

According to statements from former prisoners and SS guards, the small Müggelheim detachment grew from around 100 to around 800 prisoners and became the largest subcamp of the SS-Baubrigade II. While no definitive figures about the Berlin construction brigade exist, reports on arrivals and departures of SS men in early 1945 allow one to conclude that the Friedrich-Krause-Ufer detachment must have had several hundred prisoners. In January 1945, almost the entire guard was replaced, with those born after 1900 replaced by men born in the 1880s and 1890s who had been drafted by the SS at the end of 1944 and had attended a short training course in Oranienburg. At the end of January, 59 SS men were standing guard at the Friedrich-Krause-Ufer, and 71 at Müggelheim.<sup>15</sup>

Around mid-February 1945, some of the prisoners in SS-Baubrigade II were transferred to Sachsenhausen. Others, some from the camp in Müggelheim and some from the Friedrich-Krause-Ufer camp, were combined with prisoners from the Lichterfelde subcamp to create a group of 504 men.<sup>16</sup> The prisoners were carted to Köpenick in a construction train and left Berlin on February 25, 1945, as “2. SS-Baubrigade (E).”

While the members of the SS were not called to task after the war, their victims often suffered for decades from the terrors they lived through. Pawel Wasiljewitsch Pawlenko, who survived the SS-Baubrigade II in Bremen, Wilhelmshaven, Hamburg, and Berlin, said in a 1992 interview:

I dream most of all about the roll call parade grounds, and lining up. I dream in particular about how they led us to the work squads, but hundreds of people who had fallen were lying there. Or how they deliberately threw a cap beyond the boundary, and shot people just to get three days' leave. When I dreamt that, I screamed: “Come back! Don't go there!” That was what I dreamt at first, but then the dreams began to lessen. I still dream even today, once about how I crawled over corpses when we worked in Berlin, that something exploded, I fell, and it ripped into me. I awoke and was still whole. In those first years, I dreamt of how I was strung up by the Gestapo.<sup>17</sup>

**SOURCES** The SS-Baubrigade II in Berlin was first researched as part of a larger study of all the SS-Baubrigaden: Karola Fings, *Krieg, Gesellschaft, und KZ: Himmler's SS-Baubrigaden* (Paderborn: Schöningh, 2005). Before this, data could only be found in the more general studies of the Sachsenhausen subcamps or of the Berlin camp system. They did not go much further than what could be found in the lists compiled by the ITS.

Contemporary records that could provide more detail about the construction brigades have hardly survived. Lists of the guards may be found at the RTKIDNI, Collection 1367, Concentration Camps and Prisoner of War Camps in Germany. Of special importance are the investigations by the

ZdL (now BA-L), IV 406 AR 594-596/73, which include testimony by former prisoners and guards, as well as the reports by prisoners that are held at the AG-NG and at the Hans Schwarz Archive at the FGNS-H.

## BOCHUM (*SPRENGKOMMANDO*) (SS-BB III)

On June 19, 1943, 40 prisoners from the SS-Baubrigade III at the Duisburg subcamp were transferred to Bochum. There they were assigned to a Luftwaffe demolition squad (*Sprengkommando*).<sup>1</sup>

The transfer of prisoners from Baubrigade III, stationed in Cologne, to the demolition squad was the result of a directive from Heinrich Himmler. Faced with a high death rate among firefighters and the members of security and auxiliary services who were engaged in defusing unexploded bombs, Himmler had issued a directive on November 3, 1942, stating that

“in all cases, insofar as the situation permits,” prison inmates or concentration camp inmates were to be used for the dangerous work of uncovering and disposing of unexploded bombs. This followed a directive Adolf Hitler issued in October 1940.

Commanders of the Ordnungspolizei (Order Police) were made responsible for their quarters, food, and security.<sup>2</sup> A few days after this directive was issued in November 1942, the SS-Business Administration Main Office (WVHA) Amtsgroupe D instructed the concentration camp commandants to prepare suitable prisoner details. In those concentration camps where construction brigades already existed, prisoners were to be selected from the brigade.<sup>3</sup> An additional factor was that in the early summer of 1943 the Royal Air Force was increasingly using time-delayed fuses in the bombs it dropped over the Rhineland and Westphalia, and their removal was regarded as particularly dangerous.

It is not known where the prisoners were quartered, though it is possible they were held in a prison. In the above-mentioned directive, Himmler had stated: “To save on guard units, concentration camp prisoners used for this work are to be kept in police prisons for the duration.”

Until August 12, 1943, regular reports sent to Buchenwald gave the strength of the squad at 40 prisoners. After August 13, there were only 26, but by December 13, it had risen to 29.<sup>4</sup> In the extant Baubrigade III reports after this date, there is no further mention of this subcamp, so one may assume it was disbanded at the end of 1943.

The drop in the number of prisoners in August 1943 can be traced back to a tragic accident. On August 12, 1943, in Bochum, SS-Unterscharführer Hans Born and 13 prisoners were killed when an unexploded bomb detonated. One severely injured prisoner survived the blast but died two days later in Bochum’s Protestant hospital.<sup>5</sup> According to a political prisoner who was a member of the Kalkum detonation squad, the explosion occurred because the ordnance technician acted improperly. In a 1988 interview about the incident, Kurt Selbiger said: “[It was] a bomb with a delayed fuse as well as an additional displacement fuse. That was a major impediment to digging up such bombs: if the bomb was moved, this displacement fuse was prematurely activated. It was very, very difficult to disarm this type of fuse. And then the ordnance technician ties the bomb to a car and has a dozen prisoners grabbing the rope to help pull the bomb out of the hole. . . . And then they all went to heaven.”<sup>6</sup>

The bodies of the prisoners whose names are known were cremated in Cologne’s Westfriedhof cemetery.<sup>7</sup>

A photographic record of the Bochum Fire Brigade includes photos of concentration camp prisoners at work. One photograph, showing prisoners with a recovered bomb near the city’s car fleet park, has been published to date.

**SOURCES** For more information on the SS-Baubrigaden, see Karola Fings, *Krieg, Gesellschaft, und KZ: Himmler’s SS-Baubrigaden* (Paderborn: Schöningh, 2005).

Primary sources for this camp and the SS-Baubrigaden more generally may be found in the following collections: NWHStA-(D), ASt-N, IfZ, THStA-W, ASt-Dü, and ASt-Kö. A published photograph of the SS-Baubrigade III, Bochum, at work may be found in Karola Fings, *Messelager Köln. Ein KZ-Aussenlager im Zentrum der Stadt* (Cologne: Emons, 1996), p. 11. The photograph is reproduced from collection "Bo37" of ASt-Boc.

## BREMEN (SS-BB II)

In October 1942, the SS-Baubrigade II was assembled at the Neuengamme concentration camp and comprised 1,000 prisoners; 750 of them were sent to Bremen and 250 to Osnabrück, both of which Heinrich Himmler had visited in early September 1942 during his tour of cities destroyed during bombing raids.<sup>1</sup> In Bremen, heavily bombed during the night of June 25, 1942, the city administration, the Gau leadership, and the Weser-Ems Gau Chamber of Commerce all made efforts to obtain labor for the city. The manager of the latter wrote to the Reich Labor Ministry in September 1942: "We are in a war zone. You can see this when you visit Bremen. . . . The last heavy attack on Bremen caused immense damage and created a large number of new problems. One of the most important concerns labor, for what we lack above all are people who can remove the enormous amount of rubble."<sup>2</sup>

At this point, SS-Hauptsturmführer Gerhard Weigel, in his capacity as leader of the SS-Construction Brigade II, was already in negotiations with the Bremen city administration. The most important issue to be resolved was accommodation, but there were also questions about the specific deployment of labor, payment, and guarding the prisoners. Weigel inspected a barracks camp owned by the Francke Werke, located on the Warturmer-Heerstrasse, and declared it suitable.<sup>3</sup> The 750 prisoners were moved there no later than October 14, 1942.<sup>4</sup>

However, the office of the Senator for Construction (Senator für Bauwesen) noted that as the camp "did not meet the

necessary requirements for guarding concentration camp prisoners," a different site had to be found.<sup>5</sup> Thus, in 1942, a camp then being built for the Deutsche Arbeitsfront (German Labor Front, DAF) in the stable buildings of the Hindenburg barracks, located on Bossdorfstrasse, was requisitioned. Prisoners were quartered in the stable buildings, while barracks for the SS, lavatories, the canteen, and a kitchen still had to be built. The Senator for Construction Matters paid rent to the Bremen military administration for the use of the stable buildings and the grounds.<sup>6</sup> From the Bremen registry office death notices, one can ascertain that relocation occurred between December 18 and 22, 1942, as prisoner Petris Jonis is recorded as dying at the camp on the Warturmer-Heerstrasse on December 18, 1942, while the address of Alexej Trubatsch, who died on December 22, is given as Bossdorfstrasse.<sup>7</sup>

The SS-Baubrigade II remained in Bremen until April 1944, though their numbers shrank continually. Some prisoners went with the SS-Baubrigade I to Alderney in February 1943, a larger detachment went to Wilhelmshaven, and the greatest part of the prisoners, and thus the main camp of SS-Baubrigade II, was transferred to Hamburg after August 1943. At this point, only 272 prisoners remained in the camp.<sup>8</sup>

SS-Hauptsturmführer Weigel was a notable early member of Nazi organizations and had considerable experience in responsible positions in concentration camps as well as at SS construction offices. Born on February 23, 1908, in Flöha, Saxony, Weigel joined the Hitler Youth when he was 16, then the SA in Bautzen in 1929, and switched to the SS in 1930. Trained as a heating engineer, he only became firmly established in party positions by 1933, after a longer period of unemployment.<sup>9</sup> From 1934 on, he was part of the SS contingent at the Sachsenburg concentration camp, and following the dissolution of that camp, he participated as an engineer in constructing the Buchenwald concentration camp. After working at the Sachsenhausen concentration camp, at the SS administration office, and with the SS-Verfügungstruppe (Special Assignment Troops), Weigel joined the SS-Bauinspektion at the Higher-SS and Police Leader (HSSPF) for Reich Süd. In January 1942, he then became head of the Bauinspektion at the HSSPF for Russland Süd in Kiev and remained there until he was transferred to the SS-Baubrigade II.

Weigel negotiated with the authorities and directed the deployment of the prisoners, but he was less visible to the prisoners than were the camp leaders in Bremen, Osnabrück, and Hamburg who reported to him. Weigel was assigned a deputy, Diplomingenieur Johann Karger, who was in command of the technical deployment, and when Weigel was ordered to take command of the SS-Baubrigade V in March 1944, Karger took over as commander of the SS-Baubrigade II.<sup>10</sup> As of mid-October 1942, only 30 SS men were available to serve as a guard detail, so it was necessary to recruit local help to strengthen prisoner surveillance.<sup>11</sup>

As in other cities, the construction administration coordinated the brigade's deployment. In Bremen this was divided

between two offices; a Director of Emergency Measures (Leiter der Sofortmassnahmen) was responsible for dealing with war damage, thus also for removing rubble. Fritz Köster, described as an “uncompromising National Socialist” and an “extremely capable organizer,” was in charge of Department III and was thus responsible for labor deployment and for setting up camps. Oberbaurat Wilhelm Wortmann directed Department IV and was responsible for damage removal and cleanup work.<sup>12</sup> In addition, Paul Wegener, Gauleiter of Weser-Ems, and Senator Hans-Joachim Fischer, who headed internal administration and occasionally the construction administration as well, also dealt with the concentration camp prisoners. After Wilhelmshaven had been hit by a bombing raid, it was Fischer, also Wegener’s deputy as Reich Defense Commissioner, who offered that city SS-Baubrigade II prisoners.<sup>13</sup>

The prisoners’ work was of great importance for Bremen. A report of the SS-Business Administration Main Office (WVHA) stated that by December 1943 prisoners of the SS-Baubrigade II in Bremen had worked on more than 100 sites in the city, cleaning up rubble and undertaking rescue operations. In February 1944, there were still 346 prisoners working at 28 sites.<sup>14</sup> The population soon became familiar with seeing prisoners in their blue-and-white-striped clothes, colloquially calling them “Zebras.”<sup>15</sup> It did not escape the city authorities in charge that what the prisoners were able to accomplish was due to being terrorized by the SS. Fischer, the Bremen Senator for Construction Matters, wrote the WVHA on January 22, 1943: “I take this opportunity to record my recognition of the extraordinary work the construction brigade has done in removing bomb damage in Bremen. I especially want to emphasize here this valuable deployment that I regard as due primarily to the strict supervision SS leaders and men have exercised.”<sup>16</sup>

It is known that 168 men from the Bremen construction brigade camp died between October 1942 and April 1944, 123 of them in the first five months. Alexander P., a former prisoner, stated that there was “no order in the camp.”<sup>17</sup> Prisoners were regularly and indiscriminately beaten; bread was thrown to them, and only those strong enough got some of it. Fritz Bringmann, a prisoner medic who was transferred from Osnabrück to Bremen in May 1943, reported high levels of illness and many extremely weakened prisoners. The poor state of health in his opinion was the result of a ruthless pace of work, long shifts, the many roll calls, and poor nutrition.<sup>18</sup> The brutal behavior of SS-Rottenführer Brunken, who as roll-call leader strode about the camp with a stick or whip, hitting anyone who did not greet him correctly enough, only worsened matters. Brunken regularly mistreated prisoners in the infirmary, and in at least one case, he personally shot a recaptured prisoner.<sup>19</sup> A number of prisoners died because they were refused access to air-raid shelters during bombing raids.<sup>20</sup> Prisoners also died after having to stand for hours at punishment roll calls imposed after unsuccessful escape attempts.<sup>21</sup>

The situation in Bremen eased markedly when the majority of the SS-Baubrigade II was transferred to Hamburg in August 1943, along with camp leader Gerhard Weigel.<sup>22</sup> In the course of 1943, some of the SS personnel were also withdrawn and replaced by older guards. Pawel Wasiljewitsch Pawlenko reported: “And then the lame appeared, those who had been shot up at the front. They had been at the front for two years, and had seen what that meant. They behaved better toward us.”<sup>23</sup> The situation was also helped by an improvement in the supply of food. A report for the period from July to September 1943 mentions that the city of Bremen allocated additional rations to the SS-Baubrigade II “in recognition of its extraordinary work.”<sup>24</sup> In fact, former prisoners report that in 1943 supplies improved.<sup>25</sup> However, it is not possible to say to what extent this improvement can be attributed to the city. It is certain that beginning the fall of 1943, Bringmann passed on several hundred kilograms of potatoes in a sealed store-room to fellow prisoners. When the loss was discovered, Bringmann had to flee, according to him on April 4, 1944.<sup>26</sup>

As in other construction brigades, when it became known that the camp was to be transferred from Bremen to Berlin, efforts to escape increased, supported in particular by the forced laborers and imprisoned opponents of the regime. At the high point of the use of forced labor in 1944, Bremen held about 200 camps with about 25,000 foreigners, both male and female.<sup>27</sup> Bringmann said:

At that time, there were tens of thousands of forced deportees who had to work in the firms. They were also used to clear rubble and as a result came in contact with our comrades. What bound them together was their similar background, that they had been violently separated from their relatives, and their common interest in returning home alive. . . . It did not take long for help to be offered in the form of forged identity papers or as permits from relatives who worked in labor camps for Eastern workers in Hannover, Braunschweig, Osnabrück, and other places. With these identity papers and often with pre-bought train tickets, good preconditions were in place for a quick departure from Bremen. We arranged and provided appropriate clothing, food, and money.<sup>28</sup>

According to Bringmann, 15 prisoners were able to escape in this manner between the fall of 1943 and the spring of 1944, and only 1 was recaptured.

Neither the leaders of the construction brigades nor others belonging to the SS guard were ever prosecuted after the war for crimes committed in the Bremen camp. The dead are buried in the Osterholz cemetery in Bremen.

**SOURCES** As part of an investigation into the SS construction brigades, the Bremen camp has only recently become the focus of research in Karola Fings, *Krieg, Gesellschaft, und KZ: Himmler’s SS-Baubrigaden* (Paderborn: Schöningh,

2005). Prior to this, it was only mentioned in passing in other works about Bremen during the Nazi era, such as Inge Marssolek and René Ott, *Bremen im Dritten Reich: Anpassung—Widerstand—Verfolgung* (Bremen: Carl Schünemann Verlag, 1986). On the history of Bremen during the Nazi era, see Herbert Schwarzwälder, *Geschichte der Freien Hansestadt Bremen*, vol. 4, *Bremen in der NS-Zeit* (Bremen: Edition Temmen, 1995).

Primary source material for SS-Baubrigade II at Bremen is widely dispersed. The most important is the Hans Schwarz Archive in the FGNS-H (memoirs and the *Totenbücher* from Neuengamme) as well as the AG-NG (memoirs and other collections of material). Another source is the files of the Senator für Bauwesen in the StA-Br (Collection 4,29/1) and the files at the ZdL (IV 406 AR 245/69), available at BA-L.

## DORTMUND (*SPRENGKOMMANDO*) (SS-BB III)

On order of the Higher-SS and Police Leader West, the Cologne-based SS-Baubrigade III sent 40 prisoners to Dortmund on May 31, 1943. There they were assigned to the Luftwaffe bomb disposal squad (Sprengkommando).<sup>1</sup> This transfer can be traced back to a directive of Heinrich Himmler.

Faced with a high death rate among firefighters and the members of security and auxiliary services who were engaged in defusing unexploded bombs, Himmler had issued a directive on November 3, 1942, stating that "in all cases, insofar as the situation permits," prison inmates or concentration camp inmates were to be used for the dangerous work of uncovering and disposing of unexploded bombs. This followed a directive Adolf Hitler issued in October 1940.

Commanders of the Order Police were made responsible for the accommodation, rations, and security of the prisoners.<sup>2</sup> A few days after this directive was issued in November 1942, Amtsgruppe D instructed concentration camp commandants to prepare suitable prisoner details. In those concentration camps where construction brigades already existed, prisoners were to be selected from the brigade.<sup>3</sup> An additional factor was that in the early summer of 1943 the Royal Air Force was increasingly using time-delayed fuses in the bombs it dropped over the Rhineland and Westphalia, and their removal was regarded as particularly dangerous.

It is possible that the SS-Baubrigade's inmates were held in a prison. In the above-mentioned directive, Himmler had stated: "To save on guard units, concentration camp prisoners used for this work are to be kept in police prisons for the duration."

There is little data, and only a few prisoner names are known, about the Dortmund bomb disposal squad. At the beginning of July 1943, the SS-Baubrigade III reported that there were 75 prisoners in the squad, and by July 20, there were only 34. These 34 remained there until August 23, 1943, when the subcamp was closed.<sup>4</sup>

The names of the first 40 prisoners are in the above-mentioned SS-Baubrigade III document, dated May 31, 1943. The 5 prisoners killed on June 9, 1942—the Yugoslav Hermann Bobeck, the Poles Stanislaus Affek and Edward Kapłonski, and the Ukrainians Petro Jajez and Michailo Saloid—when an unexploded bomb detonated in Derne, near Dortmund, were probably among them and were probably also part of the Dortmund bomb disposal squad.<sup>5</sup>

**SOURCES** The Dortmund bomb disposal squad was cited only in one publication that dealt with the SS-Baubrigade III, Karola Fings, *Messelager Köln: Ein KZ-Aussenlager im Zentrum der Stadt* (Cologne: Emons, 1996), p. 112.

The THStA-W (NS 4 Buchenwald and KZ Buchenwald) has a few records on the SS-Baubrigade III, Dortmund. There are no known survivors' reports.

## DOULLENS (BUCHENWALD) [AKA SS-BAUBRIGADE WEST] (SS-BB V)

The SS-Baubrigade V, also known as SS-Baubrigade West, existed from March to October 1944 and, with its complement of about 2,500 prisoners, was the largest of all the SS construction brigades. Reichsführer-SS Heinrich Himmler ordered it formed on December 29, 1943. It was tasked with building V-weapon sites in the northwestern part of occupied France.<sup>1</sup>

Prisoners for the new brigade initially were selected from the Cologne SS-Baubrigade III, which was expanded on January 17, 1944, with the addition of 1,000 prisoners from Buchenwald. In March, further transports included prisoners from Buchenwald and from the Neuengamme SS-Baubrigade.<sup>2</sup> In selecting prisoners, care was taken to ensure none among them spoke French, to make it difficult for them to be in contact with the civilian population. However, a number of prisoners hid their linguistic abilities, as they hoped to escape once they were in France.

Some 60 percent of SS-Baubrigade V were Soviet citizens, 30 percent were Poles, and the remainder were Germans, Czechs, or Yugoslavs.<sup>3</sup> The construction brigade left Cologne in four transports between mid-March and early April 1944,

the first (with 500 prisoners) going to Liques, the second (with 576) to Hesdin, the third (with 750) to Rouen, and the fourth (with 700) to Aumale. However, a total of 2,518 prisoners arrived in France, as 4 prisoners had managed to escape from each of the last two transports. The first two transports were directed to the area west of St. Omer and south of Calais, where they were to construct V-2 sites for the Army. The 1,442 prisoners on the other two transports were to construct V-1 sites for the Luftwaffe further south, in the area around Aumale and Rouen.<sup>4</sup>

The SS-Baubrigade V was commanded by SS-Hauptsturmführer Gerhard Weigel, previously leader of the SS-Baubrigade II, who upon being appointed to lead SS-Baubrigade V also was promoted to SS-Sturmbannführer, effective June 21, 1944.<sup>5</sup> Weigel accompanied the first prisoner transport and organized the quarters for the next transports. He also conducted the initial negotiations with the military offices of the LXV Army Corps, and together with Colonel Zimmermann of the Supreme Command—West (Oberbefehlshaber West), he determined the sites of the deployment;<sup>6</sup> 95 SS men were assigned to guard duty, and 26 men were sent to deal with administrative and technical matters, all of them having come from Buchenwald. The Army and Luftwaffe, respectively, made 61 and 213 soldiers available.<sup>7</sup>

In order to have prisoners quartered as closely as possible to the construction sites, the brigade gradually set up at least 14 camps in the Haute-Normandie and Nord-Pas-de-Calais *départements*. Several hundred prisoners were quartered in the large halls of the citadel at Doullens, often referred to as the “main site.” Weigel is supposed to have directed the activities of the construction brigade from there.<sup>8</sup> Larger subcamps existed for a long period of time in Aumale, Hesdin, and Rouen. Other locations of deployment listed are Amiens, Arras, Beauval, Bergueneuse, Cassel, Mimoyecques, Montdidier, St. Omer, and Vignacourts. Prisoners were allocated to camps and construction sites according to need. In July 1944, there were four large camps, given the cover names “Lisa I,” “Lisa II,” “Inga,” and “Heilag,” and by August there were 8.<sup>9</sup>

In the main, prisoners worked at “special construction sites” of the LXV Army Corps, building launch sites as well as bunkered supply depots. Heavy physical labor was required and included excavation, laying concrete, and moving building materials. In addition, prisoners were repeatedly set to work at “immediate tasks important to the war effort,” such as repairing roads or rail lines after bombing raids. They also built bunkers, and after the Allied invasion of Normandy, they dug trenches, removed unexploded bombs, and repaired the damage to fortified positions.

The heavy physical labor was immensely difficult for prisoners, some of whom weighed less than 50 kilos (110 pounds). In June 1944, the head of the SS-Business Administration Main Office's (WVHA) Amtsguppe C, Hans Kammler, wrote that because of the time pressure, prisoners were constantly “kept working at a furious pace.”<sup>10</sup> Tomasz Kiryłłow, a survivor, has described what this really meant: “Piotr grabbed

the wheelbarrow, yanked it forward and stumbled. The SS man hit him in his chest with his rifle butt. Piotr protected himself with his arms and pulled back, his eyes filled with horror. I liked him. I had to watch how he tried to turn away from the blows of the SS whip. Blood ran from the wounds on his head. Finally, he pulled himself up and tried to move. ‘Stop!’ an SS man screamed, aimed his machine gun and fired. Piotr Majcenko turned his face to his murderer, took a few steps forward, and then sank to the ground.”<sup>11</sup>

The situation in Normandy meant that, for the first time, a construction brigade was working in an occupied country. That meant the SS was surrounded by an overwhelmingly hostile civilian population, and it was nearly impossible to prevent contacts between prisoners and the French population. Right in front of the SS guards, and apparently without fear, French men and women approached the prisoners, asked them questions, and gave them food. When prisoners were taken to work by truck, they were helped in the villages they passed through. The SS men became increasingly nervous, as resistance fighters targeted these transports.

It was difficult terrain for the SS, particularly since the increased bombing raids on the French Atlantic coast made it harder and harder for guards to know what was going on. Prisoners also had become more and more restless and refractory after D-Day. Given the military situation, Weigel had considerable difficulties maintaining discipline among the SS men, with Army and Luftwaffe guards in particular accused of lapses in duty. In one detachment, either May or June 1944, there must have been a mass breakout after a Wehrmacht post was attacked and overrun.<sup>12</sup> Prisoners were now threatened with random reprisal: for every prisoner who escaped, some of those left behind would be shot indiscriminately.

Yet despite this draconian threat of punishment, escapes remained common. At the end of June 1944, 91 prisoners were reported as having escaped, and 11 had been shot either while escaping or while trying to escape.<sup>13</sup> The high number of successful escapes was due to the great willingness of the French population to render assistance; only 2 prisoners who had fled in France were recaptured.

As a result, Commander Weigel was even more determined to break the link between prisoners and the surrounding population. On July 7, 1944, he put together a large transport of 350 prisoners suspected of planning escapes or of being in contact with the French, to be sent to Buchenwald.<sup>14</sup> He also ordered further disguising measures: the SS-Baubrigade V was renamed the “SS-Baubrigade VII,” and some of the prisoners were given civilian clothes and permitted to grow out their hair so as not to be recognized as concentration camp prisoners.<sup>15</sup>

Initially, Weigel actually was able to slow the prisoner exodus. However, before the SS-Baubrigade V was to be transferred back to Germany, the number of escapees increased again—many prisoners not wishing to return under any circumstances. In fact, in the statistics kept by the Buchenwald

concentration camp, the Normandy numbers stick out: during 1944, no other subcamp had so many prisoners successfully escaping in such a short time. Almost 20 percent of the escapees noted in these Buchenwald records until mid-September were from the SS-Baubrigade V.<sup>16</sup>

The actual use of V-weapons, on whose launching sites prisoners had worked, only began after the Allied landing in Normandy with a June 11, 1944, order from the LXV Army Corps. There were initial difficulties, but by the end of July, some 5,000 V-1 rockets had been launched against Great Britain. Anti-aircraft Artillery Regiment 155 was in charge of firing the rockets, but the Allied advance forced the LXV Army Corps to order this regiment to retreat on August 12, 1944. The Allied advance probably also prompted the SS-Baubrigade V to begin preparing to evacuate.

During August 1944, prisoners from the Aumale, Hesdin, and Rouen subcamps were gathered together in Doullens; the SS-Baubrigade V returned to Germany by rail via Lille. During a bombing raid in Lille on August 31, 27 prisoners died.<sup>17</sup> Survivors said that among these victims were prisoners wounded in an earlier bombing raid and being cared for by the French in their homes. The next day, the SS are said to have collected 10 to 15 of the wounded, stuck them in a bunker, and killed them with hand grenades.<sup>18</sup>

Between August 30 and September 11, 1944, 1,824 prisoners arrived at the Harz Mountains, in three large groups with about 550 prisoners each and in three smaller groups with less than 100 prisoners each. As no appropriate accommodations were available, they were divided up among SS-Baubrigaden III and IV, as well as the camps of the Mittelbau complex.<sup>19</sup> Despite this, SS-Baubrigade V continued to exist in an administrative sense through September, the number of hours they worked (on projects B15 and B17) being calculated by Special Inspectorate II.<sup>20</sup> Mittelbau, which had become an independent concentration camp by this time, assumed responsibility for 648 prisoners of the SS-Baubrigade V by the end of October—though by this time the construction brigade itself was in Osnabrück and had been renamed as an SS-Eisenbahnbaubrigade.<sup>21</sup>

**SOURCES** It was only late in the research into the SS-Baubrigaden that this particular brigade was examined in Karola Fings, *Krieg, Gesellschaft, und KZ: Himmler’s SS-Baubrigaden* (Paderborn: Schöningh, 2005).

Documentation of the SS-Baubrigade V is very spotty. In addition to contemporary reports, which are in the BA-B (NS 19/14, pp. 51–58), there are also collections of material titled “NS 4 Buchenwald” and “KZ Buchenwald and Haftanstalten” to be found at the THStA-W. The ITS Sachdokumenten collection holds documentation on the administrative continuation of SS-Baubrigade V. Of particular significance are the trial documents of the former ZdL held at BA-L (IV 406 AR-Z 207/73). Here one can find copies of the transport lists which permit an almost complete reconstruction of the names of the prisoners in SS-Baubrigade V. There are references to the SS-Baubrigade V as well in the interviews with former forced laborers archived at NS-Dok. Kiryllow, who success-

fully escaped from the Hesdin camp, has also written an impressive memoir, Tomasz Kuryłow, *“Und ihr werdet doch verlieren”: Erinnerungen eines polnischen Antifaschisten* (Berlin: Dietz Verlag, 1985).

## DUISBURG (BUCHENWALD) (SS-BB III)

Between February 1943 and May 1944, there was a subcamp of the Cologne SS-Baubrigade III in Duisburg. The prisoners' main task was to clear the city from rubble. The prisoners were accommodated in a barracks camp on the corner of Korn Strasse and Emmerich Strasse, in the suburb of Meiderich. The SS-Baubrigade I from Sachsenhausen was previously quartered here.

A few days after the SS-Baubrigade I was transferred to Alderney on February 21, 1943, the commander of the Cologne camp, Karl Völkner, took control of the remaining 342 prisoners. During the transfer, the commander of the guard detail of SS-Baubrigade I and four unknown members of the Duisburg city administration were present.<sup>1</sup> The commander of the camp in Duisburg was SS-Oberscharführer Franz Janitschke. Prior to this appointment, he had been a security guard in Cologne. Völkner had all the prisoner-functionaries transported back to Buchenwald and replaced them with other prisoners.

Völkner instigated a thorough selection of the Sachsenhausen prisoners now registered in Buchenwald. On the day he took control, 59 of the 342 prisoners were in the infirmary and 5 were in the hospital. In his report, sent to Buchenwald on the takeover, he wrote: “The condition of the prisoners is so bad that on Monday, February 22, 1943, only fifty prisoners could go to work. . . . The condition of their dress (Zebra), underwear and shoes is the worst imaginable.”<sup>2</sup> During the course of the day he forced another 100 prisoners to work, although their ability to function was limited. In order to keep numbers high for the work details, Völkner, on March 6, 1943, returned all weakened or sick prisoners to Buchenwald.<sup>3</sup> On March 13, the Duisburg camp received a transport of 270 prisoners from Buchenwald.<sup>4</sup>

The barracks camp was completely destroyed during a bombing raid on the night of April 26–27, 1943. The prisoners had no chance to seek refuge during the raid; 30 prisoners died, and another 28 were severely injured. The Diakonen Institute at Kühlenwall 64 was selected as the new quarters. The buildings of the Institute had been severely damaged in the summer of 1942 and had partially been reconstructed by the autumn so as to accommodate “workers from the East.” The SS took over the building in April 1943.<sup>5</sup> During the next few weeks, the prisoners had to finish the repairs to the Diakonie building. Once that was done, they were accommodated in the infirmary.<sup>6</sup>

Engelbert Oberhauser, who with another prisoner was transferred from Buchenwald to Duisburg in the summer of 1943, reported that

[t]he camp was in a hospital, burnt out during a bombing raid, a former convent of the Zisterzensier Order. It had extremely strong walls. Completely burnt to the ground, it stood in the ruins of the city centre. The Duisburg concentration camp was situated in the remaining commercial buildings. As an emergency measure the prisoners' accommodation was covered with paper maché and boards. The truss was completely burnt. The prisoners were dressed in Zebra and to a large extent in civilian rags. Among them were several German prisoner-functionaries; mostly the prisoners were Soviet and Polish SS slaves. . . . Full of lice, dirty and half-starved we learned the evening roll call. The buttocks of many were exposed; for most, only their knees stuck out of

their ripped trousers. They returned from work—demolition, cleaning up and defusing bombs. As we two lined up for roll call, we looked like lords among beggars with our new Zebra clothes, given to us before the transport left Buchenwald.<sup>7</sup>

For months, the conditions in the Diakonen Institute remained catastrophic. A report prepared in September 1943 indicates that the camp was being extended. A bombing raid again heavily damaged the building. The camp became plagued with lice, and a delousing chamber was built. There was a lack of washing facilities, and the kitchen was equipped with the bare minimum.<sup>8</sup> The catastrophic conditions did not prevent Völkner from asking for an additional 500 prisoners.<sup>9</sup>

Numbers in the camp varied considerably. Prisoners were often transferred to other detonation squads, to Buchenwald or to other camps. During the summer there were just under 400 prisoners; in October 1943, there were 1,018, the highest-known number; and in the spring of 1944, there were just over 800.<sup>10</sup>

The Duisburg “Office for Immediate Measures” (Amt für Sofortmassnahmen) was a special authority located within the city’s Building Administration. The prisoners worked at the request of the office in cleaning up and repairing damage caused by bombing raids. In March 1944, on instructions from the city, the prisoners were required to work additionally on Sundays and recycle bitumen roof sheeting so that the small allotment holders had roof sheeting to repair the buildings on their garden sheds.<sup>11</sup> Occasionally, the prisoners had to work for private companies, including August Gähringer, between September 1943 and the end of January 1944, and the German General Electric Company (AEG). The largest prisoner detachment worked at Franz Münnemann; 40 prisoners are documented as working there daily between October 1943 and January 1944.<sup>12</sup>

Many prisoners were seconded over a period of weeks from Duisburg to detonation squads in the Ruhr, which were under the control of the Higher-SS and Police Leader West. In June 1942, 120 prisoners were brought to the SS-Baubrigade III subcamp in Düsseldorf on Kirchfeld Strasse. These prisoners operated as a detonation squad until at least August 1943.<sup>13</sup> Other prisoners were sent to Bochum and Essen to retrieve unexploded bombs.<sup>14</sup>

During the spring of 1943, the number of deaths in the Cologne camp decreased significantly. The death rate remained high in Duisburg, however. Camp commandant Franz Janitschke was responsible for the conditions in the Duisburg camp. According to the prisoners, he was autocratic. Janitschke was born on March 1, 1897, in Ober-glogau (Upper Silesia). By trade he was a carpenter and had joined the SS in 1935.<sup>15</sup> In 1939, he joined the SS-Death’s Head Storm Unit at the Buchenwald concentration camp, where he remained until September 1942, when he was transferred as a guard of the SS-Baubrigade III to Cologne.

The prisoners in Duisburg were guarded by 10 SS men. While they were working, they were guarded primarily by local police.<sup>16</sup>

There were at least 49 other deaths at the SS-Baubrigade III subcamp in Duisburg, in addition to the above-mentioned 30 victims of the bombing raid. Of these, 15 died while defusing bombs; 2 were killed while cleaning up; for 20 the cause of death was said to be “Lungs—TB” or “Cachexy” (excessive loss of weight); 4 are said to have been shot while “trying to escape”; and 1 is alleged to have “committed suicide” by hanging.<sup>17</sup>

At the end of March 1944, 400 prisoners were withdrawn from Duisburg to help form the newly created SS-Baubrigade V.<sup>18</sup> The subcamp was finally dissolved on May 9, 1944: the remaining 131 prisoners were taken to Cologne, where a day later they were taken with prisoners from Cologne to Wieda in the Harz Mountains.<sup>19</sup>

Following preliminary inquiries by the Central Office of State Justice Administrations (ZdL) regarding crimes committed against prisoners in the SS-Baubrigade III, the Cologne State Prosecutor began investigations in 1968. Janitschke was one of the three accused; based on survivors’ statements, he was suspected of taking two French prisoners to Cologne, where they were killed, and of shooting two Russian prisoners in the nape of the neck during a bombing raid. The State Prosecutor could not prove Janitschke’s involvement, and the proceedings ceased in 1975.<sup>20</sup>

**SOURCES** Details about the events in the Duisburg subcamp were first published in 1996 in a monograph on the Cologne SS-Baubrigade III: Karola Fings, *Messlager Köln. Ein KZ-Aussenlager im Zentrum der Stadt* (Cologne: Emons, 1996). See also Eric Hannoschöck et al., *Initiative wider das Vergessen: KZ Aussenlager Duisburg-Ratingsee. Das Lager und die Entstehung des Mahnmals* (Duisburg: Stadt Duisburg, 1986). Earlier publications by men and women of Duisburg only dealt with the period up to the destruction of the barracks camp in Duisburg-Meiderich: Rolf Ingerfurth and Andrée Wolff, “Ein Gefangenlager in Duisburg-Meiderich (Ratingsee) zur Zeit des Nationalsozialismus” (MSS, Duisburg, 1981), in *AST-DU*, 41/302.

The *AST-DU* holds the files of the Building Office as well as a few documents on the use of the concentration camp prisoners (Collection 600, Nr. 794, 865, 866). The most important collections of documents are the THStA-W (Collections NS 4 Buchenwald as well as the Buchenwald Concentration Camp and Prisons, in particular Nrs. 9 and 10); the ZdL (IV 429 AR 1304/67), now BA-L; and NWHStA-(D) (Court Rep. 118/1174–1190 and 118/1338–1349). The Ruhr Museum, Essen, has six photographs taken by Willy van Heekern that show concentration camp prisoners removing rubble in Duisburg in 1943.

## DUISBURG (SACHSENHAUSEN) (SS BB I)

On October 15, 1942, 400 of the 1,000 prisoners made available to the SS-Baubrigade I by the Sachsenhausen concentration camp were sent to Duisburg to perform cleanup work after bombing raids. The Duisburg camp itself was administered from the headquarters of SS-Baubrigade I in Düsseldorf, though it had its own command structure as well as its own SS and police guards.

Local Nazi Party (NSDAP) functionaries and police are reported as having taken part in discussions over a suitable location for this subcamp. According to one set of memoirs, an NSDAP member suggested Sterkrade, a city district of Oberhausen, as a site, since locating a camp there would also intimidate the surrounding population. The counterargu-

ment was that Communists living in Sterkrade might hide prisoners who managed to escape. For that reason, Duisburg was chosen instead.

A fenced-in camp with four housing and one “commercial” barracks was built for the prisoners in the Meiderich district of the city. According to the recollection of a nearby resident, the camp at the corner of Korn and Emmerich Strassen was erected “overnight,” and in the ensuing months, four or five barracks were added to it.

Prisoners were put to work following directives issued by the city administration’s “Office for Immediate Action,” headed by Duisburg’s Mayor Freytag.<sup>1</sup> Invoices between the city and the SS-Business Administration Main Office (WVHA) for food, lodging, and the labor performed were handled by the Düsseldorf construction brigade.<sup>2</sup>

The prisoners’ main task was to clear rubble from the city. The city administration was so pleased with their work that the mayor personally requested that the WVHA extend the prisoners’ time beyond the planned two months.<sup>3</sup>

Neighboring residents could look directly into the camp. Nevertheless, by the 1980s memories of the camp were vague. One eyewitness tried to explain it this way: “You could see into the camp from a few apartments, but most people in Meiderich did not know what kind of a camp it was. To begin with, most thought it was a labor camp, and no one had any idea that this was a subcamp of a concentration camp. National Socialist indoctrination meant hardly anyone gave a thought to what was going on inside the camp.”<sup>4</sup>

The reason for this limited view was the widespread belief that concentration camp prisoners were in any case “criminals” and opponents of the regime, whose imprisonment and tough handling were therefore justified. This is reflected in Walter Ring’s city chronicle of Duisburg, published soon after the war: “Passers-by on the street could see the work [of rubble removal] being done by the closely guarded prisoners in their zebra-striped clothing, but could not get closer to them. It was said that they were professional criminals and anti-socials (*Asoziale*).”<sup>5</sup>

The torments and arbitrary brutality typical of the SS could be seen in Duisburg as well: “On the Sundays when prisoners did not have to work, the SS ordered them into the courtyard. Prisoners had to collect small rocks in buckets, but when a bucket was full, it was dumped out and the whole process began again. Those who didn’t work quickly enough risked a beating.”<sup>6</sup> Inside the camp, the only protection against bombing raids was a trench dug out of the earth, with a makeshift cover over it. According to residents in the area, the SS even hindered prisoners from using these trenches. These neighbors themselves felt the camp endangered them, since during night bombing raids, the camp remained brightly lit in order to prevent escapes.<sup>7</sup>

The prisoners also were punished for acts committed by corrupt SS who enriched themselves on goods retrieved from the rubble. In cleaning up the rubble from a Duisburg *Gymnasium* (state-maintained secondary scheme), for example, bottles stored in the city’s wine cellar underneath it

disappeared—according to a former prisoner, they were stolen by SS men. However, a police officer investigating the loss accused three Russian prisoners of the theft, and they were sent back to Sachsenhausen and were said to have been hanged there.<sup>8</sup>

Three members of the SS-Baubrigade I, all German, are buried in Duisburg.<sup>9</sup> There are no exact numbers for others who died. The SS-Baubrigade I began withdrawing from Duisburg during February of 1943. One small group of prisoners was taken to Düsseldorf on February 19 and, together with prisoners already there, left three days later in freight cars heading to the British Channel Island of Alderney. Some 342 prisoners remained in Duisburg-Meiderich and were then integrated into the SS-Baubrigade III on February 21 in Cologne, thus coming under the control of the Buchenwald concentration camp.<sup>10</sup>

The first systematic investigations began in the 1970s, though the State Prosecutor in Ludwigsburg responsible for the investigations found insufficient evidence to justify a prosecution. Only the camp elder from Duisburg, Adolf Fehrenbacher, was sentenced to a multiyear jail term for the crimes he committed later in the war.

**SOURCES** In the early 1980s, a trade union youth group composed of Gymnasium pupils drew attention to the fact that a subcamp of a concentration camp had existed in Duisburg during World War II. That initiative led to a publication in 1986 of their research and survey results, though this long remained the only (and difficult to obtain) information about the SS-Baubrigade I camp: see Eric Hannoschöck, et al., *Initiative wider das Vergessen: KZ Aussenlager Duisburg-Ratingsee. Das Lager und die Entstehung des Mahnmals* (Duisburg: Stadt Duisburg, 1986); Annelie Kloth, “Wider das Vergessen: KZ Aussenlager Duisburg,” in *Tatort Duisburg 1933–45. Widerstand und Verfolgung im Nationalsozialismus*, ed. Rudolf Tappe and Manfred Tietz (Essen: Klartext, 1993), 2:634–637. It would only be much later that a proper examination of the camp history, correcting some previously incorrectly interpreted data, would follow: Karola Fings, *Krieg, Gesellschaft und KZ: Himmlers SS-Baubrigaden* (Paderborn: Schöningh, 2005).

The ASt-DU hold only a few sources (Bestand 600, Bauverwaltungsamt). As the Duisburg subcamp was only a subsidiary camp of the SS-Baubrigade I in Düsseldorf, it did not feature significantly in postwar investigations by the ZdL (IV 404 AR-Z 57/67 and 410 AR 63/77), now BA-L.

## DÜSSELDORF (BUCHENWALD) (SS-BB III)

On July 19, 1943, 120 prisoners of the SS-Baubrigade III were brought from the Duisburg subcamp to Düsseldorf in order to be deployed by order of the Higher-SS and Police Leader (HSSPF) West to retrieve unexploded bombs.<sup>1</sup> The deployment of prisoners for demolition squads by the SS-Baubrigade III stationed in Cologne was due to an order by Heinrich Himmler. In the face of the high number of fatalities of firemen and members of the security and rescue services in defusing unexploded bombs, Himmler advised the offices responsible for the removal of unexploded bombs on November 3, 1942, to follow an order by Adolf Hitler dating back to October 1940. According to that order, the dangerous exposure and removal of unexploded bombs was “in all cases as far as possible” to be done by inmates from prisons or concentration camps. The senior commanders of the Order Police were responsible for the quarters, food, and further security of the prisoners.<sup>2</sup> A few days later, Amtsgruppe D instructed the commanders of the concentration camps to hold appropriate groups of prisoners ready. In those concentration camps that had organized construction brigades, prisoners were to be taken from these camps.<sup>3</sup> Another factor in the decision was that the Royal Air Force, in the early summer of 1943, had dropped an increasing number of bombs with delayed fuses in the Rhineland and Westphalia. The removal of these fuses was extremely dangerous.

The prisoners were accommodated in a school building at Kirchfeldstrasse 74–80 in that part of the city known as Friedrichstadt. A month earlier, 50 prisoners from the “Kalkum” detonation squad had been quartered there. On June 30, 1943, Wasil Bliznjuk (born in 1921) and Semjon Plushnikow (born in 1911) were killed while digging out unexploded bombs.<sup>4</sup> The remaining 118 prisoners remained at Kirchfeldstrasse until August 23, 1943.<sup>5</sup> Thereafter, the camp appears to have been dissolved—presumably the prisoners were returned to the Duisburg subcamp of the SS-Baubrigade III.

**SOURCES** There is no available research into this camp, which existed for only five weeks. The prisoners of this bomb search squad have not been given any attention because the buildings at Kirchfeldstrasse 74–80 were used for a long time

to accommodate the Buchenwald subcamps Kalkum and Deutsche Erd- und Steinwerke (German Earth and Stone Works, DESt).

## DÜSSELDORF (SACHSENHAUSEN) (SS-BB I)

The SS-Baubrigade I was one of the first generation of construction brigades, sent by Heinrich Himmler into the destroyed cities of western and northwestern Germany. On October 13, 1942, 1,000 prisoners marched from the Sachsenhausen concentration camp to the Oranienburg railway station. Two days later, they arrived at Duisburg. There the detachment was divided: 400 prisoners remained in Duisburg, while 600 prisoners on October 20, 1942, proceeded to Düsseldorf.

The SS-Baubrigade I took up quarters in an undeveloped area at Stoffeler Kapellenweg, district Stoffeln, Düsseldorf. There the Düsseldorf Road Construction Authority had already commenced construction of barracks for the accommodation of prisoners. Next to where the hotel present-day Haus Kolvenbach is to be found was the barracks camp. Housing did not adjoin the site, but a public park used frequently for recreation was not far away, and next to the camp, there were the Stoffeln Cemetery and small garden plots.

The commander of the SS-Baubrigade I was Maximilian List.<sup>1</sup> He was born on February 9, 1902, in Munich, where he graduated in 1930 from the Higher Technical College as a building engineer. In February 1937, he began his career with the SS-Construction Office. From August 1941 he commanded the SS-Building Inspectorate (Bauinspektion) Ostland at the Higher-SS and Police Leader (HSSPF) Riga, until September 25, 1942 when he was recalled to take command of the SS-Baubrigade I. List is seldom mentioned in surviving prisoners' reports; instead, SS men from Amtsgruppe D under his command are emphasized. Admittedly though, a former prisoner holds List responsible for the terror at work that reigned in the construction brigade: "On instruction of Hauptsturmführer (Captain) List, they [the prisoners] were forced to the workplace by all means possible, including beatings. Those who could not walk were beaten, as were the comrades who suffered from diarrhea. When these frail prisoners were driven into the camp in the evening, the SS, with

Hauptsturmführer List at the head, had only a smile to spare for them."<sup>2</sup>

List administered the construction brigades' camps in Düsseldorf and Duisburg with a staff structured in a way similar to the concentration camps' headquarters. Deputy Commander and head of both camps was SS-Obersturmführer Kurt Klebeck, who was in charge of prisoner security, accommodations, and supplies. At both locations, additional camp leaders, work commanders, and commanders of the guards were instrumental in determining the atmosphere of the camps. In Düsseldorf there were SS-Unterscharführer Roland Puhr (the camp's deputy commander), SS-Hauptscharführer Otto Högelow (commander of the guard), and Kurt Wittwer (commander of the labor detachments). All three remained with the construction brigade when it was transferred in February 1943 to Alderney. All three, as well as Klebeck, were charged on numerous counts of unlawful killing after the war. Wittwer, by trade a bricklayer and builder of stoves and a member of the SS since 1932, was feared in his role as construction foreman: "Everyone trembled when he came. He was ruthless with the prisoners and did not even spare the sick."<sup>3</sup> After the war, Wittwer in turn described Puhr, who was the subject of investigations regarding a number of murder charges, as a totally brutal and scheming person.<sup>4</sup> Högelow was repeatedly described as a "political fanatic" who mistreated prisoners for slight reasons and who also participated in shootings.<sup>5</sup> The SS guards were reinforced by local police working in the field.

The prisoners, most of them Soviet and Polish nationals, had to march daily into the city, where they had to clear rubble from the city. More than 100 deaths are known. Notwithstanding the deaths, there must have been a constant supply of new prisoners because the brigade's strength, at the time of its withdrawal from the city, was stated as 600.<sup>6</sup> The use of the prisoners was under the direction of the city's Air Protection Office, Labor Assignment Department. It was responsible for the "recruitment of German and foreign laborers of every type" and for their distribution, accommodation, food, and payment.<sup>7</sup> The importance of the quota of prisoners for cleaning up the city is apparent, because the prisoners represent nearly one-fifth of the 3,300-strong labor force that was available for this work in January 1943.<sup>8</sup>

Germans living in the vicinity of the camp could see how the prisoners, under blows, shifted earth from one place to another and back again. The neighborhood could see how the SS men threw rocks at the prisoners and how prisoners were pushed from the roof of a barrack, and the residents could hear screams and shots at night. It was soon generally known that after work the prisoners were punished in the camp by the SS men. Repeatedly, residents in the neighborhood saw dead prisoners.

To see the debilitated prisoners became an everyday occurrence also for the rest of the population. However, as Emil Pascha reported, in a few cases it seems to have generated a shocklike reaction: "As the overcrowded train slowly went past you could not help but see the faces of those miserable

yellow-tainted people, their skulls shaved close, nothing but skin and bones. Their appearance was shattering—the passengers slowly turned their faces in silence and the women wiped their tears.”<sup>9</sup>

Even when there was an initial desire to help, people preferred to stay away from the camp fence and the prisoners. According to Heinz Zimmermann, who was then 14 years old: “The prisoners swayed more than they were walking. They were closely guarded by SS guards. Not one of us, including our mothers, dared to give food to the prisoners. We were too scared.”<sup>10</sup> Few bystanders registered the reality of conditions in the concentration camps. The limits of perception are reflected by Emil Barth in his diary entry on the camp: “I will never forget that human community is based on violence and suffering. But it is demoralizing to look eye to eye with the victims—victims who, not to mention the innocent, agonizingly force the question whether or not, even with the individual case of perfect guilt, guilt is acquitted with guilt.”<sup>11</sup>

Heavy labor, hunger, and violence were the main causes for the 111 deaths, registered in the first five months of the existence of the SS-Baubrigade I Düsseldorf. Embezzlement resulted in minimal food rations. According to Alfons Kupka, a former prisoner, “[T]he food was extraordinarily poor. . . . Roll Call Leader Puhr with the help of the cook expropriated food so that the physical constitution of the whole detachment was very poor; almost all had degenerated to ‘Muslims’ [*Muselmänner*].”<sup>12</sup> Sick and enfeebled prisoners received no medical care. Despite their condition, they had to go to work. In the evenings, the weakest were mistreated and were often forced during the winter of 1942–1943 to spend the nights outdoors. Two SS members, Puhr and Wittwer, were later accused of deliberately killing prisoners.

Dr. Albermann was the SS doctor for the SS-Baubrigade I in Düsseldorf. He completed the death certificates so that the deaths could not be construed as occurring due to violent crimes. Only in 6 cases are deaths by tuberculosis or septicemia recorded in the cremation records at the Düsseldorf-Stoffeln Cemetery. In all the other more than 100 cases, deaths were recorded as being due to “circulatory weakness,” “heart seizure,” or “heart attack.”<sup>13</sup> It did not escape Julian von Tempski, senior city inspector at the Stoffeln Cemetery in charge of the supervision of cremations, that the death certificates did not match reality. He stated as early as May 1946, “Among the dead were many who had been shot or hung. In most cases, death certificates were prepared stating that the relevant person had died from a weak heart or heart seizure and the like.”<sup>14</sup>

A rather large group of around 55 Jehovah’s Witnesses were assigned to SS-Baubrigade I. Some of them had been in the Sachsenhausen Punishment Detail because they had regularly gathered together in the “Bible Researchers” blocks.<sup>15</sup> They were able to make contact with fellow female believers in the city just a few days after their arrival in Düsseldorf. The women brought them food at the construction sites, and

by this means they were able to send letters to their relatives.<sup>16</sup> These connections were either not noticed by the SS and police guards or were silently tolerated. It was generally known that Jehovah’s Witnesses, because of their religious convictions, would not attempt to escape from concentration camps. One Jehovah’s Witness stated that in the camp they were singled out for torture by the Kapos. The Kapos soon fell out among themselves and one by one drove each other to their deaths.<sup>17</sup> Not one of the 111 dead of the SS-Baubrigade I in Düsseldorf was a Jehovah’s Witness, which can be partly explained by the strong sense of solidarity among the Jehovah’s Witnesses and their complete isolation from camp corruption.

The SS-Baubrigade I was withdrawn from Düsseldorf on February 22, 1943. None of those responsible for crimes committed in Düsseldorf were convicted after the war.

**SOURCES** For his book *Ein KZ-Aussenlager in Düsseldorf-Stoffeln* (Düsseldorf: Bezirksverwaltungsstelle 3, Stadtarchiv, 1988), on the SS-Baubrigade I in Düsseldorf, Andreas Kussmann interviewed former inhabitants of the camp neighborhood. While especially these sources gave a graphic picture of the reaction of the neighborhood, the organizational connections of the subcamp to the city bureaucracy are explored in Karola Fings, *Krieg, Gesellschaft und KZ: Himmlers SS-Baubrigaden* (Paderborn: Schöningh, 2005).

The most important of the dispersed sources are the investigations IV 404 AR-Z 57/67 and 410 AR 63/77 in the BA-L. The ASt-Dü, inventory IV, contains records of the Building Administration. A copy of a list of the dead of the SS-Baubrigade I survived in the Düsseldorf Cemetery Administration. It is printed in Kussmann, *KZ-Aussenlager*, pp. 202–211.

### **ELLRICH (BUCHENWALD, SACHSENHAUSEN, AND MITTELBAU) (SS-BB IV)**

The SS-Baubrigade IV was stationed from May 1944 to April 1945 in Ellrich, a small village in the Harz Mountains. As with the SS-Baubrigade III, which was also at the same time transferred from the West to Wieda in the Harz, the prisoners of the SS-Baubrigade IV were to be deployed, on the orders of the SS-Business Administration Main Office (WVHA) (Amt C), to construct a new railroad track. This railroad line ran through the Helme Valley. It was about 22 kilometers (13.7 miles) long and was designed to relieve the railroad connection between Osterhagen and Nordhausen. The SS-Baubrigade IV was assigned to the eastern construction zone.

The SS-Baubrigade IV, which had been transferred from Wuppertal, began work with 529 prisoners at Ellrich on May 17, 1944; 300 additional prisoners, mostly French, were transferred on June 7 from Buchenwald to the construction brigade. There were 826 prisoners on October 28, 1944, following the camp's administrative assignment to the newly founded concentration camp at Mittelbau. The camp reached a peak with approximately 1,240 prisoners on January 15, 1945, once the Sachsenhausen concentration camp assumed administrative responsibility.<sup>1</sup> Both changes in affiliation to a main camp did not alter the location or the type of deployment of the SS-Baubrigade IV. Mittelbau used for it the pseudonym "Erich II," distinguishing it from the camp in the same town known as Ellrich-Juliushütte (Erich I).

The rooms of the Bürgergarten Inn, once a well-known restaurant, served as living quarters. However, only a small number of prisoners were quartered there. The administration and the kitchen were located at the Ellrich camp; the largest group of the prisoners lived in a subcamp in Günzerode and were led from there to the railroad line to work. For the time being, Otto Diembt, who had been in charge at Wuppertal, remained the head of SS-Baubrigade IV. Moreover, several known SS men were part of the guard detail as well as Luftwaffe soldiers, who were taken over by the SS in the summer of 1944.

The conditions of the SS-Baubrigade IV were particularly affected by the gradual change in control to the Buchenwald subcamp Dora. From about the middle of June 1944, this camp, the largest Buchenwald subcamp in the spring of 1944, step-by-step took over the functions of the main camp. The conditions in the camps, which were controlled by the newly founded Mittelbau concentration camp in October 1944, were

significantly worse than the conditions under which the SS-Baubrigade IV prisoners had to live in Wuppertal. It is noteworthy that the camp commander, Diembt, tried to check the increased likelihood of death on the prisoners that followed the Mittelbau incorporation. Former prisoners have testified that Diembt, as in Wuppertal, also behaved properly in Ellrich, arranged for the conditions in the camp to be bearable, obtained additional vegetables for the prisoners from nearby farmers, and admonished civilians who beat the prisoners while at work.<sup>2</sup>

The SS-Baubrigade IV had an especially close connection with the Ellrich-Juliushütte camp. The Ellrich-Juliushütte camp in close proximity cast a shadow also on the lives of the construction brigade prisoners. The prisoners had heard, in part from the local population and in part from Diembt, that the conditions were very brutal in this camp.<sup>3</sup> Emil W., who worked in the office of the construction brigade, had to enter Erich I more than once. In doing so, he saw many corpses, consisting of only skin and bones, in the filthy camp, which was on the grounds of a former factory. According to Emil W., the conditions were "difficult to describe in words" and "the most gruesome that I have ever seen in my life."<sup>4</sup> There was discussion in the construction brigade that prisoners in Ellrich-Juliushütte were shot for the smallest trifling. It was made clear to the prisoners by Diembt that he distanced himself from what was happening in Erich I. Emil W. stated that "his aversion to the nearby commandships and rejecting any communication with them was generally known."<sup>5</sup>

It also appears that Diembt prevented prisoners of his construction brigade from being transferred to Dora. The judgment delivered by the denazification court on Otto Diembt on April 2, 1948, states: "The situation in the camp in Ellrich became even more precarious, since there was a second subcamp where prisoners were miserably treated and where severe failures were noted. Moreover, [in] nearby Nordhausen there was the infamous camp Dora. The commandant of this camp tried to prompt his superior authority to deploy the accused's prisoners, on account of their visible healthier condition, in the underground ordnance factory at Nordhausen. The accused was able to frustrate the attempt."<sup>6</sup>

It is not possible to verify these statements concerning the death rate in Ellrich with verifiable data. Three prisoners died prior to Mittelbau officially assuming control in October 1944.<sup>7</sup> There are no reliable records after this date. Robert Rousseau, a former French prisoner, called Ellrich an "infamous camp" in which "countless French died."<sup>8</sup>

According to a statement made by Diembt in 1963, the dispute he had with the commandant of the Mittelbau concentration camp at the beginning of 1945 also centered on the question of a possible evacuation of the camp. He then stated that he did not want to evacuate the camp but to hand it over "after the collapse." This is said to be the reason for his removal on January 31, 1945.<sup>9</sup> Officially, his removal was based on "irregularities in caring for troops and prisoners."<sup>10</sup> Diembt was promoted the day before his dismissal to SS-Obersturmführer, posted to Mittelbau, and from there to

Neuengamme. In March 1945, he took command of a company known as Kampfgruppe (Battle Group) Dusenschön in Schleswig-Holstein.

Diembt's successor was SS-Untersturmführer Erich Scholz, who was born on May 18, 1911, in Tarnowitz, Upper Silesia. He studied architecture in Berlin and since August 1940 had been a member of the SS-Main Office of Finance and Construction. In September 1942, he was transferred from the WVHA to the Reich Ministry for Armaments and Munitions. There he was an adjutant to the Armaments Delivery Office of SS-Brigadeführer Staatsrat Walther Schieber. It was from here that he was transferred on February 1, 1945, to the SS-Baubrigade IV.<sup>11</sup> Former German prisoners explicitly described Scholz immediately after the war as well as later as very human. Of central significance for this predominantly positive assessment of the survivors was his behavior during the dissolution of the camp in April 1945.

Indeed, the evacuation of the camp of the SS-Baubrigade IV in the spring of 1945 was atypical. Former prisoners stated that Scholz discussed all questions regarding the evacuation in "a downright comradely manner" with them and tried to save their lives.<sup>12</sup> Scholz tried in the last days of the war to obtain the confidence of a few of the prisoners. However, his concern for the well-being of the prisoners neither included a group of about 200 Jewish prisoners, who in the last days of the war were transferred from the SS-Baubrigade III to Ellrich, nor those incapable of marching. He is said to have made these prisoners available for the infamous "Transport Brauny," which in the night of April 6–7, 1945, gathered together in the camps of Mittelbau the last prisoners incapable of marching. According to both Scholz and survivors, he was forced by the commander in charge of the city of Nordhausen to commence his decampment. In any event, Scholz delayed the evacuation as long as possible since the SS-Baubrigade IV was the last of the Mittelbau subcamps to leave its station.

After the remaining prisoners from Günzerode had marched to Ellrich, a group of roughly 1,000 prisoners and their guards set off on April 10, 1945. According to Scholz and survivors, no one was killed on the four-day march through the Harz. The SS-Baubrigade IV, its numbers decimated by escapes, reached Güntersberge on April 14, 1945. There, Scholz issued to all prisoners, who asked for it, a "Release from Protective Custody" form. He also formally discharged the SS guards. The SS-Baubrigade IV was thus dissolved. Most of the prisoners left. Scholz and a handful of SS men with a convoy of about 20 prisoners surrendered the next day to the Americans.

If one takes into consideration only the SS-Baubrigade IV prisoners forced to march, then the estimate by Joachim Neander that 50 of the 1,000 prisoners died in the Harz, immediately after the liberation, appears to be realistic. Compared with other marches in this region, the march of SS-Baubrigade IV had by far the lowest death rate. However, if one takes into account those approximately 300 Jewish or sick prisoners whom Scholz is said to have handed over to Transport Brauny and who then were massacred at Gardelegen, then every

fourth prisoner died.<sup>13</sup> There is no doubt that Scholz behaved comparatively correct with the remaining prisoners; whether that was out of conviction or consideration of his impending imprisonment may be left aside. Of note is that amid the chaos in the last days of the war, it was possible to hand to the Allies alive a large group of prisoners, even if this was knowingly done only in exceptional cases.

**SOURCES** See especially Manfred Bornemann, *Geheimprojekt Mittelbau. Vom zentralen Öllager des Deutschen Reiches zur größten Raketenfabrik im Zweiten Weltkrieg* (Bonn: Bernard & Graefe Verlag, 1994); Arbeitsgemeinschaft Spurensuche in der Südharzregion, ed., *Der Bau der Helmetalbahn. Ein Bericht von der Eisenbahngeschichte, den KZ-Häftlingslagern und der Zwangsarbeit im Südharz in den Jahren 1944–45 sowie den Evakuierungsmärschen im April 1945* (Duderstadt: Verlag Mecke Druck, 2000); and Joachim Neander, "Das Konzentrationslager 'Mittelbau' in der Endphase der nationalsozialistischen Diktatur. Zur Geschichte des letzten im 'Dritten Reich' gegründeten selbständigen Konzentrationslagers unter besonderer Berücksichtigung seiner Auflösungsphase" (Ph.D. diss., Bremen University, 1996)—these have all rendered outstanding service to research the SS-Baubrigade IV in the Harz. Karola Fings's *Krieg, Gesellschaft und KZ: Himmels SS-Baubrigaden* (Paderborn: Schöningh, 2005) concentrates on the particular situation of the SS-Baubrigade within the context of the Mittelbau concentration camp. These works also contain references to the postwar report of Erich Scholz and reports of survivors, which, in part, are held by the AG-MD. Here are also kept copies of transport lists from Warsaw (Buchenwald Concentration Camp No. 36, Mittelbau Concentration Camp, No. 9). Jens-Christian Wagner, *Produktion des Todes. Das KZ Mittelbau-Dora* (Göttingen: Wallstein Verlag, 2000), has also made use of the records of the early Dora Trials at NARA. The BA-L (IV 406 AR-Z 69/72) holds the files of the inquiry into the SS-Baubrigade IV. Of importance are, moreover, the sources held by THStA-W (NS 4 Buchenwald, KZ Buchenwald and Prisons).

### FERCH (SACHSENHAUSEN) (SS-BB II)

The SS-Baubrigade II, which was stationed in Berlin starting in April 1944, had a subcamp located in Ferch (County Potsdam-Mittelmark). It is mentioned in a list of the guards of the SS-Baubrigade II as of January 10, 1945. SS-Unterscharführer Erich Schmidt is listed as the only guard.<sup>1</sup> Apparently, Schmidt remained in Berlin even after the SS-Baubrigade II, including his detachment, was transferred to Nürnberg on February 25, 1945.<sup>2</sup>

Perhaps the SS-Baubrigade II prisoners were assigned to a camp of the SS-Construction Management, which is believed to have existed with 180 prisoners in Ferch in the summer of 1944.

**SOURCES** As investigations by the ZdL in 1973 (IV 406 AR 596/73), held at BA-L, were inconclusive, no additional information is available on this subcamp.

### GÜNZERODE (BUCHENWALD, SACHSENHAUSEN, AND MITTELBAU) (SS-BB IV)

From the summer of 1944 until April 1945, in the small village of Günzerode in the Harz Mountains, there existed a subcamp of the SS-Baubrigade IV stationed in Ellrich. While the administration and kitchen for the construction brigade were located in Ellrich, up to 800 prisoners were quartered in Günzerode to be deployed for the construction of a new railway line. This so-called Helme Valley Railway (Helmetalbahn) was a subsidiary line designed to relieve the traffic on the western line from Nordhausen to Osterhagen.

The camp was probably constructed in the middle of July 1944. René Morel, a survivor of the camp, stated in 1998:

Fifty-four years ago I was in Günzerode on the construction ground of the strategic railway line. . . . It was very heavy forced labor carried out with picks and shovels. I arrived in Günzerode on July 15 and stayed there for one hundred and twenty-four days. There were six hundred prisoners—about two hundred French, two hundred Russians, two hundred Poles, a few Czechs, and one Greek. We slept in three-level bunk beds on a sheep farm in the southern part of the village. It had been fixed up to be a small concentration camp. There were no barracks. We consisted of five work squads, each of one hundred or two hundred prisoners, and a detachment of twenty prisoners, who worked as electricians. . . . The Construction Brigade was constantly reinforced by further prisoner transports. A large number of prisoners died from diseases or mistreatment and the ranks had to be replenished.<sup>1</sup>

The conditions of the Günzerode subcamp were clearly worse than those in Ellrich. This, in part, is due to lack of medical care and also the inferior food supply. In addition, there was the heavy and debilitating work. Morel, who was 16 when he was arrested, made a statement about the work conditions: “We walked [to work] and as we did not pass through any villages we did not have to march. . . . We rose at 5.00 am; work began at 6.00 am. . . . In the autumn of 1944 it rained every day. The Helmetal flooded until November, and therefore our clothes were always wet. As the machines got dirtier and dirtier they also ceased to function properly. I cut open my shoes as my feet were always bleeding; I was still growing.”<sup>2</sup>

The Günzerode camp commander was an SS-Hauptscharführer. The remaining guards consisted of a few SS men and Luftwaffe soldiers. Unlike at Ellrich, where a German Communist as the camp elder had tried to improve conditions to the level of being somewhat bearable, survivors comment only negatively about the prisoner-functionaries in Günzerode. Morel describes a Communist from Mainz as brutal. Paul Dubois also reports on corrupt prisoner-functionaries in Günzerode, “It is obvious that these pillars of the Nazi regime, despite the fact that they had been arrested, acted like bandits and lived like princes, well fed, while we died from hunger and cold.”<sup>3</sup>

Little is known about deaths in the Günzerode camp. This is due to the lack of research and poor documentation. It is known that immediately after liberation survivors accused Ulrich Holz, born on March 22, 1922, in Altenfließ, of murdering the Polish prisoner Edward Sokolowski. A witness describes the crime as follows: “On February 15, 1945, the prisoner fled our Günzerode subcamp. He was discovered the next day in our barn at the Flaries mill near Günzerode. The prisoner, who knelt before SS-Oberscharführer Holz with raised hands, was shot in the head by him from above (Proof: the confirmed entry wound) at a distance of about three paces. Neither had the prisoner resisted his capture nor had he tried to escape. It is noticed, as a description of Holz, that he had already previously refused to sign a notice that prisoners were no longer to be beaten.”<sup>4</sup>

The camp in Günzerode was gradually dissolved between March 23 and April 10, 1945, by transferring prisoner groups to Ellrich. There, at noon on that last day, the SS-Baubrigade IV began the evacuation march.

Investigations into Holz commenced in the 1970s but were halted on October 26, 1973, by the Limburg State Court, on the basis that there was insufficient evidence for a conviction.<sup>5</sup>

## HAMBURG (NEUENGAMME) (SS-BB II)

Between July 25 and August 3, 1943, the Royal Air Force and the U.S. Air Force reduced the city of Hamburg to rubble during four nighttime and two daylight bombing raids. In barely a week, 34,000 people were killed, which was almost as many as had been killed to date by aerial warfare in the whole of Germany. Another 125,000 were injured, and more than half of all the homes in Hamburg were destroyed.<sup>1</sup> On August 7, following this series of attacks, which are known in the literature as “Operation Gomorrah,” the majority of the SS-Baubrigade II was transferred from Bremen to Hamburg for cleanup operations.<sup>2</sup> Hamburg remained the main center of operations of the SS-Baubrigade II until it was transferred to Berlin in April 1944. The Bremen camp was administered as a subcamp.

ENCYCLOPEDIA OF CAMPS AND GHETTOS, 1933–1945

Under SS guard, prisoners from SS-Baubrigade II clear rubble in the Hammerbrook section of Hamburg after the Allied raids of the previous month, August 1943.

USHMM WS # 79115, StA-HH

Once in Hamburg, the construction brigade was reinforced so that, in August, 930 prisoners could be deployed. The prisoners came, in part from the Wilhelmshaven subcamp, directly from Neuengamme, or from a bomb explosives squad stationed at the Fuhlsbüttel prison.<sup>3</sup> The SS commander was at first Gerhard Weigel. He was replaced in March 1944 by Johann Karger [see Bremen (SS-BB II)]. The SS guards were reinforced with local police assistants.

The SS-Baubrigade II was stationed in the “Dead Zone,” which encompassed parts of the heavily destroyed city areas of Hammerbrook, Hamm-South, and Rothenburgsort, and which, in accordance with the instructions of Hamburger Gauleiter Karl Kaufmann, had been cordoned off.<sup>4</sup> The largest part of the construction brigade was temporarily accommodated in a bunker at Süderstrasse 301. For a few weeks the construction brigade used the enclosed swimming baths at the corner of Süderstrasse and Heidenkampsweg as additional accommodations. The prisoners were fed at the swimming baths and left from there for work. In the evening, they returned first of all to the baths where they were fed and roll call took place. The bunker in Süderstrasse was where the prisoners slept.<sup>5</sup>

At a later date, the whole construction brigade was quartered in former classrooms on the first floor of the elementary school at Brackdamm 14/16.<sup>6</sup> The move appears to have taken place during November 1943, as the pastor at the Stephan-Kempe-Church in the Dead Zone, Heinrich Dahmlos, made the following note on November 29, 1943: “The entire area around the Stephan-Kempe-Church is still sealed off until today. Not a soul lives in the area other than the political and criminal prisoners who are quartered in the school on Brackdamm and who store their supplies of vegetables in the public shelter underneath the church.”<sup>7</sup>

The first task of the SS-Baubrigade II was to seal off the areas declared as part of the Dead Zone. According to a report of the SS-Business Administration Main Office

(WVHA), the prisoners erected a 650-meter (711-yard) wall and 1,900 meters (2,078 yards) of barbed wire to block the streets.<sup>8</sup> The prisoners' work is recorded in three photographs, which were probably taken at the request of the Police Commissioner. Signs indicated that the restricted area could only be entered with written permission from the police.<sup>9</sup>

Unlike in other cities, the Hamburg building administration did not direct the use of the prisoners but was merely occupied with allocating accommodations for them.<sup>10</sup> This is due to the particular situation in Hamburg following the mass attacks. Police Commissioner Hans Kehrl had requested 450 concentration camp prisoners from Neuengamme during the first attack, in order to deploy them for the especially unpleasant work of retrieving corpses and the dangerous task of removing unexploded bombs. As the city administration failed to retrieve corpses, the Repair Service of the Air Raid Protection Police assumed this task. The prisoners of the SS-Baubrigade II were also part of the Chief of Police's "Auxiliary Force." They are said to have been deployed in accordance with instructions of the Air Raid Protection Police.<sup>11</sup>

Once the prisoners sealed the Dead Zone, they were initially occupied with the essential task of recovering corpses, which were present in their thousands in the burned-out area. In the summer heat, the prisoners recovered the already bloated corpses, pulled them from the canals, sorted the body parts, and laid them out to be taken away. This was horrible work. According to Pawel Wasiljewitsch Pawlenko, their "hair stood on end."<sup>12</sup> There is a series of photos that records this work. It shows the SS and Police guards supervising the work from a proper distance.<sup>13</sup> The recovery of bodies remained the main task of the construction brigade for a long time. According to reports of the WVHA, by the end of September 1943 the prisoners had buried a third of the bomb victims of Hamburg. In January 1944, the Repair Service was still looking for more than 5,000 bodies under the rubble. Some 57 recovery squads were deployed to recover the bodies. The prisoners of the SS-Baubrigade II formed 37 of these squads. One month later, 40 of the 45 squads consisted of concentration camp prisoners.<sup>14</sup> One detachment, initially consisting of 20 but later 80 prisoners, worked at the Ohlsdorf Cemetery and either dug mass graves or unloaded and transported the bodies that came from the city.<sup>15</sup>

In addition, recovery detachments were also used to secure building material and also supplies such as items of furniture and clothing and items of value. The resultant corruption and misappropriation came to the attention of the Berlin authorities.<sup>16</sup> In the course of time, according to one survivor, 48 railway carriages, filled with cars, radios, typewriters, clothes, alcohol, furs, and other objects, were moved illegally to Berlin from Hamburg by the SS-Baubrigade II.<sup>17</sup> This cannot have been the only case of private racketeering, but it is an example of robbery on a grand scale, protected at the highest level. A note in a report, which was sent by Hans Kammler (Head of Amt C of the WVHA) to Heinrich Himmler in April 1944, supports this conclusion. There it is stated: "Some of the valuable items recovered from the destroyed

houses and factories have been made available in the Neuengamme concentration camp to the Central Building Administration and Amt W I."<sup>18</sup>

The deployment of the construction brigade in Hamburg meant for the Neuengamme concentration camp prisoners a partial breakdown of their isolation. A report of the Neuengamme camp association states: "Many of the Neuengamme prisoners' connections with the Hamburg population originate also from the period 1943/44. During this time different resistance groups kept contact with the anti-Fascist groups within the camp. The prisoners of war and the forced laborers, above all, made contacts. Leaflets arrived at the camp, assistance was organized, news was exchanged—without which organized resistance would not have been possible."<sup>19</sup> It was possible for individual prisoners from the construction brigade to escape. Thus, in April 1944, the camp elder, Karl W., thanks to the help of a guard and a resistance group consisting of workers from Blohm & Voss, was able to flee.<sup>20</sup>

There are limited details on the number of deaths in the camp of the SS-Baubrigade II in Hamburg. In the death lists of the Neuengamme infirmary, there are 4 entries for the period from August 1943 to April 1944, which referred to the SS-Baubrigade II in Hamburg. According to this list, 23-year-old Pole Rydzard Nowak was executed there on October 1, 1943. Another Pole, Franciszek Kubiak, died from a fractured skull in November. In addition, a German and Belgian prisoner died, respectively, in December 1943 and March 1944.<sup>21</sup> When compared with other camps, 4 deaths in a detachment that at least in August 1943 consisted of around 930 and for the first quarter of 1944 had an average of 772 prisoners is a small number. It is true that the "death books" are in general not a reliable source, but the numbers are supported by statements of former prisoners. The Kapos were for the most part political prisoners who "properly did their duty."<sup>22</sup> The ability to obtain supplies from the rubble was also of considerable significance for the prisoners.

After the war, several prisoners accused SS members of the construction brigade of throwing gas bombs into the shelters with the aim of killing and robbing the occupants. Due to these accusations, preliminary proceedings were commenced in 1948 against Johann Karger in Hamburg. The results are not known as the files were destroyed by the Hamburg State Prosecutor before the Central Office of State Justice Administrations (ZdL) became interested in the SS-Baubrigade II.<sup>23</sup> Gerhard Weigel was also never the subject of any legal proceedings. In Hamburg, there is nothing that commemorates the prisoners of the SS-Baubrigade II.

**SOURCES** Despite the comparatively good primary sources, it was only relatively late that the Hamburg SS-Baubrigade II became the subject of research; see Karola Fings, *Krieg, Gesellschaft und KZ: Himmlers SS-Baubrigaden* (Paderborn: Schöningh, 2005). Previously, a few photographs and documents as part of an exhibition had been shown in Neuengamme and printed in Ulrich Bauche et al., eds., *Arbeit und Vernichtung. Das Konzentrationslager Neuengamme 1938–1945*.

*Katalog zur ständigen Ausstellung im Dokumenthaus der KZ-Gedenkstätte Neuengamme* (Hamburg: Aussenstelle des Museums für Hamburgische Geschichte, 1990), pp. 219–224.

It is true that there is no complete collection of sources, but contemporary documents are infrequently to be found in the StA-HH, above all in the collections Baudeputation (321-2), Baubehörde I (321-3-1), Architect Gutschow (322-3), Polizeibehörde (331-1), and Senatskanzlei (131-2, 131-3). The WVHA Reports on the construction brigade are held by the BA-B (NS 19/14). Of particular significance are the judicial files of the BA-L (IV 406 AR 245/69) and the reports of former prisoners in the archives of the AG-NG and the FGNS-H (Hans Schwarz Archive).

On the impact of the bombings of Hamburg, see Ursula Büttner, “Hamburg im Luftkrieg. Die politischen und wirtschaftlichen Folgen des ‘Unternehmens Gomorrah,’” in *Städte im Zweiten Weltkrieg. Ein internationaler Vergleich*, ed. Marlene P. Hiller, Eberhard Jäckel, and Jürgen Rohwer (Essen: Klartext Verlag, 1991), pp. 272–298.

## HESDIN (BUCHENWALD) (SS-BB V)

A subcamp of the SS-Baubrigade V stationed in Doullens existed in Hesdin, a small village in the northwest French region Pas-de-Calais, from March 1944 until probably August 1944. The camp housed between 500 and 600 prisoners who were to build a base for the V weapons (*Vergeltungswaffe*). They were accommodated in a Napoleonic cavalry barracks, La Frézelière, which was surrounded by a high wall and barbed wire. From here, work detachments were sent to an Organisation Todt (OT) camp in Bergueneuse and a camp in the vicinity of Mimoyecques.

A few details of the camp history are known, thanks to the memoirs of Tomasz Kuryłow.<sup>1</sup> Kuryłow, as a 17-year-old, was forcibly removed from White Russia for forced labor and, following an act of sabotage in a factory, was first transferred to a work education camp (*Arbeitserziehungslager*). From there he was then transported to Buchenwald. He was part of the second transport of the SS-Baubrigade V, which in March 1944 was sent to France via Cologne. As with many other prisoners of the SS-Baubrigade V, he hoped to be able to escape there. He wrote the following about the departure from Cologne: “The screaming SS men drove us into the goods wagons. As usual there was very little space. Nevertheless, we were in good humour—we were travelling to France, the land of our dreams.”<sup>2</sup>

In fact, the situation for the prisoners in France was significantly better than in Germany, because the population there openly showed their sympathy to the prisoners. On their arrival in Hesdin, during the march to the barracks, the population’s support was obvious. Upon seeing them, someone yelled: “They are indeed thin, these unfortunates.” French men and women questioned the prisoners and, once they had heard that they were political prisoners, brought them food. Kuryłow wrote, “After work we returned along

Rue Farée. It seemed that in this street every inhabitant was our friend. Food packages were secretly thrown from windows and doors.”<sup>3</sup>

The prisoners worked mostly in the surrounding forests, where they built bunkers and shelters. A smaller detachment was busy in a mechanical workshop in Hesdin, working with lathes and repairing vehicles. Kiryłłow described the work done in the forest as follows: “The sweat ran down my face. Above me stood an SS man. I loaded the barrow as quickly as I could, but the SS man was not satisfied. He asked me. ‘Can’t you work?’ Obviously he did not like me. . . . Before the departure from Buchenwald I weighed forty-eight kilos [106 pounds]. The barrow laden with soil weighed definitely more than that. It was only my will that kept me on my feet.”<sup>4</sup> Kiryłłow was spared, but a little later the same SS man shot his friend Piotr Majzenko.

In addition to the daily struggle for survival, the prisoners were mainly occupied with how to make contact with the French resistance and organize an escape. After a few prisoners had already escaped, the controls in the camp were tightened. The SS examined the prisoners for smuggled civilian clothes or searched for secret messages written in French. Once, when a note was found on a prisoner during a search on which was written in French a plea for food, the SS men beat the man to death. The camp elder, Heinz Schäfer, a Communist prisoner, was punished by the camp commander, by being sent to a bomb search detachment. According to the Buchenwald concentration camp “Death Book,” Schäfer died on May 28, 1944, in Hesdin when a dud detonated.<sup>5</sup>

By this time, Kiryłłow had already escaped. He had managed to make contact with the commander of the resistance group Francs-Tireurs et Partisans Français in Blangy-sur-Ternoise, Marcel Huleux. In the following weeks the group tried to help more prisoners escape from the camp. After the withdrawal of the SS-Baubrigade V from northwest France, Kiryłłow remained with the partisans in the country around Hesdin.

Sometime in August 1944, the subcamp was dissolved, and the prisoners, probably via Doullens, arrived back in Germany. They were distributed among various Buchenwald camps in the Harz Mountains. In October 1944, they were taken over by the newly built Mittelbau concentration camp.

**SOURCES** A small camp museum was established in Hesdin. There, among other things, are kept lists of the names of prisoners. Besides the memoirs of Tomasz Kiryłłow, “*Und ihr werdet doch verlieren.*” *Erinnerungen eines polnischen Antifaschisten* (Berlin: Dietz Verlag, 1985), the sources on the Doullens subcamp (BA-L, IV 406 AR-Z 207/73; THStA-W, KZ Buchenwald) offer starting points for further research.

## HOHLSTEDT (MITTELBAU) (SS-BB I)

The camp in Hohlstedt, a subcamp of the SS-Baubrigade I stationed in Sollstedt, was constructed in October 1944. About 200 prisoners were held at first in forest bunkers until they had constructed the barracks. Among the prisoners was a large group of former members of the Wehrmacht. The prisoners worked mostly for the German railways at the Sangershausen railway junction, but from time to time, they were engaged in other tasks. The guards were not only from the SS; some were armed members of the German railways.

The survivors of Hohlstedt recall particularly bad food, mistreatment at work, nightlong roll calls in the rain, the cold, and executions, above all of Polish and Soviet prisoners.

Around April 6, 1945, the prisoners at the Sollstedt camp were sent to Hohlstedt. The evacuation of the SS-Baubrigade I to the Mauthausen subcamp Steyr-Münichholz began a day later.

**SOURCES** Only a few statements recorded in investigation proceedings, which are kept in the BA-L (IV AR-Z 57/67 and 410 AR 63/77), provide information about this camp. Jens-Christian Wagner has collected other widely distributed bits of information on this camp in his monograph on the Mittelbau concentration camp: *Produktion des Todes. Das KZ Mittelbau-Dora* (Göttingen: Wallstein Verlag, 2001).

## KÖLN (BUCHENWALD) (SS-BB III)

The SS-Baubrigade III in Cologne was established on September 21, 1942; it was one of the first concentration camp subcamps and was formed to clean up destroyed cities. It was stationed in Cologne prior to the SS-Baubrigade I and II and remained there until May 1944. It formed a number of subcamps in Rhineland and Westfalia.

The establishment of the subcamp in Cologne was the result of steps taken by Gauleiter Josef Grohé as well as later provisional lord mayor Robert Brandes. Following the Royal Air Force major offensive on May 30–31, 1942, both sought support in Berlin for the heavily destroyed Rhine metropolis. Grohé personally repeatedly contacted Reichsführer-SS Heinrich Himmler and in the autumn of 1942 accompanied him, when he was on an inspection of bombed cities and stayed in Cologne.

On September 21, 1942, an advance detachment of 300 Buchenwald prisoners arrived in Cologne. They were accompanied by the camp commandant, Hermann Pister, and Karl Völkner, who was to be the commander of the construction brigade.<sup>1</sup> The prisoners were accommodated in the center of

SS-Baubrigade III removes corpses in Cologne in this annotated photo by Josef Fischer, July 1943. The annotation reads, "Inmates of a concentration camp carry corpses on a ladder to the truck, early July 1943." NS-Dok

the city, in the trade fair area of Cologne Deutz at the Rhine, opposite the cathedral. The prisoners began with the construction of their quarters in the northeast corner on the first floor of the Congress Hall (Kongresshalle), the present-day Rhine-Hall (Rheinsaal). On the ground floor were the canteen and a changing room. The premises immediately in front of the hall was fenced off and used as a roll-call parade ground. The only entrance to the camp was in the vicinity of the trade fair tower. At the entrance was a guardhouse. The SS guards patrolled outside the fence with dogs. The SS guards and camp administration were quartered in the trade fair tower and the neighboring buildings.

By the beginning of November 1942, the number of prisoners had been increased to 1,000. By March 1943, due to deaths, the transport of sick prisoners to Buchenwald, and the transfer of prisoners to other camps, the number of prisoners had dropped to 531. In the summer of 1943, Cologne was the subject of renewed large Allied air attacks. Thereafter, Himmler, following an agreement with Albert Speer, ordered that the construction brigades in the Rhineland be doubled in size.<sup>2</sup> By July 1943, the SS-Baubrigade III had more than 1,000 prisoners at its disposal. Between September 1942 and May 1944, all in all around 6,000 prisoners went through the camps of the SS-Baubrigade III.<sup>3</sup>

The commander of the Construction Brigade III Köln was Karl Wilhelm Völkner, who was born on February 26, 1898, in

Quedlinburg, in the Harz Mountains, had worked as a master plumber, and joined the Nazi Party (NSDAP) and the SS in 1932.<sup>4</sup> Völkner, who had been decorated as an aviator several times during World War I, was called up to the Luftwaffe in August 1939. He was dismissed from service and joined an SS-Death's Head Unit and transferred in January 1940 to an SS-Guard Bataillon at the Buchenwald concentration camp. He was promoted on January 30, 1943, to SS-Obersturmführer, receiving the status equal to a commander of a construction brigade. Former prisoner Toni Fleischhauer described Völkner as follows: "He was not inclined to personally commit acts of violence. On the contrary, he was usually happy to warmly greet each prisoner. When he was drunk, he showed sentimentally accentuated comradeship. . . . To me his strongest characteristic was his pronounced desire to have possessions. He understood his function as incorporating the possibility to enrich himself. So he tried to please his superiors. That meant that he supplied, according to demand, presents or dead people."<sup>5</sup>

On average, 30 SS men were assigned to guard the approximately 1,000 prisoners. The largest part of the guards consisted of local police. In November 1943, 910 prisoners worked on each Sunday in Cologne guarded by 3 SS guards and 90 policemen.<sup>6</sup>

Daily, the prisoners were tortured by the SS men, especially during the first three months. Alexander Malofejew wrote: "They beat the prisoners and they succeeded to suppress their human dignity to such an extent that they paid no regard to age or nationality (I am thinking here of the German prisoners). You were beaten because you did not pay sufficient attention to the SS or simply because wounds in your face should not heal, because you walked too slowly in the camp, because you spoke German, because you did not speak German, because you worked too slowly, etc."<sup>7</sup>

It was only with an increased deployment of older policemen and auxiliary police forces that, according to former prisoners' reports, the terror receded. The worsening military situation changed the guards' mentality; as Askold Kurrow notes, "They [the policemen] became human only after Stalingrad and when Köln lay in ashes."<sup>8</sup>

Also, the internal power structure was of considerable significance for the prisoners' conditions of survival. During the first five months, there was a power struggle between a corrupt clique of prisoner-functionaries and political prisoners. Alfred Müller, the camp elder from Buchenwald sent to Construction Brigade III Köln, called by the prisoners "Bloody Müller," was found hung in December 1942. It was not possible to clarify whether this was a targeted resistance act, suicide, or murder by another "criminal" Kapo. In February 1943, camp leader Völkner, under pressure from political prisoners, transferred the rest of the disliked Kapos to Neuen-gamme, which resulted in a marked drop of the death rate. Most of the deaths in the Construction Brigade III Köln camp from this time were the result of delayed explosions of bombs, bomb attacks, or work accidents.<sup>9</sup>

The city office of the Head of Emergency Measures (Leiter der Sofortmassnahmen) located in the Building Administra-

tion Office, and which had an office on the premises of the Cologne Trade Fair, was responsible for the allocation of work detachments throughout the city. The prisoners removed rubble from houses and streets; they also recovered and loaded valuables such as wood, tiles, or metal at just about every destroyed site in the city area. The prisoners rescued people trapped in the rubble after air raids, recovered corpses, and were deployed to dig graves in cemeteries. During the months of July, August, and September 1943, the Baubrigade III alone recovered 4,500 corpses and “placed them in coffins during day long operations.”<sup>10</sup> Prisoner crews were often drawn on to assist where there were shortages: in building air-raid shelters, working on public utilities, constructing auxiliary homes, or working in “vital” war industries.

Prisoners of the SS-Baubrigade III Köln were, under the supervision of craftsmen, dispatched along with inmates from other subcamps to almost all cities in the 6th Defense District to work in the dangerous “bomb disposal squads.” For example, the detachments worked from March to September 1943 in Elberfeld-Barmen, Essen, Bochum, Dortmund, Aachen, Jülich, Mönchengladbach, Krefeld, Wesel, Gelsenkirchen, Bottrop, Mülheim an der Ruhr, Hagen, Witten, and Schwelm. Between July 1943 and March 1944, the demolition squads of the SS-Baubrigade III eliminated, according to SS-Business Administration Main Office (WVHA) reports, around 8,000 bombs.<sup>11</sup> Most of the time, after their mission, the prisoners returned to the camp of the construction brigade. Over a longer period, bomb disposal squads were established in Bochum, Dortmund, and Düsseldorf.

The level of illness among the prisoners was permanently high. This was due to the inadequate diet and the physically and mentally demanding work. For medical care, there was only an inadequately equipped infirmary with 12 beds for the prisoners. At the same time, the prisoners had already arrived half-starved and ill from Buchenwald. Alojzy Wasilewski provides an example—he was 180 centimeters (71 inches) tall but weighed only 56 kilograms (123 pounds).<sup>12</sup> By transporting off selected prisoners, the SS-Baubrigade III was able to maintain productivity. The selections were done by SS-Oberscharführer Gustav Schmidt from Buchenwald and a contract doctor, SS-Untersturmführer Erich Möllenhoff, from Cologne. Between September 1942 and February 1944, more than 400 prisoners declared unfit to work were transferred to Buchenwald and replaced with other prisoners.<sup>13</sup> In addition, there were transfers to Buchenwald as disciplinary measures, for example, when prisoners attempted to make contact with the civilian population. From the prisoners’ point of view, the subcamp was distinguished from the main camp in that the terrain of rubble offered better escape opportunities to the work detachments. It also appears that support especially from forced laborers and opponents of the regime, albeit only a few, was relatively high in the Cologne area.

From April 1943 the Cologne State Police used the camp of the SS-Baubrigade III to hold so-called work education prisoners (*Arbeitserziehungsbüflinge*). Some of the prisoners had been arrested on political grounds and were held there by

the Gestapo until a “Protective Custody Order” was issued. The largest group of *Arbeitserziehungslager* (AEL) prisoners were Poles or Soviets who spent a few weeks with the construction brigade and were then again released to their jobs. Several hundred Gestapo prisoners, marked with a white stripe on the exterior of their clothing, were incarcerated with the construction brigade. On May 8, 1944, a few days before the SS-Baubrigade III was transferred to the Harz Mountains, there were still 287 concentration camp prisoners and 576 Gestapo prisoners in the camp.<sup>14</sup>

In May 1944, the withdrawal of the construction brigade from Cologne began, despite the protests of the Gau Administration and the City Administration. The majority of the prisoners were assigned to the SS-Baubrigade V. On May 10, 287 prisoners from Construction Brigade III Köln and 131 prisoners from the Duisburg subcamp were transported to Wieda in the Harz.<sup>15</sup> Other subcamps of the Buchenwald concentration camp remained: the bomb disposal squad at Kalkum, the detachment Napola at Bensberg, the German Earth and Stone Works (DESt) factory at Essen and Düsseldorf, as well as camp “Berta” at Rheinmetall-Borsig.<sup>16</sup>

None of those responsible for the Construction Brigade III Köln camp were ever put before a German court for crimes committed there. In the 1960s, a few of them were living undetected in Cologne and obviously without any fear of the judiciary: such as Karl Völkner, Erich Möllenhoff, or Josef Grohé. Following prior investigations by the Central Office of State Justice Administrations (ZdL), the Cologne State Prosecutor began a systematic investigation in 1968. In 1975, however, the investigation ceased.

The existence of the subcamp first came to the attention of the people of Cologne in the 1980s because of the committed efforts of a number of individuals. Since 1993, a memorial stone, erected on the banks of the Rhine at Deutz, commemorates the SS-Baubrigade III. Since 1990, the city of Cologne, in recognition of the responsibility it had for the deployment of concentration camp prisoners, has conducted a program enabling survivors of forced labor to visit the city.<sup>17</sup>

**SOURCES** Karola Fings’s *Messelager Köln. Ein KZ-Aussenlager im Zentrum der Stadt* (Cologne: Emons, 1996) provides a monograph about Construction Brigade III Köln. In comparison with other SS-Baubrigaden, there is sufficient documentation on Construction Brigade III Köln. In addition to contemporaneous sources in the THStA-W (NS 4 Buchenwald and Prisons) as well as the investigation files of the BA-L (IV 406 AR 85/67, IV 429 AR 1304/67) and NWHStA-(D) (Ger. Rep. 118/1174-1190, 1138-1349), the most important sources are around 30 interviews with survivors of the camp, which are kept in the NS-Dok.

## KORTEMARK AND PROVEN, BELGIUM

### (NEUENGAMME, BUCHENWALD)

#### (SS-BB I)

The SS-Baubrigade I was stationed in Kortemark and Proven, Belgium, for barely five weeks, from July 28 until September 2, 1944. When it became necessary to withdraw the SS-Baubrigade I from Alderney, due to the Allied landing in Normandy, the prisoners were to construct launching pads for V-1 rockets in Belgium. The responsible Wehrmacht Field Construction unit organized the necessary accommodations in the planned operational area in Flanders, north of Poperinge between Diksmuide and Kortemark.<sup>1</sup>

Of the original 1,000 prisoners of the SS-Baubrigade I, only 570 made it to Belgium. Two camps were constructed to hold the prisoners: the main camp at Kortemark held about 350 prisoners in a school in the suburb of Markhove, and a group of around 220 prisoners were sent to Proven near Ypres. Due to this change, the construction brigade was now under the command of the Buchenwald concentration camp; on August 5, 1944, there followed the administratively required re-writing of the prisoner numbers.<sup>2</sup> The assumption of responsibility by Buchenwald made sense so far as the work of

the SS-Baubrigade I corresponded to that of SS-Baubrigade V. Its SS commander, Gerhard Weigel, instructed the SS-Baubrigade I in the works in Belgium.

With the stationing in Belgium the SS were confronted with a totally new situation. For the first time they and the SS-Baubrigade I were operating in hostile territory. The hostile attitude of the French population, attacks by partisans, and the fact that none of the prisoners who escaped were recaptured showed that maintaining control over the camp was much more difficult. In Belgium, the SS were confronted not only with a population openly helping the prisoners but also with armed attempts to help prisoners escape.

When the train reached Belgium, the prisoners found full sympathy on the part of the population. Willi Kreuzberg stated: “Everyone waved and greeted them! The Belgians quickly grasped who we were. Cigarettes were thrown to us. The SS became anxious and pushed those back who could be seen from the windows. We were not intimidated. We felt, that whoever managed to escape here would be accepted and hidden.”<sup>3</sup> The contrast to the situation in Germany was almost unbelievable for the prisoners. Helmut Koeller remembered: “We prisoners in Flanders had perhaps a life; it was the best of all times in the concentration camp! The Belgian people brought us prisoners everything; tobacco in abundance (many of us had hoarded whole pillows of it!), bread and fruit, sweets, sugar, milk, etc. In addition, the Belgian Red Cross brought us three times a week sweets, fruit and tobacco!”<sup>4</sup>

Since the supply lines broke down due to acts of sabotage, the workload of the prisoners was to a certain extent bearable. Targeted acts of sabotage, destruction from air raids, and the advance of the Allied forces caused 10 of the 12 landing ramps built by the prisoners never to become operational. Belgian farmers, who supplied the water needed to set the concrete at the sites and who were overwhelmingly part of the Belgian resistance, also helped prisoners to escape. The brazenness with which the escapes were organized almost on a daily basis was a clear indication to the SS that they were operating in enemy territory. Once a detachment with three prisoners and two Wehrmacht guards drove with a truck to a building site, a car followed them, giving the prisoners a signal to jump and to flee. When the prisoners hesitated and pointed to the guards, the civilians in the car drew a machine pistol and directed it at the guards.<sup>5</sup>

Searches for escaped prisoners were not only fruitless, but the SS guards had to consider that they could be killed by resistance fighters when searching for the prisoners. Therefore, if there was an indication of an escape, the guards made rigorous use of their weapons. The former prisoner Heinrich Dick described how, from a 10-man detachment that worked at a building site in Poperinge, no one was left:

Once when we delivered cement on a lorry to a building site six Russians escaped. The SS guard ran after them, fired at them, but returned unsuccessfully. He then shot the remaining three Russians with a pistol. I was the only survivor of ten men. . . .

Hoegelow (chief of the SS-guards) learned of this incident shortly thereafter, when we returned to the camp. We were not permitted to go out the next day because the guards were searching for the escapees. They did not capture any, but one of the guards was missing. He was found in the evening—shot with his dog. Hoegelow then said that those who saw the incident would be taken away. Since I was the only survivor it could only have meant me. I therefore fled the camp the next day together with a Russian.<sup>6</sup>

The prisoner losses for the few weeks in Belgium were enormous. When the construction brigade was forced to withdraw due to the advancing Allied forces, there were around 130 prisoners missing. Most of them must have escaped since there were only 8 registered deaths for that period.<sup>7</sup> Many prisoners fled on the day on which they were to be transferred. Under no circumstances were they going to be transported to Germany in view of the imminent liberation. On the morning of September 1, 1944, a group of 39 prisoners overran the SS post inside the walled-in schoolyard in Markrove and fled in different directions. Several prisoners were shot, but most of them indeed succeeded in escaping.

The transport of the SS-Baubrigade I that followed was marked by the simultaneous retreat of German troops, the parallel flight of German civilians, and direct war activities—all through a landscape in which ammunition and food depots had been blown up and were burning, as well as bridges and railroad tracks that had been destroyed. The SS, now extremely nervous, fought with all available means through the war zone. As with the retreat from Alderney, here, too, the SS troupe had to make forced stops because of destroyed or captured areas that had to be circumvented.

Via Ghent and near Brussels, the train reached, after four days since departure, the Dutch border town of Budel. There the train was derailed since the partisans had destroyed the tracks. Wittwer, the SS Labor Service leader of the construction brigade Commander Georg Braun, and Chief of Guards Hoegelow forced civilians to search for a new locomotive and the prisoners to lay bypass railroad tracks. Wittwer returned with several captured Dutch men, who were interrogated by Braun and Hoegelow. Six of them were shot on the spot.<sup>8</sup>

On September 6, 1944, at about 12:30 P.M., the train reached the German border. The former prisoner Helmut Knoeller described the suddenly changed situation: “Here in Germany was a completely different picture: The civilian population cheered the soldiers.”<sup>9</sup> After another four days, the SS-Construction Brigade I, comprising 441 prisoners, arrived at its new destination, Sollstedt in Thüringen.

Among the escapees from Kortemark was Robert Prokop who had reached England via France, where he had joined a Czech Brigade. He returned to Kortemark with the Czech Brigade and learned that during an escape 15 prisoners had been killed and that the SS had buried them in a ditch alongside the road. The victims were later reburied in a mass grave at the local cemetery.<sup>10</sup>

After the war, not one of the responsible SS leaders was the subject of judicial proceedings for crimes committed in Kortemark. Investigations against Braun and Hoegelow for the shooting of Dutch civilians in Budel ended without results.

**SOURCES** The first written report about the camp was published as early as December 1944 in Kortemark by escaped prisoner Jan Woitas: G. Krijger, *Duitschlands Folerkampen, Oranienburg-Sachsenhausen, Amersfoort, Duisburg, Dusseldorf and the Island Aldereney* (Kortemark: n.p., n.d. [December 1944]). It was only 60 years later that the camp was described in a study of the SS construction brigades: Karola Fings, *Krieg, Gesellschaft und KZ: Himmlers SS-Baubrigaden* (Paderborn: Schöningh, 2005). Few documents on this camp can be found in files at the BA-L (410 AR 63/77 and IV 404 AR-Z 57/67), as well as in the archives of the AG-NG, AG-S, and FGNS-H (Hans Schwarz Archive).

## MACKENRODE (BUCHENWALD, MITTELBAU, AND SACHSENHAUSEN) (SS-BB III)

Between July 1944 and April 1945, Mackenrode, a small village in the Harz Mountains, was the site of a subcamp of the SS-Baubrigade III, which was stationed in Wieda. The prisoners were assigned to construct the 22-kilometer-long (13.7-mile-long) Helme Valley Railway, a railway stretch from Osterhagen to Nordhausen, thereby relieving the existing railway from Nordhausen to the west. On July 21, 1944, the

first 150 prisoners were housed in a barracks camp not far from the village near present-day Federal Road (Bundesstrasse) 243. On July 30, another 150 prisoners occupied the barracks. The camp that consisted of three barracks located on Peterswiese was fenced in and had four guard towers. Mackenrode, with up to 475 prisoners, was the largest subcamp of SS-Baubrigade III. SS-Oberscharführer Walter Dotzauer was the camp commander. Directly opposite the entrance to the camp was a barrack for the guards, who were overwhelmingly soldiers from the Luftwaffe.

Aime Bonifas, who on September 2, 1944, was transferred from the external camp Laura via Dora to Mackenrode, described the peculiar closeness of the prison camp to the village as follows: "The camp was right next to the village of Mackenrode. We can recognize all the houses and the high tower of the Evangelic-Lutheran Church. The sight of the church in the days that followed was often a puzzle. It is not for me to judge and I do not know who congregated in the church, but how can one talk about heaven when you are so close to such injustices."<sup>1</sup> He wrote the following about the reaction of the local population: "Our construction sites were in several villages. The few locals who were seen on our way showed only contempt for us. Once a young girl spat on us."<sup>2</sup>

In order to construct the railway, the prisoners had to undertake heavy earthmoving work and clearing, mostly without the assistance of machinery or horses. The various work detachments had to walk several kilometers to the work sites. Work was often done on Sundays. Conditions in the camp deteriorated with the onset of winter. The prisoners waded through snow and mud, often without shoes, with torn clothes, without sufficient food, and without any hygienic care. From February 1945, a 150-strong prisoner detachment worked in Tettenborn; from there the existing railway line was to be connected by a branch line to the Helme Valley Railway. It is not clear whether a permanent camp had been set up for the duration of several weeks.

There are only a few reports of instances of death or acts of violence against the prisoners in the camp. An Italian prisoner, who was a stoker on a locomotive, was doused with boiling water during an accident in November 1944. He was taken to the infirmary in Wieda, where he died. In February 1945, it is said that the Belgian Josef Fruyt was beaten to death in the camp for stealing potatoes. From a report to the SS-Führungsstab (Leadership Staff) B 13, dated February 6, 1945, it is evident that two days earlier 10 prisoners from Mackenrode had been detailed for construction work, but the foreman changed the orders and had the prisoners load potatoes at a farm instead. It was here that the prisoners, including Fruyt, were said to have stolen potatoes.<sup>3</sup>

On April 6, 1945, the prisoners were taken on foot from Mackenrode to Wieda, where on April 7, 1945, the evacuation march of the SS-Baubrigade III began.

Six victims of the Mackenrode camp—a French man, a Belgian, two Poles, and two prisoners from the Soviet Union—were buried in the village cemetery. The bodies were exhumed after the war and reburied in Nordhausen.

## NÜRNBERG (SACHSENHAUSEN)

### [AKA 2. SS-BAUBRIGADE (E)] (SS-BB II)

The SS-Baubrigade II, last stationed in Berlin, in the middle of February 1945 was transformed into an SS-Eisenbahnbaubrigade. Prisoners from the camps in Müggelheim and Friedrich-Krause-Ufer were gathered together in Berlin-Köpenick. They, together with other prisoners from a subcamp of the Sachsenhausen concentration camp in Berlin-Lichterfelde, had a strength of 504 men.

The prisoners were put on a train in Köpenick, which, as the 2. SS-Baubrigade (E), left the capital city on February 25, 1945. From February 14, 1945, the brigade was under the command of SS-Obersturmführer Karl Raab, who was born on January 6, 1895, in Atzgersdorf near Vienna. The guards, numbering between 60 and 70 men, were SS men deployed in Berlin. The destination of the construction brigade was the destroyed Nürnberg railway station, where cleanup work was to be done. As the train entered the station, the prisoners experienced a heavy bombing raid. Wenzel W. described this in his memoirs in 1957: "We prisoners experienced this attack in closed railway goods wagons. Only a few prisoners survived."<sup>1</sup>

On March 12, 1945, following a large bombing raid on the city, around 30 starving prisoners set off on a search for food. As a deterrent, the SS instigated a horrible spectacle. Accord-

ing to a report from 1946, the prisoners were forced “to kneel with their foreheads on the ground for several hours during cold weather in fear of being shot if they moved.”<sup>2</sup> For theft, 3 of the prisoners were hanged from a railway wagon.<sup>3</sup> According to the statement of a survivor, a prisoner did the hanging. Willy K. described the execution in March 1947 as follows: “Unfortunately one of our prisoners assumed the repulsive role as executioner for a bottle of alcohol and cigarettes. The prisoner, a German, was lynched by the other prisoners in Landshut after the liberation.”<sup>4</sup>

Landshut was the last destination of the construction brigade, which arrived there via Regensburg, in the middle March 1945. At night the train was shunted to Ahraun and during the day the construction brigade traveled to the Landshut Railway Station for cleaning-up work.

For the last months of the war, there are scarcely any sources, and reliable information about the 2. SS-Baubrigade (E) is not available. Details on the number of transfers of prisoners in the main camp or on escaped or dead prisoners are not possible, but it can be assumed that in the confusion of the last weeks of the war many prisoners were able to escape. A guard said in 1973: “The constant bombing raids and attacks by low flying fighters caused us to suffer losses. Prisoners and guards were killed or injured. . . . Because of the air raid alarms we only worked at night. Many prisoners used this as an opportunity to disappear.”<sup>5</sup>

Almost a month later, on April 27, some of the prisoners of the 2. SS-Baubrigade II (E) set off on foot from the Bavarian town of Landshut in several columns in the direction of Wasserburg. It is said that some of the prisoners remained with the train or, after the dissolution of the columns, returned to the train. On the march, the columns gradually broke up. On the way, a group of prisoners stayed in a barn, and several groups fled. Also, the SS disappeared. Survivors report that those not capable of marching were shot. Raab was last seen with the construction brigade on April 29, 1945. The remaining SS men fled from the approaching Americans on May 1. During the following night, the columns were freed. Another column is said to have been taken to Graz.<sup>6</sup>

Shortly after the liberation, a few prisoners returned to Landshut. They found the construction brigade’s train had been burned out.<sup>7</sup> Many survivors of the 2. SS-Baubrigade (E) were marked for the rest of their lives by the many years they had spent in the concentration camps. Georg M. wrote the following in 1949: “After the entry of the Yanks I and many of my comrades from many nations celebrated in Landshut a reunion. We stayed there for six weeks recovering. I then made my way home. But I discovered that I no longer had a home. In September 1945, I lay down and almost forgot to get up. From this time my health is broken.”<sup>8</sup>

The State Prosecutor at the State Court in Nürnberg-Fürth investigated the hanging of three prisoners at the Nürnberg Railway Station but terminated the investigations on January 20, 1969. Later investigations by the Central Office of State Justice Administrations (ZdL) on crimes com-

mitted by those in charge of the 2. SS-Baubrigade (E) did not result in a trial.

**SOURCES** Without the files of the Nürnberg State Prosecutor investigation (18 Js 680/67; BA-L, IV 1666/66) and the ZdL investigation (BA-L, IV 406 AR 594-596/73), it would not be possible today to reconstruct the last months of the SS-Baubrigade II, even in the outline presented here. They constitute the central source. See also Karola Fings, *Die Kommunen, der Krieg und die Konzentrationslager. Himmlers SS-Baubrigaden* (Göttingen: Wallstein Verlag, 2004).

## NÜXEI (BUCHENWALD, MITTELBAU, AND SACHSENHAUSEN) (SS-BB III)

Between May 1944 and April 1945, the SS-Baubrigade III, based in Wieda, had a subcamp in the Harz Mountains in the village of Nüxei, which consisted of only a few houses. The prisoners were to build a 22-kilometer-long (13.7-mile-long) railway line, designed to relieve the existing line between Osterhagen and Nordhausen. Probably in the middle of May 1944, 100 prisoners began fitting up a barn on a farm in Nüxei as accommodations for a camp. The SS confiscated a meadow after 2 prisoners escaped and had the camp constructed next to present-day Federal Road (Bundesstrasse) 243. An area of about 50 meters×50 meters (164 feet×164 feet) was fenced in and furnished with guard towers and searchlights. The quarters of the guards were in the immediate vicinity of the camp.

The camp is unusual because of its proximity to the village population. Wilhelm Walter, the owner of the farm, wrote in 1972:

One Sunday morning three trucks with about one hundred “Zebras” [concentration camp inmates in striped prisoner clothing] appeared on my farm. The guards seized my barn for use as a camp. . . . Immediately a mezzanine floor was constructed in

my barn to create two sleeping levels. The guards (Luftwaffe soldiers) were accommodated in the local pub and in two rooms of one of my worker's cottages. Once the beds etc. had been put in place, the camp was occupied by about three hundred prisoners. . . . Given the small area it was impossible to keep the prisoners separated from the German population and from the forced laborers.<sup>1</sup>

After Karl Völkner, the SS camp commander of the SS-Baubrigade III, was relieved from his post in the summer of 1944, the prisoners in the Wieda and Nüxei camps were transported away and replaced with 300 new prisoners from the Buchenwald subcamp Dora. At the same time, conditions in the camp got worse. Walter reported on this as follows: "Everything changed on the evening of July 20. When the prisoners returned from work they were not allowed back into the camp. . . . All the prisoners were marched off in the direction of Wieda on the same evening. The Luftwaffe guards were immediately withdrawn. The new prisoners appeared the next day under the most severe guard of the SS."<sup>2</sup>

One of the new prisoners was Albert van Dijk, born in the Netherlands in 1924, who has described the Nüxei camp in detail in his memoirs. He wrote the following about the work: "At first we thought that we had come to a rest camp, but we soon found out that we had made a mistake. . . . The railway had to be built at an unimaginable pace, and large soil excavation was necessary which had to be done with primitive tools. . . . Soil was taken away in wheelbarrows on the run. The prisoners collapsed under the load of the railway ties and rails, which they had to carry. They were pulled up and continued to carry their load groaning. But the foremen demanded even more; the pace of work was increased excessively."<sup>3</sup>

Work on the railway ceased between the beginning of January and the middle of February 1945 because of low temperatures. During this period, the prisoners from Nüxei worked in two large underground installations in Woffleben, lengthening the grueling daily routine considerably.

The columns from the tunnel construction site marched in when we, who worked on the ramp or in the workshops, had already been standing and waiting for hours on the roll call square. We ate standing—in snow and frost. We slept without blankets; many prisoners lay on the bare floor as the stronger prisoners had taken the straw sacks from the weaker ones to use them as cover. The bread rations were constantly reduced; the small portions of margarine ceased; the soup was made from frozen and rotten rutabagas. Worn out shoes and clothes were not replaced and frostbite was very common. Hardly a day did pass without someone dying.<sup>4</sup>

Marcel Orset, a survivor, remembered the horrors of the last winter during the war: "Nüxei, was a slow struggle against death; I have terrible memories of the winter, frozen feet, a

serious leg injury; the danger of being transported away, the destruction, the dead comrades. The work? Not as brutal as in Osterhagen. Life in the camp? A lot of misery. In comparison to the hell in Osterhagen and if it had been summer one could have survived."<sup>5</sup>

Although the camp and surrounding community lived close together, it did not mean that the local population developed empathy for the prisoners and contributed something to improve the situation. On the contrary, it seemed that the situation worsened—the lack of sympathy for the starving prisoners, the pursuit of self-interest, and the missing political insight into the conditions of the concentration camp community helped in part to worsen the situation.

Van Dijk recalls a peculiar incident that occurred at Christmas in 1944. On the roll-call square Walter and representatives of the Mackenrode (Hohenstein) church had placed a large fir tree and had set a basket of presents at its base. The church choir arrived at the camp and sang Christmas carols. The would-be benefactors resented it when only the German Kapos joined in the singing. According to van Dijk:

As they refused to sing, the prisoners, as punishment, stood for longer than two hours almost like columns of ice around the Christmas tree with the barest of clothing in the frost. It was not even allowed to stamp your feet. The members of the church choir left to their houses, to the warm hearth. They took the basket with the little packages bitching about the incorrigible prisoners. Candlelight streamed from the window of the farmer's house and happy children's voices could be heard. The hands of the clock on Mackenroder church tower moved to twelve. Christmas had begun.<sup>6</sup>

Van Dijk describes an event that the farmer Walter left out of his report. A starving prisoner had caught a chicken that had entered the camp through the barbed-wire fence. He and a Russian prisoner were caught killing it. According to van Dijk, Walter, after the evening roll call, entered the camp in a rage and demanded punishment. A Kapo broke the wrist bones of the Russian, thrashed van Dijk, and crushed one of his fingers. Van Dijk was put on public display with a sign saying: "I am a chicken thief."

On April 5, 1945, the prisoners were taken on foot from Nüxei to Wieda, where the evacuation march of the SS-Baubrigade III began on April 7.

**SOURCES** The organization AgSSüHR has collected reports and documents about the Nüxei camp; see Firouz Vladi, "Der Bau der Helmetalbahn, der Zwangsarbeitseinsatz der III. und IV. SS-Baubrigade, die KZ-Aussenlager Mackenrode, Nüxei, Osterhagen und Wieda sowie Ellrich und Günzerode," in *Der Bau der Helmetalbahn. Ein Bericht von der Eisenbahngeschichte, den KZ-Häftlingslagern und der Zwangsarbeit im Südbarz in den Jahren 1944–45 sowie den Evakuierungsmärschen im April 1945*, ed. AgSSüHR (Duderstadt:Verlag Mecke Druck, 2000), pp. 40–133.

Further research on Nüxei can be based on the primary and secondary sources provided for the Wieda subcamp.

## OSNABRÜCK (NEUENGAMME) (SS-BB II)

The SS-Baubrigade II was formed in October 1942 in the Neuengamme concentration camp with 1,000 prisoners; 250 of them formed a subcamp in Osnabrück, which stayed there until May 1943. The decision to send a labor detail to Osnabrück also to remove debris from bomb damage was made on relatively short notice.<sup>1</sup> The city mayor, Erich Gärtner, may have had influence on the allocation of concentration camp prisoners, as in his capacity as head of both Emergency Measures (Leiter der Sofortmassnahmen) and Air Defense, he was responsible for all matters of removal of debris after bombing raids.

The prisoners of the SS-Baubrigade II arrived at Osnabrück no later than October 17, 1942, for on this day the first death is documented.<sup>2</sup> In the first few months of 1943 there was no further large bombing raid on Osnabrück. Therefore, the prisoners were withdrawn in May 1943, probably at the beginning of the month, and transferred to Bremen, Wilhelmshaven, and later Hamburg, despite the protests of the mayor.<sup>3</sup>

The labor detail occupied the Overberg School in a residential district of Osnabrück on the street of the same name. The gymnasium located between the two wings of the building served as the prisoners' accommodation. Looking from the street, the left wing had been destroyed by a direct hit of a bomb, and only its basement could be used. Here were the bath of the school, the storeroom, and the kitchen, in which students were taught cooking. In the basement of the right wing were the boiler room, the prisoners' kitchen, an infirmary, a small workroom, and a windowless partition. On the ground floor of the right wing were the quarters for the SS and the police reservists. The schoolyard was used for roll calls.<sup>4</sup>

Of all the construction brigade camps, the Osnabrück camp had the highest death rate; 86 prisoners died between October 1942 and March 1943 and are buried in the Heger cemetery—that is, within five months, one-third of the prisoners died. Responsible for the atrocious conditions was primarily the camp leader, who, together with a corrupt clique of prisoner-functionaries, terrorized the remaining prisoners as well as the surrounding community, which did not intervene despite the visibly dramatic conditions in the camp.<sup>5</sup>

Initially, the camp commander in Osnabrück was SS-Hauptscharführer Brinkmann. He was replaced in November 1942 by SS-Oberscharführer Walter Döring. Döring, born on March 1, 1906, in Eisenach, already had a career of several years as an SS man and as a concentration camp supervisor. From 1934, the trained butcher served as a member of the SS in Weimar, was then transferred to the SS barracks at the castle Lichtenburg in Prettin for disciplinary reasons, and from there went to the Buchenwald concentration camp in June 1937. In January 1941, he was sent to the Neuengamme concentration camp first as block and then as roll-call leader. Shortly before being ordered to Osnabrück, Döring is alleged to have been involved in the killing of a Soviet prisoner of war (POW).<sup>6</sup> One of Döring's closest confidants within the camp community was the first Kapo, Wilhelm Leers. Leers was born in 1903 in Cologne. In February 1940, he was sent by the Criminal Investigation Department of the Police in Cologne as a "professional criminal" to Neuengamme.<sup>7</sup> In Neuengamme, Leers revealed himself as a sadist, and this accounts for the criticism by political prisoners of his selection for Osnabrück. Of the remaining Kapos destined for Osnabrück, all of whom were citizens of the Reich, there were two political prisoners, Ernst Bonhoft and Fritz Bringmann, sent as orderlies.<sup>8</sup> The remaining prisoners of the labor detail transported to Osnabrück were mostly Soviet citizens, but a few Poles, Yugoslavs, and Dutch are also mentioned.<sup>9</sup>

From January 1943, the unit of guards, besides a handful of SS men, consisted mostly of local auxiliary police, who as a rule were either self-employed or worked in the service sector, for example, as waiters or barkeepers, and the majority of them were born in the 1880s and 1890s. It is possible to conclude from the surviving personnel files that the police reservists, once they started "guarding prisoners," performed their duties without any noteworthy incident. There are no instances documented of frequent absences due to illness, of applications for transfer, or of disciplinary proceedings.<sup>10</sup>

The "Regime of Terror" established by Döring and Leers included the embezzlement of food on a grand scale, so that within a few weeks most of the prisoners lost weight in a "terrifying manner."<sup>11</sup> Iwan Andrejewitsch Slipatschenko desperately searched in the rubble for food to survive: "I could have eaten the sole of a shoe if it had been attractively packed. Goodness knows what I ate."<sup>12</sup> In addition to the hunger, lack of clothing and the high pace of work were the main reasons for the prisoners' visible deterioration. With Döring's arrival

in Osnabrück, the pace of work was increased, and rations were again reduced.<sup>13</sup>

Of the 250 prisoners, around 100 had physically wasted away by the end of 1942. On Döring's instructions, no more than 10 sick were allowed in the inadequate infirmary. When the prisoner orderlies brought up the untenable conditions with Döring, he demanded that they kill the sick with injections of gasoline, which they steadfastly refused despite mistreatment by Döring.<sup>14</sup> As Döring wanted to get rid of the sick, he sent them to work where they were forced to work until they collapsed. Then they were doused with water and left lying in the cold until the prisoners returned to the camp. Bringmann wrote the following about this "treatment": "The majority did not survive until the return to the camp and died during the course of the day. The others got very rarely something to eat in the evening, but the cold water treatment was continued until they also met their fate."<sup>15</sup>

Leers also abused the prisoners with great brutality both on Döring's command and without. Once he chased a sick Soviet prisoner to work, beating him again and again, and when he was finally too weak to go, he hung him in the prisoners' quarters with his hands tied behind his back. Here he mistreated the helpless prisoner until he was unconscious—a torture that the prisoner did not survive.<sup>16</sup> The 86 prisoners whose deaths are recorded in the Osnabrück camp were except for 1 all of Soviet nationality. One can conclude that the small "layer of leadership" in the camp consisting of German prisoners, which with a few exceptions belonged to Leers's clique, knew how to ensure their survival by means of brutality and corruption. The only possibility for the Soviet prisoners was to try and escape. Only a few were able to escape, and those caught had to expect to be shot. In at least two cases, Döring personally murdered the recaptured prisoners.<sup>17</sup>

Not only the guards but also the local inhabitants were daily witnesses to the brutal treatment of the prisoners. The school janitor, Fritz L., remained at his position, and the cooking courses, headed by the teacher Agnes W., continued for various groups of students.<sup>18</sup> The violence that was meted out to the prisoners was visible. Agnes W. reported in 1950: "The schoolyard was open and the neighborhood children played there. They must have seen that the prisoners were treated badly, and they must have told their parents for the mothers complained to the SS or the Kapos. I was told by a woman, whose name I no longer remember, that she received the following reply: 'If the children are not hard yet, then they will have to become that way.'"<sup>19</sup>

The prisoners worked daily at several locations right in the middle of the city. The population could see that many of the prisoners were "completely run down, exhausted, and lacking any strength," collapsing while they labored.<sup>20</sup> They were also witnesses to the mistreatment meted out at the work sites. In 1950, a police reservist described the situation with the following words: "The prisoners were badly mistreated on the building sites. I saw countless cases. The so-called SS foremen and the Kapos committed the acts. The prisoners

were beaten on the head with wooden bars, so that they collapsed covered with blood and sometimes could not continue working for a considerable time."<sup>21</sup>

Comparing the change in the death rate over time with reports by surviving prisoners, it becomes clear that the systematic resistance by anti-Fascist and Communist prisoners finally led to an improvement in the conditions of the camp. Both Bringmann and Bonhofs as well as George Merten, who was deliberately sent in December 1942 from Neuengamme to Osnabrück, were instrumental in dismantling the power structure in the camp.<sup>22</sup> With high personal risk, they resisted the instructions of Döring and repeatedly criticized his commands. Finally, they used the opportunity during his absence on leave at the beginning of March 1943 to draw the attention of the main camp to the intolerable conditions by pointing out the low efficiency of the camp. They systematically tried to weaken the front of the corrupt and brutal Kapos, fighting back against Leers in quite dangerous conflicts for months. Döring was replaced in March 1943 by an SS-Hauptscharführer Gehrts (possibly spelled Gerds or Geerdts); Leers fled in April 1943 from the enraged fellow prisoners.<sup>23</sup>

The Hamburg State Court sentenced Döring to prison for life in 1951; on appeal the sentence was reduced to two years. He was charged again in the middle of the 1950s and sentenced to a term of eight years in a penitentiary. Leers had been sentenced to death by a British military court as early as 1946, but the sentence was commuted, and in 1954 he was released from prison. Both town doctors, who issued the falsified death certificates, were questioned in the 1950s but never prosecuted.<sup>24</sup> Nothing at the Overberg School commemorates the infamous subcamp.

**SOURCES** The history of the Osnabrück construction brigade camp was given particular attention in a study of the SS-Construction Brigades: Karola Fings, *Krieg, Gesellschaft und KZ: Himmlers SS-Baubrigaden* (Paderborn: Schöningh, 2005). Before that, it had been mentioned with a marginal comment in an extremely apologetic city history, which covered up the responsibility of the city of Osnabrück for the camp and the extent of the crimes: Karl Kühling, *Osnabrück 1933–1945. Stadt im Dritten Reich* (Osnabrück: H.Th. Wenner, 1980), p. 149. Relatively early a survivor of the camp published important witness reports: Fritz Bringmann, *Häftlinge in der 2. SS-Baubrigade in Osnabrück* (Frankfurt am Main: Röderberg-Verlag, 1981).

Sources are to be found in the ASt-Os and the NStA-Os, Dep. 3 b XV and Dep. 3 b XIX, of which a few extracts have been published in an early volume on the Osnabrück camp: Ursula Fisser-Blömer, "Zwangsarbeit in Osnabrück. SS-Baubrigade, Kriegsgefangenen- und Arbeitserziehungslager," *Antifa-Be-Os* 6 (1982): 23–29. Also relevant are the judicial files held by the BA-L, IV 406 AR 245/69, IV 406 AR 221/74, as well as the documents in the AG-NG (Interviews and Reports Nr. 141, 150, 153, 1576, 1602) and the FZG (Archive Hans Schwarz Totenbücher des KZ Neuengamme).

## OSTERHAGEN (BUCHENWALD, MITTELBAU, AND SACHSENHAUSEN) (SS-BB III)

Osterhagen is a small village in the Harz Mountains. Between July 1944 and April 1945, one of the three subcamps of the SS-Baubrigade III, stationed in Wieda, was located in Osterhagen. The prisoners were to construct a 22-kilometer-long (13.7-mile-long) railway designed to relieve the railway line between Osterhagen and Nordhausen. The camp, which had

previously been a brickworks, lay to the southeast of Osterhagen at the bottom of a valley. It consisted of three barracks and was surrounded by a fence with watchtowers. From July 5, 1944, 300 prisoners were detained there.

Osterhagen was the most notorious of all the SS-Baubrigade III camps. Aimé Bonifas, who was transferred from the Laura subcamp via Dora to Mackenrode on September 2, 1944, and arrived in Osterhagen on December 25, 1944, after a short stay in Wieda, described his transport to this much-feared camp in his memoirs:

The lorry carried us away quickly, I have no idea from which of the Wieda branch camps. . . . [G]uard towers loomed suddenly in a sweeping desolate landscape, a name which we could not believe to be true, which we dared not speak, which kept our mouths clamped tightly shut: Osterhagen, the infamous punishment camp. I was sent there, to this hellish camp, simply because numbers had to be kept up, because this beast had to continue consuming. . . . A real death hole, not a tree in sight, icy desolation, an area of despair. It was enough to make one howl. . . . I was more than used to the faces of prisoners, but here, more than anywhere else, I was shaken by their expressions, as if they were hunted animals. They bore the stamp of never-ending suffering.<sup>1</sup>

The Osterhagen camp was visibly more badly equipped than all the other camps of the SS-Baubrigade III. The hygienic conditions were particularly appalling. There was no water supply, and the filthy water brought in by truck was never sufficient. The prisoners had to wash in the open air in the icy cold. The clay surface of the camp was not sealed, with the result that the prisoners were completely filthy when it rained. Disease and epidemics were widespread. According to Bonifas, “The hygienic conditions in Osterhagen are so deplorable that we were completely covered in lice. It was a real plague. Large lice, with a black cross, that quickly multiplied, ran about everywhere and laid their eggs in the tiniest folds of our clothes. . . . They sucked the last little bit of life out of us. We were the dead waiting to be called. Many comrades died because they were quite literally eaten by the lice.”<sup>2</sup>

This, the most isolated of the SS-Baubrigade III camps, was commanded by SS-Hauptscharführer Franz Choina, described as a most brutal man. Georges Pieper, the camp elder and Kapo in the SS-Baubrigade III office in Wieda, described Choina shortly after the liberation as follows: “The Osterhagen Camp under the command of Choina was particularly infamous. He had the prisoners work in complete darkness and once the food was distributed the prisoners had to eat it cold. Warm soup was delivered in a lorry in the middle of the day and was distributed at 10 p.m. The prisoners in the Osterhagen camp were also beaten more than elsewhere. It was only in the rarest of cases that sick prisoners were taken to Wieda for treatment—it was rather the case that they had to work until they dropped dead.”<sup>3</sup>

According to Bonifas, the “law of the jungle” ruled in Osterhagen. Choina had insured the support of particularly corrupt prisoner-functionaries who tormented, humiliated, robbed, and beat the prisoners at every available opportunity. Each time the prisoners returned to the camp, there was a punishment roll call: “Each evening when you arrived at the block the green Kapo pulled out an exercise book in which he had written the numbers of the prisoners who had not worked hard enough during the day. It was often French men, mostly sick and at the end of their strength. Each was beaten five or ten times with a rubber truncheon and sometimes their soup was taken away from them. There was no quicker way to the crematorium!”<sup>24</sup>

Under the Kapos’ blows, often without shoes, and in ripped clothing, the undernourished prisoners had to perform heavy manual labor. When bad weather stopped work on the railway from the beginning of January to the middle of February, the prisoners were taken in open railway wagons each morning at 4 A.M. from Osterhagen to Niedersachswerfen, 20 kilometers (12.4 miles) away. Here they had to do heavy transport work—an additional strain that resulted in many deaths before work resumed on the railway line. The longer the winter lasted, with temperatures down to minus 20 degrees Celsius (minus 4 degrees Fahrenheit), the more prisoners died. “The end of the winter in Osterhagen was a nightmare. On March 2, [1945,] my work detail had to unload soil from the wagons and shovel against the wind which was particularly strong. The temperature was very low. On this day alone six of our comrades collapsed from exhaustion, five of them French. . . . Again the dead flooded the camp. People died everywhere at any time, day and night, often without a glance or a word or a handshake with a friend.”<sup>25</sup>

The prisoners’ corpses were brought to Dora and from March 1945 to the Erich subcamp in Ellrich. A few of the dead are said to have been buried in a mass grave in the Osterhagen cemetery from where after the war they were returned to their places of origin. Three corpses are said to have been exhumed from the campgrounds in the summer of 1945.

The camp was dissolved on April 6, 1945. The prisoners marched to Wieda, from where the evacuation march began a day later.

**SOURCES** Numerous reports and documents on Osterhagen are contained in AgSSüHR, ed., *Der Bau der Helmetalbahn. Ein Bericht von der Eisenbahngeschichte, den KZ-Häftlingslagern und der Zwangsarbeit im Südbau in den Jahren 1944–45 sowie den Evakuierungsmärschen im April 1945* (Duderstadt: Verlag Mecke Druck, 2000). In addition to the report by Aimé Bonifas, *Häftling 20.801. Ein Zeugnis über die faschistischen Konzentrationslager* (Berlin: Union-Verlag, 1983), the Wieda subcamp’s primary and secondary sources are the starting points for further research on Osterhagen.

## ROUEN (BUCHENWALD) (SS-BB V)

The SS-Baubrigade V based in Doullens had a subcamp in Rouen, about 97 kilometers (60 miles) to the northwest of Paris, between April and probably August 1944. A former World War I prisoner-of-war (POW) camp, located at a race-track, served as the prisoners’ accommodation. The approximately 500 prisoners lived in barracks of corrugated iron, known as Hindenburg Huts. The task of the SS-Baubrigade V was to construct launching pads for the V-1 and V-2 rockets. From Rouen, labor details were sent to the military airport at Montdidier and to Amiens.<sup>1</sup>

Zygmunt P., who managed to flee during a bombing raid on April 25, 1944, said the following about Rouen: “Our accommodations in Rouen were the so-called ‘Corrugated Iron Barrels.’ In one such ‘barrel’ were fifty prisoners. There were no beds and we slept on the concrete foundation that was covered with dirty, rotten straw. We were driven to work by trucks to the shore of the English Channel which was sixty kilometers [37.3 miles] away. There we had to repair the defense facilities destroyed by Allied air raids. Air-defense soldiers guarded us; their supervision was easier to bear, as they did not mistreat or abuse us while we worked.”<sup>2</sup>

The camp commander was SS-Obersturmführer Stahmer. After the war, he was accused by survivors of having caused the deaths of prisoners. He was said to have ordered the prisoners to continue working during bombing raids. Indeed, on April 23 and 25, 1944, 14 prisoners of the SS-Baubrigade V died in Rouen as a result of an air raid.<sup>3</sup>

Camp elder Friedrich B. testified in a postwar investigation about the murder of a Polish prisoner. The man was injured on the upper arm during a bombing raid and because of the bombing could not be taken to a hospital. The prisoner orderly cared for him for a few days in the poorly equipped prisoner infirmary. When the arm swelled more and more, they pretended that the prisoner would be taken to a hospital, and he was put on a truck. Friedrich B. continues the story: “I heard a shot and was told to strike him from the list. He had been shot. I saw how he was thrown from the truck.”<sup>4</sup>

In May or June 1944, a detail of the SS-Baubrigade V attacked a Wehrmacht post, and a mass breakout ensued. Hans Kammler, head of Amtsgruppe C of the SS-Business Administration Main Office (WVHA), and Gerhard Weigel, head of the SS-Baubrigade V, noted in a report to Heinrich Himmler: “As a result of the situation (invasion, air raids, etc.) the prisoners were very unwilling to work and undisciplined. In particular, measures had to be taken against the Polish prisoners as in several instances they incited the other prisoners to refuse to work and in the majority of cases they were the

instigators of escape attempts and above all, of the large surprise attack on the Wehrmacht post.”<sup>5</sup>

The attack on the Wehrmacht post could have happened in the Rouen camp. Karl J. has reported about a similar incident: “I remember just now that a labor detail of Russian prisoners attacked the guards wearing black collar tabs (soldiers of the Luftwaffe Construction Company) and fled. I do not know how many escaped. Nothing happened to the soldiers—they were just tied up. One of the escaped prisoners received serious injuries on the run in an exchange of fire with a Wehrmacht captain when a bullet grazed his head.”<sup>6</sup>

Former prisoner Walter St. has reported that after a mass escape the SS in Rouen ordered a roll call of the prisoners, selected a few at random, and shot them.<sup>7</sup>

The Rouen subcamp was dissolved no later than August 1944 and transferred to the Harz Mountains via Doullens and Lille. The prisoners were distributed to various Buchenwald subcamps over which the newly formed Mittelbau concentration camp took control in October 1944.

**SOURCES** There are only a few documents and memoirs that provide information about the Rouen subcamp—especially BA-L, IV 406 AR-Z 207/73. Further research could be based on the primary and secondary sources for the Doullens subcamp.

## SOLLSTEDT (MITTELBAU, BUCHENWALD, AND SACHSENHAUSEN) (SS-BB I)

The SS-Baubrigade I was stationed in Sollstedt, a town in Thüringen, between September 10, 1944, and April 5, 1945. It once numbered 1,000 prisoners, but by the time it reached Sollstedt after service in the Rhineland, on the Channel Islands, and in Belgium, it only had 441 prisoners.<sup>1</sup> In October 1944, this unit came under the administration of the Mittelbau concentration camp, and the prisoners were assigned numbers from the 100000 series.<sup>2</sup> The assumption of control by Sachsenhausen in January 1945 did not change the relationship with Mittelbau as the main camp. At the end of the

war, the strength of the construction brigade was again almost 1,000 prisoners because of transports from Mittelbau.

In Sollstedt, the prisoners had to improve the tunnels of a potash shaft mine and pack and store items of clothing for the SS-Business Administration Main Office (WVHA), Amt B (Truppenwirtschaft), and for the Luftwaffe Clothing Office Bielefeld. The prisoners were accommodated in a barracks camp located at the bottom of a valley near the shaft. They had to construct the three to five barracks themselves. The food for the camp was brought from Mittelbau. One work detail of the brigade worked in another potash shaft mine near Hainboltshausen until April 1945. At the end of 1944, the SS-Construction Brigade I established a subcamp in Hohlstedt.

The former power struggles between the different prisoner groups broke out again in Sollstedt. The dreaded Adolf Fehrenbacher assumed the role of camp elder during the transport from Alderney. In the memories of survivors, Sollstedt stands out as a place of murder of Jewish and Wehrmacht prisoners. For the first time, a larger group of Jewish prisoners, almost exclusively from Poland but also including a few Frenchmen and Hungarians, was transferred to the SS-Baubrigade I on March 21, 1945. This group, in particular, was subject to mistreatment by Fehrenbacher and by the commander of the guards, Otto Högelow.<sup>3</sup>

From December 1944 a larger group of Sonderabteilung Wehrmacht (Special Detachment Wehrmacht, SAW) prisoners were part of the construction brigade. The SAW men were without exception soldiers who, after having been subjected to various disciplinary measures by military courts, were found not fit to serve in a Wehrmacht punishment battalion. Such cases could be sent by the military to the police or the Gestapo for incarceration in a concentration camp for a limited time. As “Transitory Prisoners II,” such soldiers, if they had not been condemned to death, were sent to Buchenwald from August 1944 and from November to the Mittelbau concentration camp. An SS-Baubrigade I list named “Transitory Prisoners II (SAW) detained here” and dated March 1, 1945, shows 296 persons in this group.<sup>4</sup>

At least 34 deaths occurred in Sollstedt up to the middle of April 1945. Several handwritten entries give the deaths as occurring between April 5 and 13, 1945. Survivors hold the commander of the construction brigade, Georg Braun, responsible for the deaths. It is alleged that, on his orders, SAW members were forced to “run the gauntlet” as punishment for infractions. He forced these men with the words “I want to see blood” to run between the camp prisoners who were lined up in two rows and had them beaten to death; some were said to have been shot after the chase.<sup>5</sup>

In February 1945, the SS-Baubrigade I in Sollstedt, without changing its location or status, took on the tasks of a railway construction brigade. On February 10, 1945, Gerhard Weigel, the “Inspekteur sämtlicher Baubrigaden” (Inspector of Selected Construction Brigades), assigned SS-Commander Braun to the Reichsbahn (German National Railways) Directorate at Halle-Northeim. The main task remained that of

storing items in the mines. During an inspection of Sollstedt on February 10, 1945, Weigel praised the “good progress” of storing clothes and equipment for several divisions of the Waffen-SS.<sup>6</sup>

Shootings, mass escapes, and aimless transports throughout the German Reich characterized the evacuation. On April 5, 1945, the Sollstedt prisoners were forced to march 72.4 kilometers (45 miles) in 24 hours to the Hohlstedt subcamp. During the march, prisoners who were unable to continue are said to have been shot. At midday on April 7, 1945, around 900 prisoners were loaded onto a train at the Wahlhausen Railway Station.<sup>7</sup>

At first, the train headed north and reached Berlin-Grunewald on April 10, 1945, where it is reported to have received an order to head to Norway. Near Wittenberge on the Elbe, the transport had to retreat in front of Soviet troops. It was here at the latest that SS-Commander Braun might have received the Kammler order he mentioned in 1952 that the SS-Baubrigade I was to go to Steyr. It is possible that the construction brigade now became a railway construction brigade and was given a new order. SS-Oberscharführer Högelow stated in 1952 that the construction brigade in Hohlstedt “was reassigned again and this time as a Railway Replenishment Construction Unit” and was deployed as such until the whole transport dissolved.<sup>8</sup>

The train altered direction and traveled via Pirna and Prague to Pilsen, which, according to a record of a former prisoner, it reached on April 21, 1945. After a further journey, lasting a week, the construction brigade reached Steyr on April 28, 1945. At least 20 prisoners died on the journey or were shot when they sought cover under a railway wagon during a bombing raid. The train was reportedly used by more than 160 prisoners to escape and was subjected several times to bombing attacks. It is not possible to determine how many prisoners reached Steyr. From Steyr they were transferred to the Mauthausen subcamp Steyr-Münichholz. Two days after reaching Mauthausen, on May 5, 1945, American tanks freed the camp.

After the war, the commanders of the SS-Baubrigade I escaped criminal punishment. Because of his membership in the SS, Högelow was imprisoned in Esterwegen until 1949; subsequently kept in detention for trial, he was released in 1951. Later investigations against him were fruitless. The Freiburg State Court sentenced Fehrenbacher in 1955 to a term of seven years in a penitentiary.

**SOURCES** The camp was described in an outline for the first time by Frank Baranowski, *Rüstungsprojekte in der Region Nordhausen, Worbis und Heiligenstadt während der NS-Zeit* (Duderstadt: Mecke-Druck, 1998). Jens-Christian Wagner’s, *Produktion des Todes. Das KZ Mittelbau-Dora* (Göttingen: Wallstein, 2001) used this work in a study on the Mittelbau concentration camp. The Sollstedt subcamp received more attention in a book on the SS construction brigades: Karola Fings, *Krieg, Gesellschaft und KZ: Himmlers SS-Baubrigaden* (Paderborn: Schöningh, 2005).

The most important sources are the investigative files at BA-L, 404 AR-Z 57/67 and 410 AR 63/77.

## SPREENHAGEN (SACHSENHAUSEN) (SS-BB II)

For a short time at the end of 1944, the SS-Baubrigade II stationed in Berlin since April 1944 had a subcamp in Spreenhagen (County Oder-Spree). A list of the guards of the SS-Baubrigade II of January 1945 mentions this subcamp for the first time; SS-Rottenführer Wilhelm Kopiska is listed as its commander.<sup>1</sup> A report to the Kommandantur of the Sachsenhausen concentration camp, dated January 25, 1945, includes a note that the Spreenhagen labor detachment was reassigned to the SS-Construction Management in Bad Saarow (County Oder-Spree) on January 1, 1945.<sup>2</sup>

As the Sachsenhausen subcamp Ketschendorf in Fürstenwalde (County Oder-Spree) maintained a construction site among other places also at Spreenhagen, it is likely that the prisoners of the SS-Baubrigade II had to work there too.<sup>3</sup> The SS-Construction Management organizations “Reich Nord” and “Kurmark” maintained several sites at Bad Saarow, where prisoners of a Sachsenhausen subcamp located in Bad Saarow had to work.<sup>4</sup> Therefore, it is also possible that the prisoners of the construction brigades were transferred there in January 1945.

**SOURCES** Reviewing the records of the investigations by the ZdL about the Berlin camps of the SS-Baubrigade II held at BA-L (IV 406 AR 594-596/73) did not yield any further information.

## **WIEDA (BUCHENWALD, MITTELBAU, AND SACHSENHAUSEN) (SS-BB III)**

The SS-Baubrigade III was based in Wieda, a small village in the Harz Mountains, from May 1944 to April 1945. The location put it in the radius of the Mittelbau concentration camp complex then being established.

Hans Kammler, head of Amtsgruppe C (Construction) in the SS-Business Administration Main Office (WVHA), was responsible for establishing this camp. After the sites for assembling the long-distance A4 (Aggregat 4) rocket (the later V-2) were bombed, Albert Speer, Adolf Hitler, and Heinrich Himmler decided in mid-August 1943 to push for the enlargement, "with the heavy utilization" of concentration camp prisoners, of an underground facility in the Harz Mountains. Himmler appointed Kammler to carry out the construction.<sup>1</sup> The whole project was coordinated under the so-called Mittelwerk GmbH, established in September 1943.

Kammler wanted to use the SS construction brigades to build a new rail line so the existing Osterhagen to Nordhausen line could be used exclusively for armaments industry transportation. The Mittelwerk GmbH entrusted management and construction of the rail line to the Deutsche Reichsbahn (German Railways), which in turn revived an older plan to build a 22-kilometer-long (13.7-mile-long) track (called the "Helmetalbahn") south of the existing line and through the Helme valley. The Berlin company Tiefbau AG Julius Berger undertook the major excavation work.

The construction of Helmetalbahn dominated the prisoners' life until the end of the war. SS-Baubrigade III was assigned the westernmost of the three construction zones, the section from Osterhagen to Mackenrode. The administration for this section was in Mackenrode, and the SS-Baubrigade III established three subcamps along this part of the line: at Osterhagen, Nüxei, and Mackenrode.

After the Cologne camp with its remaining 311 prisoners of the SS-BB III was dismantled, and the Wieda camp was set up, the brigade began its work on May 16, 1944. Then 700 prisoners from the Buchenwald concentration camp joined them on June 7, 1944.<sup>2</sup>

An empty clubhouse of a marksmen's association formed the center of the camp in Wieda. Around it were other buildings that served as the brigade's administrative offices, a kitchen, a laundry, and an infirmary, and the grounds were fenced in and outfitted with watchtowers. On average, about 100 prisoners were housed here. Living conditions in this auxiliary camp generally were better than in the subcamps, especially as Wieda had the central kitchen. In addition, inmates here did not have to do exhausting construction work but, instead, either remained in the camp, built barracks in Niedersachswerfen, worked for private persons, or were set to work in or by the communal administration.

Brigade guards lived in barracks built for them close to the camp. Unlike in Cologne, where police and auxiliaries had been recruited, here the SS relied on Luftwaffe soldiers, in any case available because the Luftwaffe was having difficul-

ties with its supply lines. They came under the command of the SS as of September 1, 1944. In January 1945, the SS-Baubrigade III guards included an SS leader, 42 SS noncommissioned officers, and 132 SS men.<sup>3</sup>

The integration of the Wieda camp into the system of camps centered on Mittelbau meant death loomed more sharply over the prisoners. A small infirmary was set up in Wieda for minor cases, while other cases were sent to the Buchenwald auxiliary camp Dora or, starting in May 1944, to the Ellrich-Juliushütte camp that became part of Mittelbau and after January 1945 to the Boelcke-Kaserne. After June 1944, all transports to and from the construction brigade went through Mittelbau, without exception. As of July 1944, the guard details came under the control of the "SS-Standort Mittelbau"; and by October 1944, the construction brigades in the Harz came under the control of what had become the independent Mittelbau concentration camp. The transfer of control in January 1945 to the Sachsenhausen concentration camp was pro forma.

In the first few weeks, a surprisingly strong interaction developed between the Wieda camp and the surrounding community. Soldiers serving as guards played soccer with the prisoners on the sports field, and it is said that after the game they all marched singing through the village. One female villager reported: "In the first weeks after the camp was set up, it was like the annual fair. After work, in the evenings, the prisoners sat in the cleared area in front of the marksmen's tent, and some of them, especially the Gypsies, had instruments, mandolins or guitars, and made music. Many villagers, both young and old, stopped on the main street in front of the barbed-wire fence to listen in."<sup>4</sup>

This apparent lack of discipline in the camp resulted in the dismissal, in June 1944, of Karl Völkner as leader of the construction brigade. He had been in command since September 1942 and was now transferred to the Flossenbürg concentration camp. Until July 20, 1944, a certain SS-Oberscharführer Freys, who had been at the Mauthausen concentration camp in Austria, temporarily replaced him. SS-Obersturmführer Fritz Behrens replaced him in turn.

Following Behrens's appointment, conditions in the camp deteriorated, and prisoners were replaced. On July 27, 1944, groups of prisoners from SS-Baubrigade III were taken away to Dora from the sites where they were working. Two days later, around 1,000 new prisoners from Dora filled the four camps. With this ruthless replacement, relationships that had developed over the course of a year and a half between at least some of the prisoners were broken. Paul Rassinier, who learned about the SS-Baubrigade III while in the Dora infirmary, accurately remarked that "in less than two months, Wieda became as hard and inhumane as Dora."<sup>5</sup> Behrens remained the leader of SS-Baubrigade III until just before the end of the war but was replaced in early April 1945 by SS-Untersturmführer Karl Merkle.

Some 16 deaths are registered as having occurred up to the time the brigade came under the control of Mittelbau.<sup>6</sup> During the summer, the living conditions deteriorated rapidly, so

that by the end of August 1944, 300 prisoners incapable of working were taken away to the Ellrich-Juliushütte camp.<sup>7</sup> The main reason for prisoner exhaustion lay in the heavy construction work demanded of them; the pace of work dictated by Kammler and the Armaments Ministry was also repeatedly increased.<sup>8</sup> According to Georges Pieper, camp elder (Lagerältester) and Kapo in the construction brigade's office and hence a good source, death rates increased markedly in the winter of 1944–1945: he recalls 74 prisoners dying between December 30, 1944, and April 7, 1945.<sup>9</sup> In early 1945, the SS-Baubrigade III received Jewish prisoners for the first time: about 200 of them were transferred from Dora, though by the end of March they were transferred to the SS-Baubrigade IV.

For the most part the railway line was double-tracked, and many bridges and sections were already finished when work had to stop at the end of March 1945 due to the advancing Allied forces. In a report prepared after the war by the building department of the Reichsbahn office in Kassel, the mass use of prisoners received only scant mention: "In 1944/45, a new rail line for goods traffic from Osterhagen to Nordhausen was built to relieve the Northeim to Nordhausen line, length about thirty kilometers [18.6 miles]. . . . Several thousand men (prisoners and concentration camp inmates) worked on it. Work stopped at the end of the war due to the American advance."<sup>10</sup>

On April 5, 1945, the prisoners from the Nüxei and Mackenrode subcamps were taken to Wieda, and the next day, so were the prisoners from the Osterhagen subcamp. On April 7, 1,135 prisoners were marched, in a northwesterly direction, through the Harz Mountains. A train took those who were ill, numbering somewhat more than 300.

On April 9, 1945, SS-Baubrigade III, now reassembled, left the Wernigerode railroad station in a single train: camp leader Merkle had by now disappeared. The train made it as far as Letzlingen, a village north of Magdeburg at about the same latitude as Berlin. About 900 prisoners were able to flee here during a bombing raid, though during the course of the day, 200 were recaptured and returned to the train by SS guards. The SS then forced these 200 on a march at whose end, on April 24, 1945, 50 prisoners remained to be liberated. Some in this group were able to escape en route, but most had collapsed dead by the wayside or had been shot.

A second group of around 600 prisoners who had been recaptured near Letzlingen was marched in a southeasterly direction. Here, too, there were mass escapes and shootings, whereby civilians and men from the German Home Guard (Volkssturm) particularly distinguished themselves. Around 500 prisoners of this group were liberated near Burgstall on April 14, 1945. The ill, who remained behind on the train at Letzlingen, were probably the victims of the infamous massacre at Gardelegen. According to estimates by historian Joachim Neander, of the 1,135 prisoners who left Wieda, only about 700 lived long enough to experience liberation.

**SOURCES** A local group, the AgSSüHR, has collected considerable material about the SS-Baubrigade III camp, in-

cluding maps, photographs, and reports by survivors and eyewitnesses. See Firouz Vladi, "Der Bau der Helmetalbahn, der Zwangsarbeitseinsatz der III. und IV. SS-Baubrigade, die KZ-Aussenlager Mackenrode, Nüxei, Osterhagen und Wieda sowie Ellrich und Günzerode," in *Der Bau der Helmetalbahn: Ein Bericht von der Eisenbahngeschichte, den KZ-Häftlingslagern und der Zwangsarbeit im Südharz in den Jahren 1944–45 sowie den Evakuierungsmärschen im April 1945*, ed. AgSSüHR (Duderstadt: Verlag Mecke Druck, 2000), pp. 40–133. Since the 1960s, Manfred Bornemann has also collected material and evidence about the camp in *Geheimprojekt Mittelbau: Vom zentralen Öllager des Deutschen Reiches zur größten Raketenfabrik im Zweiten Weltkrieg* (Bonn: Bernard & Graefe Verlag, 1994). Joachim Neander's dissertation investigated this particular death march in detail. See Neander, "Das Konzentrationslager 'Mittelbau' in der Endphase der nationalsozialistischen Diktatur: Zur Geschichte des letzten im 'Dritten Reich' gegründeten selbständigen Konzentrationslagers unter besonderer Berücksichtigung seiner Auflösungsphase" (Ph.D. diss., University of Bremen, 1996). A recent monograph has also addressed the particular situation of the SS-Baubrigade III in Wieda and its relation to the Mittelbau concentration camp complex: Karola Fings, *Krieg, Gesellschaft, und KZ: Himmler's SS-Baubrigaden* (Paderborn: Schöningh, 2005).

Sources are scattered, although the aforementioned literature provides initial guidance. Important collections of sources can be found at the THStA-W (NS 4 Buchenwald, KZ Buchenwald and Haftanstalten). The AG-MD holds copies of the transport lists from Warsaw (KL Buchenwald Nr. 36, KL Mittelbau Nr. 9), reports from survivors, and some of the files of the local building administration at Mackenrode. The investigation files of the NWHStA-(D) (Gerichte Rep.: 118/1174-1190, 1338-1349) are also of relevance, as are the holdings at the ZdL (IV 406 AR 85/67, IV 429 AR 1304/67) at BA-L.

## WILHELMSHAVEN (NEUENGAMME) (SS-BB II)

Prisoners from the Bremen-based SS-Baubrigade II often worked in Wilhelmshaven in 1943, and a subcamp as well as a bomb search detail existed there for a time.

Initially, this strategically important harbor city was to receive 500 prisoners,<sup>1</sup> as a massive area bombing on the night of September 14, 1942, had caused more damage than all of the previous attacks. In early October 1942, Walter Temp, the city's director of construction and head of its construction administration since May 1939, began the relevant negotiations. The Naval Station detail received permission to house the prisoners at Breddewarden, a work camp of the naval garrison.

November 3, 1942, saw the heaviest attack to date on Wilhelmshaven. Bremen's Senator Fischer, as Deputy Reich Defense Commissar, again offered Wilhelmshaven 500 prisoners from the SS-Baubrigade II, and Temp wanted to make them available for cleanup work to the Naval director's office and to the dockyards. But he was unable to recruit the necessary guards, as neither the Naval Station nor the city commandant wanted to make the needed forces available. In pleading tones, Temp wrote to the police president on November 12, 1942: "I am thus forced to draw to your attention that because of this failure, the possibility of removing or cleaning-up the bomb damage in Wilhelmshaven appears to be threatened, and that in a manner that is almost irresponsible. . . . It is therefore requested that the police make available sixty guards for the prisoners in 'protective custody,' possibly augmented by Luftwaffe and SS men."<sup>2</sup> But the police president could not help either. When four construction companies then occupied the quarters that had been proposed, the possibility of using the prisoners was regarded, at least for the time being, as a dead issue.

Wilhelmshaven only received a detachment of the SS-Baubrigade II in the spring of 1943, although the exact date it began its work is unknown. However, it likely began in the wake of the U.S. Army Air Forces offensive that had repeatedly carried out daylight air raids against Wilhelmshaven, starting on January 27, 1943. The city was so heavily bombed on March 22 that for the first time the district leader painted

a picture of the downfall of Wilhelmshaven. It is therefore likely that the 175-strong prisoner detachment, whose existence in Wilhelmshaven until August 7, 1943, is confirmed, was sent to the city after this March attack. It was recalled to Bremen on August 8, 1943, as the larger part of SS-Baubrigade II then was to be transferred to Hamburg.<sup>3</sup>

It has not been possible to determine in which building the prisoners in Wilhelmshaven were housed. A former prisoner stated that the camp was located at the navy harbor, but he himself was only in Wilhelmshaven in the fall of 1943.<sup>4</sup>

After the Wilhelmshaven camp was disbanded in August 1943, prisoners from the construction brigade did return to Wilhelmshaven as members of bomb detection squads. Since February 1943, there had been considerable problems with unexploded ordnance. From September 29 to October 21, 1943, and again from November 5 to December 22, 1943, 30 prisoners were sent each time to the city to do the dangerous work of disarming and removing unexploded bombs.<sup>5</sup>

There is scarcely any information about the conditions prisoners faced: no survivors' reports from the SS-Baubrigade II refer to Wilhelmshaven details. Eyewitness Wenzel W. mentions Wilhelmshaven simply as a location where they were deployed.<sup>6</sup> Only Pawel Wasiljewitsch Pawlenko reports on working in the Wilhelmshaven bomb detection squad. According to him, the sites were cordoned off, and prisoners had to disarm the bombs themselves. In his time there, eight prisoners were killed while doing this dangerous work.<sup>7</sup> However, none of the prisoners in this commando are listed by name in the Neuengamme death registers.<sup>8</sup>

**SOURCES** The use of the SS-Baubrigade II commando was first mentioned in a longer study of the SS-Baubrigaden: Karola Fings, *Krieg, Gesellschaft und KZ : Himmlers SS-Baubrigaden* (Paderborn: Schöningh, 2005). An older study on forced labor in Wilhelmshaven does not mention these prisoners: Günther Heuzeroth and Peter Szyuka, *Die im Dreck lebten: Ausländische ZwangsarbeiterInnen und Kriegsgefangene in Wilhelmshaven, Delmenhorst, Bremen und Bremerhaven; Ereignisse, Augenzeugenberichte und Dokumente* (Oldenburg: Druck und Verlagscooperative GmbH, 1994). For background on the bombing of Wilhelmshaven, see Rolf Uphoff, *Als der Tag zur Nacht wurde—und die Nacht zum Tage: Wilhelmshaven im Bombenkrieg* (Oldenburg, 1992), pp. 98–108, 128–145. For information on Temp, see Ingo Sommer, *Die Stadt der 500.000: NS-Stadtplanung und Architektur in Wilhelmshaven* (Braunschweig: Friedr. Vieweg & Sohn, 1993), pp. 29, 375; and Werner Durth and Niels Gutschow, *Träume in Trümmern: Planungen zum Wiederaufbau zerstörter Städte im Westen Deutschlands 1940–1950*, vol. 2, *Städte* (Braunschweig: Friedr. Vieweg & Sohn, 1988), pp. 1035–1051.

There are very few relevant primary sources. In addition to the above-mentioned reports of former prisoners, an exchange of letters exists in the ASt-Wil (4600/6), and there are a few references in a file from the RFSS (BA-B, NS 19/14). Other references may be found in ZdL (at BA-L), AG-NG, and FGNS-H.

**WUPPERTAL (BUCHENWALD) (SS-BB IV)**

Between August 1943 and May 1944 the SS-Baubrigade IV consisting of prisoners from the Buchenwald concentration camp, was stationed in Wuppertal. The first 50 prisoners reached the city on August 24, 1943.<sup>1</sup> Gradually the prisoner numbers were increased—at first to 100 on September 9, then to 400 on October 13, and to 592, the highest number, at the end of November.<sup>2</sup>

The decision to establish this SS construction brigade was said to be that of Albert Speer. A Royal Air Force offensive against the Ruhr, which started in the spring of 1943, resulted in a marked reduction in armaments production. Wuppertal, on the edge of the Ruhr, had largely avoided the large air raids until 1943, although major attacks on the districts of Barmen (May 29, 1943) and Elberfeld (June 25, 1943) had caused considerable destruction. The SS-Baubrigade IV was to carry out “reconstruction in the Ruhr industrial area.” A report by the SS-Business Administration Main Office (WVHA), dated February 14, 1944, states: “The SS-Baubrigade IV is being deployed in rescue operations and opening up the main streets for transport. The rubble caused by buildings which collapsed due to rain and frost is being removed. Excavation and repair of the destroyed gas and water conduits is taking place. The work is continuing so as to, in the first instance, create accommodations for workers in the Ruhr.”<sup>3</sup>

The head of the Office for Emergency Measures in Wuppertal, the city’s building councilor Hermann Kell, and SS-Standartenführer Kurt Benn coordinated the operation. Senior Administration Officer Benn as head of the Action Staff Wuppertal City Administration and as member of the Action Staff of the District had good connections to the special staffs of the police, Nazi Party, and mayor. The construction of the camp lasted until September 1943. Benn could give all offices directions to remove bomb damage, and he directed workers to particular sites for the removal of rubble.<sup>4</sup> During this time the prisoners were already working for the city administration.<sup>5</sup>

The SS-BB IV was accommodated at Königshöher Weg 7, a Catholic school in the Elberfeld district of Arrenberg, whose

buildings had been destroyed in the summer of 1943. The advance detachment of 50 prisoners first had to establish quarters at Königshöher Weg. An inspection report prepared by the Buchenwald concentration camp doctor in September 1943 states the following: “The Wuppertal subcamp was occupied on August 24, 1943. The prisoners have been accommodated in a school, which has been badly damaged by bombs, but whose renovation is taking place with all available means. Prisoners as well as troops are accommodated provisionally in the not yet renovated school classrooms. Washing and bathing facilities are provisional and are in the process of being installed. The toilets are adequate. A kitchen is not available at this time. Food for the prisoners is cooked in two field kitchens.”<sup>6</sup>

The leader of the SS-Baubrigade IV was at first SS-Obersturmführer Arthur Knaust, an engineer, born on June 26, 1909, in Güsten (Sachsen-Anhalt). He was replaced in October 1943 by SS-Obersturmführer Dietrich. Otto Diembt, promoted to SS-Obersturmführer on January 30, 1945, commanded the brigade from December 1943 to February 1945. Diembt was born on March 18, 1907, in Bad Flinsberg. From 1926 to 1939 he worked as a bookkeeper in his hometown. He took part in the French campaign. After that he was a member of the SS-Fourth Death’s Head Unit in the Buchenwald concentration camp. After a six-month training course in Dachau and the SS-Junker School in Braunschweig, he was sent to the SS-Baubrigade.<sup>7</sup> The guards consisted primarily of police from the 6th Police District, who were based in the nearby Arrenberg Strasse. In the school yard there was a barracks for the guards.<sup>8</sup>

The SS-Baubrigade IV in Wuppertal has not been widely researched. Survivors after the war stated unanimously that there was no mistreatment or violent deaths.<sup>9</sup> In fact, of the 600 prisoners, there is only 1 documented death in February 1944.<sup>10</sup> To a large extent this can be attributed to the behavior of Diembt, who after the war received an unusually positive certification from several prisoners. Richard O. said the following about him in 1971:

Otto Diembt is probably the only camp leader, who I met during my almost ten-year imprisonment who has deservedly earned that we former prisoners stand up for him and with good conscience. When I, a former protective custody camp prisoner, make such a statement for an SS officer and camp commandant, I do so as a moral duty and with gratitude, because we were treated decently by him and above all we have him to thank for our lives. Hundreds of Poles, Russians, French, Czechs, Romanians, Hungarians, and Greeks can confirm at any time that Otto Diembt always treated us prisoners as humans.<sup>11</sup>

According to the former prisoner Josef Sch., Diembt had always treated him “tactfully and correctly” and that he had never forgotten that “human beings stood in front of him.”<sup>12</sup>

Another prisoner, Theodor E., shortly after the war raised his voice for Diembt and stated that Diembt had constantly discussed with the prisoners of the SS-Baubrigade IV the work, work hours, the prisoners' wishes, and the food supply. Theodor E. stated that Diembt, after assuming his position in Wuppertal, had first ensured that the prisoners from midday on Saturday did not have to work for the rest of the weekend and individually were even allowed to leave the camp. This freedom was only taken away when a directive was received from the Buchenwald camp commandant.<sup>13</sup> Contemporary documents confirm this. Apparently, until the middle of January 1944, the prisoners had to do much less work than elsewhere. On Saturdays there was less work than on weekdays. Until May 1944, there was as a rule no work on Sundays.<sup>14</sup> Diembt had to change this practice at the beginning of 1944—a conference on January 18, 1944, determined that “immediately work on Saturdays shall be for the same length of time as on the other weekdays.”<sup>15</sup>

Wuppertal had a particularly favorable prisoner structure and a relatively good supply of food. The German prisoners, who were the prisoner-functionaries, were for the most part political prisoners who did not encourage favoritism.<sup>16</sup> While the supply of food appeared to have been poor, it improved over a longer period when the large detachment was deployed to the heavily destroyed slaughterhouses in Elberfeld. Richard O. stated: “After six weeks we were close to starvation. Then 250 men were deployed to the slaughterhouse. . . . We were there about a year. We recovered and were even able to get some of the food to the prisoners in the camp with the result that not one of the prisoners had to suffer from hunger. From the butchers we received sausages and meat.”<sup>17</sup>

There were also many contacts with the resistance organization and the “Eastern workers” (*Ostarbeitern*), who were in the surrounding forced labor camps. The prisoners Karl Possögel, Sergej Selkin, and Dimitrij Maksimov formed a resistance group that was to prepare an armed resistance. Pamphlets and oral propaganda were composed with the German workers and the *Ostarbeitern*, translated, and distributed. As there were many small work detachments in the city, it was difficult for the SS and police guards to stop contact with the civilian population. Diembt is said to have instructed the SS not to prevent such contact.<sup>18</sup>

The few escape attempts in Wuppertal also indicate that the conditions in the subcamp were relatively bearable. There were six escape attempts from the SS-Baubrigade IV, five of which occurred shortly before it was transferred to the Harz. All the attempts were a success, and none of the escapees were recaptured and returned to Buchenwald.<sup>19</sup> In Wuppertal, unlike other cities, there appears to have been more help from the local population.

Noteworthy is an event that former prisoner Karl Possögel described. On a Sunday, 50 prisoners, guarded by an SS guard, demonstrated in the city. Possögel stated that in April 1945:

One Sunday the prisoners carried out a regular demonstration in Wuppertal. The police were off duty on Sundays, and so one Sunday a Kommando of approximately fifty prisoners went to work under their Blockführer alone. After doing two hours' work the prisoners in their convicts' clothes and with shaven heads marched off into the center of Elberfeld. For about two hours they went in disciplined formation through the streets singing their camp songs, and with the Blockführer following two hundred yards in the rear, so that people would not think he belonged to the procession. No action was taken against the prisoners on their return to the camp.<sup>20</sup>

Although in Wuppertal there was 1 death, it should not be forgotten that between August 1943 and May 1944, 58 prisoners were returned to Buchenwald.<sup>21</sup> What happened to a large transport in the middle of December 1943 is not known, as neither names nor prisoner numbers have survived. Possibly this transport followed a selection either shortly before or after the camp leader was changed and in which prisoners who were sick or who had fallen out of favor were transported away. What happened to 29 prisoners can be explained: after an average stay of three months in Buchenwald, 7 had died, 3 stayed in the camp until it was liberated, 11 were transferred to other Buchenwald subcamps, and 3 were released. There is no information as to what happened to 5 prisoners; 7 prisoners died after they were transferred to Buchenwald, including 5 who were transferred there while Diembt was the camp leader.

The dissolution of the camp began in Wuppertal on May 7, 1944.<sup>22</sup> The SS-Baubrigade IV was sent to Ellrich, a village in the Harz Mountains.

**SOURCES** The Wuppertal camp has only relatively recently been researched in a study on the SS-Baubrigaden: Karola Fings, *Krieg, Gesellschaft und KZ : Himmlers SS-Baubrigaden* (Paderborn: Schöningh, 2005).

Primary sources for the SS-Baubrigade IV begin with the relatively complete documents in THStA-W (Collections “NS 4 Buchenwald,” “KZ Buchenwald und Haftanstalten”). There are significant gaps in the ASt-W for the period from 1933 to 1945, which makes research difficult. The files of the ZdL (IV 406 AR-Z 69/72) at BA-L and denazification proceedings against Otto Diembt (BA-K, Z 42 V/608) are of particular importance. Diembt was acquitted. Additional material may be found at ITS and NARA.

Ausrüstungswerke GmbH (DAW). About half of the railroad cars housed the prisoners. In addition, there were railroad cars for the kitchen, infirmary, equipment, commandant's office, and accommodation for the guards. Most of the trains carried a Wehrmacht anti-aircraft detachment with two four-barreled anti-aircraft guns as protection against bombing attacks.

The SS-Eisenbahnbaubrigade originated from the Buchenwald SS-Baubrigade V, which in September 1944 was transferred from Normandy to the Harz Mountains. The prisoners, who at first were distributed to various subcamps, were gathered together in Sangerhausen and on October 5, 1944, shipped to Osnabrück. The SS-Eisenbahnbaubrigade was allocated 180 prisoners, who were sent from Buchenwald and the Mittelbau concentration camp to Heringen. This group was destined for the planned SS-Eisenbahnbaubrigade III. However, in the end, it was not formed.<sup>1</sup> Administratively, the SS-Eisenbahnbaubrigade was originally part of the newly independent Mittelbau concentration camp from the end of October 1944 and was taken over by the Sachsenhausen concentration camp in January 1945.

The leader of the SS-EBB V was SS-Obersturmführer Helmut Landau, who was born on February 8, 1906, in Krefeld. Landau, an architect, joined the Nazi Party in 1931 and from April 1940 was part of the WVHA (Office C-Construction). In March 1944, he was ordered to the general staff of the SS-Baubrigade V and in the middle of October 1944 took command of the SS-Eisenbahnbaubrigade.<sup>2</sup> In December 1944, there were 62 guards.<sup>3</sup> The largest number of the guards was railroad men, who were assigned for short periods to SS battalions in the concentration camps and then assigned to the railroad brigades. Most of them were born in the 1890s, and they were almost without exception of low SS rank; 21 names of transferred railroad men to the SS-EBB are known.<sup>4</sup>

The trains of the construction brigades were mostly stationed on sidings near train stations, so that the prisoners could reach their work location quickly. The SS-EBB V was quartered at the Osnabrück switching yard; a smaller detachment was based in Hasbergen.<sup>5</sup> The SS-EBB works stood clearly in the context of the deployment of the V weapons. After the war, Landau stated: “The Brigade had the task to remove bomb damage at railroad facilities in this area, so that at night at least one railroad track could be used along this route. This was necessary to transport satisfactorily the V-1 weapons.”<sup>6</sup>

Heavy physical labor was the main work for the railroad construction brigades: filling bomb craters, removing destroyed railroad tracks, and laying them anew. In Osnabrück there was also a “city detachment” that stayed to clean up the city. This detachment was popular among the prisoners as it was notable for relatively correct prisoner foremen and SS guards and because it was possible to obtain additional food. This was also the case for the “construction field command” of the construction brigade, whose prisoners built temporary accommodations for SS people in an allotment garden.<sup>7</sup> The deployment of the prisoners in the city can be traced back to

### **SS-EISENBAHNBAUBRIGADE V (OSNABRÜCK) (BUCHENWALD, MITTELBAU, AND SACHSENHAUSEN)**

The SS-Eisenbahnbaubrigade V (SS-EBB V) was the first of eight SS-Eisenbahnbaubrigaden that the SS-Business Administration Main Office (WHVA) established in the late summer of 1944 as mobile concentration camp prisoner detachments. As a rule, each of these “concentration camps on rails” consisted of 504 prisoners plus guards. Their primary task was to repair the destroyed German railroad network. The trains, which were up to 50 railroad cars long, were refitted in the factories of the concentration camps in the SS's own Deutsche

the initiative of Osnabrück mayor Erich Gärtner, who even endeavored to be assigned the coordination of the prisoner deployments.<sup>8</sup>

From the autumn of 1944, SS-Sturmbannführer Weigel was the Inspector of All Construction Brigades (Inspekteur sämtlicher Baubrigaden) in the WHVA. He reported to Hans Kammler (WVHA, Amtsgruppe C) after an inspection of the SS-Baubrigaden on February 12 and 13, 1945: "The performance of the SS-BB [Baubrigaden] is exemplary. According to the commanders, the Organisation Todt [OT], which is also deployed there, has not reached the same standard."<sup>9</sup> This high performance was extracted from the weak prisoners only through terror. Survivors of the SS-EBB V reported that during their 10 hours of work they had barely a five-minute-long break. They were not even allowed to go to the toilet. Instead, there was a saying: "Work, don't shit."<sup>10</sup> A survivor stated the following about the conditions of the prisoners in Osnabrück: "Just about all the prisoners were sick. Many were only skin and bones; others could barely stand on their legs. Everyone had to work. Now and then I saw that in the evenings a prisoner was carried back to the railroad car. When it was going really poorly for someone he could stay in the infirmary car."<sup>11</sup>

At the end of 1944, the SS-EBB V comprised 410 prisoners.<sup>12</sup> Due to the lack of sources, it is difficult to determine what happened with the remaining prisoners. Probably some had been selected as "incapable of work" and sent to the nearest concentration camp, Neuengamme, and not to their assigned camp. Danish survivors reported that both in the middle of December 1944 and March 1945 some 80 prisoners from Neuengamme were sent to the SS-EBB in exchange for sick prisoners admitted from Osnabrück.<sup>13</sup>

There is evidence for two cases of homicide. An SS guard is said to have shot a Polish prisoner who was being removed from a work group.<sup>14</sup> In addition, an SS man is said to have tortured to death a Soviet prisoner who had escaped. The captured prisoner was returned to the SS-EBB, abused, shot, and then finally killed at close range with several shots to the head.<sup>15</sup> Many prisoners are said to have died during bombing raids. There are also reports of work-related deaths: one prisoner, according to Theodor S., was run over by a train in Osnabrück while fetching water.<sup>16</sup>

Exact numbers are difficult to obtain because the contemporary sources only identify one victim of the SS-EBB.<sup>17</sup> According to survivors' statements, the construction brigade victims were thrown into a damaged building in the vicinity of the railroad lines and once a week were taken to a crematorium in Osnabrück.<sup>18</sup> At the Heger cemetery in Osnabrück, where the prisoners of the subcamp of the SS-Baubrigade II were buried, no victims of the SS-EBB were identified other than the above-mentioned casualty.

An undated but contemporary list of 470 names of the SS-EBB prisoners shows that in addition to Soviets (193 prisoners) and Poles (172), Germans (48) were strongly represented. In addition, there were French, Yugoslavs, Italians, "Gypsies," Luxembourgers, Belgians, Dutch, and a Hungarian

Jew.<sup>19</sup> A group of 35 Danes who were transferred via Neuengamme to the SS-EBB V survived the war.<sup>20</sup> Before their departure from Neuengamme, they received warm clothing and two packets of food from the Red Cross. At the construction brigade they lived in two railroad cars, stayed close together, and generally worked on the better assignments in the city. On April 2, 1945, the Danes could leave the subcamp as a result of the Bernadotte mission, which resulted in Scandinavian prisoners being released from concentration camps during the last weeks of the war.

At the beginning of April 1945, the remaining prisoners were evacuated by train at first to Bremen, where for three long weeks they had to load locomotives on to ferries to be transported across the Weser River. At the end of April, the prisoners were taken to Nordenham and put on the ship *Apollo*. After a two-day trip through the Kiel Canal, they reached the Flensburg Fjord at the beginning of May 1945.<sup>21</sup> It is alleged that several murders were committed during the evacuation. In a statement signed shortly after the war's end, a survivor stated that an SS Rottenführer single-handedly killed 18 nontransportable Soviet prisoners with a hand grenade. Another Rottenführer was accused of shooting four Russians on May 1, 1945. Outside of Flensburg, the prisoners were loaded onto the damaged ship *Rheinfels*, crammed in with other prisoners from Stutthof and Neuengamme. On May 3, 1945, all the SS guards left their posts, and on May 5 the prisoners were liberated. While the German prisoners were taken to a recuperation camp in Flensburg, the Swedish Red Cross made a ship available to take the foreign survivors to Malmö.<sup>22</sup>

None of those responsible for crimes committed in the SS-EBBs were convicted. Landau was able to successfully conceal his role as SS leader of the Baubrigade and was sentenced to three years' prison solely for being a member of the SS.<sup>23</sup> Anton Schettler, who was born on October 10, 1910, in Pestovac, and was charged with shooting the recaptured Soviet prisoner, was declared dead, with the result that no proceedings were opened against him.

**SOURCES** The SS-Eisenbahnbaubrigade V first became a subject of research in connection with a dissertation about all of the SS-Baubrigaden, published by Karola Fings, *Krieg, Gesellschaft, und KZ: Himmler's SS-Baubrigaden* (Paderborn: Schöningh, 2005). This is partly due to the fact that there are few contemporary sources, so the outline of the Eisenbahnbaubrigade V can only be reconstructed by combining widely disparate sources.

Especially important primary sources are the archives of former ZdL (now BA-L), which contains copies of contemporary sources, especially statements from the survivors (IV 406 AR-Z 182/73, IV 406 AR-Z 227/73). There is also some relevant documentation in CChIdK. A published witness testimony is Jørgen H. P. Barfod, *Helvede har mange Navne: En Beretning om Koncentrationslejre og Fngsler, hvor der sad Danskere 1940–1945* (Copenhagen: Forlaget Zac, 1969).

### **SS-EISENBAHNBAUBRIGADE VI [AKA SS-BAUBRIGADE VI (E)] (BUCHENWALD, MITTELBAU, AND SACHSENHAUSEN)**

The SS-Eisenbahnbaubrigade VI (SS-EBB VI), one of eight mobile “concentration camps on rails,” was first established as the SS-Eisenbahnbaubrigade I at the Buchenwald concentration camp. On September 12, 1944, 504 prisoners stood ready to be transported at the Buchenwald Railway Station.<sup>1</sup> At the beginning of November 1944, the unit was renamed. Until then it had been listed under various names

(also “Mittelbau/VIth SS Construction Brigade”; “1st SS Railroad Train, Construction Brigade 6”).<sup>2</sup> On October 28, 1944, the newly independent concentration camp Mittelbau took over the 514 prisoners of the SS-Eisenbahnbaubrigade VI. On January 1, 1945, it was taken over by the Sachsenhausen concentration camp along with all other SS-Baubrigaden.

The command of the SS-Eisenbahnbaubrigade VI was assigned to Walter Fikeis, born in Vienna on June 7, 1914. Fikeis, an Austrian engineer, had been a member of the SA since 1932 and with his appointment as camp commander was promoted to SS-Obersturmführer. Since 1942, he had worked in the SS-Main Office for Budget and Buildings. Before 1944, he was at first a member of the Central Construction Administration of the Higher-SS and Police Leader (HSSPF), Caucasus, and subsequently was with the Central Construction Administration “Reich Süd” in Dachau.<sup>3</sup> The guard included 65 SS members, about half of whom belonged to the SS-Business Administration Main Office (WVHA) Amtsgruppe C and the other half to Amtsgruppe D.<sup>4</sup> Among them was a major group of older railroad men who had been drafted into the SS battalions of the concentration camps. Hans R., a former senior Reichsbahn official, stated at the beginning of the 1970s that in November 1944, pursuant to a decree of the Reich Ministry of Transport, the Nürnberg Railway Administration registered him as a “railway construction expert” with the Waffen-SS. Accordingly, on November 24, 1944, he received training in the Dachau concentration camp and, with 15 other railway officials, was dispatched to the SS-Eisenbahnbaubrigade VI.<sup>5</sup>

At first the SS-Eisenbahnbaubrigade VI also had a functional relationship with the armaments and rocket center being established in the Harz Mountains. Its destination was Cologne, where the railway station “Köln-Eifeltor,” an important traffic connection for the transport of V weapons (*Vergeltungswaffe*) to the southwest, had been heavily destroyed. On September 12, 1944, the prisoners were loaded onto a ready construction train at the Weimar railway freight station.<sup>6</sup> That same evening, the train departed and the next day reached the railroad station Berga-Kelbra near Nordhausen. The construction brigade remained there until September; at times the prisoners worked in Sangerhausen, where they had to dig trenches for the laying of telephone cables. On October 1, 1944, the SS-EBB VI left Berga-Kelbra. But it first pulled up in Bingerbrück (near Bingen on the Rhine River), where it arrived on October 2, 1944. There it repaired railway tracks on the right side of the Rhine, which also provided an important connection to the Saar River and France. Only on November 1, 1944, did the construction brigade finally arrive in Cologne. Because of the constant bombing raids on that city, the construction brigade stayed in a tunnel near Brühl. From there, the prisoners were taken daily by railroad to work at the Köln-Eifeltor railway station.

In a 1998 interview, Iwan Wassiljewitsch Werenitsch describes the work of the prisoners: “The station was always being bombed. Our main work was as follows: rebuild the

foundation, remove the destroyed rails, level the ground, lay ties, seal, screw down, that is, build new tracks.”<sup>7</sup> In addition, after bombing attacks the prisoners had to uncover unexploded bombs in the area of the railway station and in the immediate vicinity and retrieve the bodies.

At the end of 1944, 465 prisoners were still counted in the SS-Eisenbahnbaubrigade VI, although up to that point at least an additional 61 prisoners had been transferred to the construction brigade.<sup>8</sup> Presumably the largest portion of the approximately 100 missing prisoners managed to escape. In the fall of 1944 the SS-Eisenbahnbaubrigaden, which operated in areas difficult to guard, belonged to a group of sub-camps that offered particularly good opportunities for escape. For this reason, the resistance movement in Buchenwald took care that specially endangered prisoners were located in such camps. In September 1944, it put several Soviet prisoners on the list of transports for the SS-Eisenbahnbaubrigade VII so that they could escape. It also managed to dispatch there two “escape point coordinators.”

Already during the night of departure on October 1–2, 1943, 23 prisoners in a train car near Kassel had forced open the doors and escaped. The furious SS officers thereupon threatened as punishment to send every tenth prisoner to Mittelbau or to string him up on the gallows—not the least because the SS leaders were threatened with disciplinary proceedings if there were high numbers of escapes.<sup>9</sup> Proceedings were initiated against Fikeis for failure of the guard in the field and for the negligent release of prisoners—which, however, remained pending until the end of the war.

This escape was part of a controversial decision among the prisoners. Alexander Agafonow, then a prisoner in the SS-EBB VI, writes:

A bold and, in my opinion, rash escape: in the center of Germany, near Kassel, surrounded by a fanatic populace cowed by terror, quick acting youngsters of the Hitler Youth and then escaped prisoners in striped inmates' clothing! At the first attempt to get hold of clothing or food the populace will raise the alarm and the chase will begin. No, I thought, the chances for the escapees are equal to nil. Only obsessed braves or men driven to despair act this way. Gustav and Ernst had been urged to risk the escape only near Köln, in no case earlier.<sup>10</sup>

In fact, the conditions for escape in Cologne were favorable. In November 1944, the SS-EBB VI was located only 21 kilometers (13 miles) away from the Allies; the battles could be heard.<sup>11</sup> Further, it was easily possible to escape during the confusion caused by bombing raids. Often, the SS could not determine definitely whether the prisoners had escaped or had been dismembered beyond recognition during a raid. Therefore, those that remained behind were spared the threatened punishment actions. A young Russian who was helped by forced laborers from his hometown made the first successful escape in Cologne. Agafonow, too, was able to flee

later during a bombing raid and was helped by female workers from the East located in a camp nearby.<sup>12</sup>

Because of the difficult transport conditions at the end of 1944, hardly any transports of individual prisoners to the political department of the concentration camps were carried out any more as punishment. Instead, a car of the SS-EBB VI was converted into a prison, in which, for instance, Russians were jailed who had been caught looting and were to be transferred from Bingerbrück to the Gestapo in Mainz.<sup>13</sup> Also, often at random, forced laborers were impressed into the SS-Baubrigade. Thus, after 2 Russians had escaped during an air-raid alarm at the beginning of March 1945, Fikeis simply arrested 4 Italian workers who from then on had to stay with the construction brigade.<sup>14</sup> However, large prisoner transports took place until the last days of the war. In the spring of 1945, SS-EBB VI sent 76 inmates to Buchenwald, for which in return it received 100 inmates.<sup>15</sup>

At this point the SS-EBB VI was already in retreat. Despite the quickly approaching Western Allies, the construction brigade was transferred as late as February 9, 1945, from Cologne to Zündorf on the right side of the Rhine.<sup>16</sup> Work was now performed on the Gremberg railway station, until on March 1 the train traveled on to Troisdorf. On March 8, 1945, one day after American troops crossed the Rhine over the bridge at Remagen, the redeployment began toward the East. The train advanced only a kilometer (0.6 miles) at a time and reached Nordhausen on March 11, which made the prisoners fear the worst. However, the train continued moving and reached Freital via Dresden. There, until April 8, cleanup work was resumed. On April 23, the SS-Eisenbahnbaubrigade VI reached Passau via Dresden, Chemnitz, Plauen, and Pilsen and, five days later, Salzburg, where on May 4, 1945, the prisoners were liberated.

After the war, Fikeis was presumed missing. An investigation that only was initiated in the 1970s was abandoned in 1973.

**SOURCES** The files of the Cologne State Attorney's Office held at THStA-(D), Court Rep. 118/2104-2106) as well as at the BA-L (IV 406 AR-Z 95/73) are among the most important sources. In addition, the journal-like chronicle of former prisoner Jules Carette, “Souvenirs de Buchenwald & de la 1e SS-Eisenbahn-Baubrigade. Einheit Bauzug” (MSS, Lille, n.d.), and the memoirs of Alexander Agafonow, *Erinnerungen eines notorischen Deserteurs* (Berlin: Rowohlt Verlag, 1993) are of particular importance. Otherwise, there are no specific publications about the SS-Eisenbahnbaubrigade VI. It was only discussed in connection with a dissertation about all SS-Construction Brigades: Karola Fings, *Die Kommunen, der Krieg und die Konzentrationslager. Himmlers SS-Baubrigaden* (Göttingen: Wallstein Verlag, 2004).

scale attacks on Karlsruhe began on the day the train arrived in the city.<sup>2</sup> The train was parked on a railroad track near the newly constructed autobahn bridge at the Karlsruhe-Durlach junction. Almost a month later, the SS-Eisenbahnbaubrigade VII (SS-EBB VII) left Karlsruhe and two days later reached Stuttgart, where it remained until almost the end of the war.<sup>3</sup> At first, the construction train stood in the Prague tunnel, a railroad tunnel to the north of the main railroad station, with guards posted at either end. The prisoners could move within the tunnel before they were locked in the wagons after evening roll call. Other trains traveling through the tunnel during an air-raid alarm ran over 3 prisoners on October 30, 1944. As a result, the train was removed from the tunnel a few days later. The tunnel remained a refuge from the air raids, and sometimes the prisoners had to seek refuge there several times a night.<sup>4</sup>

Kurt Schäfer, an engineering graduate born on June 8, 1911, in Karlsruhe, was commander of the SS-Eisenbahnbaubrigade VII. He had been a member of the Nazi Party (NSDAP) since 1931. Schäfer was ordered to Amtsgruppe C of the SS-Business Administration Main Office (WVHA) and was probably active in Auschwitz when he took over the construction brigade.<sup>5</sup> What was unusual was that Schäfer's wife and four-year-old daughter traveled with the concentration camp train.<sup>6</sup> While Schäfer was not incriminated by survivors, his deputy is alleged to have been especially brutal. For example, he forced prisoners to hop like frogs and kicked them at the same time. Once he is alleged to have shot a prisoner tortured in this way.<sup>7</sup>

Nevertheless, the SS-EBB VII has been described by survivors as an “oasis among the concentration camps.” Ryszard Krosnowski and Aleksander Miziewicz wrote the following:

Naturally there was heavy labor, poor food, and some of the SS men treated us inhumanely. But in comparison to the conditions that prevailed in the last months of the war in other concentration camps, the construction train was bearable. The reason for this was probably—besides the difference to the classic concentration camp—the type of work, which allowed food to be organized, as well as the guards who supervised the prisoners. At the beginning, the SS men who guarded the construction train had been pulled from the front and had not gone through camp training. They didn't know about how things worked in the other concentration camps, and to a certain extent behaved decently.<sup>8</sup>

The comparatively low level of brutality in this subcamp, in addition to the already mentioned reasons, is based on the rather unique composition of the prisoners. They consisted almost without exception of Poles (three-quarters) and Russians (a quarter). There was no group of German prisoners to take control, and until the end of 1944, as for all construction brigades, there were no Jewish prisoners. These two groups worked hard to maintain solidarity.<sup>9</sup>

### **SS-EISENBAHNBAUBRIGADE VII [AKA SS-BAUBRIGADE VII (E)] [AUSCHWITZ, BUCHENWALD, MITTELBAU, AND SACHSENHAUSEN]**

The SS-Eisenbahnbaubrigade VII (also known as SS-Baubrigade VII (E)) was formed in September 1944 with 505 prisoners as the SS-Eisenbahnbaubrigade II in the Auschwitz concentration camp. The task of the railroad construction brigade, a mobile concentration camp, was the repair of railroad lines. It was to have been transferred to Buchenwald by September 19, but this only occurred on October 13, 1944.<sup>1</sup> On October 20, 1944, the railroad construction brigade was renamed, and on October 28, 1944, the newly independent Mittelbau concentration camp took over the 498 prisoners. The assumption of control by the Sachsenhausen concentration camp on January 1, 1945, was, as with most of the SS-Baubrigaden, merely a formality.

On September 18, 1944, the train carrying 505 prisoners left Auschwitz and reached Karlsruhe on September 26, 1944. Karlsruhe appears not to have been the planned destination but was chosen because, according to former prisoners, large-

The daily routine for the construction brigade ran as follows: Wake at 5:30 A.M., leave for work at 7:00 A.M., half an hour for lunch, workday ends at 5:00 P.M. After the evening roll call at 7:00 P.M., the prisoners were shut in the container cars. The brigade worked until 2:00 P.M. on Sundays.<sup>10</sup>

Since the original files of the SS-EBB VII have survived, it is possible to reconstruct a relatively accurate profile of this construction brigade.<sup>11</sup> Of the 505 prisoners who left Auschwitz on September 18, 1944, 107 were listed as permanently or temporarily absent by April 1, 1945. The largest group, 38 prisoners, was transferred to Auschwitz (3 prisoners), Mittelbau (19), or Sachsenhausen (16) because they were physically weak; 36 had escaped; 10 had been handed over by the SS for punishment—7 to the Gestapo and 3 to the Leonberg subcamp. Temporarily, 11 prisoners were held in hospitals; 12 men died, at least 8 by train accidents or during bombing raids, 1 from poisoning; 2 prisoners were shot by members of the SS. In the same time period, there were 54 arrivals from other camps (4 from Mittelbau, 49 from Buchenwald, and 1 from the SS-EBB VIII); 4 came back from the Gestapo, 7 from the hospital, and another 7 were recaptured after their escape. On April 1, 1945, the day of the evacuation preparation, there were 470 prisoners in the SS-EBB VII. Compared to the prevailing terrible conditions in the main camps at this time, the death rate of 12 prisoners among 569 prisoners is relatively low. However, this does not take into account the fate of the prisoners transferred back to the main camps.

Schäfer did not transfer the prisoners back to the main camp for punishment but to the local police stations in Karlsruhe or Stuttgart, for example, when the prisoners were caught with food taken from the rubble. There was usually an additional entry in the records that a prisoner had refused to work, stirred up trouble, or was planning to escape. In the last weeks of the war, the Stuttgart Gestapo no longer wanted this responsibility. The prisoners were handed back to the construction brigade. As a result, Schäfer introduced other punishment measures. A container car was stripped down to serve as a “Bunker” prison, in which prisoners were locked up for disobedience, contact with civilians, escape attempts, or other supposed infractions. In addition, Schäfer sent prisoners to the Konzentrationslager (KL) Leonberg, a subcamp of the Natzweiler concentration camp in the vicinity of Stuttgart.<sup>12</sup>

On February 20, 1945, Gerhard Weigel, since autumn 1944 Inspector of All Construction Brigades in the WVHA, ordered “special measures for work-shy foreigners” following a visit to Stuttgart. In connection with the SD and Gestapo, there was to be erected within the SS-EBB VII a “Work Education Camp for Foreigners in Empty Railroad Wagons.”<sup>13</sup> A few days later, on February 23, 1945, the Stuttgart Gestapo transferred the first “education prisoner.” Up to 30 forced laborers were transferred to the construction brigade. The education prisoners were provided with the same living and work conditions (as the rest of the brigade); however, they could be let go after a short period of time.<sup>14</sup>

According to the accounts of survivors, the evacuation of at least a part of the SS-Eisenbahnbaubrigade VII was unusual.

After receiving the order to leave from Stuttgart authorities, SS-Obersturmführer Schäfer decided to divide the train into two parts because of the poor transport situation. The first transport left the city on April 2, 1945, in the direction of Friedrichshafen and, according to a statement of a survivor, arrived in Aulendorf, north of Ravensburg on the upper reaches of Lake Constance.<sup>15</sup> This group was evidently driven on a forced march, where some prisoners were killed.<sup>16</sup>

The second transport with about 200 prisoners left Stuttgart on April 3, 1945, under the command of Schäfer, also in a southerly direction. Three days later it arrived at Biberach. Because of the nearby French troops, everything was in disarray, and the SS men had to fear that they would soon be imprisoned. In this situation, according to two survivors, the prisoners recommended to Schäfer that in case Biberach was captured, he should disguise himself as an officer in the Wehrmacht, and they would give him a character reference. In exchange, Schäfer would give the construction brigade over to the French. With the exception of two SS men, Schäfer thereupon dismissed all of the guards. The prisoners continued to work in Biberach until April 23, and Schäfer continued to maintain the appearance of a functioning concentration camp.

After an order to vacate, the train started out on April 23, 1945, with a new locomotive. Near Bad Schussenried the prisoners, now in unlocked container cars, overpowered the locomotive engineer and were thus freed. The German troops had already left Schussenried, and the French soldiers, after giving the prisoners weapons, continued their advance. In the now-leaderless city, the prisoners acted as an occupation administration until a proper military administration could be installed. Survivors Krosnowski and Miziewicz wrote about the last days in Schussenried: “Two months after liberation the little town came permanently under French military occupation—and the prisoners, once they had regained their strength and become used to their freedom, dispersed, each to meet his own fate.”<sup>17</sup>

After 1945, Schäfer became a prisoner of the French but was not prosecuted because of his activities in the SS-EBB VII. Preliminary proceedings started in the Federal Republic of Germany were halted in 1972. In Schussenried the memory of the “Polish Train” remains alive. A collection of contemporaneous reports includes the following: “The people of Schussenried at first did not know what was happening. In the first few days there were hardly any French in Schussenried. The Poles seized the opportunity and took command. No one dared do anything against the Poles.”<sup>18</sup> The people of Schussenried reluctantly accepted that “the Poles” had been given the official city halls as accommodation by the French occupying administration. Nine of the freed prisoners died in Schussenried as a result of their imprisonment in the concentration camps. There is no memorial to these victims on their gravestones.

**SOURCES** Records on the SS-Eisenbahnbaubrigade VII are comparatively extensive. Ryszard Krosnowski took documents

with him when he escaped and gave them to Polish forced laborers in Stuttgart for safekeeping. From there, they reached the Polish Red Cross and the Auschwitz Memorial (APMO, D-Au-I-3, Microfilm Nr. 1960, fol. 1–80). Copies of the documents can be found in the BA-B, Bestandsergänzungsfilm Nr. 72205. In addition, the files of the above-mentioned investigation at BA-L (IV 406 AR-Z 150/72) as well as the reports of the survivors Ryszard Krosnowski and Aleksander Miziewicz (“7. SS-Eisenbahnbaubrigade,” *HvA* 5[1962] are important sources. The door of “Haus Silber,” the former Gestapo prison in Stuttgart on Dorotheen Strasse, still has the writing of a former prisoner of the 7th Construction Brigade—“Capo Michat, 7. SS-Baubrygady K. L. Auschwitz Gef.-Nr. 162262 Polak Radom Zeromskiego 3”—documented by Roland Müller, *Stuttgart zur Zeit des Nationalsozialismus* (Stuttgart: Theiss, 1988), p. 628. Further sources have been made available in a dissertation on the SS-Construction Brigades: Karola Fings, *Die Kommunen, der Krieg und die Konzentrationslager. Himmels SS-Baubrigaden* (Göttingen: Wallstein Verlag, 2004).

## SS-EISENBAHNBAUBRIGADE VIII (SACHSENHAUSEN AND MITTELBAU)

The SS-Eisenbahnbaubrigade VIII (SS-EBB VIII), consisting of 504 prisoners, was formed on November 20, 1944, in Sachsenhausen. A few days later the prisoners were taken over by the Mittelbau concentration camp under the numbers 100504 to 101006 [*sic*].<sup>1</sup> As with all other SS construction brigades, from January 1945 it formed part of the Sachsenhausen concentration camp. The prisoners were overwhelmingly Polish and Russian, but there were also French, Germans, Dutch, Italians, Yugoslavians, and Latvians.<sup>2</sup>

Along with the SS-Eisenbahnbaubrigade VII, the SS-Eisenbahnbaubrigade VIII was ordered to repair railroad tracks near Stuttgart. The Stuttgart rail network, as well as the city itself, had been severely damaged during continued bombing raids.<sup>3</sup> The Daimler-Benz, Robert Bosch, and Heinkel-Hirth plants, important for fighter production, had already dispersed some of their production facilities, but the attacks endangered the many remaining plants important to the Luftwaffe, as well as the military supplies that were sent through Stuttgart. In September and October, additional attacks resulted in the collapse of traffic around the main railroad station as well as at many stations in the suburbs.<sup>4</sup> The SS-EBB VIII was sent to Stuttgart-Cannstatt where a destroyed train tunnel was to be repaired and a sidetrack laid down. The prisoners of this construction brigade at times also worked on the Stuttgart Castle and its park.<sup>5</sup>

In December 1944, the construction brigade was transferred from Stuttgart to Offenburg. The Offenburg supply railroad station was located on the upper Rhine River on the Basel-Mannheim route. As a transshipment center, it was an important location due to the strategically important trade with Switzerland and Italy. On November 27, 1944, the train station was the target of a large attack, which paralyzed the transport system on the right bank of the Rhine.<sup>6</sup> The SS-EBB VIII reached Offenburg on December 20, 1944.

SS-Obersturmführer Walter Becker, an architect, was in command of the construction brigade until the end of the year. He was born on September 24, 1892, in Mannheim and had joined the SA in 1929 and the SS in 1932. Starting in April 1940, he was part of what became Amtsguppe C “Construction” of the SS-Business Administration Main Office (WVHA). From 1940, he was head of construction in Breslau, and later in Posen and Nikolajewsk.<sup>7</sup> Becker was followed on January 1, 1945, by SS-Untersturmführer Herbert Zoeger, a businessman born on October 14, 1901, in Fröbeln (Silesia). Until his appointment with the SS-Eisenbahnbaubrigade VIII, Zoeger had no full-time function within the SS.<sup>8</sup> Survivors agreed that Becker was a “very bad man,” and under his

leadership, hunger and terror ruled. It is alleged that in Stuttgart he personally shot a prisoner after a roll call. He is said to have volunteered for frontline service and was therefore replaced by Zoeger.<sup>9</sup> Zoeger, on the other hand, is overwhelmingly described as humane. In total, the SS guards numbered 73 men, including a number of former railroad men, most born in the 1890s and almost without exception all with a low SS rank.<sup>10</sup>

The SS-EBB VIII was stationed in Offenburg on a track between a school and an inn, in clear view of the local residents. On the initiative of the city mayor, the prisoners were later transferred to a former "Camp for Workers from the East." The mayor was not concerned that the prisoners could be the victims of air raids but rather that the long train could draw the attention of the Allied bomber pilots to the city.<sup>11</sup> The train itself remained at the freight station.

Between February 21 and 23, 1945, Gerhard Weigel, the "Inspector of All Construction Brigades" in the WVHA, visited Offenburg. He reported to Berlin: "General inspection of the work at the large shunting yard. The work of the 8th SS-Construction Brigade is particularly noteworthy as within a short time the through traffic—above all supplies for front line troops—is rolling at night. I ordered night work. This, however, can only be done under difficult conditions because heavy and constant artillery from Strasburg disrupts the work. The losses suffered by the 8th SS-Construction Brigade and the 10th SS-Construction Brigade are considerable."<sup>12</sup>

Included in the "heavy losses" were 10 prisoners who, according to survivors, were killed during bombing raids. On February 15, 1945, the construction train at the freight railroad yard was hit and almost completely burned up.<sup>13</sup> Weigel thereupon ordered that the construction brigade should move to Darmstadt to rebuild the train. The SS-EBB VIII remained in Darmstadt for just two weeks and was then deployed in the suburb of Erzhausen.<sup>14</sup>

In the middle of March 1945, the construction brigade moved with stops for cleanup work through Halle, Plauen, Pilsen, and Passau to Freilassing near Salzburg. It could not go any further, as Salzburg was about to fall. In his denazification proceedings in 1947, Zoeger stated that in the middle of April he received orders from Berlin to shoot the prisoners when he could not advance any further. He decided that on May 2, 1945, when he could not get in contact with a superior, to take responsibility for releasing the prisoners himself.<sup>15</sup> Survivors stated that on this day Zoeger delivered a speech and declared that he would release them on his honor as a German officer. Details of the release were then negotiated with a group of prisoners.<sup>16</sup> According to a survivor, five Soviet prisoners then tried to escape, whereupon the SS opened fire and shot one of them.<sup>17</sup> Zoeger dismissed the SS guards in the direction of Salzburg, distributed to the prisoners official release passes, and received in return a declaration testifying in his favor from many of the prisoners. On the night of May 2–3, 1945, the train, with the help of German railroad employees traveled to Bergen near Traunstein. There, according

to a survivor, all the prisoners of the SS-EBB VIII, "including those driven to the very depths of human existence," were set free.<sup>18</sup>

Two survivors independently stated that the number of prisoners freed in Bergen was 216; a third put the number at 262. On January 1, 1945, the SS-Eisenbahnbaubrigade VIII consisted of 436 prisoners.<sup>19</sup> What had happened to the remaining prisoners? According to a survivor—who did office work, probably working in the administration—at least 80 prisoners had been sent to Sachsenhausen, Dachau, or other camps; around 15 had died during bombing raids or because of illness; and 100 had escaped.<sup>20</sup> Zoeger himself stated in 1972 that in Halle he sent two railroad cars full of the sick in the direction of Sachsenhausen because a military hospital had refused to take custody of them, and Zoeger did not want to travel with the sick anymore. Furthermore, according to the recollections of another prisoner, some prisoners—possibly in Passau—were transferred to the SS-Baubrigade XI and traveled with it to Ebensee.<sup>21</sup> In addition to the above-mentioned shooting of 5 prisoners, 3 prisoners were believed to have been shot in Offenburg—a prisoner who had reached down to grab a cigarette butt, a mentally disturbed prisoner, and a recaptured escapee.

The SS camp leader, Becker, heavily incriminated by statements of survivors, stated in 1947 in a Nürnberg internment camp that as an architect he did not have an opportunity to be "politically active."<sup>22</sup> By the time the Ludwigsburg State Prosecutor's Office investigated the SS-Eisenbahnbaubrigade VIII in the 1970s, Becker had already died. In order to credibly defend himself in front of the court during his hearing, Zoeger claimed to have experienced an inner change after taking over the construction brigade. He stated that what remained of his belief in the National Socialist leadership collapsed on the day that he first saw the prisoners. It is true that up until this time Zoeger had not had professional contact with the concentration camp system. The certificate that the prisoners gave him on May 2, 1945, the day of their release, was helpful. The text of the declaration, signed by 14 Polish and Soviet prisoners, read: "On January 1, 1945, Herr Herbert Zoeger took command of the SS-EBB VIII, which consisted of Polish and Russian political prisoners. The entire time up until the present day Herr Zoeger did all that he could to improve our living conditions and protect our health and lives. With our own free will we sign this document with gratitude."<sup>23</sup> Preliminary proceedings started by the Regional Court in Offenburg were discontinued in 1974.

**SOURCES** There is nothing at the Offenburg Railroad Station to memorialize the prisoners of the SS-EBB VIII. Bernd Boll, "Konzentrationslager auf Schienen. Eisenbahn-Baubrigaden der SS in Offenburg 1944/45," *Ortenau* 73(1993): 481–485, relied mostly on the files held by the BA-L (IV 406 AR-Z 171/73) and on the inspection report of Gerhard Weigel at the BA-B (NS 19/771), but he also found some papers in the ASt-OG (NL Rombach; 18-2-16 Plans). Scattered single sources on the SS-EBB VIII were found in a dissertation on the SS construction brigades: Karola Fings, *Die Kommunen*,

*der Krieg und die Konzentrationslager. Himmlers SS-Baubrigaden* (Göttingen: Wallstein Verlag, 2004).

## SS-EISENBAHNBAUBRIGADE IX (SACHSENHAUSEN)

The first volume of the *Catalogue of Camps and Prisons in Germany and German-Occupied Territories Sept. 1st, 1939–May 8th, 1945* of the International Tracing Service (ITS), edited in July 1945 in Arolsen, contains the following reference to the SS-Eisenbahnbaubrigade IX (SS-EBB IX): "CC Kdo. of Sachsenhausen, established around the end of Nov.

forty-four, of five hundred pris., this Baubrigade was employed in railway repair work in Stuttgart until end of Dec. Work was continued in Offenburg near Strasbourg, until end of Febr. 45, then the brigade moved to Darmstadt and, half an hour before the Allied troops entered Darmstadt, via Frankfurt/M., Würzburg, Nürnberg, Regensburg, Pilsen, Salzburg, and Linz, to Ebensee (Netherlands Red Cross)."<sup>1</sup>

Based on this source, researchers, including state prosecutors, assumed that SS-EBB IX had actually existed.<sup>2</sup> However, a recent investigation indicates that the creation of this construction brigade was planned but never actually carried out.<sup>3</sup>

The basis for this conjecture is that for the SS-EBB IX in contrast to the rest of the SS construction brigades—not one contemporary source has been found. Even though the Dutch report suggests that the files of this construction brigade were completely burned at the end of February 1945 in Darmstadt during an attack on the administration car of the construction brigade,<sup>4</sup> it is still remarkable that neither prisoner lists are available from the ITS,<sup>5</sup> nor are there variation reports, kept in electronic format, in the AG-S that contain any reference to the SS-EBB IX.<sup>6</sup> According to the Dutch report, up to 250 prisoners of this construction brigade are said to have been killed in bombing raids. However, the documents kept at the cemeteries in Stuttgart, Offenburg, and Darmstadt, the supposed sites of the brigade's deployment, contain no reference to victims of the SS-EBB IX.

Gerhard Weigel, the "Inspector of All Construction Brigades" in the SS-Business Administration Main Office (WVHA), visited Offenburg between February 21 and 23, 1945, the period in which the SS-EBB IX was said to have been stationed in Offenburg. He mentioned the SS-Baubrigaden VIII and X but not IX.<sup>7</sup> In addition, the supposed evacuation goal, the Mauthausen Ebensee subcamp, has no record of the brigade—unlike the SS-Baubrigaden XI and XII.<sup>8</sup> The AG-M likewise does not hold any documents on the SS-EBB IX.

Bernd Boll based his assertion that the SS-EBB IX was in Offenburg on diary entries of the mayor who wrote about "two long trains with concentration camp prisoners" on December 25, 1944. This does allow for the possibility that two construction brigades were stationed in Offenburg at that time. However, the construction brigade trains were, owing to their length of up to 50 railroad cars, often parked in two rows on different tracks, so this cannot be seen as sufficient evidence for the existence of the SS-EBB IX.<sup>9</sup> Inquiries by the Central Office of State Justice Administrations (ZdL) have revealed no further evidence about the SS-EBB IX to date. The name of a single SS officer for the brigade cannot be ascertained.<sup>10</sup>

A comparison of lists of names eventually supplied an explanation. Five of six known Dutchmen who, after the war, were regarded as missing from the SS-EBB IX, or who—as survivors of the SS-EBB IX—were considered by the Ludwigsburg State Prosecutor as possible witnesses, are to be

found on the prisoners lists for the SS-EBB VIII from January 1, 1945.<sup>11</sup> As the sites the survivors mentioned and the details of their activities correspond to those of the SS-EBB VIII, one can now assume that the survivors' statements, which until now have been attributed to the SS-EBB IX, should be attributed to the SS-EBB VIII.

## SS-EISENBAHNBAUBRIGADE X (BUCHENWALD AND SACHSENHAUSEN)

The SS-Eisenbahnbaubrigade X (SS-EBB X) was the only SS construction brigade that was made up of Jewish prisoners. It was established in December 1944 with 504 prisoners from the Buchenwald concentration camp and sent on January 2, 1945, to Offenburg to repair the railroad infrastructure there. Three days later, as with the other SS construction brigades, it came under the control of the Sachsenhausen concentration camp.<sup>1</sup> The train was stationed in the heavily damaged Offenburg train station, an important transportation center in the Southwest. In contrast to the prisoners of the SS-Baubrigade VIII, who arrived in Offenburg about two weeks earlier and who were housed in a former forced labor camp, the prisoners of the SS-EBB X had to live in the railroad cars.<sup>2</sup>

The head of SS-EBB X was SS-Obersturmführer Ludwig Petz, who was born on June 9, 1912, in Munich. He was an architect and since 1938 had worked full-time at various SS construction sites. Beginning in November 1941, he was a

member of the Construction Inspectorate "Balkan," part of the Higher-SS and Police Leader's (HSSPF) office in Serbia. On October 15, 1944, he was appointed head of the SS-EBB X.<sup>3</sup> The guards consisted almost exclusively of railroad employees who were called up for a short time in accordance with an October 29, 1944, agreement between the German Ministry of Transport and the Waffen-SS. After a four-week training course in the Dachau concentration camp, they were assigned to the railroad construction brigade.<sup>4</sup> The 60 railroad men were mostly around 45 years old. The eldest was born in 1884 and the youngest in 1905.<sup>5</sup>

Except for 11 prisoners, the SS-EBB X comprised Hungarian Jews as well as a smaller group of Polish and Czech Jews.<sup>6</sup> The use of Jewish prisoners in a construction brigade was later stopped—whether by Heinrich Himmler personally or the SS-Business Administration Main Office (WVHA) cannot be ascertained. It was expressly ordered that only "Aryan" prisoners could be used in the construction brigades. Instructions for a transport of prisoners to the SS-Baubrigade XII in Buchenwald in February 1945 stated that "two hundred Aryans" were to be made available.<sup>7</sup> The reason for this instruction is that in the construction brigades it was never possible to prevent contact completely with the surrounding community and escapes were numerous. The SS-EBB X's prisoner-functionaries were 11 non-Jewish German prisoners who were transferred from Dachau and Mauthausen to Buchenwald.<sup>8</sup>

One of these functionaries, Josef D., described the construction train as follows:

The Eisenbahnbaubrigade consisted of a staff of SS men (ca. six men, ca. forty to fifty SS guards, ca. twelve Kapos, and ca. five hundred Jewish prisoners). A special train was assembled at the train station at Buchenwald for them, which consisted of approximately fifty to sixty cars. The prisoners were put in cattle cars. The guards were billeted in a simple passenger car. The staff was in well-equipped saloon cars. In addition, there was a car for tools and supplies and for the prisoners' kitchen. The SS staff and guards had special cooking facilities. The car for us Kapos was equipped with wooden bunks and wood shavings. There were twelve of us in the car. The Jewish prisoners, on the other hand, were cramped together and had to sleep two or three to a wooden bunk without a straw bag. The wooden bunks were double-storied. There were a good forty to fifty prisoners in a car.<sup>9</sup>

At any one time, groups of 98 Jewish prisoners and 2 prisoner-functionaries were put to cleanup work on the Offenburg railroad facilities. A survivor reported as follows: "The work conditions on the construction train were very poor. The food was miserable. Many prisoners were in a terrible condition; they had hernias and other illnesses. The equipment was poor. The prisoners had to do work on the

rails with their bare hands.”<sup>10</sup> What made conditions worse was that the prisoners had no protection during the bombing raids. In the beginning they sought protection in the surrounding compound. Then this was forbidden, according to Gerhard M.: “This type of self-protection was banned by a railroad official from Offenburg. When fighters attacked we had to seek cover under the railroad cars. However, as the cars were the targets we suffered heavy losses.”<sup>11</sup> A report after the war by the Karlsruhe Railroad Directorate on an attack on the Offenburg freight yard on February 18, 1945, stated: “sixteen prisoners from the SS-Baubrigade X were killed and thirty injured.”<sup>12</sup>

At the beginning of March 1945 the SS-EBB X was withdrawn from Offenburg. From March 7 to March 25, 1945, the train stood on a railroad line between Leutershausen-Wiedersbach and Schalkhausen. The prisoners had to repair railroad facilities at Ansbach, 5 kilometers (3.1 miles) away. From April 2, 1945, the train was stationed in a patch of forest about 10 kilometers (6.2 miles) from Ansbach, in the direction of Munich.

A former non-Jewish prisoner stated that for the Jewish prisoners “it was not possible to speak favorably about most of the guards.”<sup>13</sup> Jewish survivors have not mentioned any unusual brutality by the guards. The reports on the prisoner-functionaries do not give a clear picture. Two prisoner-functionaries are accused specifically of mistreatment, and others are said to have disapproved of mistreatment and in part prevented it.

One Jewish survivor found particularly demeaning the punishment meted out to six prisoners in the SS-EBB X for stealing food—they were whipped in Offenburg at the beginning of March 1945. He recalls that they were at first threatened that they would be shot or hanged. Finally they were whipped by a Kapo. The next day they were whipped again, and finally they had to drop their trousers and thank the “SS leadership.”<sup>14</sup> A former prisoner-functionary said that he had personally interceded with Petz on behalf of the prisoners and prevented them from being shot.

So far as the available numbers can determine, it appears that the death rate in the SS-EBB X was not higher than in other railroad construction brigades. Of the 504 prisoners, 414 reached the evacuation destination. According to survivors, 20 or 30 prisoners were exchanged for other prisoners from Sachsenhausen.<sup>15</sup> Altogether the survivors mention up to 40 dead from bombing raids and around another 20 deaths; 4 murder victims are mentioned: 1 or 2 prisoners are said to have been shot in Offenburg for misappropriating food—a Polish Jew was beaten to death in Ansbach, and another was hanged. During the relatively short period of time between March 8 and April 2, 1945, there were 17 victims, according to the diary of a former prisoner. However, the causes of death were not named.<sup>16</sup>

On April 2, 1945, the construction brigade left Ansbach and passed through Fürth and Nürnberg. After April 14, 1945, the train was stuck in Undorf near Regensburg—a destroyed bridge prevented it from moving. Rumors circulated

among the prisoners that they were all to be shot in a forest. An SS guard is supposed to have said that Himmler ordered that all of the prisoners on the construction trains were to be blown up with hand grenades. According to one survivor, only about 10 SS men stated that they would carry out this order. Petz is supposed to have distanced himself from those plans.<sup>17</sup> As the train was no longer operational, Petz finally had the prisoners start walking on April 19. They marched mostly at night due to bombing raids.

Apparently a few prisoners were shot on the march, but the numbers are uncertain. Former prisoner-functionaries have stated that there was a shooting detachment that shot prisoners who could not march any further. On the other hand, a Jewish survivor has stated that no more than five or six prisoners were shot on the march. On April 27, 1945, the aforementioned 414 prisoners reached the Dachau concentration camp, where on April 29, 1945, they were liberated.<sup>18</sup>

Petz and his closest colleagues ran off near Moosburg, after going two-thirds of the way.<sup>19</sup> By the time the Central Office of State Justice Administrations (ZdL) in Ludwigsburg investigated the SS-EBB X, Petz had died. The Regensburg police, which in 1974 questioned 125 people in various locations about the concentration camp prisoners, stated the following after the lack of cooperation from the local population: “It is not possible to state whether the interviewees in fact could no longer remember as in several places we were confronted with a lack of understanding and an unwillingness to cooperate. The people today did not want to have anything to do with what happened. Besides, many were afraid that they could be prosecuted for looting the construction train. Probably almost all of the interviewees looted the train.”<sup>20</sup> In 1975, the more-than-1,000-page comprehensive file was closed with a recommendation that it not be reopened.

**SOURCES** The SS-Eisenbahnbaubrigade X was first written about in an essay on the use of Offenburg as a marshaling area: Bernd Boll, “Konzentrationslager auf Schienen. Eisenbahn-Baubrigaden der SS in Offenburg 1944/45,” *Ortenau* 73 (1993): 480–514. In consideration of the special situation of the Jewish prisoners in the SS construction brigades, a dissertation was dedicated almost 10 years later and has since been published as Karola Fings, *Krieg, Gesellschaft, und KZ: Himmlers SS-Baubrigaden* (Paderborn: Schöningh, 2005). For the dissertation, other widely scattered sources, almost all of which have been mentioned in this essay, were used.

The most important primary sources are the judicial files at ZdL (IV 406 AR-Z 254/72), now BA-L, with additional documentation in THStA-W, BA-B, CChIdK, and NARA.

## SS-EISENBAHNBAUBRIGADE XI (NEUENGAMME AND SACHSENHAUSEN)

The establishment of the SS-Eisenbahnbaubrigade XI (SS-EBB XI) was planned since November 1944. The railroad construction brigade left the Neuengamme concentration camp for the first time on February 13, 1945, with 504 prisoners. It did not leave prior to that date because the train to carry the prisoners and supplies was not yet completed. Its destination was the freight and switching yard at Soest, a junction for all east-west transport, which had almost been completely destroyed on December 4–5, 1944, and where the prisoners were to undertake repair work. Temporarily stopped by a bombing raid just before Lippstadt, the SS-EBB XI reached the city of Soest on February 15, 1945.<sup>1</sup> As with all other SS construction brigades, it was formally made part of the Sachsenhausen concentration camp beginning in January 1945.

Since the Soest train station was the target of Allied bombing attacks on an almost daily basis, the train, with its 50 cars in which the prisoners and the SS security detail lived, could not stay there. Until February 25, 1945, the train was stationed on a stretch of rail at Lippstadt in Benninghausen. This meant long marches to work, which resulted in the train being returned to Soest. On February 28, 1945, it was

almost completely destroyed in Soest. The prisoners were taken to a barn on the Schulze-Lohöfer farm near Bad Sasendorf.

Franz Heider, an engineer born on September 13, 1910, in Steinach in Thuringia, was the leader of the SS-EBB XI until March 1945.<sup>2</sup> Although Heider had been a member of the Nazi Party and the SS since 1931, it was only with this appointment that he reached the rank of SS-Untersturmführer. He had been denied promotions for two years because in 1943 he did not take the shortest route on an assignment. Heider had been a member of the SS-Business Administration Main Office (WVHA) since 1942 and was the head of the SS-Construction Inspectorate "Balkan" in Serbia with the Higher-SS and Police Leader (HSSPF) from July 1942 until its retreat in October 1944. Survivors described Heider as "bearable." According to the camp elder (Lagerältester), Adolf K., he banned the beating of prisoners.<sup>3</sup> Heider himself stated that he was reassigned from the construction brigade in March 1945 to construct airfields in southern Germany and the neighboring regions of Austria. According to a report from the camp elder, with Heider's successor, Kurt Wittwer, came "for the first time the famous methods of the SS into the brigade." SS-Oberscharführer Wittwer was born on May 4, 1912, in Berlin and brought with him two years in the SS-Baubrigade I, where he was infamous among the prisoners.<sup>4</sup> Wittwer and another SS-Hauptscharführer, along with two Kapos, are alleged in particular to have brutally abused prisoners who attempted to escape.

Most of the prisoners came from the Soviet Union and Poland. But there were also prisoners from Denmark, France, Belgium, and the Netherlands. Among the German prisoners, who were the construction brigade's prisoner-functionaries, there appears to have been great rivalry. It was also reported that in Benninghausen a German Kapo beat to death Dutchman Jan Derk Bunink, who was born on January 7, 1926, in Zwolle.

The SS security detachment numbered 85 men in total, most of whom were old railroad employees who were temporarily posted to SS-EBB XI.<sup>5</sup> Among them was Edmund P. who at a denazification court in Regensburg in 1947 tried to create the impression that he had nothing to do with the concentration camp prisoners:

I am a career railroad man and was forcibly called up to the Waffen-SS on December 28, 1944. I was trained in the so-called SS Training Camp [Übungslager] Dachau. There I was trained as an infantryman for about six weeks. Finally, I and other railroad men were sent to a fourteen day course at the Dachau Railroad Station. On March 10, 1945, we were transferred to the Eisenbahnbau train XI at Soest, Westphalia. We were immediately sent in to repair destroyed railroad stations. I was the Eisenbahn-Rottenführer and supervised the repair work. I did not watch prisoners, who were totally occupied with work. In addition there were no assaults on the prisoners.<sup>6</sup>

Survivors' reports show a completely different picture of conditions in the SS-EBB XI. At war's end, only 206 prisoners reached the evacuation destination. In Soest, the prisoners were mostly exposed to the massive bombing raids because they either had to continue working or were not allowed to seek protection in bunkers. A former prisoner had the following to say about the bombardments: "In the morning the guys would repair the tracks and in the afternoon the Tommies [the British] came and blew it all up again."<sup>7</sup> An attack on Soest on February 28, 1945, killed 33 prisoners of the SS-EBB XI; 31 were wounded, and 33 prisoners were counted as incinerated or missing.

At the beginning of March 1945, about 30 additional prisoners died from poisoning because the guards did nothing to help them. According to a survivor, who as the detachment clerk recorded the deaths in SS-EBB XI, a railroad car with methyl alcohol was broken open in the freight yard. A large group of prisoners consumed the alcohol and soon showed symptoms of poisoning such as vomiting, diarrhea, and delirium. Because the prisoners were left to themselves, Heinrich L. stated that 24 died during the day at the railroad site and an additional 6 in camp.<sup>8</sup>

A survivor has stated that as a result of the poor rations only 100 to 120 prisoners were in a position to march out to work. Another survivor has stated that despite some food handouts from the population that prisoners died daily from epidemics or undernourishment.<sup>9</sup> Up until the last days of the war, prisoners who could no longer work were selected and replaced with new workers. For example, on March 19, 1945, 128 sick and wounded prisoners were sent to Buchenwald,<sup>10</sup> in exchange for 100 Soviet prisoners who had departed Buchenwald on March 13, 1945.<sup>11</sup>

Due to the lack of sources, it is not possible to determine an exact number of victims of the SS-EBB XI. However, extrapolating from the death rates for various nationalities leads one to the conclusion that the death rate was relatively high. Of the 36 Danes in the brigade, 14 died—in contrast to the SS-EBB V, where all 35 Danes survived the war;<sup>12</sup> 3 of the Danes were victims of bombing raids, but the majority, 10 Danes, died during the evacuation. Of the 51 Dutch, 22 were repatriated, 21 died, and 8 were listed as missing.<sup>13</sup>

The evacuation march of the SS-EBB XI, which began on April 4, 1945, was the worst in comparison to that of other railroad construction brigades. About 30 sick and wounded prisoners and five Kapos remained in Bad Sassendorf. Prisoners who could no longer walk were shot on the three-day march via Lippstadt and Paderborn to Höxter, where a train was awaiting them. On April 7, a transport with sick prisoners was sent from Halle to Sachsenhausen. The remaining prisoners left Halle on April 15 and retreated, sometimes on foot and sometimes on a train, over Chemnitz and Plauen to Pilsen (Plzen). The prisoners tried to escape if a favorable opportunity presented itself. A few succeeded. There was another selection in Pilsen. A transport with sick prisoners went to Dachau, while a small group marched to Dachau. Again, prisoners were left dead or dying along the way. The column did

not reach Dachau but was liberated in Anzing. (Survivors named the place "Anzingen." There is an Anzing near Dorf, to the west of Munich, and an Anzing nearer Munich. Which location is meant is not known. Both are situated on the same railroad line.) The main transport of the SS-EBB XI traveled from Pilsen to the Mauthausen/Ebensee subcamp, where on May 4, 1945, the remaining 206 prisoners were registered.

The victims of the Soest railroad construction brigade are buried in a plot at the cemetery in Bad Sassendorf.

**SOURCES** Comparatively early, Gerhard Köhn published an article about the SS-Eisenbahnbaubrigade XI in a local historical magazine: "Das Aussenlager des Konzentrationslagers Neuengamme bei Hamburg in Soest und Bad Sassendorf (11. SS-Baubrigade) 1945," *SoeZe* 98 (1986): 101–124. Köhn relied almost exclusively on the files of the ZdL (IV 406 AR 776/67), now BA-L. He was able to supplement many details because of his local knowledge. A new monograph on the SS-Baubrigaden has made available other sources on the SS-EBB XI: Karola Fings, *Krieg, Gesellschaft, und KZ: Himmlers SS-Baubrigaden* (Paderborn: Schöningh, 2005). The Soest memorial to the victims, which was erected in 1945, avoided using the words "concentration camp" and neglected to describe the circumstances of death. It says: "Here rest ninety-five citizens of various nationalities, who died far from their homes in the difficult years 1941–1945." See Gedenkstätten für die Opfer des KZ Neuengamme und seiner Aussenlager, ed., *Arbeitsgemeinschaft Neuengamme e.V.* (Hamburg: Selbstverlag, 2000), p. 205. It was only on May 7, 1995, on the initiative of the Soest archivist, that a new memorial stone was dedicated. On the registration of the Eisenbahnbaubrigade's survivors at Ebensee, see *Das nationalsozialistische Lagersystem (CCP)*, ed. Martin Weinmann, with Anne Kaiser and Ursula Krause-Schmitt, prepared originally by ITS (1949–1951; repr., with new intro. matter, Frankfurt am Main: Zweitausendeins, 1990), p. 378.

In addition, a chronicle of the railroad man Wilhelm Trockel (ASt-So, Sj 61) was valuable, as it contained some information about the "concentration camp train." In particular, materials from the AG-NG (Ng 6.4.91; Erinnerungsbericht Nr. 518), AG-S (IV 26), CChIdK, and FGNS-H (13-7-5-5) are noteworthy. A Danish publication describes in detail the living conditions of the prisoners and provides a detailed sketch of the evacuation route: Jørgen H.P. Barfod, *Helvede bar mange Navne. En Beretning om Koncentrationslejre og Fængsler, hvor der sad Danskere 1940–1945* (Copenhagen: Forlaget Zac, 1969).

## SS-EISENBAHNBAUBRIGADE XII (SACHSENHAUSEN)

The SS-Eisenbahnbaubrigade XII (SS-EBB XII), consisting of 504 prisoners, was established in the Sachsenhausen concentration camp. The majority of the prisoners were Soviets and Poles, but there were also French, Dutch, Czechs, Yugoslavs, Spaniards, Italians, and Hungarians. A few German prisoners were included as prisoner-functionaries. The task of the railroad construction brigade was to build and refurbish railroad lines for the Ardennes offensive, the last large German offensive in the West.

On Christmas Eve, December 24, 1944, the construction brigade left the camp and remained in Lahnstein, near Koblenz, until January 8, 1945. Then it was transferred about 50 kilometers (31 miles) up the Rhine to Bad Kreuznach, where it remained for almost two months.<sup>1</sup> In Bad Kreuznach the train was stationed on the “Red Ley,” a gorge on the Nahe River.<sup>2</sup> Prisoners and guards lived on the 50 cars of the train, which was provided with a supply car, a kitchen car, and a tool car. At the beginning of March 1945, the SS-Eisenbahnbaubrigade XII was sent to Grossen-Buseck via Mainz and Frankfurt am Main. The prisoners had to work at the nearby railroad station at Giessen, which had almost been destroyed.

The prisoners were put to work at the request of the Mainz Railroad Directorate. This is confirmed in a report by SS-Sturmabführer Gerhard Weigel, who had been the “Inspector of All Construction Brigades” (Inspekteur sämtlicher Baubrigaden) in the SS-Business Administration Main Office (WVHA) since the autumn of 1944. On February 17, 1945, Weigel inspected the construction brigade and held talks with SS-Hauptsturmführer Rudolf Goetze and the vice-president of the Mainz Railroad Directorate, Dr. Schrag, as well as senior railroad officials Steissenreuther and Dr. Kampf. On March 2, 1945, he reported to Hans Kammler, the head of Office Group C of the SS-WVHA: “There are no particular complaints at the SS-BB [Baubrigade] XII. According to the statements by the Mainz Railroad Directorate, their deployment is very worthwhile.”<sup>3</sup>

Goetze was the head of the SS-EBB XII. He was born on March 9, 1908, in Berlin and was a doctor of engineering. Goetze joined the SS in 1933 and before his assignment with

the construction brigade had worked on SS construction projects.<sup>4</sup> After the war Goetze tried to play down his actions in the construction brigade. The infamous Gustav Sorge, a long-serving SS man in the construction camps, supported him. Sorge was a longtime SS member and was very familiar with the concentration camp system. He got the nickname “Iron Gustav” due to his brutality in street and hall fighting against political opponents in 1931–1932. Sorge organized the creation of the construction brigade in Sachsenhausen and was appointed as the brigade’s leader but had to resign after getting wounded in Lahnstein.<sup>5</sup> Along with a handful of SS who belonged to the Leadership Staff, the guard detachment consisted of 70 SS men born in the 1890s. The overwhelming majority of these men, as with the other SS construction brigades, were former railroad workers called up to the SS for a short period of time.<sup>6</sup>

One of these railroad workers, Otto Stumpf from Bad Kreuznach, said the following after the war on his recruitment:

As a railroad worker I was ordered to Sachsenhausen on December 14, 1944. There, several thousand colleagues waited on their coming, difficult lot. It was all the more sad for there were only older men, between the age of forty-five and sixty, almost none of whom were party members. There were even comrades there that could hardly speak German as they came from Poland or Czechoslovakia. . . . Coming back to Sachsenhausen, I must say that it was not possible for me to get a glimpse of the concentration camp there, or to speak with anyone on the inside. Its condition first gave me cause to think that everything was not quite right with the camp. After the construction train was ready, I had the opportunity to speak with the prisoners personally about the woeful circumstances in the concentration camp. After every answer one could see the joy that they possessed, that they could now leave this camp.<sup>7</sup>

The conditions in the SS-Eisenbahnbaubrigade XII were marked by undernourishment and violence, like the other concentration camps; 37 victims of the railroad construction brigade were buried in the Jewish cemetery between Bad Kreuznach and Bretzenheim. Hunger, strict isolation, and a special brutality by the SS and Kapos, led by Sorge and the Kapo Otto Dümpelmann, stand out as the causes of the deaths. The above-mentioned guard added the following: “The SS staff was mostly young men who had not served at the front. Their sole task was hand-in-hand with the Kapos to torture us and the prisoners and to pilfer supplies and money from the construction train.”<sup>8</sup>

Survivors have reported many violent deaths. A drunken SS man is said to have shot the Kapo Fiete Leistner in Bad Kreuznach.<sup>9</sup> Among the victims in Grossen-Buseck, where the construction brigade was stationed during the beginning of March and where 11 dead prisoners were registered

between March 12, and March 24, 1945, was a victim of an execution.<sup>10</sup> The prisoner had escaped during a bombing raid on March 18, 1945, but was quickly caught in some nearby houses. An SS leader gave the order to hang this man. The hanging was justified on the basis that the man was wearing civilian clothes and therefore had "looted." Otto Dümpelmann carried out the execution. Dümpelmann was a former Luftwaffe soldier who was sent to the Sachsenhausen concentration camp because of numerous disciplinary punishments. Because of his healthy condition, he was known by the nickname "Fat Otto."

On April 10, 1962, during its proceedings against Dümpelmann, the Giessen jury court stated that the following events occurred:

In the meantime it was early afternoon and the prisoners had to step in front of the burned wagon. The SS also assembled. The prisoner was brought forward and after a short statement on the fate of looters the prisoner had to step onto the wagon's running board, where the accused put the rope, tied to the wagon's lamp holder, around his neck. The prisoner then had to jump or he was pushed. The rope broke. He was lifted, lifeless, from the ground, possibly by prisoners commanded to do so. The accuser took his belt off, attached it to the lamp holder, and then set the noose around the throat of the victim, and left him hanging in the noose.<sup>11</sup>

The SS-EBB XII also transported large numbers of prisoners during the last days of the war. A total of 156 sick and weakened prisoners are said to have been sent to the Buchenwald concentration camp.<sup>12</sup> In return, 200 new prisoners arrived from Buchenwald at the beginning of March 1945.<sup>13</sup>

The SS-EBB XII left Grossen-Buseck on March 23, 1945, and traveled to Eisenach via Alsfeld and Bad Hersfeld. Here the train had to be evacuated, and the prisoners marched on foot to Erfurt. On April 1, 1945, the train headed to Dresden via Leipzig. It remained there for a few days and then headed for Linz via Pilsen (Plzen). Here, according to the statement of a railroad man, about 300 prisoners were released on the initiative of the railroad workers.<sup>14</sup> The construction train with 214 prisoners reached the Mauthausen subcamp of Ebensee on May 4, 1945.

After 1945, no one from the leadership group of the SS was brought to justice for crimes committed while in the railroad construction brigade. Sorge was convicted in 1959 of a number of murders committed in other camps and sentenced to life in prison. Only the murder committed by the Kapo Dümpelmann was punished. Dümpelmann was sentenced to two and a half years in prison in 1962 as an accessory to homicide.

**SOURCES** The SS-Eisenbahnbaubrigade XII was mentioned in detail for the first time in a dissertation, published as Karola

Fings, *Krieg, Gesellschaft, und KZ: Himmlers SS-Baubrigaden* (Paderborn: Schöningh, 2005). Far-flung local histories also give worthwhile information: Klaus Steup, *Aufrecht geben . . . wenn alles in Scherben fällt: Busecker Alltag in der Nazi-Zeit. Erinnerungen und Dokumente* (Grossen-Buseck: Selbstverlag, 1986); "Mobiles Konzentrationslager hinterliess Blutspur: Der Heimatforscher Bernd Vorläufer-Germer hat Spuren einer 'SS-Brigade' entdeckt," *FR* (Hochtaunuskreis), November 12, 1999. The admission of the SS-EBB XII survivors to Ebensee is listed in *Das nationalsozialistische Lagersystem (CCP)*, ed. Martin Weinmann, with Anne Kaiser and Ursula Krause-Schmitt, prepared originally by ITS (1949–1951; repr., with new intro. matter, Frankfurt am Main: Zweitausendeins, 1990), p. 378.

Important primary sources are the judicial files of the ZdL (IV 406 AR-Z 33/74) at BA-L. The judgments on Sorge and Dümpelmann were published in *Justiz und NS-Verbrechen* (Amsterdam: University Press Amsterdam, 1978), vols. 15, 18, a collection of German judicial decisions on National Socialist crimes published in Amsterdam. Mention is made of the SS-EBB XII in THStA-W, CChIdK, and FGNS-H. Otherwise, one must tediously search other sources. A collection of letters and reports in the AVVN-D (Bad Kreuznach correspondence) gives cause for optimism that local historical research will bring further details to light.

## SS-EISENBAHNBAUBRIGADE XIII (DACHAU AND SACHSENHAUSEN)

On January 18, 1945, the last SS construction brigade was formed at the Dachau concentration camp.<sup>1</sup> Consisting of 504 prisoners, the SS-Eisenbahnbaubrigade XIII (SS-EBB XIII) first worked until the end of January in Bavarian Reichertshofen. As with all of the other construction brigades, the SS-EBB XIII was administered after January 1945 by the Sachsenhausen concentration camp. The prisoner group was very heterogeneous, consisting of over 100 Soviets and large groups of Germans, French, Poles, Italians, Belgians, Yugoslavians, and Czechs. In addition, seven other nationalities were listed on the transport list.

The SS-EBB XIII was assigned to the Erfurt Railroad Directorate and worked from February 1945 on the two railroad lines heading southwest to Frankfurt am Main and Koblenz. It operated simultaneously at four different locations: two larger groups worked at Aumeau near Limburg, building a siding at the Ennerich Tunnel, as well as at the Limburg railroad station, which was an important railroad junction with lines heading to all parts of Germany. Detachments of the SS-EBB XIII were sent for short periods of time to Fulda and Mücke, on the stretch between Giessen and Bad Hersfeld.

At the various locations it was the rule that segments of the train were put on branch lines. In Limburg, the three train sections were parked next to each other at the railroad station and were surrounded by a cordon of guards. It was from this “camp” that the prisoners were led to work.<sup>2</sup> Another part of the train stood at the Weilburg railroad station on the “Plattenkaute” on branch lines. From there the prisoners were led daily to work on the railroad lines Runkel-Aumenau and Ennerich-Eschhofen.<sup>3</sup>

Bernhard Kuiper was the leader of the SS-EBB XIII. He was born on August 30, 1907, in the East Frisian town of Möhlenwarf.<sup>4</sup> Kuiper was an architect who had built concentration camps since 1934. At first he worked at Esterwegen, then at the Berlin concentration camp “Columbia,” and finally in Sachsenhausen. From 1940 he was a member of the SS-Main Office for Budget and Buildings (Hauptamt Haushalt und Bauten, HHB). His professional advancement was closely connected with his membership in National Socialist organizations. He joined the Nazi Party in April 1933 and the SS in October 1934. From May 1937 to August 1939, he was part of the SS-Sicherheitsdienst. When the SS-Obersturmführer took over the SS-Eisenbahnbaubrigade XIII on November 15, 1944, he was directly pulled away from the advancing Red Army with the SS-Economic Unit “Russia South” and sent back into Germany.<sup>5</sup> In addition to other, mostly unnamed SS members, the guards consisted of a large group of old railway men. The railroad men were temporarily recruited into the SS and took about a four-week course in Dachau.

Gerhard Weigel, the Inspector of All Construction Brigades (Inspekteur sämtlicher Baubrigaden) in the SS-Business Administration Main Office (WVHA), inspected the SS-

EBB XIII and the places where it worked on February 11, 1945. He had a discussion with the president of the Erfurt Railroad Directorate, Dr. Reabes, and praised the “very good results” that the construction brigade had achieved “despite the short period that it had been at work.”<sup>6</sup> At the same time he declared the construction train to be a “model train.” In Weigel’s opinion, this train, which had been put together in Dachau by the SS-owned Deutsche Ausrüstungswerke GmbH (German Equipment Works, DAW) using experience gained from previous trains, set an exemplary standard for hygiene and other matters.

Nevertheless, the conditions in the SS-EBB XIII were by no means “exemplary.” Many prisoners died from hunger and illness, were killed in bombing raids, or were shot. In the very early days of the construction brigade, there was an outbreak of typhoid. As a result, several prisoners were sent back to Dachau on January 30, 1945, where some of them died.<sup>7</sup> In Aumenau alone, 14 prisoners were killed in bombing raids.<sup>8</sup>

After the war, survivors accused the roll-call leader, Hans Penkowski, of being responsible for numerous prisoner deaths. Penkowski is alleged to have either shot five prisoners or given the order to shoot them in a forest near Limburg in February 1945. He has also been accused of the murder of a Romanian prisoner. A survivor stated that Penkowski had the nickname Machine Pistol (Maschinenpistole) because he had the custom of shooting aimlessly at prisoners. He died during a bombing raid on March 21, 1945.<sup>9</sup> Several prisoners have stated that prisoners were shot in Limburg in the camp area “like rabbits.” The SS are said to have shot at prisoners trying to escape or those who were not quick enough to get out from under cover once the bombing raids were over.<sup>10</sup> It was reported that a Russian prisoner, who had attempted to escape and was recaptured, was forced to wear a sign that said “I am here again.” After this humiliation, it is said that the Kapos beat him to death.<sup>11</sup>

Due to the paucity of sources, it is not possible to determine the exact numbers of those killed in the SS-EBB XIII. Data from the International Tracing Service (ITS) put the number of Belgians at over 15; 8 of these prisoners—more than half—did not live past liberation. In February 1945, 2 died from unknown reasons, 3 died in Dachau, and 3 died in Buchenwald.<sup>12</sup>

On March 4, 1945, 77 prisoners were chosen in Buchenwald and sent to the SS-EBB XIII. Three days later the following entry was entered in the Work Statistics: “The SS-Eisenbahnbaubrigade XIII is dissolved and all the prisoners have been put on the transport ‘Desert.’”<sup>13</sup> At this point, signs of the dissolution of the construction brigade were already evident. In the middle of March, the different prisoner groups at the various locations were sent to the Mücke train station, some on foot and some by train. About 230 prisoners marched from there to Wetzlar. During the march, exhausted and fleeing prisoners are said to have been shot. From Wetzlar, the prisoners were taken in a train in open cars to Buchenwald. There, 185 prisoners of the SS-EBB XIII were registered.<sup>14</sup> It would seem that not all prisoners arrived

simultaneously at Wetzlar, as U.S. troops caught up with a group of marching prisoners at the end of March in the Wetzlar environs and freed them.

As with other construction brigade leaders, the former SS-Obersturmführer Bernhard Kuiper hid his responsibility for the SS construction brigade. In a denazification proceeding in 1948, he was successful in portraying his activities as an architect in the SS as being forced. Although there were statements that Kuiper had “emphasized his role as a member of the SS and SD during the Hitler regime” and had ruthlessly represented the interests of the Nazi Party, the court accepted Kuiper’s own statements. As was usual in denazification proceedings, Kuiper was asked what he knew about concentration camps, Jewish persecution, and the situation of forced laborers, both male and female. He denied having an inner understanding of the concentration camp system. He said: “I knew that the prisoners had to work, but I did not know in detail what they did. . . . I knew things which were relevant to the construction sector. Otherwise it was impossible to hear anything. I thought that life in the concentration camps was not pleasant. What the disciplinary punishments were in the camp, I cannot say.”<sup>15</sup>

Kuiper concealed that he was the responsible leader of the SS-EBB XIII. For the relevant period he admitted to have worked at the Erfurt Railroad Directorate. In a detailed biography, which he wrote in January 1946 while interned in Neuengamme, he even suggested resistance conduct: “In the spring of 1945 I was given my last post as part of the Waffen-SS. It was with the Erfurt Railroad Directorate as a member of the staff of the construction detail. I worked with the railroad engineers, in a democratic sense and as a result of their requests engaged in difficult negotiations with the military commander at Schleiz/Southeast Thuringia toward the end of April which prevented 250 railroad workers from being called up to the Volkssturm.”<sup>16</sup>

The prosecutors for the Central Office of State Justice Administrations (ZdL) in Ludwigsburg saw through Kuiper’s tactical maneuvers, as in the 1970s they were busy with the events in the SS-EBB XIII and in conjunction with which they questioned Kuiper. However, it was already too late for a successful investigation. Many witnesses had already died or could not exactly remember about the happenings of the con-

struction brigade due to the elapsed time. The State Prosecutor’s Office at the State Court in Limburg closed the proceedings on March 20, 1974.

**SOURCES** The SS-Eisenbahnbaubrigade XIII was first mentioned in a published dissertation on SS construction brigades, Karola Fings, *Krieg, Gesellschaft, und KZ: Himmlers SS-Baubrigaden* (Paderborn: Schöningh, 2005).

The dissertation refers to the sparse and widely held sources, almost all of which are referred to in this article. The most important source is the investigation files of the ZdL (IV 406 AR-Z 33/74) at BA-L. Additional archival sources can be found in BA-B, BA-K, AG-B, and ITS.

## STUTTHOF MAIN CAMP

From September 2, 1939, until late April 1945, a concentration camp existed near the town of Stutthof (later Sztutowo), some 40 kilometers (25 miles) east of Danzig (Gdańsk). The camp lay less than 2 kilometers (1.2 miles) south of the Baltic Sea and within 3 kilometers (1.9 miles) west of the Bay of Königsberg.

From its beginnings in September 1939 until January 1942, the Stutthof camp was under the control of the Danzig SS and police authorities. In January 1942, it was incorporated into the SS concentration camp system under the SS-Business Administration Main Office (WVHA). The Stutthof camp filled a number of distinct and differing roles in the period of its existence.

First, in the initial period after September 1939, what came to be known as the Stutthof civilian prison camp (*Zivilgefangenenlager*) was used as the main point for the collection and imprisonment of Poles and Jews forcibly removed from the Polish Corridor and from the former Free City of Danzig. By the end of January 1940, the camp held 4,500 prisoners, of whom at most 400 to 500 were Jews.<sup>1</sup> Most of the Jews were killed by one method or another, and by mid-1941, only a handful of them remained alive.

The original guard force for Stutthof consisted of some 50 Danzig police reservists and Nazi Party activists, called the Wachsturmbann Eimann. They were men who had been hardened in their hostility to the Poles by their participation in the ethnic struggle in Danzig in the 1930s. The first commander of the camp was Obersturmbannführer Max Pauly.

Second, from 1940 on through the end of the war, Stutthof functioned as the main *Arbeitserziehungslager* (work education camp) in Danzig–West Prussia. Forced laborers—mostly Poles and Soviet citizens—who did not work as the Germans wanted them to were sent to such camps for a sentence of from 28 to 56 days, to correct their attitudes. For many, it was a death sentence.

Third, after its absorption into the WVHA camp system, Stutthof grew into a regular, though lesser, member of the constellation of concentration camps. A steady flow of German prisoners—among them so-called career criminals (*Berufsverbrecher*), “asocials,” political prisoners, Jehovah’s Witnesses, and a handful of homosexuals—was added to the camp population, though overall it remained predominantly Polish until mid-1944. German prisoners were often appointed to the positions of Kapo and barracks block leaders, and a fair number of them found an outlet for their criminal tendencies in their maltreatment of the non-German prisoners.<sup>2</sup> A smattering of prisoners of other nationalities, most of whom were committed to the camp as political prisoners, added an international aspect.

Fourth, Stutthof functioned as the distribution hub for prisoners dispatched to the subcamps of the Stutthof camp

system. The sums received for the use of prisoner labor by state and private employers (1 to 3 Reichsmark [RM] per day) were crucial, for the camp had to be entirely self-financing. Among their assignments, the labor detachments from Stutthof worked on river regulation and flood prevention in the Vistula delta, excavated for water lines and sewers in the German cities of East Prussia, and labored in brickworks and gravel pits—the hardest types of physical labor. From 1941, as replacements for German workers who had been called up, smaller labor gangs from Stutthof were assigned to private workshops and to factories in and around Danzig. But these crews never numbered together more than a few hundred of Stutthof’s prisoners—until the late summer of 1944, when the influx of tens of thousands of Jews from the Baltic ghettos radically changed the nature of the camp.

In that final phase, from the summer until the fall of 1944, Stutthof acted as the great overflow camp of Eastern Europe, into which poured over 25,000 survivors of the great Baltic Jewish ghettos (Kaunas, Vilnius, and Riga). Simultaneously, more than 16,000 Hungarian Jews, overwhelmingly women, arrived in the camp from Auschwitz (as that camp had also been overloaded with prisoners). To this massive influx were added thousands of Polish Jews from the Łódź and Białystok ghettos and additional thousands of Polish civilians seized after the crushing of the 1944 Warsaw Uprising. It was thus only in the summer of 1944 that Stutthof assumed the profile that is associated with major concentration camps such as Auschwitz and Mauthausen, in terms of prisoner population and scale.

The initial transport of prisoners sent to the Stutthof site in September 1939 was housed in tents. The prisoners first

cleared a rectangular plot of land at the selected spot, 100 meters (328 feet) from the Danzig-Königsberg highway but screened from view by a dense stand of pines. In this clearing they erected double barbed-wire fences, barracks, latrines, a bathhouse, a kitchen, and an infirmary, as well as workshops. This complex constituted the “Old Camp.” A guardhouse, warehouses, administration buildings, housing for the guard detachment, and a large brick headquarters building, the *Kommandantur*, completed the complex. Toward the end of 1941, when all this was in place, the camp held approximately 6,500 prisoners.

Reichsführer-SS Heinrich Himmler’s visit to Stutthof at the end of November 1941 marked the beginning of the camp’s incorporation into the IKL (Inspectorate of Concentration Camps)/WVHA system. On his return to Berlin, Himmler instructed Oswald Pohl to enlarge the camp to a capacity of 25,000 prisoners and to establish large armaments and military repair workshops under the control of the SS-owned Deutsche Ausrüstungswerke GmbH (German Equipment Works, Ltd., DAW).<sup>3</sup> Within weeks of Himmler’s visit, the bureaucratic steps necessary to implement Stutthof’s change of status were complete. The nearby brickworks and quarry, which had been operated by prison labor, were taken over by the SS-owned Deutsche Erd- und Steinwerke (German Earth and Stone Works, DESt).

Construction of the “New Camp” commenced in earnest in mid-1942. Prisoners deployed in the forest detail (*Waldkolonne*) felled trees, pulled stumps, and leveled the area, using only hand tools and muscle power. This labor detail was regarded as the most punitive of those to which prisoners were assigned. In addition to constructing the barracks, guard

towers, and fences, the prisoners also built a crematorium for the disposal of the corpses of those who died in the camp. This facility began operation in September 1942. In 1944, the New Camp was expanded with the addition of hastily erected barracks to house the influx from the Baltic states and Auschwitz.

Along with these changes associated with expansion and incorporation into the WVHA system came a change of command. In September 1942, SS-Sturmabführer Paul Werner Hoppe replaced Pauly as commandant.

The SS-Death’s Head Battalion Stutthof expanded as the camp expanded. It grew from fewer than 100 men in the camp’s first year to a full battalion of some 500 men by the end of 1942.<sup>4</sup> The SS guards secured the perimeter of the camp on foot and from the watchtowers, escorted labor details to and from job sites, and guarded the prisoners while at work. Prisoners attempting to escape were shot without warning; according to a former officer of the SS guards, merely to approach the warning strip inside the barbed-wire fence of the camp or the security zone established by the guards at outdoor work sites was regarded as attempted escape.<sup>5</sup> As the war went on, the guard force increasingly consisted of ethnic Germans recruited in Yugoslavia, Slovakia, and Romania. The guards were assisted by up to 18 attack dogs.<sup>6</sup>

Topography and demography both added to the prisoners’ plight. To the south and west of the camp, the terrain was alternately wooded and swampy, which made outside scrutiny impossible and escape difficult. Moreover, the local population was almost entirely German, so there was little chance that an escaped prisoner could find food or shelter anywhere in the vicinity. The camp was situated on ground that lay below the level of the Baltic. The dampness that resulted from the high-water table was a significant contributing factor to

Prisoners erect the barracks foundations at Stutthof, September to October 1939, at which time the camp was not part of the Inspectorate of Concentration Camps (IKL).

USHMM WS #51332, COURTESY OF AMS

the camp's high mortality rate. In the winter, vicious winds blew off the sea into the exposed camp.

All told, about 110,000 registered prisoners passed through the camp, of whom at least 65,000 perished; Polish postwar sources put the death figure at 80,000, to include the number of prisoners who were never registered in the camp rolls but who died or were killed there. The most common cause of death was *Vernichtung durch Arbeit*, annihilation by work, which involved a combination of physical exhaustion, disease, malnutrition, exposure to a harsh climate, and abuse. Those too weak to work who clung to life were killed with lethal injections or, after the construction of a small gas chamber in September 1943, by gas.

Surviving records from Stutthof include the sole surviving death register (*Verstorbene VII*), which covers the period January to April 1944, the prisoner registration records (*Einlieferungsbücher*), and the records of the civil registry office of the village of Stutthof. The *Einlieferungsbuch* for the period from August 27, 1942, to January 8, 1943, contains typical examples of the fates of the prisoners. Each entry contains the prisoner's name, date and place of birth, infraction and sentencing authority, and final disposition; 3,266 prisoners were officially registered entering Stutthof in this period. The 274 prisoners in one 10-page section of the book serve as an illuminating sample. Of these, 222 were committed to Stutthof for "corrective labor," 15 were sentenced to the camp as career criminals, 7 as so-called asocials, 24 as political prisoners, 5 as Jehovah's Witnesses, and 1 as a homosexual. By national origin they included 105 Russians, 94 Poles, 35 Germans, 25 ethnic Germans, 5 Lithuanians, 1 Gypsy, 1 U.S. citizen (a political prisoner), 1 Estonian, 2 Dutchmen, 1 Czech, 1 Slovak, 2 Frenchmen, and 1 stateless person. By gender, there were 224 men and 50 women.

Reichsführer-SS Heinrich Himmler and entourage inspect Stutthof, shortly before its transfer to IKL control, November 23, 1941. Pictured from left to right are Himmler's adjutant, Karl Wolff; commander of the SS senior district Vistula (*Oberabschnitt Weichsel*), Richard Hildebrandt; Himmler; Inspector of Concentration Camps, Stutthof commandant, Max Pauly; Stutthof camp leader, Alfred Dittmann (foreground); and Stutthof labor deployment leader, Albert Schwartz.

USHMM WS #51377, COURTESY OF IPN

After the completion of their sentences, 74 of the corrective labor prisoners were released, but 53 others were dead within two months' time. The sentences of the remaining 95 corrective labor prisoners were converted to incarceration for the duration, and 60 of these people also died in the following months; 35 corrective labor prisoners were transferred to other camps. Of the prisoners from this sample who remained at Stutthof, only 14 were shown as alive at the time of the camp's evacuation. The most frequently cited cause of death was "allgemeine Herz- und Körperschwäche" (generalized coronary and physical weakness). Other listed causes of death included "intestinal catarrh," "edema," and tuberculosis.<sup>7</sup> The typhus that periodically devastated the camp was never listed as a cause of death, nor was another frequent cause: death by lethal injection, administered in the camp hospital to those too weak to work. A hint of this practice is given by the place of death shown in the records, the notation "Krbau," which stands for *Krankenbau*—the hospital.

A sample from the aforementioned register confirms this grim tale. Over the course of three days, January 27 to 29, 1943, 330 prisoners were committed to Stutthof, 298 of them for corrective labor. Within two months, 88 were dead, with another 79 perishing after another two months in the camp. By the time of evacuation in 1945, 250 were shown to have died, and the fates of the other 80 cannot be precisely determined.<sup>8</sup>

In addition to overwork, the cold, and constant abuse at the hands of guards and Kapos, bad diet was a key contributor to prisoner mortality. The standard fare included a breakfast of adulterated bread and grain coffee, a midday meal of thin soup, and more bread and coffee in the evening. By contrast, the guard dogs received 2 kilograms (4.4 pounds) of meat per day.<sup>9</sup>

At night the prisoners slept on bare wooden bunks. Many of them, particularly the large intake in the second half of 1944, had no blankets. Sanitary facilities were limited to cold water spigots in the barracks washrooms. The prisoners' clothing was washed and deloused only every several months. The toilets were pit latrines, which were periodically cleaned by the prisoners the Nazis most despised, the Jews and Polish Roman Catholic priests.

The Political Department at Stutthof maintained separate registers of prisoners' deaths. Only one of these was saved from destruction; it covers the period from January to April 1944. It lists some of the same causes of death contained in the *Einlieferungsbücher*—plus others, such as the February entries for 1 Pole "hanged in accordance with orders"; another "shot for offering resistance to state authority"; and 16 Red Army officers shot, with no justification given, simply an "E" (for *exekutiert*) entered next to their names in the death book. On March 15, 1944, 6 Jewish prisoners were shot "for offering resistance."<sup>10</sup> Executions by hanging were carried out in front of the assembled prisoners. In addition to the execution of prisoners such as these, Stutthof also served as the place of execution for prisoners sent by the Gestapo from Danzig, Königsberg, and other places. These prisoners were

not registered as inmates in the camp. One Polish expert calculated 180 deaths by execution took place from the fall of 1939 to the end of 1943. It is likely that at least an equal number of prisoners were beaten to death by the most brutal Kapos, such as Waclaw Kozłowski and Josef Pabst. Still, it was the covert execution by injection that was by far the most frequent method employed at Stutthof.

Plans for the evacuation of Stutthof, ready in the fall of 1944, called for evacuation by sea, with Neuengamme as the main destination. In mid-January 1945, the nearby subcamps were shut down and the prisoners returned to the main camp. Some of the camp records were burned, particularly the sensitive materials of the Political Section and the camp hospital. On January 25, the evacuation commenced—but by forced march. The orders specified that this evacuation would take the form of 11 columns of 1,000 prisoners each. This represented about one-half of the camp's population (just over 23,000) at the time.

The weather could hardly have been worse, with daily temperatures hovering below -18°C (-0.4°F) and deep snow blanketing the roads. The prisoners received 0.5 kilograms (1.1 pounds) of bread and 57 grams (2 ounces) of margarine as their entire ration. Most of them gobbled it up as soon as it was issued, and for 3 days they received no additional food. The prisoners were cut down by cold, hunger, sickness, and the SS guards, who shot those who could not keep up. After 11 days, the columns had moved between 120 and 170 kilometers (74.6 and 105.6 miles) to the west, and the exhausted prisoners moved into temporary camps. Only 7,000 of the original 11,000 prisoners remained. The survivors were then put to forced labor, digging antitank ditches for the Wehrmacht, in which hundreds more died. The survivors were liberated at the beginning of March 1945.

At Stutthof, the camp descended into chaos. After the evacuation columns departed, the remaining prisoners were not fed for days, nor did they go to work or stand roll call. Hunger and typhus claimed up to 200 lives per day, and by early April the population had declined to fewer than 5,000 prisoners. Another 500 perished by the time of the first evacuation by sea on April 25, 1945; the Nazis were determined that no living concentration camp prisoners should be liberated by the Red Army. There were fewer than 2,000 women prisoners still alive, most of them Jewish, along with just over 2,500 men. Some 3,000 prisoners marched to Danzig, where they were loaded onto river barges for the voyage to territory still in German hands. After a journey of some five days, one barge eventually ended up in Denmark; the others were stranded between Kiel and the island of Rügen. A second group of just over 1,000 departed on April 27. Approximately a third of the evacuees did not survive to see liberation.

The first trial of Stutthof personnel, which commenced in Gdańsk in April 1946, included one SS sergeant, six female guards and eight Kapos. Five of the Kapos were sentenced to death, as were five of the female guards and the SS sergeant.

Pauly was sentenced to death by a British military tribunal and executed in October 1946, but for his subsequent service at Neuengamme—not for his actions at Stutthof. Hoppe was tried and convicted in West Germany in 1955; he served seven and a half years of a nine-year sentence. The SS noncommissioned officers in charge of the camp hospital where the lethal injections were administered were tried and convicted in Tübingen in 1964.<sup>11</sup>

**SOURCES** Virtually all the published works on the Stutthof main camp and subcamps are in Polish, with a few in German. This essay relies heavily on Donald Steyer, ed., *Stutthof: Hitlerowski Obóz Koncentracyjny* (Warsaw: Interpress, 1988), in particular the essays by Marek Orski, Mirosław Gliński, and Danuta Drywa. Additional information is available from the National Stutthof Museum Web site.

The detailed transport lists from the summer and fall of 1944 are preserved in the AMS, Collection I-I. Detailed information that includes names and personal data of individual prisoners who entered Stutthof throughout its existence is contained in the camp's nearly complete series of Einlieferungsbücher (camp entry registers), which are held in AMS, 10, Collection I-II. Other records can be found in NARA, RG 242, as reflected in the notes, and the USHMMA contain Stutthof records as well as relevant memoirs.

## STUTTHOF SUBCAMP SYSTEM

As soon as the Stutthof concentration camp began operating, its administration created subcamps outside the camp proper to put prisoners to work in industry, farming, or other services. There were two main motivations that caused the camp authorities to form new units under central command. On the one hand, sending prisoners off the camp premises was an effective way to ease the overcrowding at the main camp and to obtain funds and other resources that would keep it operating. On the other hand, there was a more or less constant demand for labor by government institutions, companies, and private individuals from 1939 to 1945. SS-Obersturmführer Albert Schwartz, who was the farm camp director from 1940 to 1941, filed the following account before an investigating officer of the American Military Court (AMC) in Freising on September 12, 1945:

The Stutthof camp maintained its own agricultural farm, growing most of the vegetables needed for the [sub]camps there, and also had its own cattle and slaughterhouse. Big shops were constructed in which work was done for private companies in Elbing and Danzig. The money paid for this work amounted to such large sums that not only the upkeep for the camp, the food, and clothing for the prisoners could be fully paid, but considerable means were left over to build a big administration office from this money.<sup>1</sup>

The organizational history of the subcamps is a complex reflection of the Stutthof main camp's changing circumstances. Some started out as independent camps in their own right, operating as transit and detention camps parallel to Stutthof under the Danzig Prison Camp Command (Kommandantur der Gefangenenlager Danzig) and the SS-"Vis-tula" Main Sector Office (Oberabschnitt "Weichsel"), and were later absorbed into the Stutthof system. Other sites began as subcamps of those parallel camps, while still others were under the Stutthof main camp from the start. Likewise, the life cycles of the camps varied; they opened and shut down at different times and sometimes reopened later. In all cases the authority to open a subcamp lay with the commandant of the main camp, in consultation with his superiors. Labor assignments were based on contracts made between the Danzig or Elbing employment office, the army command, police headquarters, and a government agency, company, or private individual. The contracts set forth the type and duration of employment; the terms of work; and the conditions for lodging, prisoner supervision, and compensation.

Each of the subcamps operated with a large degree of independence. The central command in Stutthof coordinated economic and financial business and maintained central pris-

oner records, while the subcamp staff handled the day-to-day operation of the camp and monitored the working conditions.

It is not difficult to establish the names of all the permanent camps operating under one central command, but it is considerably harder to determine the names of the small work groups, generally called external labor detachments (Aussenkommandos), which were poorly documented because of the duration of their work, the number of prisoners in each group, and the detachment's distance from the main camp. The documentation chiefly consists of prisoners' files and correspondence with the Danzig Gestapo about prisoners, recording when and where they worked, as well as the testimony and accounts of former camp prisoners filed after the war.

An examination of the subcamp essays that follow establishes that 28 subcamps throughout the province of Danzig-West Prussia belonged to the Stutthof camp in the period from autumn 1939 through the end of 1941. Except for a few instances, that number does not include the Bauernkommandos, the farm detachments that, according to Schwartz's testimony, employed approximately 3,000 prisoners in the autumn of 1939. (Some 700 people were working on farms in January 1940.)<sup>2</sup> The detachments were named after the employers to whom they were hired out and the localities the farms were in, and they can be identified through the camp administration's notes on prisoner employment or financial records. In April 1940, the Stutthof camp assumed the central command of civilian prisoner camps; it took over the Grenzdorf civilian prisoner camp as well as the subcamps (Matzkau, Westerplatte, and external detachments in Danzig, Oliva, and Gdynia) of the Danzig-Neufahrwasser camp, which was being shut down.

The greatest number of Stutthof subcamps were formed from 1942 through 1944, after the camp had been incorporated into the SS-Business Administration Main Office (WVHA), which consequently brought the camp into the range of influence of SS economic policy and resulted in the intensive exploitation of prisoner labor. Stutthof's commandant made the decision to organize the subcamps, in consultation with and with the consent of the WVHA. Of Stutthof's 66 documented subcamps, 38 were created between early 1942 and the end of 1944: 28 of those in 1944, including 19 camps with Jewish prisoners from Stutthof from June to October 1944.<sup>3</sup>

A total of 26,251 Jews were sent to the new camps in 1944; and including non-Jewish prisoners, there was a total of approximately 33,000 prisoners at all the subcamps—the height of employment outside the main camp for the entire period the camp was in operation. They were put to work manufacturing and repairing weaponry, repairing tracks and military airfields,

building fortifications, clearing bombs, and performing other hard labor. They were chiefly hired out to Luftwaffe airfields, the Organisation Todt (OT), and private businesses. As of January 24, 1945, just before Germans began to evacuate the subcamps, there were still more than 22,500 prisoners in them, of whom over 18,500 were Jews.<sup>4</sup>

The subcamp entries that follow do not represent the entire external workforce at Stutthof. The entries do not include the stationary or semistationary external detachments (in the latter case, the prisoners returned to the main camp every day). Most of those were associated with farms and were formed annually by the dozen in the Danzig–West Prussia Reich District from 1939 through 1945. Each one of the farm camps employed from a handful to more than a dozen prisoners for a fee.

In many instances, the accounts and testimony of former prisoners make up for the gaps in the archival records or vestigial information in camp records. They are the only source portraying the living and working conditions in those detachments and their effects on prisoner life. The main principle in those detachments was to derive maximum benefit from slave labor, benefiting both the camp administration who collected fees for each day of work and the employers to which prisoners were hired out at artificially low prices.

**SOURCES** There are a small number of historical essays devoted to the history of the subcamps of Stutthof. However, there is no synthetic historiography, which would deal holistically with the issues, except in the unpublished dissertation by Józef Matynia, written in the late 1960s: “Filie obozu koncentracyjnego Stutthof 1939–1945” (Ph.D. diss., Pedagogical College, Gdańsk, 1969). The organizational system of the subcamp and employment of prisoners were researched by Mirosław Gliński: “Organizacja obozu koncentracyjnego Stutthof (1 września 1939–9 maja 1945),” *StZeMu*, no. 3 (1979); and by Marek Orski, *Niewolnicza praca więźniów obozu koncentracyjnego Stutthof w latach 1939–1945* (Gdańsk, 1999). The German edition incorporates this issue in a monograph of the Stutthof concentration camp. The following publication includes papers by Mirosław Gliński and Marek Orski: *Stutthof. Das Konzentrationslager* (Gdańsk, 1996) (translation of the Polish edition from 1988: *Stutthof, Nazi Concentration Camp*). Monographs of some larger subcamps have been published; among them are *Brusy-Dziemiany*, Gdynia, *Elbląg, Nadbrzeże Near Elbląg, Police, Słupsk, Subcamps for Jews*, and these were written by Danuta Drywa, Maria Elżbieta Jezierska, Krzysztof Dunin-Wasowicz, Marek Orski (and the co-author in the paper about Gdynia: Elżbieta Grot), Zygmunt Szultka, and Tadeusz Wolski. The monograph about the subcamp in Brusy-Dziemiany (Bruss-Siphienwalde), by Marek Orski, appeared in English: *The Jewish Subsidiary of the Stutthof Concentration Camp (Konzentrationslager Stutthof) at Brusy Dziemiany (1944–1945)*, vol. 12 YVS, (Jerusalem: YVS, 1992).

Most archival materials relating to the organization and functioning of Stutthof’s subcamps, as well as files of the former Stutthof camp, files of the Gestapo in Danzig, and cen-

tral authorities of SS including the WVHA, are located in the AMS in Sztutowo in original form or copies of originals or transcripts of documents from other archives, especially from BA-BL. Other important sources are the stenographs of proceedings against former staff of the camp and prisoner-functionaries as well as the proceedings of the Nuremberg Trials, which took place in front of the IMT and AMT. Part of the documentation relating to trials against perpetrators from the Stutthof concentration camp is kept in the IPN in Warsaw.

Testimonies of the former prisoners, memoirs, statements, and materials of interrogations constitute a large source of documentation. These are located in different institutions dealing with the commemoration of crimes committed in the former concentration camp in Stutthof, mainly in the AMS in Sztutowo, in the IPN, in the AŻIH in Warsaw, and YV in Jerusalem.

## NOTES

1. AK-IPN, PMW-BZW (hereinafter PAM-WCO), catalog no. 327, pp. 25–26.

2. Ibid; AMS, Catalog No. I-IA-1, Nurnberg Document NO-2275, Hildebrandt’s report to Himmler on the operations of SS-Wachsturmbann Eimann.

3. This has been determined from the list of the ITS at Arolsen and the dossier of the AMS at Sztutowo. Source publications as well as essays on the Stutthof concentration camp provide discrepant numbers of Stutthof subcamps. The author of the first monographic publication on the camp’s history, K. Dunin-Wasowicz, *Obóz koncentracyjny Stutthof* (The Stutthof Concentration Camp) (Gdynia, 1970), pp. 128–136, mentions a total of 28, also including the civilian prisoner camp at Danzig-Neufahrwasser and the camps in Smukała, Thorn, and Lebrechtsdorf, which were not subcamps of the camp. Mirosław Gliński, “Organizacja obozu koncentracyjnego Stutthof (1 września 1939–9 maja 1945),” *StZeMu*, no. 3, (1979): 165–180, notes about 38 subcamps and major external detachments. Marek Orski, *Niewolnicza praca więźniów obozu koncentracyjnego Stutthof w latach 1939–45* (Gdańsk, 1999), pp. 346–349, concurs, thus increasing the number of permanent subcamps as well as external detachments. The ITS at Arolsen list of concentration camps and subcamps—*Verzeichnis der Haftstätten unter dem Reichsführer-SS (1933–1945). Konzentrationslager und deren Aussenkommandos sowie andere Haftstätten unter dem Reichsführer-SS in Deutschland und deutsch besetzten Gebieten* (Arolsen, 1979)—accounts for 107 camps including some farm detachments, labor detachments formed within one subcamp, or transit camps from the time of the land evacuation. On the other hand, Józef Matynia, “Filie obozu koncentracyjnego Stutthof 1939–1945” (Ph.D. diss., Pedagogical College, Gdańsk, 1969), established that there were 61 subcamps and external detachments, including Smukała, Thorn, and Lebrechtsdorf, transit camps formed during the prisoner evacuation not qualifying as subcamps, and other camps and detachments that also cannot be regarded as such.

## ADLERSHORST

The first reference to a detachment of prisoners put to work in the Orłowo section of Gdynia (formerly Orłowo Morskie; Adlershorst from 1939 to 1945; aka Gdynia Orłowo) dates from September 13, 1939.<sup>1</sup> The date is derived from an entry on a prisoner's file card, although it cannot be equated at all with the existence of an organized group of prisoners assigned to Orłowo for a specific labor purpose at the time. No other records have confirmed the existence of a subcamp of the Danzig-Neufahrwasser, Grenzdorf, or Stutthof civilian prisoner-of-war (POW) camps in Orłowo at the time.

The first Wehrmacht divisions entered sections of Gdynia (Gdinen, then Gotenhafen during the war) by September 13, 1939. Poles fit for military service were arrested and held at two main internment camps set up by the military authorities: Gdynia Redłowo (Gotenhafen-Hochredlau) and Gdynia Grabówek (Gotenhafen-Grabau). Their identities were checked, and they were interrogated. A special committee operating at those camps from the 16th Security Police Unit of the Danzig Gestapo checked to see if the prisoners were listed in the "wanted registry" (*Fahndungsbuch*). Some of those interned wound up at the camp in Danzig-Neufahrwasser at the beginning of October 1939, or in mid-October at the latest, after the police had taken over Gdynia Redłowo and Gdynia Grabówek.

The next references to a prisoner detachment at Gdynia Orłowo noted on prisoner registration cards appear between September 18 and 28, 1939.<sup>2</sup> There is no information on the number of prisoners, where the camp was housed, and what work the camp was assigned. According to the testimony of Bolesław Przytuła, in the spring of 1940, about 50 prisoners were sent to do cleanup work at the Gdynia Orłowo City Government, where they worked until the summer of 1942. (That certainly was not the Gdynia City Hall building, which was located in Gdynia proper on Marchauer-Piłsudski-Strasse. Perhaps Przytuła meant the city offices in Orłowo or work contracted out by the municipal government to be done in Orłowo.)<sup>3</sup>

According to an entry in a prisoner's personal files, another prisoner detachment was established at Gdynia Orłowo between September 9 and December 30, 1940. Political Branch personal files contain a detachment name: Wegses Hans, Adlershorst. It is not known what type of work the few prisoners in the detachment did, nor how it was set up and how it operated.<sup>4</sup> Other data indicate that it was only in December 1940 that the first detachment of a dozen or so people was assigned to the Gdynia Orłowo concrete plant (Betonfabrik Adlershorst). It was disbanded in April 1941.<sup>5</sup>

Another large camp formed by the command of the civilian internment camp in Stutthof began operating in March 1941. About 20 prisoners from the Stutthof camp, mostly specialist tradesmen such as woodworkers, carpenters, painters, parquet layers, and upholsterers, were put to work rebuilding and finishing the home of Stutthof camp commandant Max Pauly.<sup>6</sup> The home was at 6 Seebadstrasse (later Ulica Prze-

bendowskich), which leads to the sea; the house was reportedly a present for "good service" from Albert Forster, Gauleiter and Reich governor of Danzig-West Prussia. Earlier it had belonged to an attorney from Bydgoszcz (Bromberg) named Maciaszek. The detachment's population varied as work progressed and prisoners with specific specialties were replaced. For example, prisoner Andrzej Domagała, a bricklayer by trade, worked at Adlershorst from March 8 to April 12, 1941. With the roof on, they started doing the finishing work in late autumn 1941. The interior contained such features as larch parquet floors and paneling.<sup>7</sup>

The prisoners were quartered in the private home of a Polish woman named Brydzyński. SS-Rottenführer Johannes Wall became camp commandant on March 5, 1941, and remained so until the detachment disbanded. He went through recruit training from January to March 1941, then was enlisted into the Waffen-SS. Witnesses testifying at Wall's trial in 1947 emphasized his kind attitude toward prisoners. After work and on Sundays, he would make it easier for family members or friends to visit them by making sure no one else was approaching.<sup>8</sup> Witness Franciszek Perchen, who had been sent from the Stutthof camp in March 1941 to work at the house, testified that Wall treated them kindly and let his father visit him. Nevertheless, both that witness and Waław Lewandowski pointed out that prisoners were beaten, although they heard this from other people. Besides his crimes at the Stutthof camp, the indictment also listed crimes committed at Augsburg, a subcamp of Dachau, where Wall had been transferred on September 22, 1942. The Gdańsk District Court sentenced him to five years in prison and a five-year prohibition on holding public or honorary civic offices. He died in prison in 1948.<sup>9</sup>

There is some uncertainty as to the date on which the subcamp was disbanded. Some records indicate a date as early as the end of 1941, but other records contradict that. Józef Kucharski, who testified as a witness at Wall's trial in 1947, said that in February or March 1942, he and 35 prisoners were sent from Stutthof to Adlershorst, where they stayed until July, and that Wall was in command over them. Unless there is an error in the date provided, that would mean that the detachment was disbanded only in mid-1942, that is, when the 2nd Guard Company stationed at the police barracks in Adlershorst returned to the Stutthof camp.<sup>10</sup>

Records on the escape of prisoner Piotr Dziedzic also indicate that the camp was shut down in mid-1942. He had been sent from the Lebrechtsdorf camp (with which Stutthof was associated through commandant Pauly, who was overseeing the operations of that camp and two other educational labor camps in Bydgoszcz's [Bromberg's] district of Smukała [Mühlthal] and Toruń [Thorn]) to the house in Adlershorst on December 1, 1941. He escaped on May 25, 1942.<sup>11</sup>

## BOHNSACK

The only reference to the existence of a prisoner commando in the town of Bohnsack (later Sobieszewo) near Danzig (later Gdańsk) is in the personal files of prisoners and was recorded under the date June 7, 1940. The prisoners were hired out for labor at the county construction agency (Kreisbauamt Danzig-Land, Bohnsack). They returned to the Stutthof camp on July 22, 1940.<sup>1</sup>

## BROMBERG-BRAHNAU (DAG NOBEL)

### [AKA LAGER 15]

The Bromberg-Brahnau subcamp was formed at ammunition factory Dynamit Nobel Aktiengesellschaft (DAG) on July 15, 1944.<sup>1</sup> The prisoner camp, composed of six barracks fenced with barbed wire, was located in a forced labor camp complex near the factory premises and named Lager 15. A total of 1,000 Jewish women aged 16 to 20 were sent there to make up for the labor shortage created when a thousand workers were sent from DAG to the Magdeburg-Anhalt region for Albert Speer's Jäger-Programm.<sup>2</sup> Initially 37 SS men supervised the women; female supervisors from the Ravensbrück concentration camp took over that job on July 25, 1944. When they came to Bromberg (later Bydgoszcz), the number of SS men was reduced from 37 to 12, and the rest returned to the Stutthof main camp.<sup>3</sup>

DAG's facilities at Łęgnowo (Brahnau, aka Langenau) housed the bomb and grenade divisions, while factories nearby at Zimne Wody (Kaltwasser) produced nitroglycerine, gunpowder, and nitrocellulose.<sup>4</sup> A special Home Army report dated February 25, 1944, stated that the DAG factory was composed of 17 concrete buildings, one and two stories tall (usually not including the ground floor), as well as one or two underground levels. Groups of 2 or 3 buildings constituted stand-alone manufacturing facilities. The plants employed 31,617 persons, including 3,015 Poles, in January 1944.<sup>5</sup> The work at the factory was especially dangerous because of the contact with easily oxidized chemicals, which could cause powerful explosions.<sup>6</sup>

Besides one account and fragmentary archival records from Stutthof concentration camp, we have no other materials about the Jewish women's working and living conditions. The only account, that of Teresa Mittelman, a Hungarian Jew, described the general conditions in the Jewish camp and working conditions in a factory production department filling bombs with chemicals. Mittelman noted that the work was dangerous because of the contact with chemicals and lack of work safety measures and that the camp commandant behaved brutally toward prisoners:

We arrived on August 1, 1944, to Brahnau. The older women were sent to work in the kitchen. We got a very good lunch, so we hoped for the best. But we were disappointed. The camp was small. The Lagerführer was a beast. He used torture instruments. Often we were closed in bunkers without reason. He lived in Brahnau with his family. I worked in a munitions factory. I had to fill fifty-nine bombs daily. Later we had to carry the shells to a store. The food ration was fairly good, comparing [it] with the other camps [where] we had been. Once I got ill. I inhaled poison gas, from the shells, and fainted. A Lithuanian woman doctor treated me. The factory was hidden from strangers. Nobody knew what important things were manufactured here. We worked mostly at night. One morning as we came from work, we were told to pack immediately. As we marched off, many began to escape.<sup>7</sup>

DAG settled accounts with the camp command and indirectly with the SS-Business Administration Main Office (WVHA) for the prisoners' labor pursuant to the regulations of the time, based on rate schedules set by the SS authorities. The rate for private companies was 6 and 4 Reichsmark (RM) for each full day of work on plant premises by skilled and unskilled workers, respectively. Jewish women were put to work only in auxiliary labor positions. The only surviving roster of companies owing money to the camp in late 1944 lists 23,253 man-days calculated according to a daily rate of 4 RM. On that basis, DAG was charged approximately 43,000 RM after prisoner feeding expenses were deducted.<sup>8</sup>

Of the 1,000 women sent to Brahnau in mid-July 1944, 995 were there in late January 1945—thus mortality in the camp was comparatively low.<sup>9</sup> The administration of the Stutthof concentration camp had the duty of supplying clothing and medical aid. Subcamp commandant SS-Hauptscharführer Paul Langräbe's correspondence with the clothing warehouse in Stutthof shows that the subcamp received replacement clothing and shoes, or the tools and materials to fix them, albeit late and not always in the quantity desired. A commandant's report said that 1 person had died at camp through October 23, 1944. Health problems started up when winter came, and there was a shortage of warm clothes and shoes especially, as the subcamp commandant stated in a report, because most of the women were put to work outdoors. The commandant's letter to the director of the Administration and Management Division in Stutthof dated December 12, 1944, states that there was a shortage of winter clothing and repair materials. The commandant wrote that approximately 80 percent of the clothing was in very poor condition and repairing it was not helping much; a corresponding rate of illness due to colds was reported.

The camp population in mid-December 1944 was 996 women, as indicated by the amount of winter clothes they received.<sup>10</sup> In the five weeks up until evacuation started, 1 person died in the camp. Preparations to evacuate camp began

on January 20, 1945. The prisoner count reported for January 24, 1945, was accurate only for the initial days of evacuation; after that the population dropped with every passing day. The group of 995 female prisoners merged into one column with the women from the Bromberg-Ost subcamp to form a column of 1,290 people. The destination of the evacuation was the Sachsenhausen concentration camp.<sup>11</sup>

The evacuation route, leading toward Koronowo (Krone), then to Mąkowsko (Monkowarsk), and toward Sępólno Krajeńskie (Zempelburg), was marked by the graves of female prisoners shot by SS men from a Latvian escort, who killed women who were not up to the hardships of the march. Witnesses testified that "in the evening of January 21 Gestapo with dogs escorted approximately one thousand women and men from Bydgoszcz toward Koronowo. They set their dogs on the weak, who could not go on any longer, and beat them with their gun butts, shooting anyone who could not go on."<sup>12</sup> Near the village of Lucim, SS men shot several female prisoners to death, and 4 women were killed near Mąkowsko.

Some of the women tried to break away from the column and escape, which was risky under those conditions. Teresa Mittelmann, and a group of 16 girls, hid in a village where she was liberated three days later.<sup>13</sup> The primary column of women got to the town of Flatow (Złotów) on foot without any food. There, they were loaded onto open freight cars, in which they were transported to Tempelburg (Czaplinek). Mortality rose because of the cold and snow. In Tempelburg on January 29, 1945, the Latvian escort handed the women over to Volkssturm units that convoyed the column to Falkenburg (Złocieńec). There, the 40 survivors of the original group stopped at the local brickyard to spend the night. During the stopover, 4 prisoners disguised as male railroad workers, Erna Valk among them, escaped successfully. They reached Dramburg (Drawsko Pomorskie) after a 14-kilometer (8.7-mile) march. Posing as fugitives from the East, they joined with German refugees and received money, ration cards, and identification documents, as well as a place to live in the abandoned house of a local party leader. They and the other refugees left three weeks later for Germany, where the Americans freed them.<sup>14</sup> The remaining female prisoners were liberated in Falkenburg on February 4, 1945.<sup>15</sup>

## BROMBERG-OST (REICHSBAHN)

Pursuant to a special order of the commandant of the Stutthof concentration camp dated September 12, 1944, two more subcamps for Jewish inmates were instituted effective September 13, 1944: Aussenarbeitslager Bromberg-Ost (Bydgoszcz-Wschód) and Aussenarbeitslager Russoschin bei Praust (Rusocin near Pruszcz Gdański).<sup>1</sup> In both subcamps, the Jewish women prisoners were put to work at German Railways (Deutsche Reichsbahn) sites, laying and repairing rails and loading and unloading railway ties and basalt. On Sundays, they were forced to work digging trenches. Often in the winter months, even in the late evening hours, they were forced to remove snow from the tracks and switches at the Bromberg-Ost junction.<sup>2</sup>

Some 300 Jewish women were sent to Bromberg; they had been selected from Jewish transports that came to the camp in July from Kowno (Kaunas) and in August from Riga and the Auschwitz concentration camp. SS-Scharführer Anton Kniffke was named commandant; 34 members of railway security who had been trained in handling prisoners were in charge of supervision, along with 7 female supervisors including Gerda Steinhoff and Ewa Paradies (sentenced to death at a trial in 1946), who had completed a two-week course for female supervisors held on September 14 at the Stutthof camp. The female prisoners were placed in Ober-Baurtrupp 1822, a collective camp located in the Bromberg-Ost (Bydgoszcz-Wschód) section. Two barracks were allocated for them. In November, construction was started on a small third barrack for an infirmary and an office for the prisoner foremen.<sup>3</sup>

The detachment primarily worked laying rails and repairing trackways for the German national railway, the Reichsbahn. The work was done under difficult climatic conditions, especially in late autumn and the winter. In his report dated November 13, 1944, on a camp inspection that he conducted, SS-Hauptsturmführer P. Ehle of headquarters staff noted the hard work of the female supervisors, who had to take the prisoner detachment out in the early morning in an open train and stayed on duty through the 40-kilometer (25-mile) route. The report went on to say that they stayed at their posts all day regardless of wind or rain, with no opportunity to have something hot to drink or eat. In another place, he stated that they had "no lights, no kitchen utensils, warm coats, or even winter stockings." The camp commandant had already sent

reports about the supervisors to the chief of the Administration and Management Division.

Of course, the female prisoners experienced the same conditions or worse, but they were not the target of so much concern.<sup>4</sup> Of their circumstances, Ehle stated tersely that approximately 10 percent of all the women were unfit for labor because of colds and should be replaced. The women who had been put to work at the main train station in Bydgoszcz (Bromberg), where they could warm themselves, were in the best situation, while those who worked outdoors replacing railroad ties, laying rails, and unloading and loading cars were in the worst. This state of things is confirmed by correspondence between the subcamp commandant and the Administration and Management Division at the main camp, headed by SS-Obersturmführer (becoming SS-Hauptsturmführer in November 1944) Engelbrecht von Bonin.<sup>5</sup> Reports about the detachment's poor provisioning had already reached Stutthof a month after the camp was formed. There was mainly a shortage of materials to mend clothing, as well as a shortage of stockings, which were torn by the wooden shoes (*Holzschuhe*) prisoners wore. Instead of stockings, the commandant urgently tried to get cloth leg wrappings as well as gloves, dresses, jackets, and garters.

Subsequent reports from the subcamp again concern the great damage to clothing and lack of materials to mend the prisoners' clothes, as well as a shortage of underwear. The death rate at the camp was not high; 2 inmates died over the first two months, as is confirmed by underwear orders; a third woman died in November. The population stayed the same at least until January 5, when the commandant asked the Administration and Management Division to send armbands with 297 prisoner numbers, which the camp did not have, due to a material shortage.<sup>6</sup> Then 2 more people died at the camp over the next three weeks up until evacuation began. There were 295 women in the subcamp as of January 24, 1945. They were evacuated along with the Stutthof subcamp in Bromberg-Brahna.

## BRUSS-SOPHIENWALDE

The Bruss (Polish: Brusy) subcamp was formed pursuant to a special order that the commandant of the Stutthof concentration camp issued on August 24, 1944.<sup>1</sup> The camp began operation that day and was also known in correspondence as Truppenübungsplatz (troop exercise grounds) Bruss in Sophienwalde (Dziemiany). The Germans formed the camp because of the demand for labor on the construction site of the SS-Westpreussen (West Prussian) training ground. The construction work included building a special training ground for the Waffen-SS and Wehrmacht, barracks, garages, parking lots, and transportation infrastructure. Those projects were contracted out to a dozen or so private German companies from the Danzig–West Prussia district.

Sophienwalde was home to a major base for transshipping materials, as well as the SS-FAU 128 (Frontarbeitenunternehmung), the code name for the design office for expanding the training ground. All projects for developing the training ground originated at that office. This was the site of Bruss, formed in late 1942. Various groups of prisoners passed through the camp until the end of 1944: Russian, English, Dutch, and Italian prisoners of war (POWs); Jewish women from the Stutthof concentration camp; women from the Lebrechtsdorf displaced persons and labor camp; and Poles deported from Warsaw via Pruszków and the Stutthof camp after the Warsaw Uprising. Bruss was really a holding point, from which respective groups were sent to different work sites on the premises of the training ground.

SS-Oberscharführer Willy Schulz was named commandant of the subcamp; since June 29, 1944, he had been serving in the 2nd SS-Guard Battalion at Stutthof. The female prisoners were supervised by 15 SS men designated by the training ground administration and belonging to the local garrison. Jewish women were supervised by women from the Stutthof staff: Charlotte Rose, Emilia Löscher, and Marta Müller.

A transport of 500 Jewish women, mostly from Hungary, Czechoslovakia, Germany, Poland, and Romania, was sent directly to Bruss, where the detachment was divided into two basic groups: the majority (400–450) were sent to a makeshift camp in Dziemiany on the shore of Lake Rżyno, while 50 to 100 people were placed in Bruss.<sup>2</sup>

Dziemiany had the most primitive conditions. The prisoners were quartered 10 to 15 each in about 30 wooden cabins. They slept directly on a thin layer of straw on the bare floor; the walls were made of thin noninsulated fiberboard. Due to weather conditions, many of them wore soaked clothes and shoes that they had no place to dry out, which fundamentally affected their health and sick rate.<sup>3</sup> Only on January 4, 1945,

was part of a new building opened in Dziemiany, in which there were rooms furnished with bunks for the women. All the Jewish women were moved to the new building within a month.<sup>4</sup>

The Jewish women were put to work mostly in auxiliary jobs, frequently with the forced laborers from Lebrechtsdorf and the Poles expelled from Warsaw. Their main occupation was building barracks and roads. Some of the hardest labor was roofing under the supervision of the Zemke company, which meant working at great heights, with a corresponding danger of injury; 10 women were put to work doing this, including Gertrude Schneider.<sup>5</sup> Many of the Jewish women were assigned to unload trucks of bricks transported from the Bruss brickyard or freightcars. Although it was not as dangerous as the roofing work, it required great physical strength.

The hard labor unloading bricks and building roads and military barracks, as well as the poor state of their clothing and shoes and the minimal food rations, although they were the same as at Stutthof but with little opportunity for getting extra food, caused diseases to spread, primarily spotted typhus and dysentery. Sick prisoners were murdered in the forest near the lake or during work.<sup>6</sup> The subcamp commandant's requests for warmer clothes and clothing repair materials were not always filled completely. In one letter, the commandant wrote that "if you do not provide the clothing we require and urgently need, there might be a drop in labor because of colds, and productivity could decrease."<sup>7</sup> Mainly there was a shortage of stockings, bandannas, and gloves, which served as protection from the cold as well as hand protection during work. Instead of gloves, the Jewish women used rags and newspapers that Poles from the neighboring camp provided to them.<sup>8</sup>

The camp diet was another drain on the women's health. For breakfast and supper, they were issued a slice of bread weighing about 100 to 150 grams (3.5 to 5.3 ounces), rarely with some margarine, and a cup of unsweetened black coffee; for lunch they got 0.5 liters (2 cups) of thin soup made of rutabagas and potatoes with a trace amount of fat. Dishes and eating utensils were also in short supply—one set for every five women. Poles from the neighboring camp came to the Jewish women's aid by making spoons and cups from wood and secretly providing them to the Jewish camp.<sup>9</sup> The death rate in the camp was considerable, although firm statistics are lacking. There are only 3 names on the incomplete lists of prisoners who died at the subcamps. Gertrude Schneider confirmed the high mortality rate in the camp, listing such major causes of "natural death" as spotted typhus, probably brought to the camp when 35 Jewish women from Stutthof were sent to replace sick prisoners who had been hospitalized in late October 1944.<sup>10</sup> Schneider reported that the prisoner population was always kept at approximately 500. She reported that Dziemiany numbered 488 persons on December 19, 1944, but by January 16, 1945, there were only 430 women in the camp, then 480 on February 1, and only 394 on February 10.<sup>11</sup> Thus the total number of Jewish women who passed through the subcamp, allowing for the high death rate, could not be less than 600 or 700.

On the morning of February 10, 1945, the camp was evacuated. Schulz probably received an order to march toward Lauenburg (Łębork), which was the destination for the prisoner columns led out of the Stutthof camp and was nearest to the Dziemiany subcamp's evacuation route; 86 women, mostly ill, were left in the camp. Schulz assured them they would stay there, but they were actually taken in trucks to the village of Leśno-Wybudowanie, where they were shot and their bodies burned.<sup>12</sup>

Of the group evacuated from Dziemiany (including Jewish women from the other detachments, mainly Bruss, who had been moved to Dziemiany earlier), 347 prisoners reached the town of Gotentof on February 17 after marching 83 kilometers (51.6 miles); there they merged with columns of prisoners evacuated from other Stutthof subcamps. They were to spend several days at the Gotentof camp to merge with other prisoner groups. Schneider rated the conditions at that camp as the worst that the women had encountered so far.

Only on March 9 were the prisoners again put in columns in the evening and sent further on their way. They covered 15 kilometers (9.3 miles) during the all-night march, reaching Chynów. Many other Jewish women who had arrived earlier were in a huge barn and on the roadside. Russian tanks entered the village the next day, March 10, 1945. No more than 250 Jewish women were still alive.<sup>13</sup> The Russians shot all the guards escorting the women, including commandant Schulz. The fate of the three women supervisors is unknown. Schneider reported that soldiers took two of them away in separate tanks; the third one disappeared.

## DANZIG (*BETONFABRIK*)

Beginning on June 28, 1940, 70 prisoners from the civilian prisoner camp at Danzig-Neufahrwasser were sent to work at the concrete plant (*Betonfabrik*) in Danzig-Langfuhr (Gdańsk Wrzeszcz), at what was then 235 Adolf-Hitler-Strasse.<sup>1</sup>

The owner of the plant was a Polish ethnic German (Volksdeutscher), a member of the Nazi Party (NSDAP) who changed his name from August Roszkowski to August Röskau in 1942.<sup>2</sup> The prisoners were quartered 200 meters (219 yards) from the plant and the owner’s residence, in half-dismantled barracks on the same street. A person named Jablonski was commander of the guard over the prisoners. Three prisoners escaped from the detachment on August 15, 1940. One of the escapees said in his account:

I got into a detachment in Wrzeszcz that worked at the concrete plant. There were seventy of us. Tomczyk, the son of the circus performer, was there. On August 15, [1940], we went to pour water on some concrete elements that had been produced, and, taking advantage of the SS men’s inattention, we got into a room where some civilian workers’ clothing was hanging—it was Sunday; Tomczyk, myself and one more man changed clothes and escaped. I went via Gdańsk, Tczew, and Olsztyn, and finally reached Warsaw.<sup>3</sup>

The subcamp was shut down on December 1, 1940.<sup>4</sup>

## NOTES

1. AMS, sygn. I-III-49995, I-III-50056, personal files of prisoners Grzegorz Marszałkiewicz and Stefan Tryek (or Tryko).

2. *Danziger Einwohnerbuch mit allen eingemeindeten Vororten und Zoppot* (Danzig, 1942), 1:316, 4:235.

3. AMS, *Relacje i wspomnienia*, 1:139, account of Tadeusz Masio.

4. According to various authors, this occurred between the spring and autumn of 1941. We can establish an exact date, December 1, 1940, based on the labor assignment entry for prisoner Grzegorz Marszałkiewicz. M. Gliński, “*Organizacja obozu koncentracyjnego Stutthof (1 września 1939–9 maja 1945)*,” *StZeMu*, no. 3 (1979):168, situates it in Danzig Suchanino, not in Wrzeszcz, which the account of Tadeusz Masio, former prisoner of this subcamp, clearly indicates. The same error was repeated after that publication in a monograph on the camp published in 1988. They were two different detachments, although they did a similar type of work. *Stutthof. Das Konzentrationslager*, (Gdańsk: Wydawn, 2003) p. 230.

## DANZIG (*DANZIGER-WERFT*)

### [AKA DANZIG-TROYL, LAGER TROYL]

The Danziger-Werft subcamp was formed pursuant to a special order that the commandant of the Stutthof concentration camp issued on August 25, 1944. The subcamp began operating a day later.<sup>1</sup> Besides the work detail (*Aussenkommando*) Danziger-Werft, there was also an external work camp (*Aussenarbeitslager*), Danziger-Werft. Initially 300 non-Jewish men were sent to work at the government shipyard; they had been picked from among skilled fitters, lathe operators, mechanics, and metalworkers, mostly recruited from people working at the German Equipment Works (DAW) shops, especially the gun repair shops. Most of the people who “volunteered” for the work detail were from the Danzig and Gdynia (Gotenhafen) area and hoped to have contact with their families, as well as to escape from the camp. The group included Poles arrested in late 1942 for belonging to underground organizations such as the Home Army’s Armed Combat Union and the Gray Ranks; in 1944, they were joined by Varsovians who arrived in May from Pawiak prison and from transports sent to Stutthof during the Warsaw Uprising.

VOLUME I: PART B

The prisoners helped to build new warships, especially submarines; they were to replace German specialists called up to the Wehrmacht. SS-Oberscharführer Albert Paul Höldtke was the subcamp's commandant from August 26 to November 13, 1944; when he was transferred to the Stoboi subcamp, SS-Oberscharführer Willy Redder took the position. The guard unit consisted of 15 SS men assigned from the Stutthof camp and an unknown number of German navy sailors. Subsequent prisoner transports arrived on August 25, 1944 (300 people); September 19 (100); and October 5 and 31 (120 and 100, respectively). The last transport documented was sent on November 21, 1944, and it included 170 people.<sup>2</sup> Thus, a total of 795 prisoners were sent to Danziger-Werft.

The camp was located in the Danzig-Troyl (Gdańsk-Przeróbka) section of Danzig, so the prisoner detachment has also been called Danzig-Troyl or Lager Troyl, the name used for the camp address.<sup>3</sup> Each prisoner column was taken by narrow-gauge railway to the mouth of the Vistula River in Nickelswalde (Mikoszewo), then by a large riverboat to Danzig. They were quartered in a complex of seven wooden barracks previously occupied by civilian shipyard workers who had been moved somewhere else. The prisoners' job was to fence the grounds, then to erect watchtowers. Each barrack was furnished with double-decker bunks, and one barrack housed the kitchen. Each separate room in the barracks was numbered in sequence.<sup>4</sup> According to a former prisoner of the subcamp, the camp was located "right on the street that ran from the canal to the city," from where prisoners were ferried daily to the workplace.<sup>5</sup> Knowing the area where the Danziger-Werft shipyard was located, which was on the left bank of the Motława River north of the mouth of the Radunia, the camp had to be on Przetoczna Strasse.<sup>6</sup>

The day after the arrival of the first group of prisoners in Danzig, the entire transport was sent to the shipyard. Here, civilian engineers briefly spoke with the group to ascertain the skills of the prisoners assigned to work in specific departments at the shipyard. They were mainly put to work in the foundry, the forge or fitting shop, in earthmoving, transport, cleaning the camp, and clearing the city of rubble. Work at the shipyard was done in two shifts of 12 hours each.<sup>7</sup> Prisoners worked at the shipyard in the same workstations as other forced laborers; for instance, Zbigniew Raczkiewicz was put in a four-man Polish-French group (two prisoners and two French prisoners of war [POWs]), assembling fans in one of the submarine sections. Besides their work, they also shared a common plight, and the Frenchmen expressed their solidarity by sharing what they received in International Red Cross packages with the Poles.

Camp chronicler Raczkiewicz rated conditions in camp and at work as better than, or at least no worse than, those at the Stutthof camp.<sup>8</sup> Each prisoner occupied one bunk and could move freely about the entire camp. There were no harsh discipline procedures, and the camp supervisors were not brutal, with two exceptions. The first was Max Musolf, the first camp elder, who was replaced in November 1944 by Czesław Gdaniec, a Pole from Danzig who treated the pris-

oners more decently. The second exception was the second commandant, Willy Redder, who was especially brutal and often beat prisoners himself.

The shipyard was in charge of camp food supplies; it delivered food and issued dinners, which were low in calories and meager in portions. Meals were made in camp on the free Sunday. It is no wonder that many prisoners looked for opportunities to get something extra to eat, availing themselves of the assistance of family and friends—especially those from Gdynia, who supplied prisoners with food through civilian workers who risked exposure and severe punishment.<sup>9</sup> The prisoners also took advantage of help from corrupt SS men, who let them meet their families to obtain cigarettes or gifts of food. After awhile, people could also leave food packages for inmates in the camp office, although the packages were searched thoroughly before reaching their recipients.

The prisoners were not well provided with shoes or clothing. This is evidenced by correspondence of the subcamp's commandant to the clothing warehouse at the main camp. The commandant's justification for requesting 600 pairs of shoes was that "this camp has no capability of providing prisoners with shoes. The workshops we have can only provide the most urgent shoe repairs."<sup>10</sup> The chief of the clothing warehouse, SS-Unterscharführer Willy Knott, refused the request, saying there was a shortage of shoes.

In September 1944, the camp records list the first escape of three prisoners, who fled during the night shift at the shipyard and were caught 14 days later and sent to the Stutthof camp. There is no information on their punishment. Two more prisoners escaped a month later; there is no information on whether or not they were caught.

There were several successful escapes in January and February 1945 as the camp's shutdown was approaching and supervision slackened. Czesław Szlachcikowski escaped successfully. When the guard was not watching, he left a barrack outside camp where he was working as an electrician, unnoticed, dressed in clothes his wife had sent him. Among the other successful escapees were Edmund Wyszeccki, Włodzimierz Steyer, Bogusław Popkowski, and two Englishmen, Theo Ellsmor and Thomas Mitchell. The chances of a successful escape were the greatest for prisoners who could depend on the help of people beyond the barbed-wire fence and who had civilian clothing and fake identification papers. The Russians who dared to escape failed, as did many Varsovians.<sup>11</sup>

Work stopped at the shipyard on January 17, 1945. There were 789 prisoners in the camp as of January 24, 1945. Camp conditions deteriorated: there was a food shortage, and the shipyard and personnel had been evacuated, so there was hardly any chance of getting extra food from outside. Every day a transport column would take out the bodies of dead prisoners to the crematorium at the Medical Academy or the cemetery in Saspe. The detachment's evacuation began on March 24, 1945, in several stages; the last group of prisoners reached the Stutthof camp in early April.<sup>12</sup>

## DANZIG (SCHICHAU-WERFT)

In 1944, the Schichau-Werft AG Elbing shipyard signed two contracts to employ prisoners at the Elbing shipyard and its Danzig branch. The Schichau-Werft subcamp was formed pursuant to a special order of the Stutthof concentration camp commandant dated September 12, 1944, effective September 13, 1944. SS-Oberscharführer Hans Wansel from the 1st Guard Company (1./SS-Totenkopfsturmbann KL Stutthof) was named its commandant. Some 500 Jewish women were initially chosen for the transport. They were brought to Danzig (Gdańsk) by ship from the harbor at Fischerbabke (Rybina) near the camp to the Schichau-Werft shipyard harbor in Danzig. Besides the commandant, 20 female supervisors were designated who were to be assigned to Danzig upon completing a special course. Until then, 10 guards from the 3rd Company were on duty; they returned to the Stutthof camp when the female supervisors arrived on October 18, 1944.<sup>1</sup> Navy sailors also served as supervisors at the shipyard and in the camp.

From October 16 to November 23, 1944, more Jewish prisoner transports were sent to Danzig. They were selected out of a total of 1,100 men, which increased the maximum population of the entire detachment to 1,600 prisoners. Jews from Lithuania, Latvia, Germany, and Hungary prevailed in the first transports, while in late October, Jews from the Netherlands, France, and Hungary were sent from the Auschwitz concentration camp.<sup>2</sup>

Jewish prisoners were put to work both as skilled workmen and as helpers. Since there was a shortage of German skilled workers, the prisoners were trained as welders, smelters, and plumbers. The prisoners were quartered in former prisoner-of-war (POW) barracks (Soviet, French, and Italian POWs had lived there, in that order) in Danzig Kokoski Stalag XX A, Burggraben, which had been handed over for use by the Wehrmacht command in September 1944; therefore, it was also called SS-Aussenkommando Burggraben, Danzig Kokoski, and SS-Lager Burggraben.<sup>3</sup>

Working conditions at the Danzig shipyard, to which the prisoners had a long and arduous trip, were hard to bear, especially on the night shift. In addition, when the prisoners finished the night shift, they were often faced with day work at the camp, such as loading and unloading material. Besides assembling submarines, Jews also worked

building anti-aircraft shelters for the workers employed at the shipyard, which in their opinion was among the hardest labor at the camp.<sup>4</sup>

Besides the arduous daily commutes to work from Kokoszki to Danzig in unheated train cars with the windows knocked out, the prisoners received starvation food rations. The supply of clothing and shoes, as well as food, of which the administration of Stutthof concentration camp was in charge, was inadequate, which is confirmed by correspondence of the subcamp's commandant with the clothing warehouse at Stutthof.<sup>5</sup> At camp, they slept in unheated barracks, sleeping from five to six hours. They would leave for work at 5:00 A.M. and worked from 6:00 A.M. to 6:00 P.M., with a half-hour break for lunch.<sup>6</sup>

In addition to the guards and women supervisors in the women's barrack, the prisoners were supervised in camp by Jewish foremen prisoners (Kapos). As former subcamp prisoner Josef Katz states, they were just as brutal as their counterparts at the Stutthof camp. Among the most cruel were a Latvian Jew, Glücksmann, and a Pole called Chamek (which means "brute"), who had the positions of camp elders. Katz unambiguously described both of them as "animal characters." Just after liberation, Chamek was shot by Russian soldiers, and Glücksmann fled.<sup>7</sup> Another Kapo, Henryk Kleiman, a Polish Jew, was tried by the Płock District Court in 1949 (at a circuit session in Płońsk). His indictment charged him with serving as a Kapo or barrack elder from late 1944 onward. In this position, he "smashed skulls with rocks, choked people, [and] crushed heads with his feet." Earlier he had been at the Auschwitz concentration camp, where he behaved just as brutally as at Kokoszki. By judgment of the district court dated July 14, 1949, and appellate court dated February 18, 1950, he was sentenced to death. The court was not persuaded by his good reputation at Stutthof, finding that the good did not make up for the wrongs he had inflicted.<sup>8</sup>

Despite the seemingly extreme conditions, many Jews treated their stay at Schichau-Werft as an improvement of their plight in comparison with the Stutthof main camp, where they were constantly in danger of losing their lives. At Kokoszki, each of them received a plate, a cup, and a spoon for his or her own use, as well as a single bunk, while at Stutthof four prisoners slept in one bunk made up of three levels.<sup>9</sup>

The difficult living conditions in camp, the exhausting work, and malnutrition caused a high sick rate among prisoners. It increased in December 1944 when an epidemic of spotted typhus and typhoid fever broke out. According to the affidavit of Katz, several Jews died every day. Reports by the subcamp's commandant dated December 15 and 17, 1944, state that 497 women were sent back to Stutthof, which was directly connected with the typhus epidemic in camp. Those people went to the hospital.<sup>10</sup> There were only 991 prisoners in the camp in late January 1945.<sup>11</sup> The burial register at the Zaspa cemetery listed 91 Schichau-Werft prisoners, and the Stutthof hospital also recorded some deaths.<sup>12</sup> The number of deaths must have been considerably greater than that because the central camp sent more transports to replace the sick and

dead. The dead were buried in mass graves near the camp or were taken out to be burned at the Danzig Medical Academy crematorium. The people buried at Kokoszki were exhumed in May 1994, and on November 5, 1994, the remains of 20 prisoners were solemnly laid to rest in a common grave at the Zaspa cemetery.<sup>13</sup>

In its last stage of operation, the Schichau-Werft camp was designated as a collection point and evacuation transit camp for Stutthof prisoners. All work at the shipyard ceased, beginning in January 1945. The prisoners were put to work removing snow from the streets or railroad tracks. Ever-increasing hunger prevailed in camp, and the sick and death rate increased; as many as 20 people died per day. On February 10, 1945, the 991 Jews remaining in camp were evacuated toward Lauenburg (Lębork). After leaving the evacuation camps in Rybno, Tawęcín, and Goddentow (Godętowo) near Lauenburg, some prisoners from the reevacuation route along with other evacuation columns were liberated at Chynów on March 10, 1945; others went back to the camp in Stutthof via Danzig. In late April 1945, they were evacuated by sea to Germany. The death rate in the group of Jews evacuated from Kokoszki was very high but difficult to establish. The high death rate was the result of shooting the sick and weak, as well as cases of infectious diseases, starvation, or extreme emaciation from marching or digging trenches. The number of deaths is estimated at a minimum of 100 people (from the column sent to Rybno and Tawęcín) as well as several dozen people from the group that reached Goddentow.<sup>14</sup>

## DANZIG (SCHULEMANN)

A new work detachment was established from Stutthof on July  
11, 1941. Employment entries in prisoner files confirm the  
date that this subcamp opened.<sup>1</sup> At the Stutthof camp, the la-  
bor supply announced recruitment for finishing work at Dr.  
Kurt Schulemann's private obstetrics clinic being expanded at  
23 Sandgrube Strasse (later Reverend Rogaczewski Ulica) in  
Danzig (later Gdańsk).<sup>2</sup> According to Walerian Kilanowski's  
account, 25 people signed up and were sent to Danzig that  
day.<sup>3</sup> Another account states that Dr. Schulemann personally  
came to the Stutthof camp and picked prisoners for construc-  
tion work in the commandant's presence.<sup>4</sup>

The prisoners were quartered on the street side of the sec-  
ond floor of the building under construction. Guards from  
the Stutthof camp oversaw them; their role was limited to se-  
curing the premises where prisoners worked and preventing  
escapes. Conditions in the detachment were decidedly better  
than those at the Stutthof main camp. The prisoners wore  
civilian overalls without camp markings, worked under the  
supervision of civilian foremen, and were safe from any perse-  
cution by the guards.

After two months in camp, two prisoners, Walerian  
Kilanowski and Kazimierz Dębski (aka Dębczak), began to  
plan their escape, at first independently of one another. They  
carefully observed the immediate area to plan an escape route  
and recorded the guards' daily shifts. They designated a farm  
in Stara Kiszewa near Koscierzyna that belonged to the fam-  
ily of Michnikowski, a fellow prisoner in the same detach-  
ment, as the first stage of their escape. As their escape date  
they picked Saturday, August 16, 1941, after work had ended  
and before the evening roll call had begun. They took advan-  
tage of the momentary absence of any SS men, who all went  
into town every week at the same time, except for the one who  
was on duty. Six days later the escapees successfully reached  
the Michnikowski farm in Stara Kiszewa, where they received  
aid. The next day, refreshed and dressed in new clothing and  
underwear, they set off for German-occupied Poland, where  
they survived until the end of the war.<sup>5</sup>

The consequences of that escape for the Danzig detach-  
ment's prisoners themselves is not known. There are no other  
stories on the escape except for that one account. Work at the  
clinic construction site continued in spite of it, and the de-  
tachment was shut down only on October 30, 1941. When the  
subcamp was disbanded, the prisoners were put to work by the  
national office of the Reich Food Producers (Reichs-  
nährstand) in Danzig. On November 21, 1941, the remaining  
prisoners returned to the Stutthof camp.<sup>6</sup>

## DANZIG

### (SS-HAUPTVERSORGUNGSLAGER)

The operation of this small detachment in Danzig (later Gdańsk), probably composed of just a few prisoners, is confirmed by a labor assignment entry dated June 23, 1940, in a prisoner file regarding the escape of Polish prisoner Leo Miotek.<sup>1</sup> The fugitive was apprehended two hours later in his own apartment in Danzig Orunia and punished by being assigned to a penal company and receiving seven whippings at the post of 25 lashes each. The report filed for camp commandant M. Pauly on the chase contained the prisoner’s testimony that “he only wanted to bring a couple of shirts back for himself, as there was no change of clothing at camp, and he intended on returning.”

The prisoners worked at the SS-Main Supply Depot (SS-Hauptversorgungslager), presumably helping to sort and arrange the various items being stored in the warehouse. When the work was completed or the camp commandant decided to disband the detachment, the group returned to the main camp at Stutthof.

### DANZIG (SS-OBBERABSCHNITT WEICHEL)

The SS-“Vistula” Main Sector office (SS-Oberabschnitt Weichsel, XX Wehrkreis) was instituted pursuant to Heinrich Himmler’s decision of December 14, 1939. Until then, Danzig and Pomerania were under the SS-Königsberg Main Sector office (SS-Oberabschnitt Nord-Ost, Königsberg). From April 1, 1940, to September 30, 1941, SS-Oberabschnitt Weichsel took over camp funding from Danzig Police Headquarters (Schutzpolizei), except for staff maintenance expenses. All camp income from prisoner labor went directly into the funds of the Main Sector office, which had its own independent policy for prisoner employment.

A limited liability company named Weichselland was founded in October 1941 on the initiative of SS-Oberabschnitt Weichsel. The exact details on how the company was established and operated are not known. What is known is that upper officers of the SS-Vistula Main Sector office became partners in the company, which was formed to find jobs for and exploit the labor of political prisoners. Although the camp management was taken over by the Danzig Security Police on October 1, 1941, SS-Oberabschnitt Weichsel looked after the interests of its own company in the contracts it signed with the Gestapo, as the company was guaranteed prisoner labor in its shops in the camp and at facilities in Danzig.

The first references to prisoner labor on premises belonging to the SS-Oberabschnitt Weichsel command in Danzig are in the camp commandant’s correspondence with the Danzig Gestapo Office in the matter of releasing two prisoners put to work in tradesmen’s jobs.<sup>1</sup>

A letter dated November 10, 1941, shows that both had been assigned for some time to do work at SS-Oberabschnitt Weichsel headquarters in Danzig. One of the prisoners was a metalworker by trade from Grudziądz, arrested on September 14, 1939, in Gdynia. They began the work prior to September 25, 1941, as evidenced by the Gestapo’s initial letter of that date regarding both prisoners. When pressed again in the same matter on January 5, 1942, the Stutthof camp commandant announced that the work would be completed on January 20, 1942, which actually happened. Both of them were released from camp the next day.<sup>2</sup>

Another SS-Oberabschnitt Weichsel detachment was formed in November 1942. Records of the Prisoner Employ-

ment Department and the Management and Administration Agency show that the subcamp operated in November 1942, then from January to February 1943, and from June through September 1943. Records are incomplete, so it cannot be established whether the subcamp existed the entire time or just during those months.<sup>3</sup> It is also not known how many prisoners worked in those detachments, the type of work they did, or the makeup of the guard unit. Nor is it known exactly where the subcamp headquarters was located or where the prisoners worked (possibly at Stutthof or Danzig).

**SOURCES** The following sources were consulted for this entry: AMS, sygn. I-III, prisoner personal files, correspondence of Stutthof camp headquarters with the Danzig Gestapo Office; Catalog Nos. I-IIIA-9, I-IVB-9, lists of camp receivables for prisoner labor.

## DANZIG-HOLM

Beginning on October 16, 1944, 100 Jewish women were put to work at the Danzig-Holm (Gdańsk-Ostrów) naval shipyard, a subsidiary of the Danzig shipyard. SS-Unterscharführer Josef Forstner was designated as the subcamp's commandant. Pursuant to the special order that created the camp, the staff also included seven German sailors and one trained woman supervisor from the Stutthof camp.<sup>1</sup> There were four female supervisors: Gerda Steinhoff (sentenced to death by the Gdańsk Special Criminal Court in 1946) and Lieselotte Oberauf served until December 18, 1944; and Elisabeth Thimm and Charlotte Weber from December 19, 1944.<sup>2</sup>

The Jewish women were primarily from Poland and Hungary. They were mainly quartered in workshops in a separate camp that bordered a prisoner-of-war (POW) camp. There had been a large camp complex next to it at the naval shipyard since 1942; the complex included prisoners and POWs of 13 nationalities, primarily Poles and Frenchmen but also Russians, Dutchmen, Belgians, Italians, and others. The camp had 50 barracks, in which approximately 3,200 people were quartered in the autumn of 1944, including Stutthof concentration camp prisoners.<sup>3</sup>

Before the Jewish women left for Danzig, the commandant ordered that they be issued warm winter clothing, shoes in good condition, gloves, and soap. Besides that, in October 1944, the subcamp's commandant asked the Stutthof clothing warehouse manager to send additional supplies. They were

delivered in late October 1944 and included 20 pairs of shoes and 20 pieces of women's underwear. In his next letter of November 1, 1944, the commandant reported that the new underwear and shoes had already been expended and requested delivery of another 30 pairs of shoes and clothing, 80 pairs of underwear, as well as 100 pairs of gloves and woolen yarn for darning. Orders were generally filled meticulously. Warm winter clothing such as coats, foot wrappings, and gloves, and materials to mend clothes and shoes, were ordered in late autumn and the winter months.<sup>4</sup> The concern with which the Stutthof provisions officer and the Danzig subcamp's commandant strove to secure seasonally appropriate clothing and shoes for the women is striking.

A naval kitchen at the adjoining POW camp supplied the camp with food and cooked the meals. On average, the daily ration was about 170 grams (6 ounces) of bread and 1 liter (1 quart) of soup a day, with two spoonfuls of jam issued at supper with the bread.<sup>5</sup> Such high standards were not always observed, as one of the camp's female supervisors testified at trial in Danzig. Still, it was only due to the feeding and systematic change of clothing and shoes that the detachment had the same population in late January 1945 as it did at the outset, with no loss of life. There were still 100 people in the camp on January 24, 1945, the same people who had arrived there in mid-October 1944.<sup>6</sup>

The special care for the inmates' physical fitness was doubtless due to the fact that they were put to work in a shipyard that made submarines for the Kriegsmarine, along with the manufacture of rocket weapons, the production of which was supposed to be a major trump in the decisive phase of World War II. That is how the Germans intended to regain naval superiority.

The origins of the industry at Ostrów (Holm) date back to the early years of the twentieth century, when a special railway line connecting the island to land was built in 1905 for freight traffic. The line was closely associated with the electrical engineering works that had been established and the railroad shops at Przeróbka (Troyl). A submarine base was established on the island during World War I, and two new wet docks were built for the base.

The Jewish women worked for the Marine-Bauleitung Danzig-Holm, which was in charge of the navy site on Ostrów Island. The women were not put to work in direct production of the submarines but in earthmoving projects. G. Steinhoff testified at trial in Gdańsk in 1946 that the women worked crushing rock and doing earthmoving work, which could have been for workshop expansion projects in the shipyard and adjoining areas. She thought the work was easy compared with the conditions at camp, where Jewish women were more liable to be treated badly. Here are some excerpts from the stenographic record of the trial:

**Judge:** What kind of labor did the prisoners do?

**Gerda Steinhoff:** They crushed rock and did earthmoving work.

- Judge:** Did you ever hit a prisoner?
- Gerda Steinhoff:** No, because I ran the entire camp office and had no direct contact with the prisoners. The Lagerführerin supervised the prisoners and sometimes beat them.
- Judge:** If the Lagerführerin did not punish a prisoner who was working poorly, would you punish such a woman and how would you do so?
- Gerda Steinhoff:** I would keep the prisoner in camp as punishment.
- Judge:** Which means that it was worse at camp than at labor?
- Gerda Steinhoff:** Yes, labor was a relief.<sup>7</sup>

The detachment was evacuated to the Stutthof camp in late March and early April 1945, at the same time as the two remaining Danzig subcamps, that is, the Danziger-Werft and Schichau-Werft shipyards. We do not know how many prisoners reached the main camp. Some of them perished during the bombings of Danzig, some escaped, and the rest reached the Stutthof camp in reduced numbers. They were faced with another evacuation by sea in late April 1945.

## DANZIG-LANGFUHR

The archival materials surviving from the former Stutthof camp recorded another Stutthof external detachment set up in Danzig's Langfuhr section (Gdańsk-Wrzeszcz). It operated from January 2, 1940, to December 2, 1941.<sup>1</sup> The employer was a police headquarters, to which prisoners were hired out to build barracks for a Police School (Führerschule, Truppenwirtschaftslager der Waffen-SS, Danzig-Langfuhr, TWL-Langfuhr). There are more details on this detachment in the stenographic record of the 1949 trial of Bogdan Wilhelm, who was put to work in the Wrzeszcz detachment as a cook from June to August 1940.<sup>2</sup>

The detachment numbered considerably over 100 people. Wilhelm said there were approximately 100 to 120 prisoners; other witnesses say as many as 180 prisoners. The prisoners worked building barracks for the Police School training center. They were quartered in barracks on the construction site. The police provided the detachment's food, which Wilhelm transported in and distributed. The standard evening meal consisted 0.5 liters (2 cups) of soup per prisoner, which did not always serve everyone because of limited rations. Witnesses have testified that Wilhelm would beat prisoners who demanded additional portions on the arms with a ladle in order to restore order as dinner was being issued and would also put sand into the soup. The defendant testified that he did so "out of concern that there would be a scabies infection" from sick people taking remnants of food out of the kettle and also to discipline prisoners while keeping their infractions secret from the SS men, whom he thought would employ much more repressive measures if the infractions were reported. Sometimes as dinner was being given out, Wilhelm was accompanied by Józef Reiter, a Polish foreman prisoner, who would beat the crowding prisoners with a tree root approximately 0.9 meters (3 feet) long and 4 centimeters (1.6 inches) thick.<sup>3</sup> Despite the witness testimony against Wilhelm, the court found no grounds in the testimony to administer any punishment under the Polish National Liberation Committee decree of August 31, 1944, on punishment for Fascist and Nazi criminals, and it acquitted Wilhelm on the charge of abusing his fellow prisoners.<sup>4</sup>

The subcamp was probably disbanded on December 2, 1941, which is corroborated by the final records in prisoner files concerning sending prisoners from the TWL-Langfuhr detachment to the Stutthof camp that day.<sup>5</sup> Studies of pris-

oner files have not corroborated the existence of another detachment at Danzig-Langfuhr, which began on November 18, 1941.<sup>6</sup> This reference is to the same type of labor and the same subcamp operating continuously from January 1940 but with many prisoner exchanges between Stutthof and Danzig (especially in summer and autumn 1941).

## DANZIG-MATZKAU

A work detachment in Matzkau (later Maćkowy), a section of Danzig (Gdańsk), was first a subcamp of the Neufahrwasser civilian detention camp set up on the premises of Danzig's SS-Heimwehr barracks. The initial group of approximately 20 prisoners arrived on or around September 20, 1939. According to a prisoner in that transport, a "sizable" group of prisoners—Poles arrested in Danzig at the beginning of the war—was sent out of Neufahrwasser. More transports were sent to the subcamp in subsequent months; there were already over 250 people in the camp in early November 1939. They were housed in a large empty space where they slept on a layer

of straw on the floor. SS-Rottenführer Hans Rach was the group's commander.<sup>1</sup>

The earliest references to the detachment's existence in prisoner files are from February 1940.<sup>2</sup> When the camp headquarters was moved from Neufahrwasser to Stutthof, the Matzkau detachment was made into a subcamp under the Stutthof camp commandant. Its population was unstable; small groups of prisoners were frequently moved to other sites, such as Danzig-Westerplatte, Grenzdorf, or the Stutthof main camp. These changes are confirmed by prisoner files marked with entries on transfers about where they lived and worked.<sup>3</sup>

Initially, the prisoners were put to work laying foundations and then expanding the barracks and utility buildings of the Matzkau structure. The barracks were then designated as a penal camp for SS members (*Strafvollzugslager*). The prisoners also did household and cleanup work on barrack premises; for example, there were 18 prisoners in the Wehrmacht clothing warehouses; others did gardening or worked in the kitchen. They began installing new shooting stations, as well as central heating pipes and a sewage system in the expanded section of the barracks in the spring of 1940. The work was done in the open air, regardless of weather conditions such as rain or strong winds. In early April 1940 (according to entries in prisoner files in May 1940), approximately 250 prisoners were selected from the Stutthof camp and transported to Matzkau. Another group of 50 prisoners was delivered from Stutthof in August 1940, and yet another transport was sent in the autumn of the same year. The camp's population grew to approximately 300 prisoners in late 1940. Construction work at the barracks was reaching its end in January 1941; thus, a few weeks later the camp population was reduced to 100. The population also kept dropping regularly as prisoners were released from camp.<sup>4</sup>

Initially, in the autumn of 1939, camp conditions were exceptionally hard. The prisoners slept on the damp straw, with no coverings. They were not provided with a change of underwear and could not perform daily hygiene, which contributed to the spread of lice infestation. Food rations were no different than those received at the Neufahrwasser camp. The prisoners were each issued 100 grams (3.5 ounces) of claylike bread, a bit of beet jam or margarine, and a cup of bitter coffee for breakfast and lunch. For dinner they each got 0.75 liters (3 cups) of watery soup with some flour and sometimes a herring. The food situation improved after the administration granted permission for food packages from families to be delivered to camp. They were divided freely among all the prisoners. At the end of the year, each prisoner received a pair of wooden shoes and a blanket when an officer from Danzig Prisoner Camp headquarters inspected the camp. But there was a shortage of warm gloves and sweaters.

A Polish clergyman from the Pelplin seminary escaped from the detachment in early December 1939. His escape was successful and caused no repercussions among the other prisoners; there are no references to this escape at all in the documentation of former prisoners.<sup>5</sup> Another effective way of getting out of camp was through self-injury. One prisoner

used a reed to perforate his nasal septum, causing a hemorrhage. He reported to the foreman and was released from Matzkau and sent back to Stutthof.<sup>6</sup>

The Danzig firm of Römer u. Dehlert Danzig, Unternehmung, Hoch u. Tiefbau was in charge of the construction work. Several prisoners worked in the firm's engineering office as construction engineers. They lived in appreciably better conditions than those who were put to work at manual labor; they were better fed, they slept separately with the kitchen staff, and they were permitted to move about the entire camp. Prisoners who came to the camp in the summer of 1940 stated that the working conditions and food were tolerable; the guards did not persecute them as they did at Stutthof; moreover, Leo Römer, the firm's owner, saw to it that the prisoners were well fed, for which he paid in the entirety.<sup>7</sup>

During the autumn of 1940, several dozen prisoners were sent out to do farmwork. A list of prisoners with occupational skills was compiled at camp in March 1941, and 30 of them with specialties in the trades were chosen and moved to Stutthof. On April 1, 1941, the entire group was released from camp and moved to the Jost barrel factory in Danzig as hired laborers.<sup>8</sup>

SS men from the Stutthof camp supervised the detachment beginning in mid-1940. The names of several of them are known: SS-Rottenführer Otto Arnold, Max Scholl, and Emil Wenzel, as well as SS-Unterscharführer Ernst Friedland. No information on the camp staff in 1941 or the subcamp's management is available. Two staff members were held responsible after the war: Wenzel was sentenced to 10 years in prison at a trial in Gdańsk in 1947, and the Toruń District Court sentenced Arnold to 3 years in prison that same year.<sup>9</sup>

The camp was shut down when all contracted work had been completed in August 1941 and the prisoners returned to Stutthof. The last record concerning labor at Matzkau in prisoner files ends on August 11, 1941.<sup>10</sup>

## DANZIG-OLIVA (REITSCHULE)

A Stutthof subcamp, Danzig-Oliwa (Gdańsk-Oliwa) consisted of several prisoners who worked at the Huth Riding School (Huth-Reitschule). Prisoner employment records show that the subcamp was in operation from July 16, 1940, to June 21, 1941.<sup>1</sup> Huth subleased the prisoners from the civil prisoner camp at Danzig-Neufahrwasser, and the prisoners probably worked keeping the premises clean. The business is not listed in the Danzig address directories surviving from 1927–1928 and 1941–1942.

## DANZIG-OPITZSTRASSE [AKA OPITZSTRASSE/GRUPPENFÜHRER]

From April 7 to November 11, 1941, a group of tradesmen prisoners (bricklayers, metalworkers, painters, toolmakers, etc.) were put to work on the premises of the Higher-SS and Police Leader (HSSPF) headquarters for Danzig–West Prussia at 2 Opitzstrasse in Danzig (later ul. Orzeszkowa in Gdańsk’s Wrzeszcz section). The detachment’s name, Opitzstrasse (or Opitzstrasse/Gruppenführer), appears in prisoner files. All the prisoners working there were Poles who had been arrested in September 1939 in Gdynia and Danzig and then put in the civilian prisoner camp at Danzig-Neufahrwasser.<sup>1</sup>

The Danzig–West Prussia HSSPF administration, whose area of control was the same as that of the military Defense District XX (Weichsel), started operations when SS-Gruppenführer Richard Hildebrandt was named to his post on September 21, 1939. It was initially located at the police headquarters on Karrenwall Strasse (later Okopowa) and later, from April 1940 at least, at 2 Opitzstrasse. The same building also housed the SS and police court facilities (SS- und Polizeigericht IV) as well as those of the Reich Commissariat for the Strengthening of Germanism (RKFDV). The prisoners were put to work building garages for SS motorized units.

Antoni Ryzyszkiewicz worked in the detachment as an auto mechanic. According to his account, the detachment was still operating in 1942. After a while, he was arrested for copying keys to the clothing warehouses and stealing 20 SS uniforms, a typewriter, and other items for the Polish underground organization in Bory Tucholskie. He was put in a Danzig prison and received the death sentence, which was later commuted to incarceration at the Stutthof concentration camp and assignment to a penal detachment at the Stutthof brickyard.<sup>2</sup>

## DANZIG-SCHELLMÜHL (CARSTENS)

Two prisoner detachments were created in the Schellmühl (Młyniska) section of Danzig (Gdańsk) from 1940 to 1944. The first was organized in 1940. The information on the employment of a small detachment at the Hans Carstens private meat import-export company contains notes on prisoner files dated from March 27 through July 30, 1940. Poles Henryk Raczynski and Leon Wojasiński were put to work in the Carstens company as master butchers.<sup>1</sup> The business was located at Englischer Damm 16. No exact data on the number of prisoners assigned to this work are available. They were dispatched by the civilian prisoner camp at Danzig Neufahrwasser and probably housed on-site due to the continuous nature of the business.<sup>2</sup>

SS-Rottenführer Oskar Gottschau, a Stutthof concentration camp staff member, testified at trial in 1947 that in the spring of 1940 he supervised the work of 30 Stutthof camp prisoners in a factory in Schellmühl. That could have been the Carstens company. In that same trial, the Danzig District Court sentenced him to 10 years in prison.<sup>3</sup>

**SOURCES** The following sources contain information on the Danzig-Schellmühl subcamp: AK-IPN, SO Gd, sygn. 75, records of criminal case against Kurt Dietrich and others; sygn. 80, sentences of judgment; AMS, sygn. ## DANZIG-SCHELLMÜHL (OTTO JOST)

Another subcontractor of prisoner labor in Schellmühl (Młyniska) was Otto Jost, the owner of a barrel factory

(*Fassfabrik*). Based on the fragmentary documentary materials available, a group of prisoners hired out for labor at the factory was put to work there at two different times. The first period was from late December 1940 to August 1941; then again from October 23 to December 7, 1944.<sup>1</sup> The first and last dates in the prisoners' files reflect these times. Based on the surviving documentary materials and records on former prisoners, no additional information on this detachment is available.<sup>2</sup>

**SOURCES** The following sources were consulted for this entry: AMS, sygn. I-III-, prisoner personal files; *Relacje i wspomnienia* (Accounts and recollections), (AI), tape recording of I. Andrzejewski's account; listing of transports of prisoners sent from the Stutthof main camp to the Jost factory on April 29 and October 30, 1941; *Danzig wirbt für seine Industrie, Alphabetisches Stichwortverzeichnis der Danziger Industrie-Erzeugnisse. ## DANZIG-WESTERPLATTE

The first group of 1,200 prisoners from the civilian prisoner camp at Danzig-Neufahrwasser was sent to Westerplatte on September 15, 1939.<sup>1</sup> Initially, the group was a semistationary work detachment. For the first two weeks the prisoners did not return to camp, sleeping in the ruins of destroyed buildings in the summer clothing in which they had been arrested. Among them were Polish priests and Jews.

The prisoners worked in groups to clear the premises of the former garrison at Westerplatte, which had been the scene of heavy fighting during the German invasion. The prisoners' labor consisted of removing bombs, unexploded shells, and barbed-wire entanglements; leveling the site; and demolishing destroyed buildings and repairing damaged ones.<sup>2</sup> Clearing the premises of unexploded shells was among the most dangerous jobs because there were often explosions that wounded prisoners and tore their clothes to shreds. Later, all the building material (bricks, wall tiles, and so on) was loaded onto barges at the port canal and hauled by tugboat to the Stutthof camp, which was then under construction.

Young men from the Reich Labor Service (RAD) aged 17 to 18, as well as SS men from the Danzig-Neufahrwasser camp, supervised the prisoners. The inmates remembered one of them well: SS-Untersturmführer Kurt Mathesius, of whom one prisoner wrote that he was "Lord of life and death in Westerplatte at that time."<sup>3</sup> Many prisoners were murdered by SS men as they were working. In addition, the young German supervisors from the Labor Service would often beat prisoners with their gun butts and bats for no reason.

The prisoners were not given any food during their workday except for a piece of bread and coffee for breakfast. They ate what they found in the ruins of the barracks, such as moldy bread, canned foods, and vegetables from the garden, although some of the young men from the Labor Service took pity on the Polish Catholic priests and gave them some of their food rations. Many prisoners became ill due to the low temperatures and their insufficient clothing, which was inappropriate for the season and ragged from work. Some 400 to 500 prisoners normally worked at Westerplatte each day.

On September 18, 1939, due to Hitler's planned visit to Danzig and Westerplatte, all the prisoners were removed from the peninsula and held on the seashore, surrounded by a cordon of SS men, for a period of one to three days (depending on the account). Following a triumphal entry into the city on September 19, during which he received the cheers of crowds of enthusiastic Germans, Hitler, in the company of Hermann Göring, visited the section of Westerplatte that the prisoners had cleared.<sup>4</sup>

On September 28, 1939, after the detachment had been operating for two weeks, the prisoners were taken back to the Danzig-Neufahrwasser camp.<sup>5</sup> New prisoners were sent in their place, although they were not quartered at Westerplatte but were returned to camp each evening after work.<sup>6</sup> The new detachment numbered approximately 500 people in December 1939.<sup>7</sup> SS-Untersturmführer Kurt Mathesius became the subcamp's commandant in January 1940. SS-Unterscharführer Oskar Gottschau and four SS men supervised the detachment; Gottschau's duties also included guarding Westerplatte from entry by any civilians.<sup>8</sup> At the Stutthof Trial in 1947, Gottschau received a sentence of 10 years in prison.

The subcamp operated as an external detachment with brief pauses until late February 1940, when Stutthof camp headquarters created a permanent subcamp (Aussenstelle Westerplatte) at the Westerplatte site. Commandant Pauly selected 300 Polish prisoners for the transport on March 2, 1940. They were loaded into trucks and moved to Westerplatte.

The prisoners continued to remove rubble and put the site of the burned barracks in order. Some of the buildings that were in danger of collapsing were dismantled; the others were repaired and turned over to the army. The work had probably been ordered by the army, to which the barracks had belonged until World War I. Some of the building material reclaimed from the battlefield was taken to Stutthof to be reused in the camp's expansion.

The work, which lasted from 6:00 A.M. until dusk on weekdays and until 4:00 P.M. on Sunday, required great exertion. The workers had to maintain a fast pace; if anyone slowed down or left for a moment, he could be shot for feigning work or attempting to escape. Camp commandant SS-Untersturmführer Paul Ehle (who took over command in March 1940) and the dozen or so staff members were held responsible for those killings. Stanisław Matuszczak witnessed one such event:

Some of us were so emaciated that they did not have the strength to stand. At a roll call, Oberscharführer Binke said that those who could not walk and were staying inside were to go out into the fresh air, which would do them good. He assigned them to the job of cutting wicker. After the roll call, we had to escort them out to the work site. There were sixteen of them. I heard shots at about twelve o'clock. As we returned from our labor detachments, we saw Peters and two other SS men standing where the prisoners had been cutting wicker, and the shot prisoners lying on the ground. All sixteen had been shot.<sup>9</sup>

The prisoners were quartered in former army barracks, which had damaged roofs that leaked. There were no panes in the windows, and the empty spaces were filled with barbed wire. The floor was lined with hay that had been there since the previous winter. The prisoners were not provided with even the most primitive sanitary necessities for washing or shaving. The SS men finished off extremely emaciated prisoners with their guns. There was no infirmary at the subcamp; sick people were not given medical care. The most emaciated and disabled were taken back to Stutthof.

Several prisoners attempted to escape from camp in 1940. No matter what the outcome for the escapees, each attempt ended badly for the prisoners in camp. The punishment was 20 lashes with a stick and the forfeiture of one dinner. Only one prisoner's account is available, that of Matuszczak:

The first escape was by two prisoners from what was called the "foreman" group, who were assigned to serve the SS men in their living quarters: They made their beds, cleaned their boots, kept their rooms clean, etc. The prisoners picked a very appropriate time to escape, April 20, [1940], the Führer's birthday, on which the SS men had a drinking spree and went to bed. The prisoners then left and never came back. We do not know their names. The escape was successful, which did not happen too often. . . . The next attempt was made by a prisoner whose name we do not know. All we know is that he was from Wejherowo. He had gotten pretty far from Westerplatte, already reaching Jelitkowo. A chase was ordered immediately, and two other prisoners were taken along so as to identify the fugitive more quickly. They found him! Chased down,

he started to run away when he saw the SS men, then the search party opened fire on him. His fate was sealed. He fell dead under the bullets. Accounts by the prisoners accompanying the chase say that if he had not started to run away, he might not have drawn the attention of the search party, because at that time all prisoners still wore their own clothes in which they'd been taken. Although it was sometimes shabby, the clothing did not draw attention like the camp striped uniform did.<sup>10</sup>

Several SS men from Stutthof served as supervisors in the Danzig-Westerplatte subcamp. These SS men were among the 13 supervisors confirmed in the records.<sup>11</sup> The subcamp was shut down in mid-June 1941 when the entire Westerplatte site was cleared. Approximately 50 prisoners were sent to work at the sawmill and chemical works in Danzig's Stogi section; the others returned to the Stutthof main camp.<sup>12</sup>

## DANZIG-ZIGANKENBERG

From May 15, 1940, to April 30, 1941, a group of prisoners worked at the city brickyard (Städtische Ziegelei Zigankenberg) on what was called Gypsy Hill (Cygańska Góra) in Danzig-Zigankenberg (later Gdańsk Suchanino). The subcamp was listed in camp records as Aussenstelle-Zigankenberg. The prisoners were quartered on the premises of the brickyard. Employment assignment notes in prisoner files confirm the subcamp's existence.<sup>1</sup>

No accurate data are available on the number of people in the detachment or on the working conditions.

## NOTE

1. AMS, sygn. I-III-49930, I-III-50079, personal files of prisoners Aleksander Paradowski and Feliks Zieliński. Based on these records, we can establish that the subcamp operated between May 15, 1940, and April 30, 1941.

## DOMACHAU

From October to November 1939 the Danzig Prison Camp Command and the civilian prisoner camps under it, especially the Stutthof camp, organized many "farm detachments" (Bauernkommandos) to help with the root crop harvest and cultivation. According to the testimony of A. Schwartz, the camp farm manager, in 1939 approximately 3,000 people from all of the civilian prisoner camps were assigned to work on farms located in villages in the Danzig Highlands (Danziger Höhe) and Danzig Lowlands (Danziger Niederung) as well as in Żuławy (Werder).

Among detachments of this type was one at the estate at Domachau (later Domachowo) organized from March 12 to August 29, 1940. The estate was close to Danzig (Gdańsk) near Grenzdorf (Graniczna Wieś).<sup>1</sup> It was owned by the German Rittergut, a subsidiary of the SS. Prisoners who specialized in farmwork were probably sent by the Grenzdorf civilian prisoner camp. There is no other information on the detachment except for labor assignment entries made in prisoner files. Besides prisoners, during the height of fieldwork and harvesting, Rittergut also employed regular paid workers and Russian prisoners of war (POWs). Stutthof prisoners also worked on the estate in the following years.<sup>2</sup>

The campaign to hire out prisoners to German farmers on a mass scale and for a fee began in early October 1939. Approximately 700 prisoners were still doing farmwork in January 1940. Detachments averaged in size from 10 to 20 people; on smaller farms, there were just a few working inmates. The camp provided partial escort and supervision of prisoners while they worked. This job was also done by local SS or SA members. Farm owners were responsible for housing prisoners and guards from the camp and providing them with food for the entire day.

Prisoners worked harvesting potatoes and sugar beets, threshing grain, and doing general farm chores. Their average period of employment was from four to six weeks.<sup>3</sup> After they were done, they went back to the camp at Danzig Neufahrwasser or were sent straight to the Stutthof or Grenzdorf camp.

Prisoners were hired out to work on farms for several reasons: the first was the mass influx of prisoners to the camps, which could not accommodate such large numbers; there was no way to house them. Second, there were also problems with provisions. In his testimony before an officer of the American Military Court (AMC) in Freising in 1945, Albert Schwartz said in English:

In the first days of September the number of internees went up to about fifteen thousand (15,000) men,

of which after an initial screening, about six thousand (6,000) remained to be examined in detail by the Gestapo. Since the Stutthof camp . . . could not house so many people at that time, large groups of prisoners were sent to several large farms in the rural counties of Danzig to help in harvesting. About three thousand (3,000) men were employed this way, and the farms had to house and feed prisoners and guards and also pay a fee of one mark daily for each prisoner.”<sup>4</sup>

Another reason was the new farm structure in Pomerania. All Polish farming estates and smaller farms were requisitioned and confiscated by the Nazi authorities. They were allocated to local Germans, then to the German nationals (Reichsdeutsche) and ethnic Germans (Volksdeutsche) brought in from the Baltic countries and Bessarabia. Putting prisoners to work in agriculture made up for the outflow of hired labor caused by the displacement of Polish families and by warfare. In the initial months of the civilian prisoner camps’ operation, prisoner labor on the farms was also a means to obtain funds to maintain the camps, which were just being set up.

Prisoners were assigned to work under a contract between the camp command and local farm directors (Ortsbauernführer), who were the lowest organizational level for farms in the Reich. The procedure for hiring out prisoners for labor was extremely simple. Prisoners were escorted by several SS men to the township offices, where selection for labor at respective farms took place. Many Pomeranian township directors, who were in charge of agriculture for their areas, applied for prisoner labor. Their duties generally included all administrative and occupational farm business involving government agricultural and animal-breeding requirements, especially seeing to it that work was done on time and deliveries were made as agreed. The allocation of farm machinery, tools, fertilizer, sowing and breeding material, and labor was up to them.

Recruitment for the work was generally voluntary and met with no resistance from Poles, who preferred the considerably more peaceful labor in the fields to staying in camp where they were exposed to brutal treatment by SS men. Most prisoners thought the farmers’ attitude toward them was positive, pointing out that the supervision was benign, that the food was good, and that some farmers even attempted to keep them on permanently at their farms.<sup>5</sup> In general, conditions at the farms were better than at the main camps. As Bruno Zwarra stated, at some detachments prisoners were given a bit of freedom outside of work; they could do such things as go outside the farm premises to the inn or even to the movies, but, as he points out, “not all Germans were so tolerant toward Poles. I later learned from friends that there were also Germans who constantly prodded and beat the people working in the field.”<sup>6</sup> There were even extreme instances of their drastic treatment by the Germans, especially if the farm owner was a fanatic Nazi official.

The practice by Pomerania’s German landowners of hiring laborers for seasonal work had already existed for some time. Mainly Poles hired themselves out for that work. There were at least 10,000 of them in the Free City of Danzig. The German aggression against Poland and the resultant warfare had caused delays in the root crop harvest and autumn sowing because the Polish army’s mobilization had drained the land of workers and the combat itself had caused dislocations in the initial weeks of the war. Over the long run these delays could cause food shortages in the Reich, whose domestic agricultural output before the war had not fully supplied the market with farm and livestock products (they made up for that by importing food). German propaganda demanded that Polish workers be assigned to that work and that a food “granary” be created for all of Germany out of the lands annexed to the Reich, thus making it independent of foreign countries.

Many Jewish women were sent to work on the land in the summer and autumn of 1944, probably because there was no work for them at the central camp and its subcamps. Leaving camp meant an improvement in their situation and a greater chance of survival, as hunger and a high sick rate prevailed there. The accounts of Lithuanian Jews Cyla Kajcer-Perla, Maria Rolnikajte, and many others hold dramatic descriptions of selections for work, which only a small group of women could get. Those who were in good physical condition were selected for the work, first and foremost being tall enough and having strong, healthy legs with no traces of ulceration. Because work groups for grain or potato harvests were only organized from time to time, that was the only opportunity to leave camp and get away from the brutal supervisors. Work lasted from 4:30 A.M. until 8:30 P.M., with an hour’s break for breakfast and dinner. Besides fieldwork, they also did all the farmwork and housekeeping chores such as milking the cows, chopping wood, pumping water, sweeping the yard, and so on, including on Sunday. They were issued food irregularly. Rolnikajte stated that once a week they were rationed one loaf of bread and a quarter kilo (approximately nine ounces) of margarine, plus a cup of coffee for breakfast and soup at dinnertime. There were no arduous roll calls, daily persecutions by SS men and foremen prisoners, mindless killings of Jews, or selections in the barracks.<sup>7</sup>

## ELBING [AKA BRÜCKENKOPFBAU, STOBOI BEI ELBING]

A subcamp was formed on November 20, 1944, pursuant to the commandant's order issued that same day. The chief of Amtsgruppe D at the SS-Business Administration Main Office (WVHA) had given permission for the camp to be formed on November 10, 1944.<sup>1</sup> SS-Oberscharführer Wilhelm Werner was designated camp commandant (Lagerführer); he was replaced by SS-Oberscharführer Albert Paul Höldtke on December 18, 1944. Some 24 guards sent by Elbing military headquarters (Wehrmachtskommandantur Elbing) were assigned to the detachment's transport and supervision, and SS women Margarete Okon (starting December 19, 1944) and Edith Thews and Johanna Wisotzki (January 1945) were also assigned from the Stutthof camp.<sup>2</sup>

In official correspondence the camp was called Aussenarbeitslager Stoboi bei Elbing. The name Brückenkopfbau was also used.<sup>3</sup> This was the name used for the military fortifications in the outskirts of Elbing (Elbląg). The detachment was headquartered in Stoboi (later Kamiennik Wielki) near Elbing. The prisoners worked under the direction of the Organisation Todt (OT). There were male French prisoners from POW and labor camps also working in the same area, as well as Polish workers and Germans from the German Labor Front (DAF). The OT supervised the construction work.

Upon the commandant's order, 500 female Jewish prisoners were sent to Stoboi in the first transport. The population increased by 500 more Jewish women who were sent in late November or early December 1944. This is confirmed by Werner's letter of December 2, 1944, regarding sending additional clothing, because “the second transport of five hundred women is very inadequately clothed.” The detachment's population has been confirmed by Eugenia Kacówna, a prisoner of the subsidiary, who testified in 1945 that “on November 18 [or] 20, 1944, I was selected and sent to Elbing, where I

worked on anti-tank barriers. A total of one thousand of us women worked there.”<sup>4</sup>

Food supplies for the guard staff and prisoners were provided by the OT administration, which operated its own kitchen. In the camp, whose exact location and prisoner housing conditions are unknown, there was an infirmary, as evidenced by Werner's letter to Stutthof main camp headquarters dated December 2, 1944, in which he asks that three white smocks and 20 towels be sent at once for the camp infirmary. The difficult winter conditions and considerable physical exertion expended on digging antitank trenches were made worse by the already inadequate supply of warm clothing and shoes.

According to a report of January 24, 1945, 341 women were in the camp. However, Kacówna stated in her account that, one day later, about 400 women went to the main camp in Stutthof, and the rest were evacuated three days later. There may have been two transports, the first with 400 women who reached the Stutthof camp before January 25, and the second with the number mentioned in the report—altogether 741 persons. If that is in fact the case, it would indicate a roughly 25 percent drop from the initial camp population of approximately 1,000.

## ELBING (OT ELBING COMPLEX) [AKA KOMMANDO BEFEHLSSTELLE STRASBURG]

The Elbing camp complex was formed on August 7, 1944, pursuant to a special order of the Stutthof concentration camp commandant issued the day before.<sup>1</sup> The prisoners' employer was the Organisation Todt (OT); therefore, the name Organisation Todt Elbing (OT Elbing) was also used in official

correspondence about the camp. Kommando Befehlsstelle Strasburg was another name for the camp: that was the location of the subcamp's main office and the headquarters of the guard company that watched the prisoners (the 36th SS-Standarte, SS-Stadtwachtkompanie). Bülow was named camp commandant and staff officer. To help him, he was assigned five junior officers from the 1st SS-Wachbataillon and 95 SS men from the Allgemeine-SS.

The subcamp initially received 5,000 Jewish women from Poland, Hungary, Czechoslovakia, and Lithuania. Upon arrival in Elbing (later Elbląg), an OT representative divided them into work groups of several hundred and placed them in towns along the Vistula Bay, where they dug ditches and built bunkers and other military fortifications. They changed their places of work and lodging frequently, depending on the status of the work the OT assigned them. The conditions in which the women lived were primitive at first: makeshift lodgings (barns and tents) and meager food. When they left the Stutthof camp, they had been outfitted with just a blanket and a bowl and spoon. The summer clothing in which they left, adequate for that time of year, proved to be totally insufficient for the autumn and winter months.

After the work planned for that region had been completed, the women were moved to the Brodnica (Strasburg) and Toruń (Thorn) area, along the Drwęca (Drewenz) River. In mid-August 1944, a second prisoner transport of 1,500 women arrived. In early October 1944 the camp population was 6,440 women, and on January 24, 1945, it was 5,036.<sup>2</sup> In early September 1944, Brodnica headquarters was put in charge of eight camps located in Brodnica, Lubawa, and Toruń counties.<sup>3</sup>

One of the hardest labor detachments was at Gutowo (Guttau). The first group of 1,000 to 1,200 women there lived in makeshift tents; later they were moved to 13 unheated round barracks housing up to 100 prisoners each. The barracks had no foundations or finished floors; the prisoners slept on straw. Their food consisted of lukewarm water in place of coffee and a slice of bread at noon. When the detachment returned from work, it was issued soup cooked from unpeeled potatoes. An infirmary in one barracks served only as a typhus isolation ward, where the patients usually died, due to the lack of medicine or professional care.<sup>4</sup>

The camp staff was extremely brutal; they tormented the prisoners and meted out harsh punishments for trivial offenses. According to Elżbieta Deutsch's account, a Jewish woman was placed under a running faucet of cold water in bitter cold weather for stealing two potatoes. The prisoner died as a result. Among the most brutal SS men were the local camp director Bier, his assistant Bittner, and Engel (he would kill off sick Jewish women), Zibber, Mokka, Schmidt, and others of the staff.<sup>5</sup>

Work was done from dawn until dusk, under difficult weather conditions, especially in late autumn and in winter; it was extremely strenuous, driving up the prisoners' sick rate and causing numerous deaths. It is estimated that approximately 170 to 200 Jewish women died at Gutowo, including

the four or five infants born there. They were buried in a nearby meadow.<sup>6</sup>

The Gutowo camp was shut down on January 17, 1945. Some of the sick, about 140 persons, were left in the barracks. The staff tried to kill them by injecting them with toxic substances, which proved to be ineffective. According to the testimony of witnesses—village residents and former prisoners—the prisoners were taken out of camp into a field and killed off with gunshots. Few managed to escape. According to the account of witness Leonard Dmochewicz, 104 women perished then, whom he buried not far from the camp. When Russian units entered Gutowo, the sanitary section took care of the Jewish women and recorded a special report on the topic: "We have discovered a female camp. One hundred sixty-three women in a state of ultimate devastation, with frostbitten legs, some of them had wounds, 140 had phlegmon and ulcers on their arms from injections of some sort of toxic fluids intended to kill them. . . . Besides that, we also discovered a mass of female bodies in the camp, in canvas tents or nearby, varying in age from twelve to fifty-five. We managed to count 120 corpses upon a rough count."<sup>7</sup> Working and living conditions at the other detachments were also difficult and did not differ much from each other.

Throughout the Elbing complex, the prisoners' situation was especially dire in late autumn and winter. They still spent nights in tents or barns, without warm clothing, gloves, or any footwear. In a letter to Stutthof concentration camp headquarters dated September 4, 1944, Commandant Bülow reported that almost every camp director was reporting inadequate prisoner clothing and underwear supplies to him, and he indicated that a lack of footwear was reducing work output. In another letter of October 6, 1944, he reported that he only had 1,000 pairs of shoes for 6,440 prisoners; 80 to 90 percent of prisoners urgently needed a change of shoes. His appeals did not lead to any immediate improvement, however.<sup>8</sup>

SS-Hauptsturmführer Paul Ehle from headquarters' staff inspected five camps near Toruń on November 13, 1944. He confirmed the poor state of clothing and shoe supplies, which he thought affected productivity. There were 6,200 women in all the camps at that time. Most of them were in poor condition, 10 had died so far, and approximately 300 were in a state of extreme exhaustion. He recommended that the most ill and emaciated be transported to Stutthof and that the camps be provided with footwear, warm sweaters, pants, and other needed clothing.<sup>9</sup>

The evacuation of the existing labor camps took place in mid to late January 1945 when the prisoner population totaled 5,036 women. The groups working closest to Elbing returned to the main camp and then were evacuated on January 25 and 26. The other ones located over 150 kilometers (approximately 93 miles) from Stutthof were evacuated to Praust (Pruszcz Gdański) (one of the stages in the central camp's evacuation) or directly toward Lauenberg (Łębork), the evacuation's destination. The casualties were very high in

all the detachments. In most camps, selections were performed even before the evacuation columns were formed, and sick prisoners were excluded, killed with injections of lethal fluid, shot, or finished off with blunt instruments (such as gun butts). Only a few managed to survive. Many prisoners perished on the march route and were buried in common graves; some were shot, but in most cases their fates remain unknown.

## ELBING (*SCHICHAU-WERFT*)

On September 20, 1944, the Germans transported 100 prisoners to a new camp at the F. Schichau-Werft GmbH in Elbing (Elbląg), pursuant to a special order from the Stutthof commandant and a preliminary contract signed with the shipyard. Three more transports of 500 prisoners each followed on September 25 and 29 and October 3, bringing the number of prisoners to 1,600.<sup>1</sup> Half of the population were Poles; the rest were German, Russian, Lithuanian, Estonian, and Latvian—including a group of 15 to 20 former Latvian policemen who had been put in Stutthof for deserting the SS and for criminal offenses.

The subcamp's commandant was initially SS-Oberscharführer Willy Redder; then from October 27, 1944, SS-Untersturmführer Friedrich Walter was in charge. The guard staff was composed of 9 SS men from the 1st Guard Company. The staff grew as subsequent prisoner transports arrived at Elbing. Another 20 SS men were assigned to the camp on September 25 and 29, 1944. On November 2, there were 12 civilian personnel in camp.<sup>2</sup> In addition, factory guards supervised the prisoners.

The prisoners lived in barracks in back of the Schichau-Werft facilities on Krafoldsdorfweg (later Radomska Ulica in Elbląg) as well as in another camp on the premises of the machine and locomotive factory on Boelkestrasse (in a group of camps for forced laborers of Schichau Werke), in which prisoners of Stutthof's first subcamp had lived, beginning in April 1941.

Most of the prisoners were qualified lathe operators, mechanics, and fitters. The shipyard, where they built and fitted out submarines, was their primary workplace. When there was no work there, some of the prisoners were sent to the Schichau Werke machine and locomotive factory located by the railroad station (called Trettinhof or T'hof), where they manufactured such things as armored locomotives, combat vehicles, tanks, and ships' guns.<sup>3</sup>

The prisoners worked in a 12-hour daily shift system, with a 1-hour break for dinner, and worked until noon on Sundays. In contrast to the 1940–1942 period, prisoners were put to work directly on the production lines, with strict output quotas (for instance, assembling one vehicle body per day). Failure to reach quota was treated as tantamount to sabotage, for which an order from the SS-Business Administration Main Office (WVHA) provided harsh punitive sanctions, including the death penalty, when someone was charged with deliberate destruction and holding up production.<sup>4</sup>

The hard and dangerous labor, the poor supply of clothing and shoes, and the low-calorie food increased the rates of sickness and death. A former prisoner of the camp described conditions there as considerably worse than those at the main camp. The food for an entire day provided no more than 1,000 calories. The production line quota system and watchful supervision by SS men, prisoner foremen, and factory guards did not provide much opportunity for getting extra food from other sources. Although the Schichau Werke

administration was in charge of food supplies, the subcamp's management ran the kitchen. Prisoners stole food items frequently, as confirmed by surviving forms recording punishment by whipping for stealing.<sup>5</sup> In addition, fatal accidents often occurred at work; for example, some died of wood alcohol poisoning when painting locomotive bodies.

The supply of clothing and shoes was inadequate, especially in wintertime. Before leaving for Elbing, prisoners handed in the clothes they had been wearing and received replacements to wear until they were supplied with striped uniforms. The commandant made the camp administration agree to supply prisoners with warm clothing and winter footwear. When the cold weather came, thin jackets did not protect prisoners against colds, which also sometimes ended in death.

The promised jackets and warm clothes reached camp late and in a smaller amount than had been demanded. In early November 1944 the commandant again asked for the delivery of camp clothing, including 250 vests and pairs of shoes, as well as 1,593 pairs of stockings.

In the surviving report of November 25, 1944, the subcamp's commandant asked for the immediate delivery of 7,200 items of clothing, footwear, and towels, mainly including warm jackets, pants, long underwear, foot wrappings, gloves, and so on. The order was not filled until December 2, and it contained almost 3,000 items fewer than what was asked for. The order for 1,600 gloves or towels indicates that the target prisoner population had been maintained and that several new prisoners had been sent to the camp.

One more of the commandant's letters, dated late December 1944, has survived. The letter shows the disastrous state of prisoner provisions. There was a shortage of gloves, winter jackets, shirts, long underwear, pants, camp caps, footwear, and belts. The prisoners' shoes were no longer repairable. Of the 10,000 items of clothing or pairs of shoes that the commandant had requested, he only got half.<sup>6</sup>

The camp had an infirmary whose personnel consisted of a prisoner doctor and two orderlies who arrived at Elbing in the first transport. Dr. Bolesław Drobner-Kwiatkowski, a Pole, served as the doctor the entire time. However, patients reporting to the infirmary could not count on getting the proper medical care, because Dr. Drobner-Kwiatkowski had a minimal amount of medicine, bandages, and dressing materials. More seriously ill patients were taken to the Stutthof hospital.<sup>7</sup>

The first deaths of Elbing prisoners were reported in October 1944. In one of the commandant's reports dated October 24, there is a list of 11 deceased prisoners, including prisoner Józef Sieroszewski, who was shot as a fugitive.<sup>8</sup> The subcamp's population on November 2 was 1,593, indicating that 7 prisoners had died or had been sent back to Stutthof in under one and a half months.<sup>9</sup> According to partially surviving camp doctor reports on deaths at Stutthof subcamps, 64 people died from November 3, 1944, to January 10, 1945, the greatest number of them Poles but also Russians, Latvians, Lithuanians, and Estonians.<sup>10</sup> The bodies of deceased prison-

ers were taken away to the camp morgue near the infirmary barrack on Boelkestrasse. They were later buried in the woods outside Elbing.

Based on surviving records, we can establish that chiefly Russians and Poles attempted to escape. They were not all successful. By September 29, 1944, there had already been a successful escape by Pole Czesław Sowiński.<sup>11</sup> Another escape by two Polish prisoners occurred on October 23; one of them was caught.<sup>12</sup> On December 17, another Pole, Stanisław Pędzisz, escaped successfully.<sup>13</sup>

The other escapees were Russian prisoners. In their case, preparing for escape involved overcoming many difficulties, mainly getting civilian clothes and provisions, as well as establishing contacts outside of camp in order to compensate for their poor knowledge of the area; 13 Russians tried to escape, of whom 8 were successful.<sup>14</sup> The camp command had to report every escape to Stutthof headquarters and also pursue the fugitives. When an escapee was caught, the Reich Security Main Office (RSHA) in Berlin was informed and subsequently issued sentence. Accounts of former prisoners of the Elbing subcamp show that death sentences were sometimes issued. Jan Pięta recalls such an event; during a special morning roll call, he was an eyewitness to the hanging of 3 persons who had attempted to escape from camp.<sup>15</sup>

The subcamp was disbanded on January 20, 1945. All the prisoners returned to Stutthof. Several days later some of them were in the evacuation on foot heading toward Lauenburg; the others left the camp in April 1945. In the four months of the Elbing subcamp's operation, at least 1,800 prisoners passed through the camp (including the rotation of the sick and the dead), with a death rate reaching approximately 5 to 10 percent of the camp's population.

## ELBING (*SCHICHAU WERKE*)

Stutthof prisoners began working in private businesses in Elbing (Elbląg) as early as September 1939.<sup>1</sup> Prisoner files of the time contain the names of the companies that employed them most often, which were chiefly the Schichau Werke and its associates, as well as city agencies. Prisoners were quartered either in what were called "collection camps" or on company premises. In early January 1940, the Elbing detachment was reinforced by a group of 75 Polish prisoners of war (POWs) who had been at Schichau Werke doing construction and wiring work since October 1939. The POWs had been captured at Modlin and then sent from Königsberg prison in late September 1939 to work in Elbing. They were quartered in an inactive brush factory that had been owned by Jews between the wars and had been taken over by Schichau Werke. In early January 1940, 75 people were arrested, charged with sabotage for cutting electric wires. Their POW status was removed, and they were made civilian prisoners of the Stutthof camp.<sup>2</sup>

The decision to use the existing detachment as the basis for a single subcamp was hastened by the evacuation of the

Neufahrwasser camp in February 1940. In mid-March 1940, prisoners were selected for use at outside workplaces, mainly for the purpose of acquiring funds to maintain the Stutthof camp administration. Approximately 200 prisoners were brought by barge to Elbing via Vistula Bay. Predominantly Poles were selected for the transport, as well as smaller groups of Danzig Germans, Czechs, and Russians.

The camp had six commandants in its six-year history. The position was successively held by SS-Obersturmführer Waldemar Wilhelm, Fritz Meier, and Erich Müller and by SS-Oberscharführer Alfred Dittmann, Willy Redder, and Fritz Weber. Besides them, the staff was made up of 40 to 50 SS men acting as supervisors at camp and escorts to the workplace. The SS men's attitude toward prisoners was different from the inhumane behavior of the Stutthof camp staff, although it was not totally lacking in repressive and violent elements. Commandant Müller and his deputy Max Michelsen were among the most brutal. The former, along with other SS men, were responsible for killing a Polish physician from the infirmary, Dr. Franciszek Gabriel, who dared to try to improve camp sanitary conditions through official channels by drawing attention to the prisoners' poor state of health. Michelsen, along with the camp senior, Stefan Plombom, often carried out whippings personally.

The majority of prisoners were hired out to F. Schichau-Werft GmbH Elbing. They were quartered in the aforementioned brush factory at Tannenberg Allee 75, and when it was shut down in April 1941, the prisoners were moved to a new camp on Boelkestrasse in the back of Schichau Werke. The camp neighbored several other camps for forced laborers who were deported from many German-occupied European countries.

Prisoners worked not only at the shipyard but also at other Schichau company plants in Elbing, such as the machine and locomotive factory and the iron and steel foundry. They were put to work at the shipyard as helpers, doing such things as sorting materials to build the hulls of seagoing vessels and transporting them to the shipyard production facilities. The shipyard assembled warships—torpedo boats and "pocket" submarines.

The Schichau locomotive factory was also an important part of the company's production. In 1942, the factory started building what were called "war locomotives," which had considerably higher engineering specifications designed for military transports, as well as armored vehicles and replacement parts.

The prisoners at Schichau-Werft's direct disposal were also hired out to its numerous associates that did construction and assembly work in the port and shipyard, such as the construction companies Gaidies Fritz und Co. Hoch und Tiefbaugesellschaft, Philipp Holzmann AG, Baustelle Schichau Elbing, the hemp and wire rope factory of Carl Stephun, Mech.- und Drahtseilfabrik Elbing, and others. Some prisoners were lent out to city agencies when there was no work at the shipyard or locomotive factory. They also worked installing city sewers, building a housing project, at a plywood

factory, and at the city sanitation company. From time to time they were also sent to do farmwork and drainage work.

The contract signed by Schichau-Werft Elbing GmbH provided for the employment of a regular group of several hundred employees. That population ranged from 200 people at the very beginning of 1940 to about 500 in the summer of 1941. The average prisoner population in October and November 1941 was 400.<sup>3</sup> In his business and financial performance report of late October 1941, Niemann, the camp business chief, listed 420 persons working at the Schichau company. There were 376 prisoners in camp as of December 11, 1941.<sup>4</sup>

Living conditions in the camp on Tannenberg Allee were decidedly different from those at the Stutthof camp. Although there was crowding in the production hall, where two or three prisoners slept in one bunk, they were not starving. The meals given to prisoners chiefly consisted of porridge issued at lunchtime, and bread with margarine or jam mornings and evenings. The prisoners' ragged, stinking clothes were replaced by World War I Austrian army uniforms: gray jackets made of light material and blue-green pants, as well as round rimless caps.

Living conditions further improved when the prisoners were moved to the site on Boelkestrasse, which Schichau Werke owned. The food quality improved, but the amount was still inadequate for hard labor. Some German civilian employees and forced laborers helped prisoners get extra food, and prisoners' families sent packets illegally if they knew their relatives' whereabouts. Then in November 1940, Commandant Wilhelm began allowing correspondence, including food packages, into the camp.

Working conditions at the shipyard and other companies were very difficult. Safety precautions were not observed; accidents were common and sometimes fatal. The camp infirmary only treated less serious injuries that did not require complicated procedures or absence from work. People who had serious accidents were taken to the city hospital in Elbing and from there to the Stutthof camp hospital. Their chances of survival and returning to health were very slim.<sup>5</sup>

Some prisoners decided to escape from camp, not because their lives there were intolerable but for fear that they would be moved to the main camp, where conditions were worse. Prisoners who decided to escape were in danger of being killed by SS men or the prisoner surveillance staff. The first documented escape attempt by a prisoner named Mironowicz ended in disaster: he was caught and murdered by the search party. Three other escapes were successful.<sup>6</sup>

The first Stutthof subcamp at Elbing operated for about 26 months. Probably 700 prisoners actually passed through the camp in that time, when one counts replacements for those sick, injured, released, or dead. The camp shut down in February 1942. The exact date is unknown; the last surviving record, dated February 28, appears to have been written after the camp closed. The main reason for disbanding the subcamp was probably Stutthof's change in status and its expansion—and therefore an increased demand for labor.<sup>7</sup>

## GERDAUEN

Gerdauen (later Zheleznodorozhnyy in Russia) was one of five subcamps that the Germans established at Luftwaffe airfields in East Prussia on September 21, 1944 (the others were at Heiligenbeil, Jesau, Schippenbeil, and Seerappen).<sup>1</sup> Pursuant to a special order by the Stutthof commandant, 1,000 prisoners—900 women and 100 men, the maximum prisoner population—were sent to Gerdauen a day later. The subcamp's first commandant was SS-Unterscharführer Friedrich Marzan, succeeded by SS-Hauptscharführer Hans Moser on October 17, then by SS-Hauptscharführer Ernst Thulke from November 10 until the camp's evacuation.<sup>2</sup> The guard staff in each of the five camps consisted of 46 Luftwaffe soldiers from the airfield staff, plus 6 guards for the camp facilities; 2 SS

women were assigned to supervise the women's barracks—Christel Bankewitz and Margarete Okon. They came to the camp on October 11 upon completion of training at the Stutthof camp. All the guards assigned by the airfield command had been thoroughly instructed on their duties; among other things, they were enjoined to keep secret the fact that prisoner labor was being used, and they were forbidden to speak with the prisoners at all.

The prisoners, chiefly from Czechoslovakia and Hungary (including 500 women who were moved to Stutthof from the Łódź ghetto), lived in three large barracks on the airfield compound. Many of the prisoners had been provided with winter clothing and good shoes for the trip, as well as towels and soap. The men wore striped prisoner clothing. They were also issued quilts. The camp had a prisoner kitchen supplied by the camp command. As was the case with the other East Prussian subcamps, a prisoner doctor and orderlies were sent to Gerdauen to provide basic medical care.

Prisoner accounts show that although they did hard work leveling the construction site for a future airfield, when they were done, they had a lot of freedom to move about the camp buildings, and they were not subjected to physical violence. As Rywa Cytryn related, the prisoners from one of the barracks were even regularly late for the morning roll call, which was unthinkable at Stutthof. At Gerdauen, they were punished for that offense by being deprived of morning coffee and then having to kneel until the prisoners left for work. The Luftwaffe guards supervising them did not observe the ban on talking to them. Moreover, there were communications between prisoners and civilians from outside, who would throw them sandwiches specially wrapped in newspapers, from which prisoners would find out about the current situation at the front.<sup>3</sup>

Conditions at camp began deteriorating when late autumn and winter arrived. It turned out that not all prisoners had been furnished with winter footwear and clothing, which the director of the camp administration was supposed to provide. Just two weeks after prisoners had been sent to Gerdauen, Commandant Marzan's request for the urgent delivery of 200 pairs of shoes and materials to repair them reached the Stutthof clothing warehouse. He justified the request by saying that he could not send 105 prisoners out to work because of their inadequate shoes and the muddy ground. A day later, clothing warehouse manager SS-Unterscharführer Willy Knott allocated the camp 200 pairs of shoes, sewing tools to repair them, a roll of hemp yarn, and leather scraps (*Lederabfälle*), among other items.<sup>4</sup>

By October, 28, 1944, the camp population had been reduced by the death of one female prisoner. Commandant Moser requested the urgent delivery of winter clothing for the prisoners, which the camp received on November 8 in a considerably smaller amount, only one-quarter of the items like long woolen underwear or shirts. In November 1944, during a period of torrential rains, the commandant made a special effort to have 200 more pairs of leather shoes and 300 pairs of wooden ones sent. Instead, he received 500 pairs of wooden shoes, due to shortages at the warehouse.<sup>5</sup>

The camp's evacuation began in December 1944.<sup>6</sup> Such an early evacuation was probably due to the fact that the airfield was the closest to the front zone of all those in East Prussia. The winter offensive by Russian forces began on January 12, 1945, and a week later the Stutthof subcamps in East Prussia were immediately behind the front. According to figures on prisoner population at the Stutthof subcamps, there were only 24 prisoners at Gerdauen on January 24, 1945: 1 man and 23 women.<sup>7</sup> Therefore, most prisoners, excepting that small group, avoided the tragic fate of the other camps evacuated to Königsberg and Palmnicken, although their return to Stutthof also took a large toll.

The prisoners were evacuated from Gerdauen to Stutthof on foot. Many lost their strength during the march due to a lack of food and water; the guards killed off the weakest of them by gunshot. For many of them, the return to Stutthof meant more struggles for survival, in camp itself as well as during the next phase in the evacuation of the central camp.<sup>8</sup>

## GOTENHAFEN

Several prisoner labor groups were formed from 1939 to 1941 in the city of Gotenhafen (Gdynia before and after the war; Gdingen from 1939 to 1940), to be put to work at German institutions and private businesses. The names of those institutions and businesses can be identified based on notes made in prisoner files by the administration of the Danzig Neufahrwasser and Stutthof civilian prisoner camps, as well as from accounts and testimony given after the war.

Between September 14, 1939, and December 3, 1941 (the first and last dates recorded in prisoner files, indicating the

length of time they were in those detachments), the prisoners were put to work by three firms primarily: the private business Thiel u. Co., the Gotenhafen City Offices, and the agency Haupttreuhandstelle Ost (Main Trustee Office East, HTO). From October 1941 to January 1942, prisoners were also hired out to the administration of the Gotenhafen train station, removing rubble and expanding the train station facilities.<sup>1</sup>

From June 27 to October 20, 1941, 50 prisoners were hired out to Thiel u. Co. of Bromberg (Bydgoszcz) to work at Gotenhafen-Kiel. There is no information available on exactly what they did. The testimony of one of the detachment's workers shows that prisoners were put to work digging peat.<sup>2</sup> The prisoners were quartered at the labor camp in Gotenhafen-Kiel.<sup>3</sup>

For one month, from November 3 to December 3, 1941, prisoners worked at the Gotenhafen agency of the HTO.<sup>4</sup> A branch was instituted in the Danzig–West Prussia district in December 1939 as an agency of the HTO formed by Hermann Göring on October 19, 1939. The Gotenhafen branch was a subsidiary of the HTO's Danzig agency. The agency was tasked with the confiscation and management of Polish government property as well as that of Poles and Jews throughout the district, until the property was transferred to German hands. The nature of the prisoners' work and the number of workers are unknown.

Prisoners worked at the Gotenhafen City Offices from April 17, 1940, until December 3, 1941. They were put to work doing cleanup jobs at the Gotenhafen City Offices, as well as at the train station.<sup>5</sup> The city government administration put several prisoners to work on municipal land. There is no detailed information about this detachment.<sup>6</sup>

## GOTENHAFEN (*DEUTSCHE WERKE KIEL*) [AKA DEUTSCHE-WERKE SONDERLAGER]

Gotenhafen (Gdynia before and after the war; Gdingen from 1939 to 1940) was an important military industrial center for the Reich, one of the navy's largest port, shipyard, and operations bases. The Deutsche Werke Kiel was one of the most important shipyards there. By late 1944 it employed approximately 7,000 workers, a considerable number of whom were forced laborers, prisoners of war (POWs), and in the latter half of 1944, prisoners from Stutthof.

The Stutthof subcamp at the Gotenhafen shipyard was formed on October 16, 1944.<sup>1</sup> (Stutthof prisoners had worked there before, but it is not known how many, and apparently no permanent camp was established for them.) It was also called Deutsche-Werke Sonderlager in Gotenhafen (German Works—Special Camp in Gotenhafen). After the camp was established, 310 prisoners were sent to Gotenhafen on October 16 and 28 in the first two transports.<sup>2</sup> According to the commandant's special order, the Germans intended to increase that population to 1,000. In early November 1944, two large prisoner transports arrived: 300 people from Stutthof and 180 directly from Dachau. At that point there were slightly more than 800 people living at the camp. The population remained at that level—its maximum—until the end of the month, fluctuating slightly, depending on the death rate and prisoner traffic between the main camp and Gotenhafen.<sup>3</sup> On January 24, 1945, there were 730 prisoners in the camp; on March 25, the date the evacuation began, there were 719.<sup>4</sup>

The majority of prisoners at Gotenhafen were from Poland, Russia, Estonia, Latvia, Lithuania, and Germany, although a number of other countries were represented as well. Most of them were skilled tradesmen, although some of the Poles who arrived early were exceptions. For them, working in Gotenhafen offered the chance to see relatives, obtain extra food, and perhaps escape, and so members of the Polish underground who worked in Stutthof's employment office faked their comrades' qualifications.

SS-Oberscharführer Hans Kuhlmann was the first commandant; upon his dismissal on December 9, 1944, SS-Oberscharführer Josef Bock replaced him. The camp staff initially consisted of 2 SS men from Stutthof and 34 navy

sailors. On November 9, 1944, they were joined by another 10 SS men from Stutthof. There were 49 sailors serving as supervisors in the camp and shipyard in late November 1944.<sup>5</sup>

Supervisory prisoners supplemented the staff. The highest position in the hierarchy, camp elder, was held by Johann Bank (aka Bańkowski), a German career criminal. He also oversaw prisoners at the work site. The Poles convicted him in 1948 for abusing prisoners under his supervision and sentenced him to three years in prison.<sup>6</sup> The jobs of barrack supervisors and camp office workers were generally held by German criminals and Polish political prisoners, though the former became dominant when Bock took over. Impromptu beatings and official whippings were everyday occurrences in camp. Only when the shipyard and camp were bombed on December 18, 1944, and many of the criminals were hurt, did the prisoners' situation improve. In January 1945, after Bank was wounded, his place was taken by an Austrian, Victor Dorotic, who was more lenient, followed by a German criminal whom Dorotic had recommended for the position.

The prisoners worked at the shipyard, where they assembled submarines. They assembled type "Y300t" submarines in a system of sections at four workstations. The work was supervised by a representative of Deutsche Werke Kiel and civilian foremen from the shipyard. The prisoners worked in two 12-hour shifts, with shift changes at 6:00 A.M. and 6:00 P.M. The sections, which already had been fitted out, were brought in by rail to the shipyard, where they were assembled on slip carts in the production facilities; the assembled units were transported to the Schichau shipyard in Danzig for final finishing.<sup>7</sup>

Prisoners also worked in other manufacturing companies in Gotenhafen and for the city: transporting ordnance from military shelters to the nearby airfield, building shelters at the shipyard, and removing rubble from bombings. Beginning in mid-January, they were put to work at earthmoving jobs connected with the construction of military fortifications in the region. Work at the shipyard was halted after the shipyard facilities and vessels being repaired were disassembled and evacuated to Kiel starting in January 1945.

The camp was carved out of the southern part of an existing camp for French forced laborers located in the immediate neighborhood of the shipyard. The prisoners' living conditions were generally no different than those prevailing at the parent camp, but they were even worse as far as sanitary conditions or food supplies were concerned. The shipyard provided housing and food, while the camp was responsible for supplying clothing and shoes.

The daily food rations provided no more than 800 to 1,000 calories. Prisoners who worked in the shipyard assembling submarines got additional food. Food packages were substantial help; they were sent by families of prisoners from Gotenhafen or via underground organizations operating in the city, such as the Tajny Hufiec Harcerzy (Secret Scout Regiment), Armia Krajowa (Home Army) or Gryf Pomorski (Pomeranian Griffin). The same channels provided the camp with drugs and dressing materials lacking in the hospital. Food

thefts by prisoners, mainly Russians, Latvians, and Italians, from the kitchen storehouses were evidence of the hunger prevailing in camp. Polish civilian workers employed at the shipyard provided prisoners with some small help.

The supply of clothing and shoes, for which the camp was responsible, was terrible. There was a shortage of warm clothes, underwear, shoes, and tools for shoe repair, as well as shaving and haircutting instruments. The surviving portion of the commandant's correspondence with the Stutthof camp, such as his letter of January 5, 1945, in which he demanded that clothing be sent for the prisoners to replace clothes that had been destroyed during an air raid in December 1944, confirms the shortages.<sup>8</sup> The death rate at camp was high due to the bombings of the shipyard and camp, exhaustion from labor and lack of food, and abuse. Prisoner losses through death and transports of the seriously ill to the hospital in Stutthof were made up with new prisoners. It can be assumed that there were about 200 such replacements. All deaths were registered at Gotenhafen's Bureau of Vital Statistics, which recorded 52 deaths in November and December 1944 and 17 between January and March 1945.

The camp's location and the kind of work the prisoners did were conducive to escapes, which mostly Poles and Russians attempted. The first escapes were organized as early as October 1944, and there had been three attempts by December, all failures. The most famous escape attempt was that of two Latvians, the Gajewski brothers, who were captured and hanged in public at Stutthof. Several escapes occurred from early January until the camp was evacuated on March 25, 1945. According to official camp population reports, six prisoners were involved in them, and all were successful. The greatest number of prisoners escaped during two failed evacuation attempts on March 8 and 14, 1945.

The camp numbered approximately 700 prisoners on the day evacuation began. Several dozen people escaped en route to the port; just 618 prisoners were loaded onto small passenger ships. Their evacuation route led through Hel and Świnoujście, then to camps in Hamburg, Kiel, and Sandbostel, where some prisoners were liberated, then to Neuengamme. Tragically, they next joined the evacuation from Neuengamme to Lübeck, where they boarded ships that were bombed and sunk on May 3. About 200 prisoners survived the evacuation, as well as the several dozen who had escaped from the evacuation transport en route to the port in Gotenhafen.

## GRENZDORF

The first transport of approximately 70 prisoners arrived at Grenzdorf (later Graniczna Wieś) between September 10 and 13, 1939.<sup>1</sup> They were sent from a temporary camp for Poles arrested at the start of the war at Viktoria Schule in Danzig (later Gdańsk), after a brief stay at the delousing station in Danzig-Neufahrwasser, where their hair was cut off and they were disinfected. Until March 31, 1940, the camp was under the Danzig Prison camp command as a separate civilian prisoner camp; thereafter, it became a subcamp of Stutthof.<sup>2</sup> Previously, the site had housed a penal camp formed by the government of the Free City of Danzig in October 1938 for "notorious idlers," criminal prisoners serving sentences at the Schiesstange Strasse prison.

SS-Sturmführer Hertzner became the camp's first commandant; his deputy was SS-Oberscharführer Paul Anker. They had a positive attitude toward the prisoners, making conditions at the camp bearable for them. Hertzner greeted prisoners with "Kameraden" (comrades); Anker permitted them to purchase and bring to camp tobacco and cigarettes. Prisoners were able to mail news to their families, who visited

them on Sundays, bringing them fresh underwear and food.<sup>3</sup> Hertzner was dismissed shortly after the camp's opening, and in December 1939, SS-Obersturmführer Richard Reddig was appointed to replace him as commandant. Except for a break from February 1 to April 1, 1941, when SS-Obersturmführer Fritz Meier acted as commandant, Reddig served until the camp was dissolved. Unlike Hertzner and Anker, Reddig was a cold and emotionless camp official. Roman Bellwon and others remember that when a prisoner escaped from Grenzdorf, Reddig selected two others whom he ordered to be shot.<sup>4</sup> Reverend Henryk Malak quoted Reddig's greeting of a group of priests who arrived at the camp in April 1940: "Actually, if it was up to me, I'd rather shoot you all today right away! . . . But since I'm short of people to work—" He gave a broad wave of his hand, not finishing the sentence, pointing at a heavy machine gun ready to fire. "This is always waiting for you! This is a labor camp! Here you either work and earn your food, or you croak! Understood?!"<sup>5</sup>

Due to the hard working conditions, the Grenzdorf camp was treated as a penal detachment for the priests, political activists, and Jews from the Polish community of Danzig. Also sent to the camp in late June 1941 were 38 Soviet sailors from the ship *Magnitogorsk*, including 2 women.<sup>6</sup>

The prisoners worked in quarries or in the nearby gravel pit for the Danzig Senate Roads Administration.<sup>7</sup> Their work consisted of breaking up great stones and processing the rock into basalt cubes. With smaller rock pieces, they made gravel for use in construction or as road building material. The work was not mechanized; all operations were done by hand. Gravel and sand were transported in carts pushed by prisoners; large stones were moved on what were called "stretchers." The work, lasting about 12 hours a day, was done under the watchful and harsh supervision of guards and foreman prisoners (Kapos). Besides working in quarries, prisoners were hired out to work at farms and local companies, such as Wilhelm Thiessen's farm at Grenzdorf B.<sup>8</sup>

Depending on the number of prisoners, the guard staff was composed of about 30 SS men. Among the most brutal SS men were SS-Oberscharführer Brunon Krummreich, SS-Unterscharführer Otto Knott, SS-Rottenführer Johann Plicht, and SS-Rottenführer Willi Witt, who was sentenced by the Gdańsk District Court to 10 years in prison in 1947.<sup>9</sup> Prisoners were also supervised during work and in camp by Polish Kapos, some of the most degenerate of whom were Józef Reiter, Waław Kozłowski, Franciszek Szopiński, and Tadeusz Kopczyński. In 1946, they were tried by the Gdańsk Special Criminal Court, which gave them the death penalty.<sup>10</sup>

The death rate at camp was very high, as accounts of former prisoners show. Many prisoners died through abuse or outright murder. Waław Mitura recalls that there were frequent instances of suicide provoked by the SS. Some prisoners, in a state of hopelessness, crossed the white string that marked forbidden areas and were shot; others were provoked to do so by the SS men, who would take the caps from the prisoners' heads and throw them outside the line.<sup>11</sup> On March 20, 1940, at Grenzdorf, they buried Scoutmaster Alf

Liczmański, the commander of the Danzig Regiment of the Grey Ranks, who had been tortured at Stutthof. Liczmański had been brought from Stutthof to Grenzdorf that day by truck and was probably already dead. He was buried on the spot. His remains were exhumed and moved to the Cemetery of Merit at Zaspa on November 14, 1948.<sup>12</sup> The death rate among Jewish prisoners was considerably high. Almost the entire group of approximately 40 people had been slaughtered by the end of 1940.<sup>13</sup> Seriously ill prisoners were taken to the Stutthof hospital, and the bodies of deceased prisoners were taken to the Zaspa cemetery in Danzig.

Few prisoners tried to escape. Three such attempts are known, which all ended tragically. Max Schindler, a Jewish prisoner, tried to escape in late December 1940; he was shot to death, probably during the manhunt. In February 1940, a Pole, Kozłowski, unsuccessfully tried to escape under the pretext that he was going to the toilet just outside the fence. He was caught by local people and returned to the camp, punished with 50 lashes with a cane, then shot three days later with three other prisoners at a public execution in camp. Another prisoner, a Yugoslavian, met the same fate in 1941.<sup>14</sup>

The camp population stood at 350 persons in late 1939 or early 1940, then increased to 500 in late January.<sup>15</sup> In 1941, it sank to between 100 and 200. The quarry probably ceased operating in late October 1941, when all the prisoners were sent back to Stutthof. E. Niemann's report of October 28, 1941, confirms this, stating that Grenzdorf had been made into an educational camp. A listing of subcamps appended to a letter dated November 28, 1941, no longer includes Grenzdorf. A group of prisoners, probably the last one, left Grenzdorf on November 5, 1941.<sup>16</sup> Jan Starzyński contends that the branch was shut down on November 6, 1941; others say the closing date was November 10, 1941. Dr. Julian Węgrzynowicz stayed at Grenzdorf to the very end in a group of the last 20 prisoners; he confirms the camp was disbanded in November 1941.<sup>17</sup>

## GROSS LESEWITZ

A camp at Gross Lesewitz (Lasowice Wielkie) was first mentioned in early 1940. In his account, Reverend Alfons Muzałewski recalled that a group of prisoners sent from the Gestapo prison on Schiesstange in Danzig, including Reverend Władysław Szymański, were sent to work on a farm. They were treated with hostility and abused. Reverend Szymański's back was covered with bruises from beatings, and his foot was pierced by a pitchfork. When the work was completed, the prisoners were sent to the camp in Danzig-Neufahrwasser.<sup>1</sup>

According to another account, in October 1939, a large number of Poles from the Danzig-Neufahrwasser camp were sent in narrow-gauge railway cars to work at farms in Żuławy. One of the groups, composed of approximately 40 Poles, worked at a farm in Gross Lesewitz. The author of the account stated that they worked under "rather decent conditions" until March 19, 1940. The detachment was reduced to 20 people after January 1, 1940.<sup>2</sup> There were probably two detachments working at different times and at different farms.

In the autumn of 1944, a group of Stutthof camp prisoners, the number of whom is hard to determine, were sent to Gross Lesewitz again, where they were put to work in the local sugar mill—a branch of the sugar mill in Marienburg (Malbork). The testimony of former Stutthof prisoners confirms the detachment's existence.<sup>3</sup>

The prisoners were housed on the farms in Gross Lesewitz and Klein Lesewitz (Lasowice Małe), where they also did farmwork. No additional information is available on this detachment. The subcamp's commandant and staff remain unidentified. The prisoners returned to the Stutthof camp in late November 1944.

## HEILIGENBEIL

The Heiligenbeil camp was created by special order of the Stutthof commandant on September 21, 1944, as one of five identically organized subcamps at Luftwaffe airfields (the others being Gerdauen, Jesau, Schippenbeil, and Seerappen).

The first transport of 1,000 Jewish prisoners (900 women and 100 men, mainly from Hungary and Poland but also from Latvia and Germany) was sent on September 21, 1944. Another transport of 200 Jewish women arrived on October 9. SS-Unterscharführer Hermann Kleiss was the first commandant, followed by SS-Oberscharführer Johann Mayer on October 18, by SS-Hauptscharführer Ernst Karl Thulke on November 20, and then by SS-Sturmscharführer Wolföfer on January 3, 1945. Besides the 46 Luftwaffe soldiers who guarded the airfield, 2 SS women served as supervisors: Erna Beilhardt and Erna Neumann. The entire camp premises were also guarded by 6 guards at permanent posts around the camp.<sup>1</sup> According to Beilhardt's testimony given at trial in Gdańsk in 1946, she completed six weeks of training at Stutthof, then left for Heiligenbeil as a German Red Cross nurse.<sup>2</sup>

The prisoners lived in 20 barracks, where they had double-decker bunks lined with straw. There were also French prisoner-of-war (POW) camps and a Reich Labor Service (RAD) camp for Russian forced laborers nearby. The prisoners were put to work building a road to the airfield; the Organisation Todt (OT) supervised the engineering. Work began at 6:00 A.M. and ended at 7:00 P.M., with an hour's break when prisoners received some unsweetened black coffee. The RAD kitchen made food for the prisoners using regulation ration amounts, which were actually half of that recommended by the SS authorities. The sole small assistance the Jews got in the way of extra food was from the French POWs and the Russians—mostly potato peels or coffee.<sup>3</sup>

Thulke testified at a group trial of Stutthof staff in 1947 that while he commanded the camp from November 20, 1944, to January 2, 1945, the prisoners' food was good; he checked it himself. He was also present when bread was distributed. On the other hand, he confirmed the fact that only half of the prisoners (600 people) went out to work and that there were 4 or 5 deaths during his tenure. This testimony is questionable, because the highest mortality at camp was in November and December 1944, when an epidemic of typhoid fever had broken out.<sup>4</sup>

A lack of suitable clothing made the prisoners' situation worse. On October 1, 1944, the subcamp's commandant sent

an urgent letter to Stutthof's administration, requesting warm clothes and the tools and materials to mend them. In its report dated October 27, the camp command requested the urgent delivery of gloves, underwear, women's dresses and skirts, stockings, and foot wrappings, as well as thread, nails, and so on, to mend clothes and shoes. The camp barber also needed haircutting instruments. The subcamp received the items five days later.<sup>5</sup>

When winter arrived, the prisoners' situation got even worse. Upon taking up command of the subcamp in early January 1945, Commandant Wolföfer said the state of prisoner provisioning was "disastrous." In his report of January 4, 1945, he said that 260 Jewish women could not work, as there was no footwear for them. Another 262 people were in the infirmary; their shoes had been assigned to healthy prisoners. The commandant requested machinery to set up a clothing and shoe repair workshop, but it is not known if the order was filled, since the camp evacuation date was approaching.

The records are incomplete, but considering the bad living conditions, hard labor, and epidemics of typhoid fever, the camp's death rate does not appear to have been high. The sick rate was appreciably higher. More seriously ill people were moved to the hospital at Stutthof, where some prisoners died; the numbers are difficult to establish. A female prisoner/doctor from the camp and the airfield doctor cared for sick prisoners;<sup>6</sup> 10 such prisoners can be identified based on fragmentary camp doctor reports on deaths at the subcamps, as well as studies of prisoner records. The records cover the period from late October 1944 to early January 1945.<sup>7</sup>

The records also mention women wounded or killed during alleged escape attempts. A report of October 29, 1944, stated that Basia Littmann, a Jewish woman, was shot while trying to escape; another Jewish woman received a gunshot wound in the chest and died as a result. It is difficult to ascertain whether these were really escape attempts. The women may have simply left their workplace briefly, which was regarded as an escape attempt. Planning an escape under those conditions and at that time held little promise of success.<sup>8</sup> The Russian front was still quite distant at this stage, for one thing.

There were 1,157 inmates in camp, including 1,064 women and 93 men, when the prisoners were evacuated toward Königsberg on January 20–21, 1945, together with prisoners from the other subcamps in East Prussia.<sup>9</sup> Since there was no communication with Stutthof, the decision to evacuate the camp was probably made by East Prussian Gauleiter Erich Koch's staff. Apparently, the intent was to send the prisoners toward the port of Pilau and then on to Hamburg, a concentration point for prisoners from Stutthof and Neuengamme. Sick prisoners were left in Heiligenbeil. Many prisoners became weak during the march; the weakest were driven the rest of the way to Königsberg in vehicles.<sup>10</sup>

The second stage of the evacuation probably began at dawn on January 26, or perhaps a day earlier, before Russian forces surrounded Königsberg. Koch's staff had already decided what to do with the prisoners. At the suggestion of Gerhard Rasch, the director of the amber manufacturing

works in Königsberg, they intended to slaughter all the prisoners in tunnels in nearby Palmnicken. They were either going to gas the prisoners, blow them up with dynamite, or suffocate them inside the tunnels after sealing up the openings. The commandants of the camps were supposed to escort the prisoners to Palmnicken.

According to various sources, from 3,000 up to as many as 10,000 prisoners of Stutthof subcamps left Königsberg, but the high figure is probably exaggerated, considering that there were approximately 5,000 prisoners in all the East Prussian subcamps in late January 1945. However, if POWs and prisoners from the labor camps operating near Luftwaffe airfields are included in this estimate, the number could be on the higher side.<sup>11</sup>

Even before the march out of Königsberg, the guards shot some of the prisoners in the Steinfurt works, where the prisoners had been accommodated; later they shot emaciated and sick prisoners during the march, pulling them out of the ranks and murdering them. A few were successful in escaping from the march column. On the night of January 26–27, 1945, approximately 4,000 prisoners reached Palmnicken.<sup>12</sup> Due to the objection of amber works director Landmann and Major Feyerabend, steward of the Dorbnicken, Gross-Hubnicken, and Palmnicken estates, where the works were located, the prisoners were not annihilated in the tunnels. They were sent toward the sea in columns of 50 prisoners under heavy escort by the SS, Lithuanian and Estonian SS-Osttruppen (Hiwis), and the OT. The massacre of the prisoners began when they reached the shore. Approximately 200 prisoners managed to escape during the shooting; 13 additional people survived the massacre by feigning death.<sup>13</sup>

Out of the Heiligenbeil staff members, Thulke and Beilhardt were held criminally responsible. In 1946–1947, Polish courts sentenced each of them to five years' imprisonment.<sup>14</sup>

## HOPEHILL [ALSO REIMANNSSFELDE]

The administrative order that specifically created the Hopehill subcamp does not exist in the Stutthof records. However, there is an order from the commandant dated May 29, 1942, that names SS men for administrative positions. SS-Oberscharführer Johannes Kuhlmann was the first camp commandant, followed by SS-Oberscharführer Karl Böhm and SS-Unterscharführer Herbert Korsch.<sup>1</sup>

Over 50 SS men served at Hopehill (Witowo), over half of whom were ethnic Germans (Volksdeutsche) from Croatia, Lithuania, Poland, Romania, Slovakia, and Hungary; the rest were German nationals.<sup>2</sup> Among them, the Germans—such as Kurt Janzen, Paul Wellnitz, Heinz Löwen, Alfred Tissler,

and Waldemar Henke—were unusually brutal toward prisoners. On the other hand, former prisoners have emphasized their good treatment from Polish and especially from Croatian SS men.

Prisoner-functionaries supplemented the staff. Among the most cruel—just as brutal as the German SS men—were German prisoners in the positions of senior prisoner foreman and prisoner foreman (Oberkapo and Kapo), mainly Willy Narcius, Tony Köhl, Hans Senger, Peter Flink, and August Sauter.

The prisoners were hired out to the SS company Deutsche Erd- und Steinwerke GmbH (German Earth and Stone Works, DESt). The first detachment consisted of 40 prisoners. The next group came in two transports from Flossenbürg and Mauthausen. The inmates were chiefly Germans (including numerous criminals) and Polish political prisoners. They held key administrative and supervisory positions in the barracks and work groups.

In July 1943, DESt took over the management of the Reimannsfelde (Nadbrezie, later Nadbrzeże) brickyard, which was considerably more modern and efficient. At that point, the camp was expanded, and the quarters were moved to nearby Reimannsfelde.

The prisoners were initially housed in a single-level brick building. The average prisoner population at that time was approximately 60 to 70 people. A few hundred yards from the building, the prisoners could see the high smokestacks and factory buildings of the brickyard. There was a makeshift storehouse in the attic for the bodies of dead prisoners, which were carted away every 10 days to the crematorium at Stutthof. Until October 1942, living and sanitary conditions were not the worst they would become, although overcrowding and the primitive sanitary facilities precluded ordinary hygiene. The situation degenerated with the arrival of autumn weather. The sick rate rose because of upper respiratory infections, and there was an outbreak of lice due to inadequate living and sanitary conditions; an epidemic was averted only because the entire camp was disinfected, and prisoner hygiene was enforced to some extent.<sup>3</sup>

Until mid-1944, prisoner doctor Dr. Aleksander Witkowski provided only emergency outpatient treatment. As a result, the death rate in the subcamp remained high, but a separate infirmary was set up in mid-1944, when the number of deaths reached a peak. By the spring of 1944, there was an SS medical orderly on the camp staff. According to (incomplete) records, an average of three prisoners died per week, and the camp lost at least the same number of sick to the Stutthof camp hospital.<sup>4</sup>

In early November 1942, the prisoners' striped summer uniforms were replaced with winter ones, without winter coats. Their inadequate clothes provided little protection; prisoners used various materials such as newspapers or empty cement sacks to supplement their uniforms.<sup>5</sup> Only in late 1944 or early 1945 were they issued winter clothing. In correspondence dated from November 1944 to January 1945, Commandant Korsch reported difficulties supplying prisoners with

warm clothes and footwear. In his report of January 3, 1945, he stated that the prisoners had not received a fresh change of underwear since October 4; he requested the express delivery of 300 pairs of long underwear and shirts, foot wrappings, and sewing materials to mend the winter uniforms.<sup>6</sup>

The prisoners' food, which the Stutthof camp administration provided, consisted of starvation rations. In the initial period of the subcamp's operation, working conditions in the kitchen were very hard due to lack of space, poor sanitary conditions, and meager food rations. The average daily intake throughout the entire period from 1942 to 1945 was approximately 1,500 to 1,800 calories; in 1942, it was less than 1,000 calories, especially because prisoners could only receive food packages beginning in late 1942.<sup>7</sup>

Approximately 300 prisoners occupied the camp as of mid-1943. That represented the peak population, although the constant replacement of dead or ill prisoners meant that the number of prisoners who lived there at one time or another was much higher—about 500. Poles constituted the largest group at the camp (approximately 50 percent), followed by Germans and Russians. There were also groups from Estonia, France, Lithuania, and Latvia.

The workday in the brickyards was 11 to 12 hours long. The group that operated the kiln worked the longest, divided into two shifts. Although the Hopehill brickyard was a partially mechanized facility, most work was done by hand. The Reimannsfelde brickyard, on the other hand, was a modern and fully mechanized plant; its output was twice that of the Hopehill brickyard.

Conditions in the detachment improved in late 1943 when a French Alsatian, Anton Köhl, became Oberkapo, and Poles took over most functionary positions from German criminals. Living conditions in camp also improved when the infirmary was set up after Dr. Lech Duszyński became doctor in January 1944, followed in June 1944 by Dr. Stanisław Kruszwski and Dr. Roman Łoziński. Camp life had become appreciably more liberal in comparison to the 1942–1943 period, when the German Narius was camp Oberkapo and there was an atmosphere of terror and incessant persecution. Prisoner cultural activities developed semiofficially on a previously unprecedented scale, such as carving amber extracted from the clay hill, cultural evenings held in the Polish barracks (literary and musical events and political discussions based on Nazi publications to which the camp subscribed), and even wrestling and boxing competitions held on January 1, 1945.

There was not even one escape attempt in 1942, because the supervisory regimen was so strict. In 1943, three attempts were recorded. One was really a suicide (the prisoner consciously crossed the line of guard posts), and another ended when an SS man caught and shot the prisoner. Narius attempted to escape in late August, as a direct result of the rivalry between German and Polish prisoners. He was caught and met the same fate as the previous fugitive.<sup>8</sup> There were several more escapes in 1944, five of which were successful. Three other escape attempts ended in failure, with the fugitives being captured and punished, usually by whipping.<sup>9</sup>

The subcamp's history included an event that was extremely famous throughout Stutthof, involving the murder of an Estonian prisoner by Oberkapo Köhl and his accomplices, which interrupted a time of relative peace and security after the initial harsh phase. Rumors circulated that a prisoner had been burned alive in the brick kiln, which was untrue. However, the rumor prompted a thorough investigation by officials from Stutthof headquarters and the removal from office of commandant Kuhlmann, labor director Janzen, and Oberkapo Köhl (sentenced to death by the Reich Security Main Office [RSHA]), who were found to be jointly conducting prohibited communications with the outside.

The subcamp was disbanded pursuant to an order from the Stutthof commandant dated January 26, 1945 (although former prisoners maintain that it occurred on January 19). When the prisoners returned from the brickyard at noon, there was a final roll call; they were each issued 500 grams (approximately 18 ounces) of bread and about 127 grams (4.5 ounces) of margarine. A cleanup crew of about 50 inmates stayed at Nadbrzeże; they returned to Stutthof the next day.<sup>10</sup>

Eight staff members and prisoner-functionaries were tried by Polish courts after the war. Wellnitz received the death penalty; Martin Stagl got eight years in prison. SS men Löwen, Tissler, and Henke were sentenced to five years in prison, and Jan Alfred Wróbel received a seven-month prison sentence. Of the two prisoner foremen, Jan Breit received the death penalty, while Paul Wiechern was acquitted.<sup>11</sup>

## JESAU

The Jesau (later Yuzhnyy in Russia) subcamp was located on the premises of a Luftwaffe airfield in East Prussia (there were four other similar subcamps established on the same day, September 21, 1944, at Gerdauen, Heiligenbeil, Schippenbeil, and Seerappen). The first prisoner transport sent to

the camp on September 23, 1944, consisted of 1,000 Jews: 900 women and 100 men. On October 9, 1944, a convoy of 250 Jewish women and 100 Jewish men arrived in Jesau.<sup>1</sup>

A fighter-bomber division of the Wehrmacht was stationed at the airfield. In February 1944, they began testing a fighter aircraft there, a rocket-powered Messerschmitt (Me) 163B interceptor designed by Willy Messerschmitt. A Russian prisoner-of-war (POW) camp was also set up in airfield buildings, followed by a camp for 100 prisoners brought from the penitentiary labor camp at Działdowo (Soldau) in December 1944.<sup>2</sup>

SS-Unterscharführer Ernst Stock was named camp commandant on September 21, 1944. He served in that post as long as the subcamp existed. On October 11, 1944, he was assigned the help of two SS women, Erna Böttcher and Anneliese Glaw;<sup>3</sup> 46 Luftwaffe soldiers served guard duty while the prisoners worked, and 6 other guards kept watch over the camp premises.

Women prisoners were outfitted for the trip with a coat, a sweater, a dress, underwear, a bandana used to cover the head, fresh stockings, socks, and wooden shoes.<sup>4</sup> Women prisoners from the first transport to Jesau confirm that conditions at camp were good at first. Jesau had its own prisoner kitchen, which was supplied by Stutthof, and so no one went hungry. The food was adequate: for instance, for breakfast they would receive a half a liter (half a quart) of oatmeal cooked in milk with some sugar. Every three weeks they were issued extra food, such as canned meat.<sup>5</sup> Nonetheless, as Dina Hercberg confirms in her account, selections were conducted at the camp every few weeks—not just among the sick but among healthy people who were avoiding work.

The prisoners were housed in barracks, and each had his or her own bunk and blanket. They began work at 6:00 A.M. They were put to work clearing woods, building roads, digging antitank trenches, and laying train rails. Sewing and shoemaker shops, where clothing and shoes were mended, were set up in camp in late autumn, where older and sick people worked.<sup>6</sup>

Although the prisoners had been outfitted well for the trip, their summer clothing proved to be inadequate when the autumn rainy season and chilly winds came, and their shoes also deteriorated quickly due to the muddy ground. According to Stock's report of October 27, 1944, there were 1,249 female prisoners and only 200 male prisoners living in camp at that time; thus, only 1 person had died or was shipped off. The problem of the lack of winter supplies applied to all Stutthof subcamps at the time. When Commandant Stock asked if the warehouse at the Stutthof main camp had winter clothing and footwear, the warehouse manager, SS-Unterscharführer Otto Knott, said that he had nothing but civilian coats and no shoes. Two weeks later the subcamp got some underwear, shirts, dresses, underclothing, gloves, foot wrappings, and leather shoes, as well as materials to mend clothing and shoes. The allotments did not fill all the shortages. A shipment of 500 pairs of women's shoes and 100 pairs of men's shoes arrived at Jesau on November 24, 1944.<sup>7</sup>

In late November 1944 the prisoners' situation got even worse. A report dated November 28, 1944, signed on behalf of the commandant by Anneliese Glaw, says that the clothing received in the last shipment (November 10, 1944) had only made up for the greatest shortages and was extremely inadequate in quantity. The biggest problem was the supply of wooden shoes. The shipment of 600 pairs of shoes in late November had not relieved the footwear shortage. The shoes had been delivered in poor condition, so that shortly thereafter the prisoners were unable to go out to work. The workers in the shoemaker shop labored day and night but could not keep up with the need for shoe repair, for which there was still a shortage of materials.

A Polish Jewish woman, Dora Hauptman, recalled that despite their hunger and the cold they were forced to do hard labor in light shoes and summer clothes. The guards often beat prisoners during work. They were issued rutabaga soup and a piece of bread for dinner. Under these conditions, many Jewish women died every day.<sup>8</sup>

The camp's evacuation began on January 21, 1945. The prisoner count report dated January 24, 1945, listed 1,086 prisoners, including 888 women and 198 men.<sup>9</sup> That was 264 people less than the early camp population, many of whom died in camp or had been hospitalized at the Stutthof hospital. Surviving hospital records do not contain any figures on the death rate at the Jesau subcamp. Additional prisoner transports probably were not sent to Jesau to replace the dead or the sick who had been moved to the Stutthof camp. The number of items of prisoner clothing ordered in late November 1944 corresponded with the number of prisoners then living in the camp, which suggests that no replacement prisoners were sent.

The columns of evacuated prisoners were herded on foot toward Königsberg (see Stutthof/Königsberg), escorted by Luftwaffe soldiers under Commandant Stock and the two SS women. In Königsberg, the prisoners were put in a factory bunker on the premises of the Steinfurt railroad car factory, together with prisoners from the Heiligenbeil and Seerappen subcamps as well as those who were put to work in Königsberg itself.<sup>10</sup> Their subsequent fates were similar to those of the Heiligenbeil prisoners (see Stutthof/Heiligenbeil).

## KÄSEMARK

The subcamp at Käsemark (Kiezmark), a town located 26 kilometers (16 miles) from Danzig, operated between October 21, 1939, and October 25, 1941.<sup>1</sup> The dates that prisoners began and ended their work on the Wagner farm are listed in prisoner files.<sup>2</sup> The detachment was probably initiated during a period of intense farmwork from 1939 to 1941. It was initially under the command of the civilian detention camp at Neufahrwasser, and after that subcamp was shut down, it fell under the Stutthof camp.

In Käsemark, near the pontoon bridge over the Vistula River, there was a place where prisoners were collected in early October 1939. German farmers, seeking to put them to work on their farms, gathered there to collect the prisoners. A former prisoner, Bruno Zwarra, recounts the following about this: "I was put in a group of prisoners who wanted to work on farms, and we were loaded up and taken to Gdańsk [Danzig]. In about fifteen minutes, we stopped in a long line on Burgstrasse [later Grodzka Ulica in Gdańsk], where we waited to be loaded onto a coastal steamer. . . . We approached the pontoon bridge outside of Käsemark, but that's not what interested us; rather, it was the long line of carts along the embankment on the Żuławy [West Prussia] side. The local farmers were waiting for us in a meadow by the river."<sup>3</sup> Besides the entries in prisoner records, no other information has been established as to how the detachment was organized, its size, period of operation, and casualties.

## KÖNIGSBERG

The subcamp at Königsberg (later Kaliningrad in Russia) was formed on August 19, 1944, pursuant to a special order that the Stutthof commandant issued a day earlier.<sup>1</sup> Some 500 Jewish prisoners were selected for the subcamp from transports that had come to Stutthof in early August from Kauen (Kaunas, Kovno) and Riga. The prisoners were transported from the landing at Stutthof by boat to the Schichau Werke in Königsberg. SS-Oberscharführer Alfred Tänzer was named camp commandant; upon his dismissal on September 6, 1944, he was replaced by SS-Oberscharführer Karl Böhm. The position changed hands again on October 4, 1944, when SS-Oberscharführer Fritz Weber took over from Böhm. He served in that post until the camp was disbanded and the prisoners were evacuated in late January 1945.<sup>2</sup>

Initially, 15 SS men from the 2nd SS-Guard Battalion were assigned to supervise the detachment. Later, the guard staff was increased to 18 SS men. Two prisoner doctors were picked for the transport. The order stated that proper medical care was to be provided by the local SS doctor and company doctor who were assigned the help of an orderly, SS-Oberschütze Rudolf Achs. The company kitchen was responsible for providing food for the prisoners.

The prisoners were hired out to Waggonfabrik Steinfurt Königsberg GmbH (the Steinfurt railroad car factory), which specialized in such things as constructing dual-axle second-class cars for the Prussian narrow-gauge railway lines. The company also manufactured locomotives. Narrow-gauge railways, such as the one in Treuburg, were equipped with these cars and locomotives. Prisoners were put to work at the Steinfurt railroad car factory building and repairing cars.<sup>3</sup> In addition to the factory, prisoners were also hired out to work at the Schichau-Werft (shipyard) in Königsberg.<sup>4</sup>

From the moment the subcamp started operating, the hard and dangerous labor and the shortages in the prisoners' supplies of basic gear, clothing, and shoes tended to use up their strength quickly. Although the order from headquarters had promised enough cleaning supplies, blankets, and other amenities, the subcamp's commandant struggled with great difficulty to maintain efficiency from the very start. Most prisoners were put to work as assistants, although professional qualifications for working in the factory were considered when prisoners were selected for the camp. Many of the prisoners concealed their true occupations; hoping to get out of camp, they counted on an improvement in their situations and the help of civilians. In his report of September 3, 1944, Commandant Tänzer stated that the majority of prisoners had no skills to work in specialist positions. The camp administration also abandoned the training of 28 prisoners who had initially been selected from the entire group. Since they were unaccustomed to the hard and dangerous jobs of operating machines, those prisoners would most likely suffer serious injuries on the job. For example, on August 25, 1944, a sheet-metal-cutting machine tore off three finger pads from a prisoner's right hand, which prevented him from working for six weeks.<sup>5</sup>

Letters to the clothing warehouse from October to December 1944 requested the urgent delivery of not only clothes and shoes but also hair clippers (which were requested twice to no avail) and tools to mend clothes and shoes (a shoemaker's last, thread, nails, wire brushes, thimbles, sewing yarn, and shoe tar, for instance). On November 9, 1944, the commandant reported the pressing need for delivery of 300 new pairs of shoes to replace irreparably worn footwear. The order was filled a week later, as confirmed by warehouse clothing manager SS-Unterscharführer Knott's initials. Subsequent correspondence shows that the camp made many more requests for additional supplies, to which it received in response mainly offers of materials and tools to mend clothing and footwear and, to a lesser extent, clothes. Among the exceptions was a delivery of gloves for the 470 prisoners living in the camp on December 18, 1944.<sup>6</sup>

Prisoners who were ill or extremely emaciated from labor were removed to the Stutthof main camp, the first transport of which left within one month of the subcamp's opening;<sup>7</sup> 50 men returned to the subcamp, and former Italian prisoner Aldo Coradello says that they did not even look like animals, let alone humans. He was left with the impression of randomly moving skeletons with unseeing eyes and legs dragging about the ground.<sup>8</sup>

The highest death rate in camp was recorded in November and December 1944. The incomplete records of the camp doctor's department and the camp administration confirm the deaths of over a dozen people by January 4, 1945. The most frequent causes of death were what was termed "an overall debilitation of the organism" and heart diseases.<sup>9</sup>

There were 462 prisoners living in camp on January 24, 1945.<sup>10</sup> The evacuation of all prisoners from Königsberg took place two days later, on January 26. Prior to evacuation, the

prisoners were concentrated in a factory bunker, which also held transports from the remaining five subcamps in East Prussia. In addition to the Steinfurt plant, they were also put in a twine factory and in barracks in the Kalthof section.<sup>11</sup> They were escorted toward Palmnicken (later Yantarny). Commandant Weber and the group of SS men from the subcamp at the Steinfurt factory were also in the columns' escort. The subsequent plight of the subcamp's prisoners was the same as that of the prisoners from the Heiligenbeil and Jesau camps (for details, see Stutthof/Heiligenbeil and Stutthof/Jesau).

## LAUENBURG [AKA SS- UNTERFÜHRERSCHULE LAUENBURG]

The Lauenburg (later Łębork) subcamp was formed on April 1, 1942. It was located on the premises of an SS noncommissioned officers' (NCOs) school and thus was also called SS-

Unterführerschule Lauenburg. Its formation was directly connected to a labor detachment of Buchenwald concentration camp prisoners that had existed in the same place since November 11, 1941. The detachment was probably disbanded around March 20, 1942, and the prisoners went back to Buchenwald. On March 23, 1942, another transport of 114 prisoners was sent from Buchenwald to Lauenburg. An order from the SS-Business Administration Main Office (WVHA) dated March 28, 1942, confirmed that effective April 1 the Buchenwald detachment was being disbanded and regrouped as a Stutthof subcamp with the same prisoners.<sup>1</sup>

Only in mid-April 1942, as Stutthof's administration was taking over from the Buchenwald camp, were the 114 prisoners, mostly Russians and Poles, listed in the Stutthof camp personnel files under the numbers 13161–13274. The entire transport had been registered under the date of April 14, 1942. (Researchers provide different dates for the subcamp's formation. Krzysztof Dunin-Wąsowicz says it was established in the summer or autumn of 1944, while J. Matynia says autumn 1941. The others, such as M. Gliški, think that the Stutthof subcamp was formed when a group of prisoners came to Lauenburg [or rather their registration was transferred over to the Stutthof camp's records] and provide the wrong size and numeration for the transport.) Two dates should be distinguished in the detachment's operation: April 1, 1942, refers to the formal creation of a camp under the command of Stutthof concentration camp, while April 14, 1942, is the date that the same group of prisoners was registered in the camp's records.<sup>2</sup>

The position of camp or detachment leader changed hands often over the nearly three years of the subcamp's operation. When the position was unoccupied, a Blockführer appointed by the commandant fulfilled this role. The position of camp leader was filled in succession by SS-Rottenführer Herbert Korsch from an unspecified date in April to October 25, 1942; SS-Oberscharführer Gottfried Heering from October 25 through December 9, 1942; SS-Scharführer Kurt Zemke from December 10 to December 28, 1942; SS-Unterscharführer Leopold Wanninger from December 28, 1942, to March 10, 1943; SS-Unterscharführer Ewald Foth to March 20, 1943; then SS-Scharführer Johannes Meyer until July 31, 1943. SS-Unterscharführer Fritz Peters was director of the camp from August 1, 1943, to October 30, 1944. The last camp leader, SS-Oberscharführer Emil Dreher, was appointed to the position on November 30, 1944.

The detachment's population probably did not require additional guard forces. The number of prisoners, of whom there were 114 at the start, kept decreasing due to deaths or transports of the sick to the Stutthof hospital. The dead were removed to the crematorium at Stutthof or buried in common graves in the woods. There is a common grave of 28 deceased prisoners at the Łębork cemetery.

The constantly fluctuating prisoner population provides evidence of regular replacement transports, usually once or twice a year. One such transport arrived at Lauenburg in 1942.<sup>3</sup> On April 27, 1942, there were 72 people in the detachment; on

March 29, 1943, there were 24; on September 15, 1944, there were 55; and just before evacuation in late January 1945, there were 53 prisoners.<sup>4</sup> Perhaps young SS men from the NCO school were assigned to supervise them. Officials from the command staff also served as supervisors in the posts of work group supervisors and block leaders. For instance, up until December 9, 1942, SS-Scharführer Sebastian Schmidt was assigned as second Kommandoführer (G. Heering was the first Kommandoführer) to provide additional supervision.

The detachment was quartered in the basement of the SS NCO school; it was wet and cold because there were no windows. The prisoners were put to work expanding the school, doing building and renovating there, as well as building a shooting range nearby in the woods. They worked from dawn until night. Prisoners carried the bricks and wooden beams to build the shooting range five kilometers (three miles) on their backs. They pulled carts with sand along rails, hurried on by SS men stationed every 50 feet and by prisoner foremen. Among the most brutal SS men were Fritz Peters and Ewald Foth. The Gdańsk District Court sentenced both to death in 1947. The position of construction detachment leader was held by the German criminal prisoner Karl Kliefoth, later the camp elder and first overseer at Stutthof. He was tried by a federal court in Hamburg in 1950 but acquitted of all charges. German criminal prisoners served in supervisory jobs.<sup>5</sup>

Besides the brutal supervision and starvation food rations, there were also clothing and shoe shortages. The surviving portion of the subcamp leader's correspondence with the clothing warehouse is from the final months of 1944. The correspondence reported that the summer clothing had been worn out in mid-September 1944 and that there was also a shortage of winter clothes, underwear, and shoes. The commandant requested the urgent delivery of tools and materials to repair shoes, as they wore out quickly in the work in the woods and construction.<sup>6</sup>

On July 8, 1942, Zygmunt Pencherzewski, a Polish prisoner who had been put in Stutthof on June 27, 1942, successfully escaped the subcamp, to which he had been sent six days earlier.<sup>7</sup>

There were 53 persons living in the camp on January 24, 1945. Their later fate involved the plan to evacuate the prisoners from the central camp at Stutthof beginning on January 25 and 26, 1945. Approximately 11,000 prisoners were slated to be moved by foot march to Lauenburg, 140 kilometers (87 miles) from Stutthof.<sup>8</sup> Upon reaching Lauenburg, they were to be housed at the NCO school. That plan was never carried out because the school had already been occupied by the Wehrmacht (for soldiers' quarters and a field hospital). Several Reich Labor Service (RAD) camps were prepared for the prisoners, which they reached in early February 1945.<sup>9</sup>

J. Matynia states that the subcamp existed until Lauenburg was liberated on March 10, 1945, and the prisoners lived at the school until the end, getting the furnishings ready for evacuation. Other source materials indicate that the detachment was disbanded earlier.<sup>10</sup> Former prisoners who were living at evacuation camps near Lauenburg in February 1945 say

that a food distribution point for prisoners evacuated from Stutthof was set up at the school.<sup>11</sup>

**SOURCES** The secondary sources concerning Lauenburg start with its listing in the ITS catalogs *Das nationalsozialistische Lagersystem (CCP)*, ed. Martin Weinmann, with Anne Kaiser and Ursula Krause-Schmitt, prepared originally by ITS (1949–1951; repr., with new intro. matter, Frankfurt am Main: Zweitausendeins, 1990), p. 647; and ITS, *Verzeichnis der Haftstätten unter dem Reichsführer SS (1933–1945)*, 2 vols. (Arolsen, 1979), 1: 48, 286. Useful is J. Schodzińska and G. Przykucka, “Losy ewakuowanych więźniów KL Stutthof na terenie ziemi łęborskiej,” *BLHBH* 13 (September 2000): 18. ## LIBAU (*HEERESGRUPPE NORD*)

The Libau subcamp for Jewish prisoners was formed in East Prussia in November 1944. The camp was set up for 330 Jews, men and women, in the town of Liepāja (German: Libau), attached to the Wehrmacht's Army Group North. The prisoners were put to work building fortifications. The first mention of the detachment's operation was in a hospital record of prisoners who had been inoculated for typhus on December 2, 1944. Next to the prisoners' names and numbers, the list provides such information as the work group names and the institutions and companies to which the prisoners were hired out.<sup>1</sup>

The December 2, 1944, record established that the subcamp began operating in November 1944. It lists prisoner Oskar Zirkmann as being prisoner foreman (Kapo) of the detachment. There are other references to the subcamp in camp population reports from late January 1945. There were 227 prisoners in camp on January 24, 1945, including 140 men and 87 women. The next report dated January 30, 1945, lists an increase to 327 female prisoners.

The last record confirmed by sources dated February 17, 1945, regarding sending the prisoners to the Stutthof camp, lists 307 Jewish women out of the detachment's population of

315. It is not known what happened to the Jewish men, who were still at the subcamp on January 24. Based on the surviving records, it cannot be determined if the difference of 100 persons was due to an error in the report (twice) or whether some prisoners had already returned to Stutthof, replaced by another group of Jewish women.<sup>2</sup>

The subcamp operated until February 17, 1945. On that day, 307 Jewish women were sent back to Stutthof; 8 women were left behind, having been excluded from the transport. It is assumed that they died in their final weeks at camp.

**SOURCES** The primary sources of information included AMS, Catalog No. I-IIIB-6, reports on the camp's population; Catalog No. I-VB-15, list of prisoners inoculated against typhus dated December 2, 1944; D. Drywa, *Podobozy (Aus-senarbeitslager) KL Stutthof dla więźniów narodowości żydowskiej* (in print; typescript at AMS); M. Orski, *Niewolnicza praca więźniów obozu koncentracyjnego Stutthof w latach 1939–1945* (Gdańsk, 1999).

1. AMS, Catalog No. I-VB-15, list of prisoners inoculated against typhus, dated December 2, 1944.

2. AMS, Catalog No. I-IIIB-6.

## MÜGGENHAHL

A subcamp of Stutthof was created in the town of Müggenhahl (later Rokitnica in Gdańsk County) near Praust (later Pruszcz Gdański). Based on labor assignment entries in prisoner files, we can establish that it operated from October 21, 1939, to August 19, 1940.<sup>1</sup> The prisoners were hired out to several employers who owned farms in the area: Claassen, Dirksen,<sup>2</sup> and Voss. Notes made in the records do not provide any information on the type of work the prisoners did.

Another work detachment was instituted in the same place in July 1942. According to the testimony of a prisoner who was assigned to Müggenhahl, a group of approximately 20 people were sent from the Stutthof camp to do work for local farmers. Paul Schulz was one of them; and we know that a group of prisoners worked at that farm until the end of the war.<sup>3</sup> They were lodged in a barracks under the supervision of SS men from Stutthof. The prisoners were divided up among several farms, to which they went unescorted every day, returning to the camp in the evening. The detachment was supervised by one elderly SS man named Günter Paul (who is not listed in the partially surviving Stutthof concentration camp staff index). The employers provided the food for the prisoners.

**SOURCES** In addition to those sources mentioned in "Stutthof Subcamp System," the following were consulted in writing this entry: AK-IPN Gd, witness examination reports of Antoni Janiewicz, Wrocław; AMS, Catalog No. I-III, prisoner files; *Einwohnerbuch der Danziger Landkreise 1927–1928*.

*Danziger Höhe. Danziger Niederung. Grosses Werder* (Danzig, 1927).

## NEUTEICH

From January to April 1942, 21 prisoners were put to work in Neuteich (later Nowy Staw), compressing hay and straw as well as loading and unloading compressed bales. The prisoners were taken to Neuteich by narrow-gauge railway, escorted by four SS men. Dinners for the detachment were brought in from Stutthof. When the detachment's work was completed and the subcamp was disbanded in late April 1942, the prisoners returned to Stutthof. No references have survived in camp records, except for the information on the detachment from the account of a prisoner who was sent there.<sup>1</sup>

## PELPLIN

From May 15 to June 30, 1940, 24 prisoners were put to work in Pelplin, building a road on the premises of the closed Pelplin Theological Seminary near Tczew (Aussenkommando Pelplin).<sup>1</sup> The buildings had been adapted to become an Auxiliary Police School (Hilfspolizeischule der Ordnungspolizei). SS-Unterscharführer Leo Skierka was camp commandant until July 3. He changed his name to Schierer on June 3, 1941.<sup>2</sup>

The prisoners were quartered in one of the seminary buildings. They received their food, which was relatively

good in comparison to that of the main camp at Stutthof, from the police school kitchen. The prisoners' basic job was to build a macadamized road on the seminary premises. They packed a layer of small broken stones with a roller pulled by six—later two—prisoners.<sup>3</sup>

Three prisoners escaped from the detachment on the night of May 9, 1940. The search party sent out the next day produced no results. Four other prisoners whose beds were next to those of the escapees were arrested and interrogated by the police. They were accused of not having done anything to prevent the escape, of which they really knew nothing. They were given the death sentence, which was to be carried out that same evening. The fugitives were then caught, and one of them was shot to death. The fate of the two surviving prisoners is unknown.<sup>4</sup>

Besides Commandant Skierka, the prisoners were supervised by students at the police school. The Pelplin detachment was disbanded on June 30, 1940.<sup>5</sup>

## PÖLITZ [AKA STETTIN]

The subcamp in Pölitz (later Police), near Stettin (later Szczecin), began operating on June 25, 1944.<sup>1</sup> It was one of several camps that housed labor for the city's two largest industrial plants: Hydrierwerke AG (of which IG Farbenindustrie AG

had a large share) and Norddeutsche Mineralölwerke GmbH, producers of synthetic gasoline and other products. A maximum of from 25,000 to 28,000 workers lived in all the surrounding camps, including concentration camp prisoners, prisoners of war (POWs), and forced laborers.<sup>2</sup>

According to the fragmentary source materials, the Hydrierwerke plant requested that the SS-Business Administration Main Office (WVHA) grant permission to put prisoners to work at the factory and house them in a labor camp it would build at its own expense.<sup>3</sup> The prisoners were initially housed in tents next to the Hagerwelle penal camp. Work was begun at the same time on the construction of a permanent camp in the woods near the train station at Messenthin (Mścicino). The prisoners arrived there in the autumn of 1944.

The number of people at the subcamp ranged from 800 in June 1944 to 2,800 in late August.<sup>4</sup> That number dropped to 2,364 between August and mid-December, and to 2,065 in April 1945. Besides Poles, Russians, Lithuanians, Latvians, and Germans, there were also Frenchmen, Yugoslavians, and Greeks at Pölitz.

SS-Oberscharführer Hans Kuhlmann was camp commandant from June 25 to August 5, 1944, followed for the short time until August 18, 1944, by SS-Hauptsturmführer Ernst Sette, who was followed by SS-Untersturmführer Kurt Volkmann.<sup>5</sup> Initially, the camp staff was made up of 30 SS men from Stutthof and a medical orderly. The number of SS men increased to 43 in August 1944 because the camp population had gone up. Wehrmacht soldiers and Ukrainians from auxiliary formations also served as supervisors, replacing Germans called into the army. There were 50 people on the camp staff on November 11, 1944.<sup>6</sup> There was also a system of supervisory prisoners including work group overseers (Vorarbeiters) and prisoner foremen (Kapos), mainly German criminals. The post of camp elder was held by Waclaw Kozłowski, a Pole who had been a barrack chief at Stutthof, where he proved to be one of the most brutal prisoner-functionaries. After the war, he was tried by the Gdańsk Special Criminal Court and sentenced to death.<sup>7</sup> Besides him, there were over 12 German criminal prisoners serving as prisoner foremen, 4 of whom stood out due to their brutality: Richard Friedrich, Bruno Neumann, Alfred Hölzel, and Gustaw Lüge. They died in the camp on December 18, 1944, after drinking ethyl alcohol.<sup>8</sup>

The permanent camp was made up of about 30 barracks. The sanitary conditions, housing, and supplies of food, blankets, clothing, and shoes in the camp were satisfactory only for a few weeks at the beginning. Later, 8 people shared one loaf of bread, and the prisoners were issued a watery soup made from weeds for dinner. The factory management would sporadically provide the camp with raw carrots and soup from the factory cafeteria. The exhausting labor, hunger, and abuse weakened the prisoners and contributed to the camp's high death rate.<sup>9</sup> The hospital records show 106 prisoner deaths at Pölitz from October to November 1944, but given the regular transfers of prisoners in and out, the true total must have been much higher.<sup>10</sup> Prisoners who were too weak to work

were often selected for transport to Stutthof, where many of them were killed with phenol injections, their death certificates falsified.

Dr. Bolesław Kaczyński served as camp doctor; he managed to save over a dozen prisoners despite the primitive conditions in the infirmary. Dr. Heidecke, nominally designated by the factory as doctor, was not interested in the prisoners and only signed death certificates.<sup>11</sup> The bodies were transported to the crematorium at a Stettin cemetery; later, when it was closed, they were buried in common graves in Messenthin.

Conditions deteriorated with the colder weather, as indicated by the commandant's reminders to the Stutthof supply warehouse to send warm clothing (jackets, ear protectors, gloves, etc.) and shoes for the prisoners and SS staff, as well as materials to mend them.<sup>12</sup> The prisoners experienced some improvement after the visit of Stutthof assistant commandant SS-Hauptsturmführer Theodor Meyer.

The prisoners were put to work expanding the synthetic gasoline factory in Pölitz for Hydrierwerke AG. Hydrierwerke AG worked with local construction companies to build the camp and factory, prepare the site, and so on. These companies included Grün & Bilfinger, Dyckerhoff & Widmann AG, Betonwerke Gossebaude, and Westermann & Co.<sup>13</sup>

The prisoners worked at construction work for 12 hours a day in groups of up to 100. They were also hired out for various jobs in Pölitz or subcontracted out to other city firms or businesses, which was common practice for IG Farbenindustrie and other big companies. Some of the most dangerous work was the construction of giant bunkers on factory premises or disarming unexploded bombs from the raids that had begun in July 1944. Prisoners in the bomb disposal detail left the factory premises mostly in groups of 6 to 8, escorted by one SS man and a German civilian bomb disposal expert. For disarming one bomb, a prisoner would get 10 Juno-brand cigarettes or a liter (four cups) of soup from the company kitchen. However, the work killed an estimated 80 percent of the prisoners who had to perform it.<sup>14</sup>

The records indicate the attempted escape of approximately 40 prisoners, mainly Russians, between July 1944 and February 1945, of whom fewer than half were successful; there were probably many more undocumented attempts as well.<sup>15</sup> Krzysztof Dunin-Wąsowicz says that the greatest number of escapes from the entire camp was in Pölitz; he estimates that number at 20.<sup>16</sup>

The most spectacular event at Pölitz was an attempt to kill Kozłowski, the camp elder, in October 1944. The attempt failed because Kozłowski defended himself with a bayonet that he kept in his boot. Six of the attackers escaped through a hole in the wire, another was wounded in the attempt, and several others had to stay behind. When the accused did not come forward, the commandant selected nine prisoners at random from a transport from Warsaw and hanged them, along with the wounded man.<sup>17</sup>

The evacuation of prisoners westward began on April 17; there was no communication with the Stutthof camp, so Sachsenhausen assumed command over the prisoners when

they left Pölit; 184 prisoners were sent to Barth and Bergen-Belsen in two transports. Those who were the most ill and unable to march, approximately 300 people, were shot on April 25, 1945; the rest, approximately 400 prisoners, were sent toward Rostock.<sup>18</sup>

## PRAUST (FLUGPLATZ)

The Praust subcamp began operating on July 7, 1944.<sup>1</sup> Pursuant to a special order issued on July 3, 1944, by camp headquarters, 500 Jewish women were sent to a military airfield (*Flugplatz*) located along the road to the village of Kochstedt (later Roszkowo) near Praust (Pruszcz Gdański) to do building and cleanup work; the camp's population grew by another 300 women on August 6, 1944. (There were four other Stutthof subcamps at Luftwaffe airfields, at Gerdauen, Heiligenbeil, Jesau, and Seerappen.)

SS-Hauptscharführer Otto Berger of headquarters staff was named camp commandant. The staff included seven SS men from an SS-Guard Battalion and seven from a Wehrmacht Training Battalion composed of soldiers unfit for duty at the front (on July 6, 1944, they were joined with the newly formed Stutthof concentration camp II SS-Guard Battalion,

VOLUME I: PART B

then moved to Guard Companies I–III on September 6, 1944, when the battalion was disbanded). In addition to these men, an SS man in charge of feeding the prisoners and a medical orderly were assigned to Praust. When the prisoner population increased, six more SS men and several SS women were assigned to the staff. Some of them had come with prisoner transports from other concentration camps; the others were recruited in an operation conducted by the Danzig employment agency. They underwent special training at the Stutthof camp, then were assigned to guard duty at the main camp or subcamps. One such recruitment operation in late October 1944 included 60 women, 7 of whom were later assigned to Praust.<sup>2</sup>

The Hungarian Jewish women selected for the original transport arrived at Stutthof from Auschwitz concentration camp on June 29, 1944; 40 of the weakest women were replaced just three weeks after the subcamp had been formed.<sup>3</sup> Another transport of 300 women was assigned to the subcamp on July 25, 1944. Two SS women, moved from the Kauen concentration camp, Emilie Macha and Anni Scharbert, arrived with them.<sup>4</sup> Jewish women from Czechoslovakia, Germany, and Austria were selected for the transport. They had previously been at the Terezin and Auschwitz II-Birkenau concentration camps.

The prisoners were quartered on airfield premises in three wooden barracks. Reveille was at 5:00 A.M. Every day started with roll call, which sometimes lasted 15 minutes and sometimes went as long as 60 minutes. All they were issued for breakfast was hot coffee-colored water. Some women ate a piece of bread they had saved from the day before. Then they left camp, going to work on leveling the terrain of sandy hills. They were watched at work by guards; several construction companies (e.g., Kieferling, Metzger & Co.) supervised the project. There were extreme differences in the way the SS men treated the women so that in a short time the prisoners could tell good days apart from bad. Some SS men gave them some freedom of movement during the day, even allowing them to pull turnips from the fields. Some of the SS men were work fanatics who did not let the women have the slightest moment's rest, while some were sadists who were not interested in work but in inflicting extra torture on the prisoners. Their favorite form of persecution was to drive the women into a ditch and aim their guns at them, ready to fire.<sup>5</sup>

The kitchen set up by the subcamp's management was in charge of food supplies for the staff and prisoners, assisted by the junior officer from Stutthof camp headquarters in charge of food supplies. The food consisted of starvation rations: some hot coffee, which was coffee in name only, for breakfast and supper; a piece of bread in the evening; and some soup with low-caloric content for lunch. When autumn came, problems began with supplying prisoners with warmer clothing and shoes, which deteriorated quickly. In mid-October 1944 the camp received such things as 800 pairs of wooden shoes and the same number of foot wrappings, 168 dresses, 500 pairs of long underwear, and 400 shirts. In late December 1944, Praust again received wooden shoes and foot wrappings,

which indicates the camp's great demand for those items and the rate at which they wore out.<sup>6</sup>

The subcamp numbered 800 women on January 24; thus, it reached its level of mid-August 1944. There is no surviving information on the death rate, so it cannot be determined what the size of the prisoner replacement transports were that arrived from the main camp.<sup>7</sup> Presumably the death rate was not too high, but there were considerably more sick people who later could not cope with the hardships of the evacuation march and were shot by the guards.

The camp was evacuated together with the subcamp at Russoschin beginning around February 11, 1945. Upon reaching the vicinity of Lauenburg (Łębork), pursuant to the Stutthof general evacuation plan, the prisoners were placed in two Reich Labor Service (RAD) camps at Gnewin (later Gniewino, Poland) and Burgsdorf (later Berezovka, Russia) as well as at a newly established camp in Kolkau (Kolkow). Upon liberating the Kolkau camp, the Russians found 600 exhausted women. According to the accounts of Norwegian prisoners liberated on March 11, 1945, at the nearby Jenzow estate, the owner of the Kolkau estate was shot when the Russians entered. The common grave of 143 people who had been shot in the back of the head was found in the camp after the war. The remains of the slaughtered victims were moved to the cemetery at Rybno.<sup>8</sup>

Transports of women prisoners evacuated from the Organisation Todt (OT) Elbing camp were put in the abandoned Praust airfield camp between late February and early March 1945. Several hundred starving and sick women were imprisoned here, many of them severely frostbitten. Every so often the sickest of them were taken away from the camp, presumably to be put to death. The camp was liberated on March 23, 1945.<sup>9</sup>

Only one of the SS women from the Praust camp staff stood trial in a Polish court after the war. Emilie Macha (née Wawoczny), who came from Silesia, was sentenced by the Kraków Criminal Court to 12 years in prison on November 16, 1948 (she died in prison on February 4, 1949). She had served as a camp guard at the Auschwitz, Lublin, Kauen, and Ravensbrück concentration camps before coming to Stutthof.<sup>10</sup>

## PREUSSISCH STARGARD

The subcamp in Preussisch Stargard (prewar: Stargard; postwar: Starogard Gdański, both in Poland) was formed in March 1942. No archival materials on the camp's establishment have survived, and there is no accurate information about its organization and operation.<sup>1</sup>

The only source providing information on the detachment's operation is the testimony given during trial at Gdańsk District Court in 1947 by two SS men of the same rank, SS-Unterscharführer Gustav Eberle and Erich Jassen, who supervised the prisoners' work. Based on their testimony, we can establish the period in which the detachment operated, from March to at least October 1942. SS-Unterscharführer Gustav Eberle was sent to Preussisch Stargard in March 1942 with a group of 150 prisoners. The prisoners were hired out to a construction company (name unknown) to build a road between Preussisch Stargard and Gutowiec (possibly Schwarzwasser). The company provided housing and food for the subcamp's staff and prisoners. The camp was located in Preussisch Stargard. When they had completed their job in the Preussisch Stargard region, the prisoners were moved on

toward Czersk, where until October 1942 they continued building the road in the vicinity of Łąg (German: Königsried) and Gutowiec (German: Gutenwirt).<sup>2</sup>

SS-Unterscharführer Erich Jassen and six other SS men were assigned to the detachment in Preussisch Stargard in August 1942.<sup>3</sup> Both Eberle and Jassen were tried as defendants at the Gdańsk District Court in November 1947 and were sentenced to 10 years in prison.<sup>4</sup>

## PRÖBBERNAU

The subcamp at Pröbbernaue (later Przerbno) was formed near Stutthof for the construction of a dike on the Vistula Bay side of the peninsula. The first documented references to the detachment are from October 31, 1939. The camp commandant's report for the Danzig Gestapo on Polish prisoner Jan Hryniewicz contained information on his labor assignment at the Pröbbernaue subcamp from October 31 to December 15, 1939.

The camp's first commandant was named Lenau. No information on him has survived in the Stutthof camp staff personnel records. He was probably removed from his position for alcohol abuse and illegal dealings with the company building the dikes. He was less brutal toward the prisoners than the second commandant, SS-Unterscharführer Franz Mielenz, a man with sadistic tendencies. Mielenz served as commandant from September 24, 1940, to April 1941. The prisoners were supervised by SS men. The commandant and guard staff were quartered in a farm owner's building.

The prisoners who arrived in the first transport to Pröbbernau were initially housed in a township shed. The group was taken to its destination in trucks and probably numbered from one to several dozen prisoners. Their first job was to build the camp, to quickly put up a living-quarters barrack, farm buildings, and sanitary facilities, and to fence in the entire site with barbed wire. The camp was designed for a maximum of 200 to 300 prisoners. Approximately 200 people lived there on average. It was located on the leased part of a farm near the Evangelical cemetery. The first work erecting new levees was begun only upon the arrival of a group of approximately 200 or 300 prisoners from the Neufahrwasser camp in early November 1939; they were Poles arrested in Gdingen (later Gotenhafen, then Gdynia) in mid-September 1939.<sup>1</sup>

The prisoners were hired out to Deichverband des Kreises Elbing (the Elbląg company Dike Unit of Elbing District). Four engineering foremen from the company were in charge of the work. The work consisted of raising levees—carting in wheelbarrows of sand, building an embankment, and reinforcing it with sod. The prisoners who worked building the embankment stood waist deep in cold water. They were hurried on and beaten during work by the guards and especially by a foreman named Aleksy, who, according to a witness account, “always tried to outdo the guards in cruelty, with a bat, and a gnarly one at that, whether it be at morning roll call, or at work, beating prisoners himself and inciting the guards to beat them.”<sup>2</sup>

The living conditions in the camp, especially the food, were as poor as at the main camp. The prisoners slept directly on the floor, strewn with a fresh, clean layer of straw, which was covered by canvas. Each prisoner had one blanket. The company to which the prisoners were hired out provided food, but the daily food rations were inadequate, and moreover the kitchen's chief cheated the prisoners in their rations, selling scraps of food such as potato and rutabaga peels to the local farmer as feed. There was no infirmary in the camp. More serious illnesses were treated at the hospital in Stutthof.

Hungry prisoners searched on their own for other sources of sustenance, availing themselves of nearby farms. At first the local population tried to supplement the prisoners' diet by bringing food such as bread into the camp, but the commandant quickly prohibited that. For a while, the families of the Pröbbernau prisoners also provided them with food. In extreme instances, determined prisoners decided to escape. One attempt, in which two persons were involved, ended with the fugitives being caught. During a special roll call, those prisoners were shot before the eyes of the entire detachment.<sup>3</sup>

The work at Pröbbernau was halted with the coming of winter 1939, when the cold weather made the work impossible. Most of the prisoners were sent back to Stutthof on December 15, 1939.<sup>4</sup>

A group of approximately 50 prisoners was kept at Pröbbernau; they probably did additional work to protect the levee during the winter, under the supervision of company engineers. The detachment was reactivated on April 18, 1940, according to assignments to Pröbbernau noted in the prisoners'

files. Recruitment for the labor was done at the Stutthof camp. The 203 prisoners were sent on foot to Pröbbernau, about 18 kilometers (11 miles) from Stutthof. The group included many prisoners who were emaciated and unfit to do the hard physical labor of raising the levees. Many of them died at Pröbbernau. When the construction foreman complained, 50 of the weakest prisoners were sent back to Stutthof a day later. The population was replenished by additional prisoner transports sent to Pröbbernau from Stutthof as needed.<sup>5</sup>

The housing, sanitary, and food conditions were basically unchanged in this second season. The prisoners occupied the same barrack as in 1939. Sanitary conditions were better than those at the Stutthof camp. Although the toilets were still outside, on Sunday afternoons the prisoners were escorted to bathe in the sea about 1 kilometer (0.6 miles) from camp. The food most often consisted of unpeeled potatoes and codfish heads. Sometimes pea soup was issued. Because of the prevailing hunger, after a while the prisoners were allowed to receive food packages. By September 29, 1940, the camp population had dropped to 129 prisoners due to the high death rate. There was no infirmary at the camp, even though special space had been designated for a doctor's office, and there was a doctor, Julian Węgrzynowicz, in the detachment. The doctor had no other medical supplies at his disposal than aspirin and paper bandages. His job was just to determine what condition a patient was in, while the commandant made the treatment decisions. From time to time, the sickest people were sent to the hospital at Stutthof, and new prisoners were brought in.<sup>6</sup>

Several prisoners attempted to escape from the camp. The first attempt was in June 1940 by a prisoner named Moško. He was caught a few hours later because he had taken a bad escape route toward Kahlberg (later Łysica, then Krynica Morska), where he was beaten by SS men and escorted back to the camp. If the escape had been successful, 10 other prisoners were to be put to death. After another unsuccessful attempt by the same prisoner, the SS men tortured him to death. His body was buried outside the camp fence. In vain, 3 other prisoners attempted to get out of the camp; all the escapes ended badly for the fugitives. They were caught and sent back to Stutthof, where they were put to death publicly. The only escape that was successful was by camp carpenter Czesław Majewski on September 26, 1940, partly because he had taken a long time to plan his escape route carefully.<sup>7</sup>

The work at Pröbbernau ended on December 19, 1940, due to severe frost, just as the year before, and the basic group of prisoners was sent back to Stutthof, except for 50 persons moved directly to do similar labor at the Zeyerniederkampen subcamp.<sup>8</sup>

There is no archival information on whether the detachment was reactivated in subsequent years. However, the accounts and testimony of former prisoners show that groups of prisoners were sent to Pröbbernau, as well as to Zeyerniederkampen, Terranova (later Nowakowo) on the Nogat River to do the same work in 1944 and perhaps even earlier.<sup>9</sup> The work erecting the levee was continued by a youth camp

(*Jugendlager*), of which nothing else is known, located next to the Pröbbernau subcamp site.

## ROSENBERG

The small detachment making up the Rosenberg subcamp, numbering a maximum of 10 prisoners, was formed in August 1944. Initially it numbered 9 persons, including 8 Danish prisoners.<sup>1</sup> A group of 20 English prisoners of war (POWs) also worked there.<sup>2</sup>

The prisoners were hired out to the owner of a sawmill in the town of Rosenberg (later Susz). SS-Unterscharführer Herbert Zills was director of the detachment and also supervised the work group of several people.<sup>3</sup> The detachment's population was 10 in early October 1944. The Stutthof camp administration provided food as well as clothing and shoes. The only document confirming that the detachment operated is a letter sent by Commandant Zills to the Stutthof main camp clothing warehouse, dated October 6, 1944, in which he reported that he was sending 10 jackets and 10 pairs of pants back to the warehouse because they were too small. Warehouse manager SS-Unterscharführer Willy Knott initialed the letter only a week later and sent the request to be filled on October 16, 1944, ordering that just 1 jacket and 1 pair of pants be delivered to the detachment.<sup>4</sup>

According to the accounts of the Danish prisoners, the camp was disbanded and the prisoners sent back to Stutthof on January 19, 1945. A list of prisoner populations in the subcamps, dated January 24, 1945, states that there were 10 prisoners in the detachment when it was evacuated.<sup>5</sup>

## RUSSOSCHIN [AKA REICHSBAHN RUSSOSCHIN]

The subcamp at Russoschin bei Praust (later Rusocin near Pruszcz Gdański) was formed on September 13, 1944.<sup>1</sup> The prisoners were hired out to work for the German National Railways (Deutsche Reichsbahn, DR)—thus, the camp was also called Reichsbahn Russoschin. Some 300 Jewish women were sent to Russoschin. They were mainly from Hungary and Germany. SS-Unterscharführer Willi Engler was the first camp commandant, followed by SS-Oberscharführer Konrad Döring on October 22, 1944.<sup>2</sup>

Seven SS women supervised the prisoners, as did an unknown number of railroad security guards (*Bahnschützen*). SS women candidates were employed at the German Railroad Administration in Danzig until October 1944, after which they were delegated from the Railroad Administration via the Danzig employment agency to the Stutthof concentration camp to train for guard duty at the parent camp or the subcamps for women. As railroad employees, they were subject to conscription into military duty.<sup>3</sup>

Training began at the beginning of August and lasted more or less until mid-November 1944. Most candidates were German. According to the 1945 testimony of prisoner Zofia Jackowska, 150 SS women candidates were trained over three months; 60 of them remained at the central camp, and the rest were sent to its subcamps.<sup>4</sup>

The training program involving the 7 SS women who were posted to Russoschin began on October 27, 1944, and lasted three weeks. A total of 60 women attended that course. According to the testimony of Elisabeth Becker and Wanda Klaff, who attended the training program, the first Schutzhaftlagerführer T. Meyer's main focus in the instruction was on the SS women's communications with the prisoners and on punishing the prisoners for any transgressions. They were strictly forbidden from talking at all with the prisoners outside of the line of duty, especially about the war. The SS women were also responsible for making sure the prisoners did not communicate with the civilian workers. Meyer ordered the SS women to force the prisoners to work using a system of punishments: taking away their food for any minor transgression and whipping them for more serious ones, with the whipping done in camp rather than at the workplace. Meyer reminded them several times of the formal ban on hitting prisoners, advising them to assign any women reluctant to work to cleanup jobs as punishment or send them to jail.<sup>5</sup>

The seven women assigned to Russoschin upon completing the training course were Anni Jack, Gertruda Schönhof, Marta Gryszewska, Maria Szerańska, Klara Reichert, Elfried Hansen, and Wanda Klaff. Out of that group, Klaff was tried by the Gdańsk Special Criminal Court in 1946 (sentenced to death; the sentence was carried out on July 4, 1946, at Stolzenberg hill in Gdańsk), while the Gdańsk District Court sentenced Hansen to 15 years in prison in 1947. Klaff came from a Polish family and was named Kalacińska, changing her name to Kalden when the second German National List (*Deutsche Volksliste*) group was admitted, then to Klaff, the name of her husband, a German.<sup>6</sup>

Approximately 50 women were put under the “care” of each SS woman. They were quartered in three wooden barracks located in the village (Gemeinschaftslager Russoschin bei Praust). The prisoners were escorted daily from the barracks to work at a railway junction or to replace sections of track. The women were hired out to work at the Reich Railways Repair Works (Reichsbahnausbesserungswerk, RAW) in Praust. They were also put to work building air-raid shelters.<sup>7</sup> The work required great physical fitness and strength. Pursuant to the commandant's order, before leaving for Russoschin, the women were supposed to be equipped with adequate clothing, shoes, a towel, and soap. Reichsbahn Direktion Danzig also promised to provide additional protective clothing and agreed to mend the clothes and shoes in its own workshops. As Klaff testified at her trial, in spite of that the women worked in light clothing that put them at the mercy of the weather and endured beatings by the SS women. The commandant's correspondence with the clothing warehouse at Stutthof also confirms the inadequate state of provisions, especially supplies of warm clothing (foot wrappings, gloves, and coats).<sup>8</sup>

The commandant and the Stutthof staff were in charge of food supplies for the prisoners. They set up a separate kitchen for prisoners, while the commandant and SS women were assigned food pursuant to military rationing. According to Klaff's testimony, reveille was at 4:00 A.M., followed by a long roll call and a march out to work at around 6:30 A.M. The women got their first meal only at noon: a plate of potato or rutabaga soup, sometimes cooked with horsemeat. After they got back from work at about 5:30 P.M. and went through roll call, they were issued supper, consisting of 1 liter (4.2 cups) of watery potato soup and a slice of bread of about 50 grams (1.8 ounces) with a bit of jam or margarine.<sup>9</sup>

The hunger, the cold, the lack of medical care, and the beatings during work were the main reasons for prisoner sicknesses and deaths. There were 289 women in camp on January 24, 1945.<sup>10</sup> Klaff's testimony at her 1946 trial shows that sick and weak Jewish women were sent to the hospital at Stutthof regularly. Selections were held every three weeks. An average of 12 persons were taken away to Stutthof after each selection. But the figures recorded during an examination conducted on June 18, 1945, by an investigative officer of the Gdańsk Province Public Security Agency were significantly higher: selections were held every two weeks, and from

15 to 20 Jewish women were sent to Stutthof following that selection.<sup>11</sup> There are no figures on the death rate in the camp, so it is not possible to establish how many deaths occurred on the camp premises and how many at the Stutthof hospital, where the sick women were sent. The commandant's correspondence with the Stutthof camp administration shows that the maximum working population of 300 prisoners was maintained through early January. This is evidenced by such things as the commandant's ordering the delivery of double sets of strips of material for prisoner numbers for prisoners to wear, a total of 600 items.<sup>12</sup>

The subcamp was disbanded around February 12, 1945. The evacuation of the subcamp at Praust had begun a day earlier. That camp's prisoners, 800 women, joined the group of 289 women evacuated from Russoschin. Together they began their march toward Lauenburg that same day. The camp population report dated February 13, 1945, removed the prisoner counts of the Praust and Russoschin camps from the Stutthof camp records, a total of 1,089 persons, who had been registered as evacuees the day before. Both camps' inmates shared the same fate. Klaff, who escorted the Jewish women to Lauenburg, testified that all 300 women [*sic*] reached their destination, but 60 percent of them died in evacuation camps due to disease, starvation, or lack of medical aid.<sup>13</sup>

## SCHIPPENBEIL

The Schippenbeil subcamp was formed on September 21, 1944, along with four other identically organized camps at nearby Luftwaffe airfields (Gerdauen, Heiligenbeil, Jesau, and Seerappen). A day later the first transport of 1,000 Jewish prisoners, including 900 women and 100 men, was sent to Schippenbeil (later Sepopol).<sup>1</sup> That population increased when 250 more Jewish women were sent to Schippenbeil on October 9, 1944.<sup>2</sup> A maximum total of 1,250 people lived at the camp.

SS-Unterscharführer Kurt Weinert held the post of camp commander until October 17, followed on October 18 by SS-Hauptscharführer Erich Meissel.<sup>3</sup> Some 46 Luftwaffe soldiers (including some from General Andrei Vlasov's Ukrainian formations) made up the guard unit at the airfield, while 6 guards at fixed posts in the camp watched over the camp buildings; 2 SS women, Gertrud Reinhold and Anny-Lotte Schmidt, assigned to Schippenbeil on October 11, 1944, supervised the Jewish women.<sup>4</sup>

Most of the Jewish women were young and came from Hungary, Poland (the Łódź ghetto), and Austria. Housing, sanitary conditions, and food were no different from those at the other subcamps located at Luftwaffe airfields. The German Labor Front (DAF) kitchen on the airfield's premises provided all the prisoners' daily food. The Stutthof concentration camp administration supplied clothing and shoes. In early November 1944, the commander sent a request to Stutthof, saying the subcamp needed footwear and materials for mending clothes, as well as paint to stamp numbers and 1,100 strips of material to number prisoners. The order was filled a month later. Subsequent surviving reports from December

1944 concerned the urgent delivery of winter clothing to Schippenbeil (jackets, coats, pullovers, vests, woolen trousers, stockings). The deliveries were not made on time and did not contain everything that had been ordered, such as a package sent on December 22, 1944, that only contained mending materials but not ready-to-use clothing and shoes.<sup>5</sup>

These conditions have been confirmed by the local population, which sometimes happened to encounter the Jewish women from Stutthof concentration camp. Anna Krause of Stopki (Schtolzenfeld), approximately 10 kilometers (6.2 miles) from Schippenbeil, testified that she saw a group of about 200 Jewish women from Schippenbeil. The women were ragged and barefoot.<sup>6</sup> Another witness, a prisoner of war (POW) put to work in Schippenbeil, said that Jews (men—but could refer to women as well) were put to work at the station unloading cement: “the sight of them was terrible: they were more like corpses than living people; that’s how wasted and ragged they were.” He also confirmed the brutal attitude of the guards toward the women. One day he witnessed a Jewish woman being forcefully struck in the back by a gun butt for picking up some pomace from the ground; she fell down and could not get back up on her own.<sup>7</sup>

The prisoners worked at a large Luftwaffe military airfield. It had been built during the war as a base for Hitler’s quarters at Görlitz near Rastenburg. Intensive expansion work was begun on it in 1944. The project was supervised by the Organisation Todt (OT), which with the help of the DAF had set up numerous labor camps for the forced laborers and POWs in the region, including Polish and Russian POWs.<sup>8</sup>

The poor housing conditions, starvation food rations, and lack of adequate clothing contributed to the subcamp’s exceptionally high prisoner death rate (especially in January 1945, with over 50 percent of all the recorded deaths), which is confirmed by the surviving source materials. The death figures based on the death reports that the commander sent to Abteilung III, Arbeitseinsatz, refer to the period between November 4, 1944, and January 7, 1945, and list 62 people, all women.<sup>9</sup> There are additional death rate figures in the hospital death records in prisoner files; 7 other deaths were established based upon those records.<sup>10</sup>

In late October and early November 1944, the camp population dropped by 150 and totaled 1,100 (figures from a report by the subcamp’s commander) due to prisoners dying or being sent to the hospital at Stutthof. By January 24, 1945, the camp numbered only 947 prisoners, including 96 men and 851 women.<sup>11</sup> The difference between the population of September 1944 and that of late January 1945 was 303, the majority of which constituted prisoner deaths.

The dead were buried in the town or nearby in the woods, in such places as a common grave holding a dozen or so bodies exhumed after the war at what became Mostowa Ulica, where the SS command was located during the war.<sup>12</sup> Other accounts say that the SS shot Jewish women in the woods near the town in January just prior to evacuation. Their bodies were carted to a pile, doused with gasoline, and burned.<sup>13</sup> They were probably the victims of a selection associated with

the camp’s evacuation, in which the sick and weakest prisoners were put to death.

The camp evacuation began on the night of January 21–22, 1945, as the prisoners were sent toward Königsberg, and its history was analogous to that of the other Luftwaffe subcamps in East Prussia.<sup>14</sup>

## SCHÖNWARLING

Two prisoner labor detachments were set up in the town of Schönwarling (later Skowarcz) in 1940–1941 and 1944. In both instances, the prisoners were hired out to the construction company of Aloysius Dehlert, Tief-, u. Strassenbau of Danzig, which operated one or more gravel pits in Schönwarling.

A detachment was established for the first time in 1940. According to the account of Jan Gdaniec, a Polish prisoner from Danzig, approximately 50 Poles were sent to Schönwarling from the Stutthof camp and probably the Danzig-Matzkau camp in May 1940. They were put to work in two gravel pits. The prisoners were quartered with a local farmer. Two SS men supervised them. Gdaniec was moved to Danzig-Matzkau in January 1941, then to the Stutthof camp, and from there to Sachsenhausen concentration camp (see Stutthof/Danzig-Matzkau and Sachsenhausen).<sup>1</sup> The detachment probably continued to operate on a smaller scale. Another group of prisoners was sent to Schönwarling from the Grenzdorf and Stutthof camps between February 2 and June 11, 1941.<sup>2</sup> The subsidiary was still operating in the summer of 1941, as confirmed by staff member Otto Arnold at his 1947 trial in Toruń.<sup>3</sup>

Another subsidiary with 15 prisoners (Aussenkommando der Bauleitung in Schönwarling) was formed in Schönwarling on November 7, 1943, at the Dehlert company gravel pit. There is no accurate information available on how the camp was organized, the members of the guard staff, or the prisoners' living conditions. The company was in charge of providing housing and food. The detachment existed until late August 1944 and mined the gravel the company needed in its business. The first prisoner to escape from the detachment was Aleksander Skrzypczyk on November 28, 1943. After an investigation held two days later, the fugitive was captured in Gdynia and reincarcerated at the camp on August 9, 1944. No information is available on Skrzypczyk's punishment or eventual fate.<sup>4</sup>

An order by headquarters dated October 17, 1944, states that five more prisoners escaped from Schönwarling on August 24, 1944. They were not caught after two days of searching. The commander punished SS-Rottenführer Paul Wolff with three weeks of close arrest "because he allowed five prisoners to escape from the external construction detachment facilities at Schönwarling the night of August 24, 1944, and they ran away [from camp]."<sup>5</sup>

The detachment was disbanded as a consequence of the escape and the other prisoners were returned to the Stutthof camp. According to the organizers of the escape, it occurred the night of August 21–22 and was only reported to the camp two days later as occurring on the later date.<sup>6</sup>

## SEERAPPEN

One of the five subcamps formed at the Luftwaffe airfields in East Prussia was set up in the town of Seerappen (later Lyub-lino in Russia). The four other Stutthof subcamps at Luftwaffe airfields were Gerdauen, Heiligenbeil, Jesau, and Schippenbeil. The Seerappen airfield was the Luftwaffe's main operational base for air attacks against the USSR's northern regions. The subcamp began operating upon the arrival of the first transport of 1,000 prisoners, composed of 900 women and 100 men, on September 21, 1944. Another transport of 200 Jewish women was sent on October 9, 1944.<sup>1</sup> These prisoners, who were Jews from the Łódź and Wilna (Vilnius) ghettos, Hungary, and Slovakia, came to Stutthof from the Krakau-Plaszow concentration camp.<sup>2</sup>

SS-Unterscharführer Kurt Dietrich was the camp's commandant initially, followed by SS-Oberscharführer Hans Kauffeldt on October 17, 1944. Some 46 Luftwaffe soldiers supervised the prisoners as they worked at the airfield, while 6 guards from the airfield staff watched over them in camp, joined by 2 SS women from the Stutthof camp, Charlotte Fregin and Gerda Kunath, on October 11, 1944.<sup>3</sup>

The prisoners were put to work on construction projects supervised by the Organisation Todt (OT), building roads and digging antiaircraft trenches, in the airfield area. Work lasted between 10 and 12 hours a day regardless of the weather.<sup>4</sup> The conditions in the camp can be described, based on the partially surviving correspondence on prisoner provisioning between the commandant and the Stutthof camp administration. The correspondence confirms the disastrously low supply of work clothes and winter attire for the prisoners and that the detachment was generally unprepared to go to Seerappen.<sup>5</sup>

The first reports came to Stutthof as early as October 9, 1944. Seerappen's commandant requested the urgent delivery of primarily materials to mend clothes and shoes—hemp

twine, thread, and cobbler's wax. In his report of October 26, 1944, he requested the delivery of warm winter clothing, underwear, and more tools and materials for mending clothes. The number of female prisoners stayed the same until mid-November 1944, as confirmed by the number of clothing articles ordered (1,100 pairs of gloves and stockings).<sup>6</sup>

Subsequent reports dating from December 1944 and January 1945 requested mending materials, since the central warehouses could not provide new or used clothing or footwear. Orders of clothing and shoes were filled in smaller amounts, and some items such as men's socks and women's stockings were not filled at all. Out of the 1,950 items or pairs of clothing and shoes the commandant had ordered in his letter of January 11, 1945, not quite 1,100 were sent, including just 50 pairs of shoes instead of 500.

Under these conditions, the camp's population gradually dropped, reaching 1,009 prisoners (925 women and 84 men) just before the evacuation, which began on January 20, 1945.<sup>7</sup> The difference of 91 prisoners since late October 1944 was accounted for by fatalities or sick prisoners sent to the hospital at Stutthof. No figures on deaths at the subcamp and no information on transports sent to Stutthof are available. The food in camp was prepared by a kitchen set up by the subcamp's management; medical care was provided by a prisoner doctor.

The camp's evacuation to Königsberg (see Stutthof/Königsberg) and then to Palmnicken resulted in numerous casualties. It is not known how large a group from Seerappen survived the massacre on the beach in Palmnicken (see Stutthof/Heiligenbeil).

## STEEGEN

Female and male prisoners, ranging in number from a handful to 30, were hired out for woodcutting to the Oberforstamt Steegen or Oberförsterei Steegen (Steegen Forest Management Agency) in October 1942. On average, there were approximately 14 people in each detachment. The camp administration earned 1,530 Reichsmark (RM) for their labor.<sup>1</sup> The prisoners were probably quartered in Steegen (later Stegna) in barracks belonging to the agency.

Prisoners continued to be hired out for woodcutting on Oberforstamt Steegen lands in 1943. A work allocation (*Arbeitseinsatz*) report dated May 16, 1943, lists a female woodcutting detachment scheduled for the next day.<sup>2</sup> There are no other records on the subject except for notes in the registers of changes in the barracks.

In the autumn of 1944, 30 Norwegian policemen were put to work in a group called Forsterei I, logging trees in the Steegen forest. A Forsterei II group was put to work hauling tree trunks into the Vistula River. The wood was to be used to build bunkers and trenches on the Eastern Front, but it never reached its destination due to shipping problems and military developments—that is, the swift progress of the Russian offensive.<sup>3</sup>

A much smaller subcamp began operating in Steegen for the first time in September and October 1942. The prisoners were hired out to Unterdeichverband (Dike Subunit) Steegen, which did such work as raising and reinforcing levees in the Steegen area. The company was a division of Deichverband des Kreises Elbing (Dike Unit of Elbing District) and had previously put prisoners to work raising and maintaining levees along the Vistula Bay and Nogat River. The Unterdeichverband detachment in Steegen was composed of about eight prisoners.<sup>4</sup>

A group of four to six prisoners were put to work again in June and July of 1943, then again in September. The levee reinforcement was seasonal work, and it resumed every year under a special contract with the Stutthof camp headquarters. Prisoners were put to work as helpers, for which the camp administration was paid 4 RM per day for each prisoner's work. The camp administration received 1,024 RM in 1943 for 256 man-hours of labor.<sup>5</sup>

The detachment was reactivated in August 1944.

## STOLP

The subcamp at Stolp (later Słupsk) was formed pursuant to a special order by the commandant of Stutthof concentration camp dated August 26, 1944.<sup>1</sup> Prisoners were hired out to the Reich Railway Repair Works in Stolp in Pomerania province. The Stolp repair shops were a division of the works in the German town of Eberswalde. The Germans sent 621 Jewish prisoners to Stolp, 239 women and 382 men. They were mainly from Estonia and Lithuania, but some were from Austria, Czechoslovakia, Hungary, Poland, and Germany. One Polish doctor, Lech Duszyński, was also included in the transport.

Another prisoner transport was sent on October 28, 1944, with 20 Jewish boys from the Łódź ghetto who were supposed to learn metalworking in Stolp. They were put in the Stolp subcamp under an order of Inspectorate of Concentration Camps (IKL) Chief Richard Glücks, dated October 17, 1944.<sup>2</sup>

SS-Hauptscharführer Julius Sakowski became camp commandant. Railroad security personnel served guard duty during work and in the prisoner housing camp. SS woman Margarete Ritscher was assigned to supervise the women. Pursuant to the commandant's order, the prisoners were to be equipped for the trip with new clothing and shoes, as well as towels, soap, table utensils, and spoons. The railroad administration agreed to issue protective clothing with a red cross for dirty work.

The men and boys were put to work in the railroad shops, and the women worked at modernizing and repairing the railroad tracks, as well as digging antitank ditches outside town. The group of men sent to Stolp consisted predominantly of tradesmen who were specially brought in on August 9, 1944, in a transport of 400 people from the Kaiserwald concentration camp near Riga, where they had worked at rolling stock repairs. Some of them were put to work at the subcamp in Königsberg (see Stutthof/Königsberg).<sup>3</sup> In Stolp, they labored chiefly in the car shop and repairing rolling stock.

The labor that the women did was considerably harder; they cleaned the shops, repaired the tracks, and dug fortification trenches. They were often forced to carry large, heavy pieces. The Jewish women were abused while doing this work; they were beaten for no reason. Forced to stand in the open during hours-long roll calls, arbitrary beatings, and hunger also tormented them. The men in skilled-worker positions at the railroad shops were better protected from persecution by SS men, but their work exposed them to the risk of physical injuries because work safety rules were not observed.<sup>4</sup>

The prisoners were housed in railroad buildings: the men in the car shop, where they slept on quadruple-decker bunks; the women, in the gymnasium. The railroad provided food; a special group of prisoners prepared meals. The food was extremely inadequate; the only food that prisoners ate, besides a daily bowl of soup, was a loaf of bread shared among several people. Dr. Duszyński provided medical care until he left to fill the same position at a Gotenhafen (Gdynia) subcamp on October 14, 1944; he was replaced by a German-Jewish surgeon, Dr. Gaspari.<sup>5</sup>

Despite the orders by Stutthof's commandant to supply prisoners with adequate clothing and shoes before they left for Stolp, their situation was not good at all. Only a small group of prisoners received a change of underwear in August 1944; 100 people needed their wooden shoes replaced immediately; the rest had shoes that were urgently in need of repair. In his report for August 26 to September 18, 1944, Commandant Sakowski requested the delivery of clothing and footwear, plus materials to mend them, as well as towels.<sup>6</sup> Notes made on the forms show that the orders were only partially filled.

On September 4, 1944, the camp was visited by SS-Hauptsturmführer Paul Ehle from headquarters staff, commander of two guard companies, the 2nd and the 3rd. No report of the inspection has survived, however. The reason for the inspection was the inadequate state of prisoner clothing and shoe supplies. Footwear was a serious problem, especially for those prisoners who worked at earthmoving, because of the moisture and clay. Many prisoners' shoes were worn out after just a few weeks of work. Without waiting for a late shipment from the Stutthof camp, the company's headquarters in Eberswalde bought 100 pairs of shoes for 600 Reichsmark (RM), charging the amount to the Stutthof camp administration.<sup>7</sup>

In his next report dated October 14, 1944, Commandant Sakowski ordered the delivery of winter clothing and towels for a third of the prisoners, as well as one set of underwear for each, as underwear wore out quickly due to the hard labor. Sakowski's statistics on the subcamp show that the population dropped by two at that time: one Jewish woman died, and Dr. Duszyński was assigned to a subcamp in Gotenhafen.<sup>8</sup>

Following October 27, 1944, when 40 boys aged 10 and 11 were sent to Stolp from the Łódź ghetto, the camp population rose to 659, including 238 women and 381 men. The older prisoners took the boys under their care; for instance, each prisoner foreman took care of a boy, providing him with extra food if possible. Those among the boys who already knew a bit about metalworking made usable metal items, such as penknives, rings, necklaces, and pendants. They then sold them for pieces of bread to the camp's prisoners to supplement the regular camp rations.<sup>9</sup>

One public execution took place in the camp in late 1944. According to Chaim Kozieniecki, the prisoners had been accused of stealing tobacco products from railway cars. An all-day roll call was held in the falling snow, and traces of tobacco were found on 5 prisoners, who were hanged the next day.

with the entire camp present.<sup>10</sup> Other sources state that between 8 and 10 prisoners were hanged, while the real perpetrators (who stole food packages and tobacco) were actually German railroad employees who crashed railway cars in order to rob them.

There were 640 prisoners living in camp on January 24, 1945, including 402 men and 238 women.<sup>11</sup> That figure does not allow for the prisoners who had been hanged; presumably the report on the matter did not reach the Stutthof camp in time. There were a total of 642 prisoners who had been sent to the Stolp subcamp throughout its operation, including 1 replacement for a Jewish woman who had died in camp.

In January and February 1945, prisoners from the camp were put to work in jobs associated with the construction of antitank ditches in the town. The camp's evacuation began in late February 1945. The columns of prisoners were sent to the empty camp in Danzig-Burggraben (in the town of Koko-szki), then to the camp in Stutthof. Their evacuation continued by sea in April 1945.<sup>12</sup>

## THORN (OT) (WITH SUBCOMMANDS)

### [AKA BAUKOMMANDO "WEICHSEL"]

Construction detachment Baukommando "Weichsel" was a complex of camps under the overall supervision of the Organisation Todt (OT) office in Thorn (Toruń). The commandant of Stutthof formed the new subcamp on August 24, 1944, in reaction to a request from the OT, which needed workers for a series of construction projects—mostly military—along the Vistula River.<sup>1</sup> The subcamp's management was located at the Botten (Bocien) estate on the outskirts of Kulmsee (Chełmża).

SS-Hauptsturmführer Paul Tschesny held the post of overall camp commandant from August 24 to November 24, 1944, followed by SS-Hauptscharführer Wilhelm Totzke. SS men from the SS-Wacheinheit Lebrechtsdorf (Potulice) unit—140 in all—made up the guard staff. In addition, several officers and noncommissioned officers (NCOs) were assigned from the command staff at Stutthof to direct the subordinate detachments. It is known that SS-Hauptsturmführer Hans Jacobi and his successor SS-Sturmscharführer Wilhelm Anton headed the camps at Argenau (Gniewkowo) and then at Korben (Chorobie) between September 6 and October 5, 1944. SS-Oberscharführer Willi Tysarzik and SS-Oberscharführer Alfred Meyer assisted Tschesny in setting up the complex.<sup>2</sup>

The initial influx of prisoners consisted of 5,000 Jewish women from many European countries—mainly Hungary, Bohemia, Lithuania, Latvia, Germany, Romania, Slovakia, and Poland—who had arrived in Stutthof from Kauen (July 1944), Auschwitz (August 14 and 16, 1944), and Riga (August 9 and 23, 1944). They joined approximately 40,000 forced laborers and prisoners of war (POWs) who also worked on the project.<sup>3</sup>

The women were transported by train from Stutthof in three groups between August 24 and 26, 1944. The first group of 1,700 went to Botten; the second group, numbering 1,600,

went via Botten to Schirkenprass (Szerokopas); and the third group, numbering 1,700, went to Toruń and on to Argenau.

Before leaving Stutthof, the women received one blanket, table utensils, a towel, and soap. The camp administration was also to provide clothing and housing. Stutthof provided army tents for some prisoners, others stayed in barns, and some prisoners were later kept in cabins of thin plywood that held 35 to 40 people. The greatest problem was the lack of footwear and warm clothes. Stutthof's administration was unable or unwilling to provide better uniforms, despite many letters and reminders from the detachment directors and the supervisory office in Botten. In order to cope, women cut out woolen jackets, coats, and underwear from their blankets.<sup>4</sup>

The women worked the same as the other forced laborers, five days a week and on Saturdays until noon. The work—digging antitank ditches and bunkers—was exhausting. Wake-up was as early as 3:00 A.M., and work lasted until dusk. The prisoners had to march many hours to their workplaces, which were located far from the camps.<sup>5</sup>

When they completed their job, the extremely emaciated women from both Botten and Nagelstal were moved in late December 1944 to Groden (Grodno), about 10 kilometers (6.2 miles) from Nagelstal. They were housed on the shore of Grodno Lake in plywood cabins. The Jewish women cut reeds on the lake, worked at the nearby Mirakowo (Merch) estate, or dug common graves for deceased prisoners on a peninsula in the southeast part of Grodno Lake, out of sight of the town of Grodno. The women at Argenau, meanwhile, had moved on to Korben in mid-September; their task was to dig trenches along a line from the town of Cegielnik (Ziegelwiese) to Górsk (Gurske). They lived in tents during their time there.

Conditions were extraordinarily harsh at all these camps. The exhausting work, the inadequate clothing, shelter, and food, and poor hygienic conditions killed the prisoners off directly and contributed to the spread of disease, especially spotted typhus and dysentery. Abuse by the guards made the situation still worse. According to Lajosne Fleischer of Hungary, many women died from beatings by SS men, who crushed their heads with gun butts, broke their spines, walked on their stomachs, and killed them while they worked.<sup>6</sup> At Nagelstal, the guard staff—made up of approximately 60 Ukrainian and Belorussian SS men—and the commandant (whose name has not been established) displayed an exceptionally brutal attitude toward the women. Several witnesses, including one of the camp's guards, Ukrainian Władysław Kulman, testified at trial in Toruń in 1945 that five to six women died every day, in part from torment by guards; they were beaten with gun butts, locked in a water-filled basement, or forced to stand in the cold with no outerwear. One of the cruelest guards was Filipowicz from Białystok, who murdered his victims in the camp courtyard, as well as Kulman's appointees: a Russian, Klimienko (commander of the guards), and some privates named Rudenia, Biełonożko, Szwap, and Wacek. The dead were buried in the Catholic cemetery.<sup>7</sup> At Argenau and Korben, the guard force consisted of 60 Lithuanian, Latvian, and Estonian SS men.<sup>8</sup> They were no kinder.

As a result of all these factors, the death rates in the OT complex were high. Of the 3,300 women who arrived in Botten and Nagelstal in late August 1944, only 2,947 remained by October 9.<sup>9</sup> The number of deaths increased in November and December; at Botten alone, 31 prisoners died between October 4 and November 30, and as many as 133 died in December. Because of the high percentage of deaths, an additional 1,000 women were sent to Botten on November 19.<sup>10</sup> The Argenau-Korben group had dwindled from 1,700 to 1,475 by October; that number rose to slightly over 1,600 in the latter half of December after an additional transport arrived from Stutthof, but more died in the next month.<sup>11</sup> The actual number of deaths in the whole complex is impossible to calculate with any precision, however, since the records of replacement drafts from Stutthof are incomplete.

A report dated January 24, 1945, indicates a total of 3,225 prisoners in the detachments that made up Baukommando "Weichsel" before evacuation.<sup>12</sup> At Groden the staff conducted a selection to test the prisoners' physical condition before the evacuation began; 200 of the weakest women were excluded and later savagely put to death. The remaining women were escorted toward Lauenburg. Several selections were conducted in the course of the march, and several hundred women died as a result. Approximately 300 prisoners reached Dirschau (Tczew); another 400 got as far as Goddentow (later Godętowo) near Lauenburg (later Lębork); thus around 1,000 women died out of the approximately 1,700 from Groden.

Also on January 24, approximately 1,500 female prisoners were marched out of the Korben camp. The staff excluded 180 women from the evacuation; they were later shot; 28 of them survived the massacre. The other 1,300 or so prisoners were sent toward Bromberg (Bydgoszcz). Another 87 women were murdered during the 97-kilometer (60-mile) march to the town of Krone (Koronowo), where the survivors spent the night in the local prison. The next day, the Russians liberated 997 prisoners—the remainder had presumably died.

Only two members of the large group of SS men supervising OT Thorn were tried before Polish courts. The Toruń District Court sentenced Hans Jacobi, the commandant of Argenau and Korben, to six years in prison on May 2, 1949 (he died on August 30, 1949). The other defendant, Władysław Kulman, was sentenced to death by a judgment from the Toruń Special Criminal Court dated June 18, 1945; the sentence was carried out on August 31, 1945, at Toruń prison.

## THORN (*SS-NEUBAULEITUNG*)

This small prisoner detachment of probably several people was set up as part of the SS construction company in Thorn (Toruń). Based on partially surviving entries in prisoner files, it can be established that the subcamp operated between July 23 and December 18, 1940. According to the International Tracing Service (ITS), the SS-Neubauleitung detachment operated until February 8, 1941, but this claim is not supported by surviving records of the Stutthof concentration camp. A prisoner labor assignment record for another Thorn detachment, dated a year later with the identical month and date, was probably read in error.<sup>1</sup> The prisoners were put to work building or expanding the SS officers' (police) school in Toruń. When the work was completed, the prisoners were moved to Stutthof. One of the detachment's laborers was Jan Dłużewski, a Pole and a senior railroad assistant for the Polish National Railway in Danzig.

Another Stutthof subcamp was instituted in Thorn a year later, probably at the same site, the SS officers' school, and listed in prisoner records as TWL-Thorn (Truppenwirtschaftslager). Prisoners who were tradesmen were put to work finishing and fitting out the building. The subcamp operated between February 8 and April 12, 1941. When the work was completed, the prisoners were returned to the Stutthof camp.<sup>2</sup>

**SOURCES** This subcamp is listed in ITS, *Verzeichnis der Haftstätten unter dem Reichsführer-SS (1933–1945)*, 2 vols. (Arolsen, 1979), 1: 297. Primary sources for this subcamp are found in AMS, Catalog No. I-III, prisoner files.

## THORN-WINKENAU (AEG)

The Thorn-Winkenu subcamp was formed pursuant to an ordinance issued on August 28, 1944, by Richard Glücks, chief of Amtsgruppe D of the SS-Business Administration Main Office (WVHA), which concerned sending 250 Jewish women prisoners to Allgemeine Elektrizitäts Gesellschaft (AEG), a company in Thorn (Toruń). The ordinance was noted in an order by camp headquarters dated September 12, 1944.<sup>1</sup>

There was no special order issued to confirm that the subcamp had been established, as was the case with other camps instituted in 1944. The transport of September 13, 1944, was not the first one sent to Thorn. This is clear from a letter from the subcamp's commandant SS-Hauptscharführer Ludwig Blatterspiel to the clothing warehouse at Stutthof dated

September 4, 1944, regarding a shipment of clothing and underwear made on August 12, 1944. All the women had come to the camp from Riga-Kaiserwald concentration camp on August 9, 1944 (that was the first transport from that camp to Stutthof). This is supported by information on a shoe shipment from Riga-Kaiserwald, narrowing down the date that the camp was formed to sometime between August 9 and 12, 1944. The number of prisoners from that transport can be placed to at least 150, based upon a supply ordering addendum dated September 4, 1944.<sup>2</sup>

Along with Siemens, AEG was one of Germany's largest electrical engineering concerns; it had 264 million Reichsmarks (RM) in authorized capital in 1943. The company employed 175,000 people in 1942; 10 years earlier, it had employed 30,000. The proportion of foreign workers it employed in 1941 to 1942 grew from 25 to 35 percent, on average. AEG manufactured the majority of weapons-related electrical systems, especially for aircraft, submarines, and other warships, as well as for artillery equipment, tanks, and V-weapons.<sup>3</sup>

The next transport of 280 women was sent to Thorn on October 30, 1944. In it were Hungarian Jewish women who had come to Stutthof from the Riga-Kaiserwald concentration camp on October 1, 1944. They had been put to work at the AEG works in Riga; previously they had been at the Auschwitz concentration camp.<sup>4</sup> Several SS men were sent with the Jewish women to Thorn; they had been transferred from the SS-Totenkopfsturmbann (Death's Head Battalion) at Riga to Stutthof on October 25, 1944, and assigned to the AEG subcamp. On the return trip, an escort composed of one noncommissioned officer (NCO), two SS men, and eight sailors from the 1st and 2nd Guard Companies was in charge of transporting 230 emaciated women to the Stutthof camp.<sup>5</sup>

Out of the 680 Jewish women sent to Thorn through late October 1944, 510 were still alive by late January 1945, which means that one more transport of at least 100 people must have come to Thorn in the meantime. The partially surviving hospital records on deaths at Stutthof's subcamps do not contain any names from AEG Thorn, and no personal accounts have been found to illustrate what kind of work was done in the factory or the living conditions in the camp.

The only source that describes the prisoners' situation in this camp is the vestigial correspondence of the subcamp's commandant, Blatterspiel, to the Stutthof clothing warehouse and the Prisoner Employment Department. In it he notes the inadequate and poor state of the clothing of the women who came from the Riga-Kaiserwald concentration camp, who were dressed in light summer clothes and shoes unfit for use. Just a few days after the first prisoner transport arrived, there was a shipment of clothing and underwear to Thorn, which later proved to be highly inadequate.<sup>6</sup>

The housing conditions at Thorn-Winkenu were worse than at the parent camp. Aside from making space available for the prisoners, AEG provided neither sleeping blankets nor straw mattresses. The subcamp's commandant asked the Stutthof warehouse for these items in early September 1944, requesting that two blankets and one straw mattress be sent for

each woman. There was also a shortage of shirts, stockings and underwear. It is not known whether the order was filled because the report for October 1944 is missing.<sup>7</sup>

Working conditions were very hard. This is evidenced by the large percentage of prisoners unfit for labor in late October 1944, due to their health, and the need to replace them with people in better physical condition. The camp statistics from October 1944 through late January 1945 are missing, so an accurate assessment of the scale of replacement cannot be assessed. The Jewish women were put to work at such labor as loading and unloading heavy machines for the factory, which was under construction, working at the river port, or manufacturing ammunition and weaponry.<sup>8</sup>

The evacuation of the detachment on foot began on January 20, 1945. The Jewish women were headed toward Bydgoszcz (Bromberg). The destination was the AEG factory in Germany, and the factory furnishings were evacuated as well. Even before the evacuation, several women including the Freumovits sisters tried unsuccessfully to escape. They were caught and escorted to the factory. There was another escape attempt during the march. The sisters hid with 10 other women. The engineering director of AEG hid 4 Jewish women from the escort in the boiler room.<sup>9</sup> The entire group was liberated on January 27, 1945, by Russian forces that occupied the factory.

The rest of the women evacuated to Bydgoszcz were liberated by Russian forces on January 26, 1945, in the village of Trzecieć (Goldfeld) near Bydgoszcz. During the march, many Jewish women were shot by the escort.<sup>10</sup>

## TRUTENAU

A group of prisoners worked in the village of Trutenau (later Trutnowy) between Käsemark (Kiezmark) and Praust (Pruszcz Gdański) from April 10 to July 19, 1940, on a farm owned by someone named Behrendt (possibly Walter).<sup>1</sup> A labor assignment record in prisoner files documents the detachment's existence.<sup>2</sup>

In 1939, one of the farms in Trutenau cultivated a special variety of rose for the manufacture of rosewater used in the pharmaceutical and cosmetic industries. In November 1939, a detachment of prisoners from the camp at Danzig-Neufahrwasser was put to work there.<sup>3</sup>

**SOURCES** This subcamp is listed in ITS, *Verzeichnis der Haftstätten unter dem Reichsführer-SS (1933–1945)*, 2 vols. (Arolsen, 1979), 1: 298.

Primary sources for this camp are found in AMS, Catalog No. I-III, prisoner files. Information for identifying the farm's owner may be found in *Einwohnerbuch der Danziger Landkreise 1927/1928: Danziger Höhe. Danziger Niederung, Grosses Werder* (Danzig, 1927).

## WESSLINKEN

The first 50 prisoners were sent from Stutthof to the town of Wesslinken (later Wiślinka) on the outskirts of Danzig

(Gdańsk) near Bohnsack (Sobieszewo) on May 29, 1940. They included building tradesmen and workers. They were put to work building and fitting out a brickyard.<sup>1</sup>

The prisoners were quartered in one of the barracks near the construction site. The other barracks were occupied by a group of approximately 200 British prisoners of war (POWs) who were put to work on the same project. When their assigned jobs (such as carpentry, construction work, and so on) were completed, some prisoners were sent back to the camp at Stutthof. New prisoners with other specialties were sent to replace them. Subsequent groups arrived in June and July 1940, one of which returned to Stutthof in mid-October 1940. The detachment was disbanded on December 15, 1940, and the prisoners returned to Stutthof.<sup>2</sup>

The Wesslinken brickyard detachment was reactivated in early 1943. SS-Schütze John Pauls was in charge of it until March 10, 1943, when he was reassigned to Sachsenhausen concentration camp. After the war, Pauls was tried by the Gdańsk Special Criminal Court and sentenced to death; the sentence was carried out on July 4, 1946, in a public execution in Gdańsk.<sup>3</sup>

## ZEYERSNIEDERKAMPEN

In the first transport of November 8 or 9, 1939, 20 prisoners arrived in Zeyersniederkampen (now Kepiny Wielkie); they had volunteered from Stutthof to help build a new subcamp in the delta of the Nogat River.<sup>1</sup> Initially the prisoners were quartered in an abandoned barrack of a Reich Labor Service (RAD) camp. The actual camp, ready to take another 120 prisoners, was erected in mid-December approximately 2 kilometers (1.2 miles) away, between the banks of the Nogat and the levee near the village of Terranova (later Nowakowo). The camp was composed of one large barrack for approximately 150 persons, a separate kitchen, and facilities for the subcamp's commandant and guard staff, which were located outside the camp fence.<sup>2</sup>

The core group of prisoners arrived at camp on December 21, 1939.<sup>3</sup> Prisoners were rotated throughout the subcamp's operation from November 1939 to the spring of 1941.<sup>4</sup> A total of about 160 people lived there at one time,<sup>5</sup> and any vacancies caused by sickness or death were filled by sending additional transports from the camp at Stutthof. A truck would come from Stutthof every Saturday to replace prisoners who had become ill or died.<sup>6</sup>

Until mid-December 1939, while there were only 20 prisoners, the prisoners were supervised by 2 SS men, who transported the prisoners from Stutthof to Zeyersniederkampen. When the camp population had grown to approximately 150, SS-Oberscharführer Paul Görke took over as commandant, followed by SS-Oberscharführer Herbert Baumann. The guard staff was increased to approximately 14 SS men.<sup>7</sup> SS-Unterscharführer Franz Mielenz was commandant from April to July 1940, followed by SS-Oberscharführer Willi Redder.<sup>8</sup>

Housing, hygienic conditions, and clothing were all grossly inadequate. Neither the barrack nor the uniforms were sufficient protection against the weather. There were no bunks in the barrack. Prisoners who arrived at camp in the spring of 1940 reported that they had to sleep with no covering at all. The floor was spread with layers of straw, which was not changed for many months and became a hotbed for germs, causing contagious diseases. The lack of fresh underwear or opportunities to wash, as well as the filth and the climate, caused upper respiratory tract ailments, lice infestation, scabies, and diarrhea, among other ailments. Prisoners could not use the primitive latrine outside the barrack at night; they had to use metal containers left for them, of which there were an insufficient number.<sup>9</sup> The camp infirmary run by Dr. Aleksander Witkowski had no effective medication to help prisoners.

The prisoners were not given anything to eat during work. For breakfast they got black coffee and a piece of bread weighing about 200 grams (7 ounces) with a bit of margarine or beet jam. When they came back to camp after work, they were issued their final meal, most frequently a liter (4.2 cups) of soup made of rotted rutabaga, fresh cabbage or sauerkraut, and sometimes barley with potatoes or beans with a bit of fat. The prisoners' salvation came in the form of food packages sent by their families, who knew where they were, thanks to legal correspondence sent by the inmates and to the intercession of sympathetic locals. Sometimes the packages contained hidden banknotes, with which the prisoners bought bread in the shops in Zeyersniederkampen or Terranova from sympathetic Germans.<sup>10</sup> Correspondence was cut off from December 15, 1939, and after the first escape attempts, visits and food packages were cut off as well. These privileges were restored in mid-1940.

The prisoners were hired out to Deichverband des Kreises Elbing (Dike Formation of the Elbing District).<sup>11</sup> Mostly, they worked building a dike along the Nogat River. Work began at 5:00 or 6:00 A.M. and lasted 10 or 12 hours, depending on the season; reveille was an hour before the start of the

workday. The prisoners worked in several groups, each of which did something different: excavating clay, conveying it in carts to where the dike was being raised, forming the dike, or delivering sod and putting it in with stakes. The design called for a dike 15 kilometers (9.3 miles) long, 3 meters (9.8 feet) high, and 5 meters (16.4 feet) wide at the base. Other groups worked in the camp doing cleanup jobs, in the kitchen or infirmary, or in the transport column delivering supplies for the subcamp. On Sundays the prisoners were hired out to local farmers. In the winter when it was extremely cold and no longer possible to continue working on the levees, the prisoners were sent to dig up old willow trees growing along the route of the planned dike and to cut down reeds and brush used to reinforce the levees. Although this work was one of the easier jobs, it required great stamina because the prisoners had to cover considerable distances over the course of the day. They also removed snow from the road and built barracks in the neighboring village of Terranova.<sup>12</sup>

Worse than the work, however, was the way the SS men and prisoner foremen treated the prisoners. Former prisoner Franciszek Adamczyk testified that during work the SS men would position themselves every 18 meters (20 yards) or so and beat the prisoners with whips. The prisoners were also subjected to so-called cleanliness roll calls, in which they were rolled naked in the snow and beaten with birch branches.<sup>13</sup> Also, before the prisoners entered the barracks, SS men often lined up and ordered the prisoners to run the gauntlet between them while they administered a painful beating.<sup>14</sup>

In the winter of 1940, prisoners caught trying to send illegal correspondence were punished by flogging during the evening roll call. The most trivial offenses at the camp were punished this way, with 25, 50, or even 100 lashes. Prisoner E. Lewandowski, who walked away from camp looking for food, was shot by a guard who treated that as an attempt to escape from the detachment.<sup>15</sup> One Jew, Jakub Apfelbaum, was exposed by a prisoner's denunciation in December 1939; the SS men beat him mercilessly, and the next day they took him away to Stutthof.<sup>16</sup>

It should be stressed that not all the SS men and foremen in the same positions were so cruel; there were highly moral persons among them, including Rev. Józef Szarkowski, Franciszek Zieliński, and SS man Arno Rauchdt. These men were the exceptions, however. The guards' behavior even drew the attention of the local people, who filed a complaint with the Danzig Gestapo. The Gestapo sent an officer to inspect the camp, but although he did find numerous indications of beating and frostbite, none of the prisoners he questioned admitted being beaten, fearing retribution from the guards. The outcome of the inspection was that "we were beaten even more than before," as Jan Urbaniak said.<sup>17</sup>

Conditions at camp definitely deteriorated in late January 1940. That was due to the mostly unsuccessful attempts by prisoners to escape from the detachment and the resultant restrictions imposed by the subcamp's management. The only successful escape from the detachment was that of two sailors

in January 1940. They left the camp even before the barracks had been locked after the evening roll call. They crossed the frozen Nogat River at night unnoticed.<sup>18</sup> Two other prisoners who escaped in the winter of 1939–1940, independently of each other, were caught; one was tortured to death, and the other survived.<sup>19</sup> Władysław Dembski was caught while escaping on July 16, 1940; he died from gunshot wounds, beating, and bleeding.<sup>20</sup> The whole camp suffered the consequences of tightened discipline, such as night roll calls, a ban on correspondence, restrictions on receiving packages and visitors, and collective responsibility of the “neighbors” of any fugitive—the penalty being flogging.<sup>21</sup>

The detachment was disbanded on March 29, 1941.<sup>22</sup> Considering the frequent prisoner replacements, at least 100 should be added to the fixed population of about 160. According to Urbaniak’s testimony, of the 160 persons incarcerated at Zeyersniederkampen in December 1939, only 17 returned to the main camp on November 17, 1940.<sup>23</sup>

## ZEYERSVORDERKAMPEN

A prisoner detachment operated between 1939 and 1944 next to the Nogat River in Zeyersvorderkampen (now Kepiny Małe). It had little in common with the subcamps at Pröbbernau and Zeyersniederkampen on the other side of the river. The prisoners were put to work at local farms or in small tradesmen’s companies.

A detachment was first set up in Zeyersvorderkampen in 1939–1940. This is documented by labor assignment records in prisoner files. They cover the period from November 25, 1939, to June 10, 1940. In all three instances of such records that have been found, the prisoners were hired out to a German farmer named Fast.<sup>1</sup> All the prisoners had been sent from the camp at Stutthof.<sup>2</sup> They represented various trades, from farmworker to merchant to bricklayer.

Another subcamp was activated in the same place in the autumn of 1944, this time with female Jewish prisoners. The subcamp’s operation is documented by a letter of September

26, 1944, from the Zeyersvorderkampen township farm director Johannes Jahn to Stutthof concentration camp headquarters on providing the women with underwear, clothing, and shoes. The letter requested the shipment of clothes and underwear for the women in his administrative region, in the amounts that had been agreed upon with van Riesen, the farm director at Rosenort.<sup>3</sup>

Some 78 women prisoners were put to work at all the farms in Zeyersvorderkampen. That is the subcamp's population as reported by Jahn in late September 1944 when he ordered pullovers and socks. He thought that supplies for the women were inadequate and asked for the prompt delivery of needed items of clothing. The prisoners probably returned to the Stutthof camp in late November 1944 when they had completed the farmwork.

## NOTES

1. According to the *Einwohnerbuch der Danziger Landkreise 1927/1928: Danziger Höhe; Danziger Niederung, Grosses Werder* (Danzig, 1927), 3: 377, Kornelius Fast held the post of Zeyersvorderkampen township administrator (Gemeindevorsteher). But because of the lack of sources from wartime, it is not known whether he continued to serve in that post in the period under discussion. As township administrator he could request prisoner labor at local farms or for the township administration or his own office.

# VAIVARA

Soviet investigators inspect corpses from the Klooga subcamp of Vaivara which have been stacked for mass burning, September 1944.  
USHMM WS #98906, COURTESY OF GFH

## VAIVARA MAIN CAMP

Vaivara<sup>1</sup> was one of the last concentration camps to be established, at a time when two aims shaped decisions of the Nazi leadership: (1) to implement the final stage in the destruction of European Jewry by liquidating all remaining ghettos and (2) to utilize Jewish labor. On June 21, 1943, Heinrich Himmler decreed the closure of the remaining ghettos in the Baltic states, the transfer of ghetto inmates to newly formed concentration camps, and the deportation of as many able-bodied Jews as possible for work in oil-shale production in Estonia.<sup>2</sup> Vaivara was established on September 19, 1943, to hold this Jewish workforce.<sup>3</sup>

The production of oil from shale was the responsibility of the Baltische Öl GmbH or Baltöl (Baltic Oil), a subsidiary of the Kontinentale Öl AG, both operating within the sphere of responsibility of Dr. Krauch, chairman of the board of IG Farben and Generalbevollmächtigter für den Erzeugungsplan der chemischen Industrie (General Plenipotentiary for the Chemical Industry Production Plan). After the German occupation of Estonia in 1941, Baltöl took over and tried to reutilize the oil-mining facilities in northeastern Estonia.<sup>4</sup> In 1943, Baltöl was facing two important developments: first, the German withdrawal from the Caucasus made alternative sources of oil even more important than before; second, there was an increasing shortage of workers, caused in part by the German army's transfer of prisoners of war (POWs) to fortification and other projects. POWs had been the backbone of the Baltöl workforce. Baltöl needed labor to produce oil for the war effort, and Himmler wanted to dispose of a large remaining group of the Jewish population in the Baltics. Vaivara was the result.

At a July 19, 1943, meeting at the Commander of Security Police and SD offices in Reval, the officers made detailed plans for the establishment of Vaivara. The list of those present reveals that all local players were involved: the civil administration and SS-Police in Estonia; the German army (Wehrmacht); Baltöl; the Organisation Todt (OT); Einsatzgruppe Russland-Nord; and Einsatz Baltöl, which was in charge of construction projects.<sup>5</sup> The camp personnel were to be provided by the SS-Business Administration Main Office (WVHA) in Berlin; the WVHA in Riga was in charge locally. The initial establishment of the camp (before personnel were transferred to Estonia) was undertaken by SS-Sturmbannführer Wossagk, who was the head of security (Abwehrbeauftragter) of Baltöl, and, under his direction, by the head of the plant protection force (Werkschutzleiter) Hilgenfeld.<sup>6</sup>

Throughout its existence, Vaivara was characterized by diversity. Two main employers, Baltöl and OT, used a multi-ethnic workforce of Soviet POWs, forced laborers, civilian workers, and concentration camp inmates.<sup>7</sup> Further, several camps at each work site were supervised and administered by

different organizations (POW camps by the Wehrmacht; civilian and forced labor camps by the civil administration, OT, and Baltöl; and the Vaivara subcamps by the SS and Security Police). The Jewish concentration camp inmates were strictly segregated from the others,<sup>8</sup> and Jews and POWs received worse treatment than other workers.<sup>9</sup> This mixture caused numerous frictions in the one year of Vaivara's existence.

The commander of Vaivara was Hans Aumeier, formerly Schutzhaftlagerführer in Auschwitz; his administrative staff consisted of eight SS members. Head of administration was Otto Brenneis. Dr. Franz von Bodmann, SS doctor for all camps, was in charge of monitoring the work ability of inmates, which included curing as well as killing. During an illness in December 1943, Bodmann was replaced by Dr. Krebsbach from Riga. Franz Mang was in charge of a dental station. A branch office of the Deutsches Hygiene Institut in Riga was established in Kohtla-Järve. In general, very few and low-ranking Germans were assigned to Vaivara and its subcamps—in most cases, only a commander and a medical orderly (Sanitätsdienstgrad, SDG). The role of SDGs was unusually prominent; often they also took over the function of camp commanders. This was caused by the disastrous hygienic conditions in all Vaivara camps and by outbreaks of illnesses, in particular epidemic typhus (*Fleckfieber*). From January to March 1944, Bodmann got 10 additional Wehrmacht medical orderlies assigned to Vaivara.<sup>10</sup> In the first few weeks, the newly established camps were often run by OT personnel; some smaller camps remained under OT commanders. One characteristic feature of the Vaivara camps is a frequent movement of SS personnel and inmates from one camp to another. In several cases, camp commanders took inmates they knew with them to new assignments, but in most cases the movement was caused by shifting work priorities and short-term assignments. For presumably the same reasons, several camps that were initially planned for Baltöl plants—such as Slanzy—were not set up. While the SS camp staff remained skeletal, the hierarchy of inmate functionaries was fully developed, ranging from camp elders (Lagerälteste) to elders for sections (Blöcke) and rooms (Zimmer), prisoner police, Kapos, prisoner clerks, doctors, and nurses. The camps were guarded by the Estonian Schutzmannschaftsbataillon 287 and the Russian Schutzmannschaftsbataillon 290. These battalions were under the command of the Commander of the Order Police (KdO) and were assigned to the camps by the SS- and Police Leader (SSPF) Reval. The guards also accompanied inmates to the work sites; the foremen were mostly OT. In some cases, OT personnel were armed to take on guarding functions.

Most of the camps were located in the oil-shale region of eastern Estonia. The administrative staff and the main camp were located in Vaivara. In October 1943, subcamps

(*Arbeitslager*) existed in Klooga, Narva, Soski, Auvere, Kerstowa, Ereda, Jõhvi, Kuremäe, Port Kunda, Kiviõli, and Vivikonna.<sup>11</sup> The mix between Baltõl production sites and Vaivara camps leads to some confusion about the proper names and locations of subcamps. One example is Kohtla-Järve, one of the centers of Baltõl and OT activity. The company lists 1,163 Jews working at Kohtla-Järve and another 856 at Kohtla; but no corresponding camps can be found in the monthly reports by the Vaivara SS doctor.<sup>12</sup> One has to assume that the inmates of either of the subcamps Ereda or Kiviõli were marched to Kohtla-Järve; former inmates often recall the long distances they had to cover to get to and from work. Because of the advance of the Red Army, the more eastern camps had to be evacuated in February 1944; Aumeier's headquarters were moved to Saka. In the same area, the Aseri, Goldfields, and Sonda subcamps were established, together with a group of temporary camps in southern Estonia and, in the summer of 1944, the Lagedi subcamp near Reval. In August and September 1944, the Germans retreated completely from Estonia, and all camps were evacuated. In addition to the Vaivara camps, the Security Police had its own camp system in Estonia for incarcerating real or perceived political opponents.

The majority of Vaivara inmates were deportees from the Vilnius and Kaunas ghettos in the summer and fall of 1943; in many cases, they comprised whole families. Former inmates often recall how and where one after the other of their family members perished, until only they themselves or maybe another survived to see liberation. By the end of 1943, a small group of German and Czech women, who had been deported to Estonia in September 1942 and had been kept in Security Police camps, were transferred to the Vaivara system. Another group of inmates came from Riga-Kaiserwald, and another from Hungary in the summer of 1944. Prisoner numbers from Bodmann's reports are 6,982 in October 1943, a peak of 9,207 in November 1943, and a decline from 8,210 in February

1944 to 6,662 in June 1944. According to former inmates, they received a number upon arrival, which they kept during their numerous transfers to other camps. The numbers of individual inmates in the Klooga index confirm this: many are too high for the total number of Klooga inmates, but they add up to roughly 9,000.<sup>13</sup>

The purpose of the Vaivara camp system was the fullest exploitation of the work capacity of the inmates. For this reason, large killings of the able-bodied did not take place before the retreat. Individual killings, most in a gruesome manner, were whimsical killings by specific subcamp commanders, acting out their murderous impulses at whatever camp they were assigned to. Apart from these individual killings, selections and killings of old and weak prisoners took place on a continuous basis. As whole families were deported from Lithuania, many old and sick people and children found their way into the camps. Already in his October 25, 1943, report, Bodmann euphemistically mentioned that mostly old Jews had "died"—that they were those who could not adapt to the changed conditions and that this would constitute a relief for the camps.<sup>14</sup> Apart from ongoing selections and killings—the reason Bodmann visited the Vaivara camps on a regular basis—two large groups of inmates were deported. In February 1944, 907 old and sick inmates and 111 children were deported to the Riga-Kaiserwald concentration camp. Among the inmates, deportation to Riga-Kaiserwald was equated with death. In April 1944, 500 inmates, including children (who had been kept separately), were deported from Ereda and taken over by the SD. Bodmann gives contradictory information about the final destination of the transport, mentioning both Riga-Kaiserwald and Auschwitz; however, one mother had insisted on accompanying her child and testified later that the transport went to Auschwitz.<sup>15</sup> Inmates suffered from disease, cold, hunger, and exhaustion in large numbers. In all camps, facilities to burn corpses were set up, preferably in somewhat hidden places.<sup>16</sup> The medical personnel tried to control the 1943–1944 typhus epidemic through quarantines and hygienic measures like boiling all drinking water, and they also worked at combating lice and vermin. One witness, however, reports that compulsory washing with hot water on the camp square in subzero temperatures was more detrimental than beneficial to the inmates' health.<sup>17</sup> Nevertheless, Aumeier was congratulated for taking initiative during the typhus epidemic.<sup>18</sup>

Labor in the camp was very hard and often beyond the strength of the inmates. Not only former inmates recall this, but Baltõl and OT reports mentioned this repeatedly. The Jewish workforce was not considered an adequate replacement for the Soviet POWs, who were often miners by profession. Weakened by malnutrition and cold and lacking shoes and clothing, the Jewish contingents were considered capable of only 50 percent of the POW and civilian work capacity.<sup>19</sup> For this reason, the Baltõl management tried to avoid assigning Jews and refused to deport additional Hungarian Jews to their work sites.<sup>20</sup> Some inmates were used as craftsmen in special workshops, producing clothing and shoes. This type of work seemed to have made the most

Soviet investigators inspect corpses from the Klooga subcamp of Vaivara which have been stacked for mass burning, September 1944. USHMM WS #98901, COURTESY OF ESTHER ANCOLI-BARBASCH

sense as far as productivity was concerned. As Baltöl was mainly interested in improving productivity, they supplied additional foodstuffs. Most former inmates recall that entirely insufficient portions were given to them, indicating that the problem lay mainly with the SS camp administration. For the October 1943–June 1944 reporting period, Bodmann lists 1,506 deaths in all Vaivara subcamps, with a peak of 296 in November and December and another 245 in March 1944. This was about 16.5 percent of the camp population.

Evacuations of camps took place several times, causing inmates to endure difficult marches. Only occasionally was transportation provided; during most of the evacuations, prisoners were forced to march without sufficient shoes, clothes, or food. Large numbers of inmates died from exhaustion or, when they were incapable of moving on, were killed. From the German administrative perspective, evacuations were complicated by the fact that different organizations were responsible for different types of inmates. The army moved the POWs, the companies moved their workforce, and the SS moved the Jewish concentration camp inmates. This added considerably to the already existing chaos; but, as usual, Jews and POWs were treated worse than others. Evacuation plans from March 1944 actually detail the plan to march 5,000 Jewish inmates from eastern Estonia via Ereda, Kohtla, and Kiviõli to Riga—a march estimated to take three weeks.<sup>21</sup> In August and September 1944, the final evacuation from Estonia was planned, but it was delayed by a series of conflicting orders from Hitler, first forbidding and then finally allowing evacuation.<sup>22</sup> In this period, inmates were moved further to the west and finally loaded on ships or, because there was not enough ship space, crowded into the Klooga subcamp and a makeshift camp in Lagedi, near Tallinn. During the voyage along the Baltic coast, several ships sank. Most of the inmates were brought to Stutthof near Danzig and after that to other camps in Germany. Some actually ended up in another shale mining facility in Dautmergen, a subcamp of Natzweiler, where they encountered the former commander of Vivikonna and Ereda again. Not all inmates were supposed to be deported, however. In the last days of July 1944, presumably on July 20 and days following, Bodmann conducted particularly strict selections in one camp after another. Former inmates refer to it as the “10 percent selection,” since fully 10 percent of the inmates were loaded on trucks and taken away. In several camps, the already suspicious remaining inmates asked the selected inmates to leave information on the trucks. The trucks returned with bloodstained clothes and messages that the deportees were to be shot near Ereda. All the SS personnel went away for this action and returned in a drunken stupor with bloodstained uniforms. Former OT personnel in Ereda witnessed the mass executions on July 23 and 24, 1944.<sup>23</sup> On September 19, 1944, the last day before the final evacuation, the remaining inmates of Klooga were also shot.

Most of the major perpetrators in Vaivara served in a number of concentration camps during the war and were sentenced after the war for their activities in camps other than Vaivara. Aumeier was sentenced and executed in Poland in 1948; Dr. Krebsbach was sentenced to death in 1946 in Dachau. Some of the minor figures received jail sentences from U.S., Polish, and Soviet authorities. Bodmann committed suicide in May 1945; Brenneis was killed in the last days of the war. The Soviets conducted a trial in 1951 against members of the Schutzmannschaftsbattalion 287.<sup>24</sup> The German authorities conducted a number of investigations against former camp personnel, some of which led to trials. Helmut Schnabel received a life sentence in 1977; former SDG Rolf Klicker received a reduced sentence of six years, because he had been a minor during the war.<sup>25</sup> Ernst Runde was indicted but committed suicide in 1967 in prison. Oskar Helbig was indicted as well, but in the 1970s he was declared unfit to stand trial. Erich Scharfetter fled to Egypt in 1960, when the investigation against him commenced, but returned in 1977 and was given a life sentence in 1980.<sup>26</sup> Wilhelm Werle and Wilhelm Genth were investigated and died in the 1960s; others, like Alfred Engst, died in the 1950s, before the investigations of events in Estonia took a serious turn after the establishment of the Central Office for State Justice Administrations (ZdL) in 1958. Other perpetrators could not be identified, often because witnesses could only remember a last name. The only perpetrator about whom numerous serious allegations were made, who was never located, is Kurt Pannicke. He came from Wittenberg, later in the Soviet occupied zone, and neither the German Democratic Republic (GDR) nor the West German authorities could trace him.

**SOURCES** The most important sources are the reports from the SS camp doctor (Lagerarzt), which cover the period from September 1943 to June 1944. The reports were only discovered in the summer of 2002 in the EHM, holding documents 152/2/40. In the ESTA, the following records have been preserved: R 187 Baltöl, R 169 OT/Einsatzgruppe Rusland-Nord, Einsatz Baltöl, R 966 AL Narva-Ost, R 170 AL Klooga. Witness testimony can be found in German trial records, the most comprehensive at the ZdL case numbers AR-Z 246/59 and AR-Z 233/59. Witness statements can also be found in the oral history collections in YVA.

Not much has been published on Vaivara. The most comprehensive study was written by Mark Dworzecki, who was an inmate himself and conducted postwar interviews with other former inmates: *Jewish Camps in Estonia* [in Hebrew] (Jerusalem: YV, 1970). An article by Alfred Streim gives an overview of the findings of German courts: “Konzentrationslager auf dem Gebiet der Sowjetunion,” *Datte* 5, (1989). A recent, unpublished study by an Estonian historian uses newly accessible material in Estonian archives: Riho Västriku, “KL Vaivara” (unpub. MSS, Tallinn). The diary of an inmate of Klooga has been published: Herman Kruk, *The Last Days of the Jerusalem of Lithuania: Chronicles from the Vilna Ghetto and the Camps, 1939–1944*, ed. and introd. Benjamin Harshav and

trans. Barbara Harshav (New Haven, CT: YIVO Institute for Jewish Research, 2002).

### ASERI [AKA OT OSTLÄNDER LAGER]

The Aseri subcamp was established on May 8, 1944. It held 225 inmates and was monitored by 23 guards. The camp commander was Kurt Pannicke; witnesses recall a deputy nicknamed “Boxer” or “Giraffe.” The SS medic (SDG) assigned to Aseri was Erich Scharfetter. The camp elder was Diller. One witness stated that there were Dutch personnel in the camp, one of whom helped inmates; another, Wilhelm Genth, beat many of them.<sup>1</sup> Inmates either worked in a quarry or laid down railway tracks. Housing consisted of wooden barracks. Even according to the reports of the SS camp doctor, Bodmann, hygienic conditions and food supply in Aseri were inadequate.<sup>2</sup>

In September 1943, French, Spanish, and Dutch forced laborers were working in Aseri; in February 1944, the camp was still referred to as “OT [Organisation Todt] Ostländer Lager.” Vaivara inmates were marched to Aseri and remained there until August. In typical Vaivara fashion, Pannicke was transferred from one camp to another, and he took a group of Jewish inmates he selected with him.<sup>3</sup> According to witness statements, Pannicke knew inmates individually and exhib-

ited a godlike attitude, as expressed in his saying, “I am killing my Jews myself.”<sup>4</sup> Inmates were beaten on a special bench for stealing food during work assignments outside the camp. One witness related a rather unusual experience: a German army colonel requested a daily work detail of 20 inmates for the sole purpose of giving them food.<sup>5</sup>

Bodmann “selected” 10 percent of the Aseri inmates, including children that the inmates had previously been able to protect. After the selection, the remaining inmates heard machine-gun fire near the camp. One witness stated that a wounded survivor came back to report that the victims were shot near Erede; this account would be consistent with the overall pattern of killings after the big selection in the summer of 1944. Pannicke returned with a bloodstained uniform, and when asked what had happened by the inmates who were requested to wash it, he joked that he had been involved in a duel.<sup>6</sup> Some inmates were deported by ship from Aseri via Kiviõli to Stutthof in the summer of 1944; others remained in the Vaivara camp system.

## AUVERE

The Auvere subcamp, which the Germans established in the fall of 1943, was one of the smaller camps. In October 1943, it contained 406 inmates; in November, it held 542 prisoners and was considered overcrowded. In January 1943, the number of inmates was 531, but 487 of those inmates were sent on an evacuation march in February 1943. On February 4, 1944, the camp was considered closed.

The first inmates were transferred to Auvere immediately after deportation from Vilnius and Kaunas; others arrived later via Vivikonna. The first camp commander was an Organisation Todt (OT) member; he was replaced by a German police officer, remembered by inmates as Wittner. He was succeeded by Ernst Runde around Christmas of 1943, who also acted as SS medic (SDG). The camp elder was called Jankelewicz. The work was very hard, consisting of building a narrow-gauge railway in a swampy area, which meant that the inmates were standing up to their ankles in ice-cold water. Others worked at woodcutting. OT supervised the work. The inmates were first housed in a former school building; later *Tonnenzelte*, a sort of emergency barracks, were added.

The typhoid epidemic of the winter of 1943–1944 reached Auvere, and in December 1943, 35 inmates had died and 123 were in quarantine. In January 1944, another 12 deaths were registered. The SS camp doctor, Bodmann, fell ill himself in the December period and was temporarily replaced by Dr. Krebsbach. An inmate acted as grave digger. The food situation was as bad here as in other Vaivara camps. Inmates who worked outside the camp were always trying to obtain supplementary food; 1 inmate, who was apprehended with a piece of bread, was killed by the SDG. Another witness recalled how the SDG shot an unnamed inmate who had fallen to his knees, begging for his life. This inmate had been given a few fish by an Estonian.<sup>1</sup>

Due to the approach of the Red Army, Auvere was evacuated on February 4, 1944, and 487 inmates were forced to march via Vaivara to Kiviõli, a considerable distance in the middle of winter with plenty of snow on the ground. On January 29, 1944, 40 sick inmates had been transported to

Vaivara. The march was supervised by Runde and a Wehrmacht SDG. Runde himself recalled that the marching column stretched to 3 kilometers (1.9 miles) and was guarded by the Estonian police. Most witnesses recall the terrible circumstances of the march, during which feeble inmates were thrown into a lake.

## EREDA

Ereda was operated by Baltische Öl GmbH, or Baltöl (Baltic Oil), as production site (*Werk*) number X. Before the Germans established the main Vaivara camp, the workforce at Ereda consisted of a mix of civilian laborers, prisoners of war (POWs), and forced laborers. A Waffen-SS depot (*Reservelager*) was nearby. In the vicinity of Ereda, there were a number of work sites, such as mines for oil shale, coal pits, refineries (in nearby Kohtla-Järve), and several building sites run by the Organisation Todt (OT).<sup>1</sup> Ereda was one of the first Vaivara camps to be set up, initially only on a temporary basis, and it contained 245 inmates in October 1943. In November, plans were changed, and the number of inmates was raised to 630. They were supposed to build a new camp 10 kilometers (6.2 miles) away. In December, this plan was dropped, and Ereda continued to consist of two, close-by camps, referred to as the lower camp and the upper camp. In December and January, 752 inmates were incarcerated in Ereda, but the number rose sharply with the influx of evacuees, which brought the total up to 1,600 in February and 1,907 in March. In May 1944, there were 1,497 inmates guarded by 61 Russian guards. As of July 19, 1944, 1,132 Jews worked on OT construction sites. The companies considered the number of Jewish inmates to be too high for acceptable productivity.<sup>2</sup>

When the first Jewish prisoners arrived, Ereda was still run by OT. After the takeover by the SS administration, the first camp commander was Heinz Drosihn, with Becker as deputy. Drosihn was succeeded by Helmut Schnabel. Erich Scharfetter was in Ereda during the December 1943–January 1944 period of the typhus epidemic; later Rolf Klicker was SS medic (SDG). Former inmates mention as camp elders Lehmann, Rauch, and Glaser. Some witnesses have bad recollections of some of the camp functionaries, and they commented on the lack of solidarity in the camp.<sup>3</sup> Drs. Konjurski, Ponwaski, and Konis were mentioned as camp doctors. Roughly 1,000 Jewish inmates were sent to Ereda directly after their deportation from Lithuania in August–September 1943, some of whom were moved to Narva (see Vaivara/Narva) after roughly one month. In the winter of 1943–1944, a small number of Jewish women, who had been deported to Estonia from Germany and Theresienstadt in 1942,

were transferred from the Reval prison to Ereda, presumably in an effort to separate all Jewish from non-Jewish inmates, though 1 of them held that this was meant as punishment for maintaining contact with their families at home with the help of German workmen.<sup>4</sup> In February 1944, when the more eastern subcamps of Vaivara were evacuated, Ereda became one of the reception camps. The inmates of Narva, for instance, were marched to Ereda under Schnabel's command, and many of them were shot on the way. Some inmates thus encountered family or friends from whom they had been separated. In the early summer of 1944, Hungarian women were deported to Ereda. According to German witnesses from OT, Ereda was liquidated by the end of July 1944, and—as in Aseri and other subcamps—shortly afterward the victims of the “10 percent action” were shot there.<sup>5</sup>

The most dramatic incident in the history of Ereda is connected with the transfer of the group of women from Reval to Ereda. Camp commander Drosihn fell in love with one of the young women, leading to an improvement in the inmates' living conditions. One witness recalls a New Year's Eve celebration where Drosihn was drinking toasts to the inmates and wishing that everybody would be home the following year.<sup>6</sup> The relationship was discovered, and Drosihn, who must have been aware that the penalty for *Rassenschande* (racial defilement) was death, sought the assistance of his friends in the OT, who helped him to escape and hide. After a few days, however, both Drosihn and the woman were apprehended—either they were shot or they committed suicide. This took place at the end of February or in early March 1944. The episode had a profound effect on the SS camp administration, and strict regulations were implemented to avoid another occurrence. Schnabel took over as camp commander.

Ereda consisted of an upper and a lower camp built on swampy ground. The first inmates had to build their own accommodations; even essentials like a camp kitchen were missing. The housing situation was unsatisfactory, consisting initially of Quonset-type huts, which provided no shelter from the cold. The inmates referred to these huts as “dog-houses.” Inmates' hair sometimes froze to the ground during the night, and they had to cut it off in order to be punctual for roll call. Only in June 1944 was the camp connected to running water, which allowed the inmates to wash daily. The death toll due to the bad living conditions was high: 109 deaths in February 1944 and 161 in March 1944. Because of the numerous construction sites in the vicinity, inmates had to march considerable distances to their workplaces, in the winter and with wooden clogs, which exhausted them even more. After February 1944, the camp became so overcrowded that inmates hardly had room to lie down. In the January–February period, an epidemic of typhus broke out, which added to the general chaos in the camp. Corpses were regularly burned in pits in a clearing in the woods nearby. The sick and the children were confined to the lower camp, where conditions were even more atrocious. On February 14, 1944, all the sick people, together with doctors and nurses and 184 children from the lower camp, were deported. Ereda continued to be used as a collection point for sick inmates; in April

1944, another large group was deported. In July 1944, the “10 percent selection” took place in Ereda as in other subcamps (see “Vaivara Main Camp”), and the camp was evacuated. The inmates were transported by rail, with the exception of roughly 100 people who were left behind, supposedly to clean up the camp.

Schnabel committed numerous acts of atrocity and murder and was considered a sadist. Even former OT personnel commented on the terrible conditions in the camp, the frequent floggings, and the daily deaths of inmates. Several of the killings that Schnabel committed were talked about throughout the camp: one was the killing of two inmates who had asked for a second helping of soup; another, the drowning or starvation (accounts differ) of a newborn baby. Another incident concerned an inmate who, due to illness, could not reach the camp latrines in time and was shot by Schnabel with the words: “Damn dog, you are soiling the white snow.” A young girl was ordered by Schnabel to clean his boots while he was walking around in them, forcing her to crawl on her knees after him while he kicked her in the head.<sup>7</sup> One of the former Jewish camp doctors commented that Schnabel liked to see blood. Only when the treatment by the Jewish doctors gave Schnabel relief from his arthritis did he treat the inmates somewhat better. Schnabel used a great deal of alcohol; to procure it, two youngsters from the camp bartered food supplies for alcohol in the nearby village. Dealings of this nature seem to have made Schnabel somewhat approachable; at times, both he and the SDG could be bribed with valuables.<sup>8</sup> Most of the former inmates comment more favorably on the behavior of the OT men, who tried to improve the food situation.

## GOLDFIELDS (“GOLDFELD”)

Goldfields was part of the Baltische Öl GmbH, or Baltöl (Baltic Oil) concern, named such by a British company in the interwar years. Jewish workers were used for several Baltöl building projects. In February 1944, the Goldfields subcamp opened with 1,200 inmates. In March the number rose to

1,543, but in May there were only 889 inmates in the camp. In July 1944, Baltöl statistics show 405 Jewish workers on Goldfields construction sites.

The camp commander at Goldfields was Fritz Stiewitz. According to one witness, Stiewitz originated from Frankfurt, and some of the female inmates knew him from school (this in reference to the Frankfurt deportees, who came via the Reval prison to the Vaivara camps). According to the same witness, Stiewitz was not so bad by himself, but became cruel under group pressure from other SS soldiers.<sup>1</sup> Inmates remember SS medic (SDG) Erich Scharfetter, nicknamed “Kirkennik,” who was routinely assigned to camps to combat typhus epidemics. In May 1944, the SDGs were Heinrich Helmlinger and Theodor Schmitz. Some inmates remember Raphael Oster as camp elder; others recall somebody named Dipante.<sup>2</sup> In the final period, Kurt Pannicke, who had marched some of the inmates of Aseri to Goldfields, presumably in preparation for the final evacuation, took over as camp commander.

Inmates of Ereda report that they were marched daily to nearby Goldfields to work on construction. When the new camp opened, Stiewitz selected the first group of inmates from those he knew in Ereda. They were housed in unused barracks and worked building railway tracks and on other construction sites. Goldfields was one of the camps to receive the populations of the already evacuated camps. In March 1944, the inmates of Kuremäe arrived in Goldfields, leading to a sharp deterioration in hygienic conditions. All of the inmates were infested with lice. In April 1944, 150 inmates were sent to Klooga, bringing some relief from the overcrowding. Inmates from Aseri recall arriving as late as August 1944. In this period, no productive work was conducted, as everybody knew that the end was near.<sup>3</sup> A large group of inmates managed to escape, but Pannicke organized a search, during which many of the escapees were shot.<sup>4</sup> The final evacuation took place in part by truck. A truck loaded with 50 SS men in black leather coats accompanied them. After an error in direction, panic seized the already apprehensive inmates, who jumped off the trucks and tried to hide. Shots were fired, a few people were killed, but the rest came back and were finally deported from Reval to Stutthof by ship.<sup>5</sup>

## JÖHVI (JEWE)

Apart from oil-shale mining, Organisation Todt (OT) was engaged in multiple projects at Jöhvi, which was listed as Werk IV of Baltische Öl GmbH, or Baltöl (Baltic Oil). The other projects included building fortifications and digging antitank trenches; constructing a power station, a hospital, and barracks; and cutting wood for the construction projects. Jöhvi housed a number of German offices, an Estonian security police outpost, a local army commander (Standortkommandant), and a field hospital (*Hauptverbandsplatz*) located next to a hospital under construction and a big cemetery. It must have been a place of some importance, for when Reichskommissar Lohse inspected the Baltöl and OT sites on September 1, 1943, he visited Kiviõli and Jöhvi.

In October 1943, the first 201 inmates of Jöhvi were placed in unused barracks. While their number slightly increased to 264 in December, the camp never physically grew bigger. It was obviously meant as a temporary camp, because by the end of December, it was closed. One witness recalls that he remained behind with a group to clean up.<sup>1</sup> In February 1944, it was reopened for a short period, this time containing 190 inmates. The barracks for Jewish inmates were close to a Russian camp but strictly separated by barbed wire. OT personnel recalled that the Jews were later replaced by prisoners of war (POWs).

When deportees from the first transport from Vilnius arrived in Jöhvi, the camp was not yet incorporated into the Vaivara system. Even afterward, no SS commander was assigned to Jöhvi, but the camp was run by OT and a camp elder. The OT also supplied the camp guards. Former inmates have positive recollections of the OT supervisor, who on one occasion tore a picture of Hitler from the wall.<sup>2</sup> SS medic (SDG) Erich Scharfetter, nicknamed “Kirkennik,” was the only SS member active in Jöhvi for lengthy periods of time due to his function in disinfecting inmates.<sup>3</sup> In December 1943, an epidemic of typhus erupted. Scharfetter killed sick inmates through injections and shot others who were running a fever, causing widespread panic and several suicides among the inmates. The remaining sick inmates were sent to a hospital in Vaivara.

Jewish female inmates from the Jöhvi camp worked as cleaning personnel in OT offices. A female German office worker, in charge of payment of salaries, recalls that they were pale, malnourished, and insufficiently clad and that she gave them food.<sup>4</sup> Former OT men mentioned that the Jewish cleaners cried because their hair had been cut and that the Jews working on construction complained about hunger.

## KERSTOWA AND PUTKI

The Germans established Kerstowa as a temporary camp in October 1943. Its 348 inmates had to work on a demolition project that was supposed to last for one or two weeks. The camp was not run by SS personnel and was far away from the other Vaivara camps. In November, the camp was dissolved, and the remaining 159 inmates were transferred via Narva to a new camp, Putki.

Putki was located in an area of forest and swamp, housed 145 inmates, and was run entirely by the Organisation Todt (OT). In January 1944, 198 inmates were transferred from Narva, bringing the camp population to 340. The camp operated until February 4, 1944, when the Red Army's advance made the OT retreat. The 334 remaining inmates were marched by Wehrmacht medic Rabel to Vaivara, under terrible conditions, through forests and swamps.<sup>1</sup>

## NOTE

1. Reports of the SS-Lagerarzt, October 25, 1943, November 25, 1943, December 29, 1943, January 26, 1944, February 20, 1944—all: EHM, 152/2/40.

## KIVIÖLI I AND II

Kiviõli was a center of industrial activity: the headquarters of Baltische Öl GmbH, or Baltöl (Baltic Oil), had its office there, and the Mineral Oil Command (Mineralölkommando) and the General Labor Leader (Generalsarbeitsführer) of the Organisation Todt (OT) Industrial Protective Service (Werkschutz, supervised by the gendarmerie detachment leader, Gendarmeriegebietsführer) were stationed there.<sup>1</sup> In addition, a German gendarmerie post and a local headquarters (*Ortskommandantur*) of the German army were located there. The commander of the Security Police of Estonia had a branch office there, headed by Heinz Zielfeld. The various construction projects at Kiviõli were considered of great importance.<sup>2</sup>

In October 1943, Kiviõli contained 448 inmates; they were housed in temporary barracks until additional facilities were built. The number of inmates rose steadily, from 698 in November to 1,300 in February 1944, and to 1,689 in May and June. On July 19, 1944, 1,462 inmates worked at Baltöl construction sites in Kiviõli.<sup>3</sup> In February 1944, 104 old and sick inmates were deported to the Riga-Kaiserwald concentration

camp; in May, 250 sick people from Ereda were brought to the camp; and in June, 200 inmates from Goldfields were transferred to Kiviõli.

Two camps existed—Kiviõli I and II—but they were administered as one. The commander of Kiviõli I was Wilhelm Werle; the deputy commander and SS medic (SDG) was Ernst Runde. A dental station was run by Franz Mang. In March 1944, after the Germans had to leave Vaivara, Oskar Helbig became deputy commander. The camp doctors have been identified as Dr. Wolkowyski and Dr. Naftali Resnik; the camp elder, as Zepelewicz (or Cypelewicz). At a later point, Reissig took over as the commander. The commander of Kiviõli II was Wirker, although Erich Scharfetter acted for him occasionally. In May 1944, 71 guards monitored 1,689 inmates. Some female inmates recall female army auxiliaries (*Blitzmüdel*) as their guards.<sup>4</sup>

Sanitary conditions were initially bad but slowly improved, in part because of security considerations. Baltöl considered the installation of running water a necessity because the use of a common well increased the risk of escapes and undermined the separation of Jewish inmates from others.<sup>5</sup> Communication between the two camps seems to have been possible, and, to a certain degree, contact between male and female inmates was also possible. Kiviõli I was considered the better place; former inmates recall sufficient food—even kosher (without meat)—and celebration of Jewish holidays was possible.<sup>6</sup> The Jewish criminals (*Shtarke*) held a strong influence in the camp.<sup>7</sup>

Former inmates of Kiviõli I recall that Runde harassed them at roll call; they also describe Helbig as a sadist, whereas the commander was seen as a moderating influence. One former inmate, who was deported directly from Vilnius to Kiviõli I and stayed there until mid-1944, describes Runde as the main negative influence in the camp.<sup>8</sup> Both Runde and Helbig are alleged to have killed inmates on big piles of hot slag; Helbig actually had several feeble inmates thrown on it, so that they burned alive.<sup>9</sup> Inmates of Kiviõli II reported that Wirker was quite active in the camp, supervising activities in the sickroom, ordering specific roll calls to be conducted on Sundays, and committing a number of atrocities. The ongoing selections claimed victims from among Hungarian Jewish women, many of whom arrived in the camp pregnant.

The “10 percent selection” (see “Vaivara Main Camp”) took place at both camps, conducted by the SS camp doctor, Bodmann. The camp elder and doctors of Kiviõli I were among those selected. It appears that the lists of “unfit” inmates had been prepared in advance.<sup>10</sup> As in other camps, the inmate in charge of vehicle maintenance looked on the returning truck and found indications in several languages that those selected were being shot close to Ereda.<sup>11</sup> An SS driver returned with his arm wounded and his rifle broken, complaining about “the Jews” who had done that to him; the other SS officers had bloodied and dirtied uniforms and boots; the SS dentist brought a box with gold teeth back. According to a former German police officer, Kiviõli was also the site of the elimination of mass graves by Sonderkommando 1005.<sup>12</sup>

## KLOOGA

The subcamp at Klooga was located west of the city of Tallinn, outside the northeastern mining and oil-shale district, and it was not connected with Baltische Öl GmbH, or Baltöl (Baltic Oil). In 1942, camps for resettlers from the army area “Russia-North,” in Klooga-Lodensee, Polküla, Pakri, and Baltisch-Port, were based at Klooga. In 1943–1944, Klooga was a camp for Russian forced laborers; from 1943 on, it was the barracks grounds and administrative offices of the 20th Estonian Waffen-SS division; and then it became a subcamp

Soviet investigators inspect corpses from the Klooga subcamp of Vaivara which have been stacked for mass burning, September 1944.

USHMM WS #98905, COURTESY OF ESTHER ANCOLI-BARBASCH

of Vaivara. A work detail (Aussenkommando) was located in nearby Laoküla.

The camp population in Klooga was more stable than in other Vaivara camps. Many former inmates stated that they had been deported directly from Lithuania to Klooga and remained there until August–September 1944. In October 1943, Klooga already contained 1,453 inmates; in November, 1,854; and in April 1944, 2,080. In May 1944, there were 2,122 inmates and 112 guards. In November 1943, 250 inmates were sent to work camps near Dorpat; in April 1944, 250 were received from Ereda and Goldfields; and in May, more inmates were received from Kiviõli. Men and women were housed in solid barracks in separate parts of the camp. Running water and elementary sanitary facilities existed; the Vaivara SS camp doctor, Bodmann, considered the conditions in Klooga better than those in any other camp. In the final stages of German occupation of Estonia, many inmates from other camps and the SS camp administration—including Aumeier, Brenneis, and Bodmann—crowded into Klooga, waiting for transport by ship to Germany.

The camp commander was Bock, though it is unclear whether he held that position for the whole period. For the last few weeks in the summer of 1944, he was replaced by Wilhelm Werle. The SS medics (SDGs) were Wilhelm Bahr and Karl Theiner (confirmed for May 1944); inmates name others, among them Wilhelm Genth. Female inmates were guarded by female SS guards, one of whom was transferred from Ravensbrück. Sources mention Melzer and Frieda Beiwill as camp elders; others mention Fried and Muskat. Jewish camp police were present, and inmates were assigned as work supervisors. Former inmates also speak about the presence of organized Jewish criminals from Vilnius (*Die Shtarken, unsere Unterwelt*), which, contrary to the other inmates' apprehensions, turned out to be a positive element, organizing the stealing and distribution of food.<sup>1</sup> Witnesses also speak positively about an SS man in charge of supplies, who would give them the opportunity to steal or barter for food and bring it back to the camp.<sup>2</sup> This story is confirmed by the former cook of a navy work detail in Klooga.<sup>3</sup> Dutch civilian laborers working close by also supplied inmates with food.<sup>4</sup> According to criminal investigations conducted by the Estonian security police, a lively trade bartering clothes for food took place between Klooga inmates working outside the camp and the local population, in particular Russians from the resettlement camp.<sup>5</sup>

Work consisted of the production of concrete mines supervised by the Organisation Todt (OT) and a special command of the German navy, construction activities under the OT, or work at a sawmill. The OT also worked with non-Jewish forced laborers. A card index of inmates of Klooga and their work assignments gives an overview of the work details, which included pouring concrete, construction, transport, the sawmill, craft shops, cleaning details, and the army supply depot Reval (*Truppenwirtschaftslager*).<sup>6</sup>

Former inmates recall few instances of killings before September 1944. One scene that many remembered took place upon arrival of the deportation train. After disembarking, in-

mates had to line up in front of a long table and deliver their valuables or money to the SS. One former Jewish Vilnius ghetto policeman obviously tried to conceal money and was shot on the spot in public view. Bodmann and the medical personnel repeatedly killed sick inmates with injections. Corporal punishment was meted out; on one occasion, an inmate was beaten to death by three SS men. Different variants exist about the killing of a newborn baby, which a medic with the nickname “Antek” burned in the oven of the sawmill. Other atrocities are attributed to Antek as well; and several inmates claim that he was in fact Wilhelm Genth. However, many of the allegations do not coincide with the established stages of Genth’s camp career. Other sources claim that Wilhelm Bahr murdered the baby; Bahr was confirmed as a medic in Klooga.

Klooga was liquidated on September 19, 1944. Inmates from outside work details were brought back to the main camp, which was cordoned off with the help of units of the 20th Waffen-SS Division under the command of Sturmbannführer Georg Ahlemann.<sup>7</sup> The SS tried hard to avoid a panic among the inmates and promised that everybody would be evacuated to other camps in Germany. They even provided a particularly good meal. It cannot be ascertained who was in command on that day; the obvious person would be the then-camp commander Werle, although he denied this and claimed that the (higher-ranking) Verwaltungsführer Brenneis had taken over. Apart from the Vaivara personnel present in Klooga, a group of 20 or 30 people from the Commander of Security Police and Security Service in Reval arrived on the morning of September 19 to carry out a mass killing. All the inmates had to sit down cross-legged on the camp ground. Several hundred young men were then called up and had to carry stout pieces of wood out of the camp. After that, inmates were marched out of the camp in small groups. At some point, the sound of gunfire confirmed the suspicions of the waiting inmates; in addition, 1 man came running back and shouted warnings before he was shot. In the ensuing panic, over 100 inmates were able to flee and hide. The wood that the inmates had carried had been used to form pyres. People were shot and fell onto them, then a new layer of wood was added and the next group shot. Other inmates were shot in a shed, but several people escaped before it was doused with gasoline and burned. The pyres were also set on fire. Russian prisoners were shot as well.

At the end of the day, the Germans left the camp. The inmates in hiding were liberated by the Red Army a few days later. The Red Army widely reported on what had happened and took pictures of the execution site, and the Klooga mass murder was introduced in the Soviet trial against Friedrich Jeckeln and others in Riga in 1945–1946. For these reasons, this mass killing and Klooga itself have become more widely known than other subcamps where similar events took place—for instance, Ereda.

## KUREMÄE

The first 150 inmates of the Kuremäe subcamp were housed in a former community center (*Gemeindehaus*). Everything was lacking: food, water, latrines, shoes, and clothes. Even the Vaivara SS camp doctor, Bodmann, remarked on the desolate conditions. The inmates had to build the fences enclosing the camp themselves; later a few emergency barracks (*Tonnenzelte*) were erected. Some people were directly deported from Kaunas to Kuremäe; others arrived later via other camps. Inmates worked on a narrow-gauge railway. In November 1943, the number of inmates increased to 462. Bodmann complained about the high percentage of people unfit for work but mentioned that the numbers had “decreased.”<sup>1</sup> From this remark one can conclude that the 33 deaths registered in November were not due to natural causes. In December 1943 and January 1944, the number of inmates was slightly lower, and 10 and 14 deaths occurred, respectively. In February 1944, the population sharply increased to about 850, due to the transfer of 437 inmates from Soski. On February 8 and February 16, inmates were killed by Soviet artillery at their work sites. Kuremäe was closed in March 1944.

The camp commander was Alfred Engst; the SS medic (SDG) was Knott. SDG Erich Scharfetter was also present. The guards were Russians or Ukrainians. Dr. Dworzecki was the camp doctor. Later, at the time of the evacuation of most eastern camps, Wilhelm Genth, who was acting as commander in Soski, marched the Soski inmates to Kuremäe with the help of the Estonian guards. The inmates recall having “been driven like cattle” and that Scharfetter killed several people on the way.<sup>2</sup> After Kuremäe was evacuated, the inmates were absorbed into other camps. Several witnesses list Goldfields as the next station.

Scharfetter was infamous for his acts of cruelty; he killed inmates with injections but also by cutting their throats or with a pickax. An inmate recalls the murder of 19 sick inmates; later, that inmate, who had to burn the corpses, recounted that all 19 had wounds inflicted by a pickax.<sup>3</sup> A German court sentenced Scharfetter to life imprisonment for 18 counts of murder.<sup>4</sup>

## LAGEDI

The subcamp at Lagedi existed only briefly, approximately from July to September of 1944. Entries on transfers in the Klooga card index indicate that it was considered a work camp.<sup>1</sup> When the transports of inmates coming from camps evacuated in the second stage of the retreat could not be housed in Klooga, a camp was erected close to Reval in Lagedi near the railway line. Inmates were initially living in the open; later they constructed temporary shelter. In August 1944, material to erect barracks was supplied by Klooga. The camp commander was Helmut Schnabel. SS medic (SDG) Scharfetter seems also to have been present at one stage, and there are allegations against him of killings of inmates in pairs. At one point the camp was bombarded by the Soviets, and some inmates were wounded. In the final evacuation, the inmates were transported by ship to the Stutthof concentration camp. When they left, only a group of approximately 80 inmates remained to clean up. Former inmates later heard that the 80 were killed after they performed the work. The German camp personnel shot them after the Estonian guards refused to do it.

On August 18, 1944, 500 inmates from Klooga were brought to Lagedi, which was at that point empty except for camp commander Alfred Engst and two Jews. Some inmates have positive recollections of Engst; for instance, he allowed them to bathe once a week. The inmates had to dig antitank trenches. Shortly before the evacuation, the Vaivara SS camp doctor, Bodmann, conducted a final selection. On September 18, 1944, Krebsbach, Brenneis, and other SS officers arrived to tell Engst that the camp inmates would be evacuated to another location. Inmates were driven away by truck. The last truck containing members of work details was delayed, and upon arrival at its destination—a clearing in a wooded area—the inmates overheard the driver being told that he was too late. They were taken to Reval, where they spent the night in the prison, and then they were brought to Klooga on September 19. Later they realized that all the others had been shot in the woods, but they were brought back to be killed in the big action in Klooga. A truck with female inmates also arrived too late for the execution in the forest, and they were then transported back to Klooga via the Reval prison.

NARVA [AKA NARVA-OST]  
(AND HUNGERBURG)

The Germans established the Vaivara subcamp Narva-Ost (as the official letterhead stated) in the fall of 1943, when Kurt Pannicke was transferred there with 500 inmates. Other inmates arrived from Vivikonna or, at later points, from other camps. One former inmate recalls that he volunteered for Narva in order to get away from the terrible conditions in Ereda.<sup>1</sup> In October 1943, the Vaivara SS camp doctor, Bodmann, listed 1,548 persons at Narva; in November, 1,693. In November 1943, 300 inmates were sent to a work detail (Aus-senkommando) in Hungerburg (Estonian: Narva-Jõesuu). Consequently, the population decreased to 1,290 in December, then to 1,004 in January. In February 1944, Narva was evacuated, and 733 inmates had to march for 20 hours to Vaivara.

The Narva camp was located in a former factory; the inmates lived in factory buildings, men and women in separate sections. The SS medic (SDG) was Ernst Runde. Helmut Schnabel acted for Pannicke in January 1944 when the latter was ill. Diller was named as camp elder. The camp clerk (Schreiber), a man called Brojde, or Broido, was well known among the inmates from Vilnius, because he had once been a Lithuanian consul. The guards were Estonians and Latvians. From the reports on the shooting of two inmates—who were allegedly trying to escape—the guard figures as a “Schutzmann.”<sup>2</sup> Dutch laborers worked close by; their food was prepared in the so-called Dutch kitchen.

Work consisted of building fortifications and digging anti-tank trenches for the Pantherstellung, an army defensive network, as well as roadwork, woodcutting, and construction projects by various companies under the auspices of the Organisation Todt (OT). The Pantherstellung was given high priority; on March 1, 1944, the army planned to assign 3,000 Jewish workers to this project.<sup>3</sup> Surviving OT invoices for compensation paid for the laborers working on their construction sites show an 11-hour workday.<sup>4</sup> Inmates in the Hungerburg camp did forestry work. This camp was run by OT. When a typhus epidemic struck, however, SDG Scharfetter was temporarily transferred there. In January 1944, the subcamp was closed.

The surviving records show that the camp was organized in sections (*Blöcke*) and rooms (*Zimmer*); transfers from one room to another were recorded, as well as the number of sick inmates in the sickroom (*Revier*) or the amounts of wooden clogs or pieces of clothing distributed to inmates.<sup>5</sup> The recollections of former inmates create a not-so-orderly picture of a world of hunger, cold, exhaustion, sickness, lice, and typhus. Food was entirely inadequate; inmates recall receiving a daily ration of 200 grams (7 ounces) of bread and 0.5 liters (2 cups) of soup. Even Bodmann admitted that the work at Narva was extraordinarily hard and the conditions bad. The number of deaths was high—125 in December 1943 alone. The few surviving camp records report several cases of inmates leaving their workplace to beg for food. Malnutrition led to famine

edema, and typhus was rampant. As early as November 16, 1943, inmates attempted to escape. (The Estonian Security Police helped track down escapees, as a warrant indicates.)<sup>6</sup> One former inmate recalled that he escaped and went to town, where he tried to find work, but he was ferreted out by an informer and was returned to the camp via the police prison.<sup>7</sup>

On top of the overall bad conditions, the SS officers running Narva were of a particularly murderous disposition. Pannicke was only 26 years old, and he exhibited a strange mix of favoritism toward certain inmates and, at the same time, extreme cruelty. He seems to have enjoyed the limitless power his position gave him, telling inmates that their lives were entirely in his hands.<sup>8</sup> At other times he could joke with them and show concern for their well-being. During marches he made them sing Jewish songs.<sup>9</sup> Pannicke also enjoyed his material advantages: he forced an inmate shoemaker to steal leather from the OT to make boots for his girlfriends, and he gave jewelry or gold to the camp elder to buy him additional food.<sup>10</sup> Mimicking the sound of his name, inmates nicknamed him “Peiniger” (Torturer).

Runde had the nickname “Meine Herren!” (Gentlemen!) because he used to publicly address inmates this way. Helmut Schnabel was not stationed in Narva but visited his friend Pannicke often. On these visits, excessive consumption of alcohol and murderous rampages were common. One of the worst episodes occurred around Christmas 1943 or New Year’s Eve 1944, when Pannicke and his friends walked onto the camp ground and beat and trampled several inmates to death in full view of the prisoners standing to attention. Many witnesses also recall the deportation of Brodje, one of Pannicke’s former favorites, presumably during the “10 percent selection.” When Pannicke gave Brodje’s leather jacket to another inmate, everybody knew what his fate had been.

Pannicke regularly beat inmates at roll call, forced them to stand overly long at attention as punishment, killed weak people or threw them into a canal adjoining the camp grounds, and drilled them to remove their caps and put them back on with military precision. Runde regularly checked the camp infirmary and throttled sick inmates. The room elder (Stubenältester) then removed the corpses and took them off the list of inmates, which Runde then countersigned. Sick people were also killed through injections. The background for this can be found in Bodmann’s reports: in November 1943, he complained about the high number of old inmates but hoped that by the “harsher measures” (*bärteren Masstab*) applied by Runde the numbers could be decreased. In December, most old Jews were reported to have died. At the time when the typhus epidemic was rampant, one of the inmates recalls Bodmann saying that the best thing would be to raze the entire infested camp.<sup>11</sup> Corpses were burned in a factory oven on a regular basis. Feeble inmates were also “finished off” by the work supervisors.

In February 1944, Narva was evacuated due to the advancing front line; the inmates were marched via Vaivara to Ereda. Schnabel may have supervised the march; other witnesses recalled Pannicke as supervisor. The march claimed many victims.

## PANKEWITZA

The Germans established a camp at Pankewitza, 50 kilometers (about 31 miles) west of Pleskau, in November 1943. Two hundred and fifty inmates from Klooga were transferred there on November 11 and housed in barracks. For December, the same numbers are listed.

No further information on this camp is available.

**SOURCES** For all relevant sources, see “Vaivara Main Camp.”

Ruth Bettina Birn

## PETSERI, ÜLENURME, KULUPE

In January 1944, 198 inmates were registered at the work camp at Petseri; 3 deaths occurred during that month. There were 127 inmates in the nearby camp at Ülenurme, and 299 in Kulupe. These camps were too far away from the headquarters in Vaivara to be inspected regularly by the SS doctor. The SS medic (SDG) Karl Theiner was in charge of all three camps. In March 1944, 513 inmates from all three camps were deported, and after a German army unit refused to allow Jews into their delousing facilities, the prisoners were brought to Riga-Kaiserwald. Former inmates recalled that they worked on a railway originating in Dorpat and that camps were shifted according to the progress of construction.<sup>1</sup>

## PORT KUNDA

A subcamp of Vaivara, at Port Kunda, was established in the autumn of 1943 with the purpose of supplying the Port Kunda cement factory with manpower. The factory was situated on the north coast of Estonia between Tallinn and Narva. It was built in the 1890s by the then-largest Danish industrial corporation FL Smidth & Co., which took over the ownership of Port Kunda in 1922 in cooperation with Swedish interests. Port Kunda Cement, with approximately 1,200 workers, was self-sufficient in all raw materials. It was run by Danish engineers until 1940, when the factory was nationalized in the wake of the Soviet occupation of Estonia. Soon after the German attack on the Soviet Union in 1941 and the subsequent occupation of Estonia, negotiations between the German and the Danish governments were initiated concerning a Danish takeover of Port Kunda. On the Danish side, negotiations were conducted by Minister of Public Works Gunnar Larsen, who was able to utilize his personal connections with German Minister of Armaments and War Production Fritz Todt. In alliance with Todt, Larsen bypassed the German Foreign Ministry and instead approached newly appointed Minister of the Occupied Eastern Territories Alfred Rosenberg, who was eager to produce political results. Negotiations were probably facilitated by the fact that, in 1935, Larsen, an engineer who studied at the Massachusetts Institute of Technology, had taken over the leadership of FL Smidth & Co. and was now both director and chairman of the board of that corporation. Thus, already in the autumn of 1941, the former director of Port Kunda, Theodor Hansen, returned to the factory; and during Larsen's official visit to the Baltic lands, the Reichskommissariat Ostland, in April–May 1942, the factory was formally handed over to the Danes. The reinstallment of the former owners was one of the few tangible results of the work accomplished by Larsen and the so-called Danish Committee for the Eastern Areas, initiated by him and established under the auspices of the Danish Foreign Ministry.

At Port Kunda, cement production had already commenced in August 1942, but it was seriously hampered by a chronic shortage of labor, and Hansen repeatedly asked the local German authorities for extra manpower—specifically, 200 men for the oil-shale quarry at Ubja.<sup>1</sup> At the same time, the FL Smidth & Co. headquarters in Copenhagen urged Reichskommissar Hinrich Lohse to solve the problem. The Technisches Hauptamt Estland regarded Port Kunda Cement—Estonia's only cement factory—as crucial for the supplying of cement for the Organisation Todt (OT); and in the summer of 1943, Port Kunda Cement was characterized as an armaments concern (*Rüstungsausbau*) of decisive importance to the war (*kriegsentscheidender Bedeutung*). The same year, the factory produced 49.3 tons of cement, covering 90 percent of the minimum demand in the Generalbezirk Estland.<sup>2</sup> In September 1942, 40 local Roma (Gypsies), who had been interned by the occupation authorities, more than half of whom were women, were set to work at the factory. Later that year, an extra 62 refugees and settlers from the Leningrad

area arrived with their families. When in April 1943 these people were shipped to Finland as part of a German-Finnish settlement program, production at the factory came to a standstill.<sup>3</sup>

Heinrich Himmler's order of June 21, 1943, to dissolve the Jewish ghettos of the Reichskommissariat Ostland and set the prisoners to work in the camps of the Estonian oil-shale areas helped solve the problem. On September 15, 1943, Vaivara was established at Narva as the main camp for 27 work camps in northern Estonia. A few weeks later, a camp connected to Port Kunda Cement was set up. On October 10, 1943, the first contingent of Jewish prisoners—approximately 60 men and 10 women—arrived from the ghetto of Vilnius and were put behind barbed wire. Shortly thereafter, they were joined by up to 200 Jewish prisoners who were among those evacuated from the Kaunas ghetto on October 28.<sup>4</sup> Thus, from October 1943, there were two camps at Port Kunda. One was the “Jewish Camp” situated in the woods at a closed-down oil-shale quarry at Vainamoisa, approximately 11 kilometers (6.8 miles) outside Port Kunda. Every day, the Jews were marched from their wooden barracks to the limestone quarries at Arro and Allofer and the oil-shale quarry at Ubja, where they worked under inhuman conditions. The limestone and oil shale they mined were transported by train to the cement plant at Port Kunda. At times, some of the Jewish prisoners were sent to Port Kunda to assist in cement production. The camp at Vainamoisa was guarded by the Training and Reserve Battalion 20 of the Estonian SS, commanded by the German SS-Unterscharführer B. and a few other German SS. Information is unavailable about whether any of these people were ever tried before a court after the war.<sup>5</sup>

The other camp was a stone house (still standing in 2006) on the factory grounds, where the Gypsy families lived. Guarded by Estonians, they carried out the most exhausting work at the plant, reloading the oil shale as it arrived from the quarries outside Port Kunda. At the time of the Danish administration from 1941 to 1944, one Gypsy was shot while trying to escape. The surviving Gypsies were released on the day before the arrival of the Red Army in the summer of 1944.

The Jews and Roma at Port Kunda's two camps endured hard physical labor. According to survivors, the commandant would often hit and threaten the prisoners, leaving them to wait for hours in the cold when they had finished work. Hansen left Port Kunda immediately after the arrival of the Jews, leaving the administration of the factory to the remaining five Danish engineers. According to an interview with one of the engineers, the inmates were given the same quantities of food and cigarettes as the staff.<sup>6</sup> In February 1944, as the German-Soviet front drew near, production facilities were taken over by the German authorities.

As many as 500 people might have worked at Port Kunda's limestone and oil-shale quarries when the factory was abandoned in July or August 1944. Shortly before the evacuation, elderly people and children were taken away and shot in the woods. The surviving prisoners were sent to Tallinn and were

taken by ship to Danzig/Gdańsk, where they were set to work in the Stutthof concentration camp. The few survivors were finally marched to Germany, where they were liberated in the spring of 1945.<sup>7</sup>

The FL Smidth & Co., later FLS Industries, was partially compensated for its loss of property by the Soviet authorities in the 1960s, but in 1997 the corporation again claimed compensation, this time against the newly reestablished Estonian state. The claim was given up when shortly thereafter it was revealed in the Danish media that the corporation had been involved in the use of forced labor during the war. FLS Industries then initiated a search for survivors. A total of 12 surviving Jews and Roma from Port Kunda were thus compensated economically for their suffering during World War II.

**SOURCES** The history of the FL Smidth & Co., the Danish Committee for the Eastern Areas, and the cement plant and labor camp at Port Kunda is treated extensively in Joachim Lund, *Hitlers spisekammer* (Gyldendal: Copenhagen, 2005), a summary of which can be found in Joachim Lund, “Denmark and the ‘European New Order,’ 1940–1942,” *CEH* 13:3 (August 2004): 305–321. On the early history and geographic details of Port Kunda Cement, see “Cementfabriken ‘Port-Kunda’ med tilhørende bivirksomheder” (unpub., FL Smidth, 1932). Figures on cement production in the Reichskommissariat Ostland are given in “Abschlussbericht des Wirtschaftsstabes Ost 1944–1945,” printed in Rolf-Dieter Müller, ed., *Die deutsche Wirtschaftspolitik in den besetzten sowjetischen Gebieten 1941–1945* (Boppard, 1991). Survivors’ accounts from the Estonian camps are published in Ilya Ehrenburg and Vasily Grossman, eds., *The Black Book* (New York, 1981), pp. 390–398.

Primary source material on the labor camp and production at Port Kunda include Danish as well as German archival sources. The DNA in Copenhagen holds the archives of the Committee for the Eastern Areas of the Danish Foreign Ministry as well as the diary of Minister Gunnar Larsen. Details of the labor camp are given most extensively in the postwar trial of the director of Port Kunda, Theodor Hansen, in the ACCC, 21. Dept. No. 477, 1946 (RA-ZMLF, Copenhagen). Additional information on Port Kunda Cement is found in the archives of FLS Industries (Copenhagen). Internal correspondence of the German authorities and their correspondence with the Danish counterpart are to be found in the PAAA, Büro Staatssekretär I (Berlin), and the archives of the Ministry for the Occupied Eastern Territories (BA, R 6, Berlin). Part of the documents are printed in German as well as in Danish in *Beretning til Folketinget*, afgivet af den Parlamentariske Kommission, etc. (Copenhagen, 1945–1953). The BA branch in Aachen holds the

*Tätigkeitsberichte* of Technisches Hauptamt Estland, Gruppe Bauwirtschaft, as well as Hauptamt IV (Technik) beim Generalkommissar in Reval [Tallinn] and the Organisation Todt/Einsatzgruppe Russland Nord (esp. R 50 I/391–396). See also Kriegstagebuch für das Wehrwirtschaftskommando Reval (BA, R 91, Reval/2, Berlin). A few surviving documents of the Sipo in Reval regarding the Jewish camps exist in Osobyj Archiv (RGVA) 504 K/2/8 (Moscow).

Additional information was given in interviews with former engineer at Port Kunda Tage D. (Copenhagen, 1993 and 1994) and surviving prisoners Abram Majerowitj Krein in 1944 (ZSL-L, 110 AR 1409/97). In 1997, William Kagan and Charles Lubock, both living in the United States and located with the help of the USHMM, were interviewed by Danish journalist Lisbeth Jessen, as was the daughter of Lejb Radzelis, also a former Port Kunda prisoner (Dahlin et al. 2002; Lund 2005), as well as Port Kunda residents Pauline Kroon, Ursel Onk, and Arnold Emme (cited in Lisbeth Jessen, “F.L. Smidth i Estland,” in *Magtens bog*, ed. Ulrik Dahlin et al. [Aschehoug: Copenhagen, 2002], pp. 876–896).

## SONDA

The Germans established the camp at Sonda with 200 inmates on February 20–22, 1944, during the second phase of the existence of the Vaivara camp system. Sources show 293 inmates in March 1944; the number declined to 270 by June. Inmates were transferred to Sonda from Narva or from other camps after their closure (see Vaivara/Narva). Witnesses recall Wirker as the first commander, and then Reissig. Prisoner work consisted of clearing forests. The Vaivara SS camp doctor, Bodmann, considered this light work, requiring little strength, while former inmates recall deaths caused by exhaustion and illness.<sup>1</sup> In May, sick inmates from the camp hospital (*Krankensammellager*) in Ereda were transferred to Sonda. Camp statistics show 6 deaths in March, 8 in April, and

7 in May and in June. On May 26, 1944, the SS medic (SDG) was Wilhelm Genth, and the camp guards numbered 25.

### SOSKI

Soski was located near Lake Peipu in a densely forested, swampy area in Estonia. In October 1943, 495 inmates were housed there in makeshift barracks, sleeping on the bare ground. The number of inmates remained roughly the same until the camp's evacuation. In December 1943, the camp commander was Reissig. Some former inmates report arriving in a first group of 150 people from Ereda (see, Vaivara/Ereda) with Reissig and that Alfred Engst became his deputy. Others recall Engst as the first commander. All seem to remember that Engst was much worse than Reissig. In the winter of 1943–1944, SS medic (SDG) Wilhelm Genth arrived for a short period, presumably to act for Reissig, who had contracted typhus and was transferred to the military hospital in Narva (see Vaivara/Narva) on December 21, 1943. According to reports from the Vaivara SS camp doctor, Bodmann, Genth had already made an unsuccessful attempt to reach Soski in November.

Witnesses recall laying railway tracks and loading and unloading boats on the nearby river and that no Organisation Todt (OT) personnel were present in the camp. Work was very hard. One inmate remembers Soski as the worst camp in which he had ever been imprisoned.<sup>1</sup> While no organized killings took place, inmates died slowly of starvation. In December 1943, 23 deaths were registered. An inmate died after a severe beating. On February 3, 1944, the Red Army was only 4 or 5 kilometers (2.5 to 3.1 miles) away, and the Germans suspected Jewish inmates of contacting Soviet partisans. Bodmann received the order to go to Soski and organize a retreat. SDGs Genth and Lingg led the march over frozen swamps to Kuremäe (see Vaivara/Kuremäe). Several inmates died due to the harsh conditions.

### VAIVARA SUBCAMP

Vaivara was home to the staff of the entire Vaivara main camp under Hans Aumeier and also to a subcamp that served as a transit camp for newly arriving inmates before their transfer to other subcamps. In September 1943, this camp held 202

inmates; in October, 1,237; and in February 1944, 1,292. Because of its function as a transit camp, the Vaivara subcamp contained a high number of old and infirm inmates, as well as children. The main camp's SS doctor, Bodmann, mentions 202 children in October 1943, crammed into a barrack, which he saw as an inevitable burden on the camp for “security reasons.”

The first inmates arrived in the Vaivara subcamp during the summer of 1943; one inmate remembers the date as August 6.<sup>1</sup> For a brief period, an Organisation Todt (OT) man was in command; after a few weeks, Kurt Pannicke took over, until he was transferred to Narva (see Vaivara/Narva) at the end of September. In that period, inmates recall Diller as camp elder, who went with a number of other inmates to Narva with Pannicke.<sup>2</sup> From the end of September or early October 1943 until the evacuation of the camp in February 1944, Helmut Schnabel was commander. He brought inmates with him from his previous camp, Vivikonna (see Vaivara/Vivikonna). Oskar Helbig was Schnabel's deputy. Other inmates recollect Fritz Stiewitz and Adolf Kley acting for Schnabel toward the end. SS medics (SDGs) named were Heinrich Hemlinger, Rolf Klicker, and Heinrich Schattkus. Several SDGs were assigned to supervise the evacuation marches, where female guards were also present. The camp elder under Schnabel was called Meir Zwei; other inmates say it was Isaak Jutan. The SS personnel from nearby headquarters also made appearances in the work camp.

Inmates did labor in the forest, on the railway line, or at construction sites. Work was organized by the OT. Dutch workers were housed close by, and some female camp inmates worked in the so-called Dutch kitchen. The Vaivara subcamp was a central point for other camps, with a camp pharmacy delivering medicine to all the affiliated work subcamps. Inmates who attempted to escape had to wear a piece of red cloth on their chest and were moved from their individual camps to Vaivara.<sup>3</sup> In December 1943, typhus broke out; 20 percent of the inmates succumbed to the epidemic, and sick inmates from other camps were transferred to quarantine in the Vaivara camp hospital.

Food was insufficient in Vaivara. Former inmates recall receiving 125 grams (4.4 ounces) of bread and some soup and tea each day, leading to hunger-induced illnesses. Craftsmen were in a better position because they arranged to trade food for their products, making use of those in the work details outside of the camp. Several SS men and Germans from other organizations working close by had caps or garments custom made by Jewish craftsmen.<sup>4</sup> A former Vaivara cap maker could still remember Aumeier's and Bodmann's head sizes in his postwar statement.<sup>5</sup>

Continuous selections were conducted; though they were considered a secret, inmates found out that those selected were shot 5 kilometers (3.1 miles) away from the camp, in the woods.<sup>6</sup> Sick inmates in the camp hospital were killed with injections. A special command for burning the corpses was set up.

Both Pannicke and Schnabel inflicted continuous punishment and torture on the inmates. Pannicke used to drill in-

mates during roll call; Diller gave the commands for the “caps on, caps off” game. One former inmate had no positive recollections of Diller in general; he is alleged to have stolen valuables.<sup>7</sup> Schnabel was zealously active in Vaivara as in his other assignments, searching the barracks for inmates dodging work, beating inmates who spilled their soup, forcing the whole camp to do demeaning exercises during roll call, and killing inmates who had stolen potatoes or received a second helping of soup.

Many former inmates recalled two particular atrocities. One was the killing of Dr. Katz, a dentist, who as an older man could not work anymore and was hiding during the day in the barracks. Schnabel found him, beat him, and while he was lying on the ground, poured a bottle of Lysol into his mouth.<sup>8</sup> The second incident was the killing by Pannicke of an inmate who had been an official of the Jewish council in Vilnius. During roll call, the whole camp was made to stand to attention and watch while the inmate was slowly tortured by having to do “exercises” (*Sport treiben*), leading to his death.

In January 1944, inmates were sent to the Vivikonna subcamp, thus relieving Vaivara’s overcrowded conditions; in the same month, however, the inmates of the closed camps Hungerburg and Jõhvi (see Vaivara/Narva and Vaivara/Jõhvi) arrived at the Vaivara subcamp. In February 1944, 604 sick people and 185 children were sent to Ereda (see Vaivara/Ereda). By this time, the first wave of evacuations from the East had arrived in the Vaivara subcamp, including inmates of Narva, Auvere, Putki, and Vivikonna. Moreover, the Vaivara subcamp itself had to be evacuated immediately, on February 4 and 5, 1944. There were 2,466 inmates that marched to the new Vaivara subcamps Kiviõli, Ereda, Jõhvi, and Goldfields. During the evacuation march from Vaivara, inmates had to cover long distances: 65 kilometers (40.4 miles) to Kiviõli, 45 kilometers (28 miles) to Ereda, 50 kilometers (31 miles) to Goldfields, and 28 kilometers (17.4 miles) to Jõhvi. The marches took three days in bad weather conditions. Soviet planes bombarded the prisoner columns, causing casualties, while others died due to exhaustion or were shot.

## VIVIKONNA OT AND VIVIKONNA BALTÖL [AKA WERK IV SILLAMÄE]

The mining facilities at Vivikonna were an important part of the Baltische Öl GmbH, or Baltöl (Baltic Oil), operation. In the first meeting between the Security Police and Baltöl representatives on July 19, 1943, 400 Jewish concentration camp inmates were promised to the Vivikonna mine. Organisation Todt (OT) planned several construction projects in Vivikonna, including building barracks for the Jewish Camp Vivikond (Judenlager Vivikond). Vivikonna consisted of three camps, the first of which was already closed in October 1943. There were 1,300 inmates assigned to this camp, housed in very inadequate barracks. For the November–December 1943 period, the Vaivara SS camp doctor, Bodmann, mentioned two new camps, one called “Vivikonna OT,” the other, “Vivikonna Baltöl.” The Baltöl camp contained 699 people, and the population remained constant. In the Baltöl organization, this work site was referred to as Werk IV Sillamäe. Inmates mined shale in open pits doing alternating shifts with Russian prisoners of war (POWs). Baltöl set strict rules to ensure a separation between Jewish and Russian workers.<sup>1</sup> Vivikonna OT was set up with 100 inmates transferred from Vaivara; inmates transferred from the Jõhvi subcamp increased the number to 474 by January 1944. The camp was located in an isolated spot in the woods. In February 1944, plans were made for evacuation; the SS and Police Leader was in charge of the Vaivara inmates, who represented roughly one-third of the Baltöl workforce.<sup>2</sup> Workers were to be marched toward Kiviõli, Kohtla-Järve, and Ereda. On February 2, 1944, 872 inmates from the OT camp were evacuated; on February 12, 698 inmates from the Baltöl camp followed.

As no original documents have survived indicating the names of camp commanders, it is somewhat difficult to differentiate between the camps, based on witness testimony only. Helmut Schnabel is mentioned as commander of the first camp, after a brief transition period under OT. He had a deputy with a glass eye. Camp elders named were Jutan, Heiman, and Szczibuk (phonetic spelling). When Schnabel was transferred to Vaivara, inmates were transferred with him and to other camps. The inmates did forestry work, built railroad tracks, or dug trenches under the supervision of the OT. Initially there was no running water, the ground was swampy, and barracks were built on stilts.

Bock, who later became the commander of Klooga, was mentioned as commander of one of the camps.<sup>3</sup> This camp was presumably Vivikonna Baltöl, as it was described as relatively big, and inmates worked in a quarry, mining coal and shale. The medical orderly (SDG) was Schattkus. The camp elder was Aranowicz; doctors named were Buzhanski and Fried.<sup>4</sup> Overall, inmates recall conditions in this camp as relatively good, particularly in comparison to the other one. It is not clear who the commander of Vivikonna OT was.

Former inmates from the camp under Schnabel’s command remember selections and shootings of the elderly and

the infirm. The children in the camp were gathered together at one point and taken away on trucks. This led to heart-breaking scenes. For example, one child was hammering at the window of the barracks in which she was locked up, but when her mother tried to get close, Schnabel shot the mother. Inmates recall that OT men were appalled by these scenes. Schnabel tortured the inmates; he tried to extort valuables from them, and he shot some of them afterward. He ordered an old man, who had fallen in the swampy ground and could not get up, to be shot. He beat a mentally disabled youngster and put him in a ditch full with water overnight. Schnabel is reported to have said that Jews were not human beings.<sup>5</sup>

## WARSCHAU MAIN CAMP

The Warschau concentration camp, known in Poland as Ge-siówka because it stood at 45 Ulica Ge-sia, was established in the summer of 1943 on the ruins of the Warsaw ghetto. After the deportation of the last of Warsaw's Jews, the Jewish quarter was to be razed and rendered uninhabitable, but not before all usable building materials from the ghetto had been recovered. But the Warsaw Ghetto Uprising in April and May 1943 stymied German plans. The Germans' scorched-earth tactics under Jürgen Stroop to quell the Jewish resistance reduced the area of the ghetto to rubble. After the defeat of the Jewish resistance fighters, the Germans could now proceed to salvage significant quantities of construction materials, especially bricks and scrap metal, from the debris to be used in support of the German war effort. For this task, Stroop suggested the deployment of Jewish prisoners who would be incarcerated in a concentration camp converted from the former ghetto prison. The Germans also expected to uncover large caches of secreted valuables hidden by the deported Jews. Furthermore, clearance of the rubble would facilitate the effort of German forces to uncover the hiding places of Jewish fugitives from the German assault on the ghetto in cellars, bunkers, and dugouts. Finally, it was in the Germans' interest to erase all evidentiary traces of their annihilation of Warsaw's 400,000 Jews.

In an apparent endorsement of Stroop's proposal, in June 1943, Heinrich Himmler ordered Oswald Pohl's SS-Business Administration Main Office (WVHA) and the Security Police (Sipo and SD) in the General Government to erect a concentration camp on the site of the destroyed ghetto. It was Himmler's wish not only to salvage bricks, scrap metal, and other building materials from the rubble of the former ghetto

but also to seal all underground hideouts, flatten it to the ground, and plant a park in its place. Responsibility for the implementation of this plan was delegated to Hans Kammler, chief of the WVHA's Office Group C.

The Warschau concentration camp was officially established on July 19, 1943, with 300 prisoners, German inmates from Buchenwald, both political opponents of the regime and common criminals, who would soon become the camp's de facto administrators. In April 1944, the camp was annexed to the Majdanek concentration camp in Lublin and assumed the new name of Lublin concentration camp–Warsaw labor camp (Konzentrationslager Lublin–Arbeitslager Warschau). The camp's first commandant was SS-Obersturmbahnführer Wilhelm Göcke, who was transferred in September 1943 to establish a concentration camp in Kauen (Kovno or Kaunas); after his departure the camp was headed first by SS-Hauptsturmführer Nikolaus Herbet and then by SS-Obersturmführer Friedrich Wilhelm Ruppert, the commandant of the camp when it was evacuated in July 1944. Four German construction firms—Merckle (Ostrów Wielkopolski), Ostdeutscher Tiefbau (Naumburg), Berlinisches Bau-geschäft (Berlin), and Willy Keymer (Warsaw)—were contracted to execute Himmler's order with the assistance of the German Eastern Railway (Ostbahn).

Jewish male inmates from Auschwitz constituted the prisoner labor force for the execution of this project. Two series of transports of Jewish prisoners arrived in Warsaw. Four transports with 3,683 Jews arrived in Warsaw from Auschwitz in August, October, and November 1943.<sup>1</sup> After mid-May 1944, transports of an estimated 4,000 to 5,000 Hungarian Jews replenished the inmate population, which was considerably depleted by then. To the Germans, the key criteria in the selection of these prisoners were their relatively decent physical condition, since the work would be heavy and arduous, and their non-Polish origins, because they did not want Jewish prisoners to fraternize with Polish civilians employed in the same work area. Moreover, command of Polish would be an invaluable asset in the event of escape. Thus the Germans deliberately selected Jews from Western and Central Europe and Greece for prisoner labor in Warsaw. In spite of German intentions, several Jewish prisoners in the Warschau concentration camp had migrated westward from Poland before the war and therefore spoke Polish. In the November 1944 transport, moreover, the Germans were forced to include 50 Polish Jews because there were not enough non-Polish prisoners available to fill the quota of 1,000 men. A couple of thousand paid Polish civilian workers and dozens of salaried German technicians augmented the camp's Jewish labor force.

The bulk of the Jewish prisoners were assigned to the demolition of the ghetto. It entailed several steps: gathering

Post-liberation view of Warschau concentration camp; the Jewish cemetery on Okopowa Street is visible in the background on the left behind the camp.

USHMM WS #80904, COURTESY OF JULIUSZ BOGDAN DECZKOWSKI

bricks from the ruins of the ghetto—that is to say, not only recovering bricks already lying on the ground but also demolishing the unstable walls of dilapidated buildings for their bricks; cleaning the bricks by scraping the mortar from them; and stacking them in piles for conveyance by trucks (driven by Poles) to trains. The prisoners were forced to perform this task mostly with the use of their bare hands and occasionally primitive tools like picks and shovels. In the spring of 1944, the use of dynamite, often planted by the prisoners, was introduced to raze remaining buildings. This was backbreaking, exhausting, and dangerous work, and many prisoners were killed and injured. The bricks were heavy, especially for men suffering from fatigue, malnutrition, and disease. Prisoners frequently fell from the heights of ramshackle buildings earmarked for demolition. The tempo was brisk, and German overseers disciplined prisoners who were unable to maintain the pace or abandoned their labor for a brief respite. In his account of the ghetto's demolition, one surviving prisoner writes, "Human life played no role whatsoever."<sup>2</sup> The stupefying lengths to which these prisoners were driven are attested to by the results of their forced labor. By June 1944, they had demolished an area of approximately 10 million square meters (nearly 12 million square yards) and collected 34 million bricks, 6,000 tons of scrap metal, 1,300 tons of iron ore, and 805 tons of nonferrous metals.<sup>3</sup>

Officers of the SS unit assigned to the Warschau concentration camp, which amounted to a company, were transferred from various other camps, including the Sachsenhausen and the Lublin subcamp Trawniki. After the annexation of the camp to Majdanek in April 1944, SS personnel from Lublin replaced the original SS unit. The primary function of the SS in Warsaw was to guard the periphery of the camp. In spite of this minimal task, the camp's Jewish prisoners bore the brunt of oppressive SS tactics, as the SS unit attached to the camp never recoiled from acts of violence. The SS unit assigned to the Warschau camp appears to have exhibited an unreflective "healthy, common sense" or "everyday understanding" that Jewish concentration camp inmates were enemies of the state, enemies whose execution—largely through work at this late stage in the war—was totally appropriate.<sup>4</sup> In the Warschau camp, SS violence was prompted further by prospects of personal enrichment. SS men were enticed not merely by the plunder of valuables discovered by prisoners in the debris of the ghetto but also by the hope of lining their own pockets with the gold teeth of the camp's dead—and occasionally barely living—prisoners. The ferocity of the Warsaw Ghetto Uprising, in which Jewish insurgents had managed to kill and wound several SS men, apparently served to intensify the loathing of Jews among the SS men in this unit into a violent animosity.

SS brutality aside, the German prisoner-functionaries, who essentially ran the camp, dispensed most of the daily humiliation and degradation that the prisoners suffered. Prisoner-functionaries took pains to intimidate the Jewish prisoners under their control with forcible measures and even wanton cruelty. This was especially true of the criminal

elements among the Kapos, whose feral instincts were directly opposed to the prisoners' welfare. But because of their own inmate status, most of the German prisoner-functionaries were probably most concerned with their own survival, to which aim the Jewish prisoners were expendable.

Hundreds of Jewish prisoners died from sheer exhaustion, mistreatment, and execution; in addition, a typhus epidemic in the winter of 1944 devastated the inmate population. Starvation rations and primitive sanitation, even by the low standards of the concentration camp system, helped create conditions conducive to disease. Lice spread quickly through the camp in the winter of 1943–1944, and typhus then struck the camp with a vengeance in January and February 1944. Afflicted prisoners were placed in an isolation barrack, where they just lay on soiled pallets, receiving no supplemental rations or antibiotics until they either recovered or died. The epidemic created a legion of walking skeletons—"Muslims" (*Muselmänner*) in the universal argot of camp life—who, enervated by camp conditions, gave up on themselves and apathetically awaited death. By March 1944, approximately 75 percent of the camp's Jewish prisoners had died, with approximately 1,000 men still alive. Since the ghetto's demolition was not completed, German authorities decided to replenish the camp's depleted Jewish workforce with additional Jewish prisoners from Hungary in June 1944.

Jewish prisoners employed various stratagems to survive their plight. Successful escape from the camp was rare, since fleeing prisoners had to overcome two sets of guarded walls—the wall surrounding the camp proper and the ghetto wall. Apprehended escapees were hanged in the presence of the entire inmate population, in an effort to deter others from contemplating flight. Since escape was impractical, survival demanded the capacity to endure the deplorable conditions of camp life by navigating breaches in the camp's brutal regime. Physical self-preservation necessitated what was called, in the universal vernacular of the concentration camp system, "organizing." In the Warschau concentration camp this activity essentially entailed scavenging through the rubble of the ghetto for abandoned objects of value and then either selling them for cash to buy food or bartering them directly for food in the flourishing underground economy established between Jewish prisoners and Polish civilian workers. When it later became more difficult to locate items of value in the rubble, many prisoners had their gold teeth extracted by fellow prisoners and then sold them to Poles for either bread or cash to buy bread.

There was modest cultural activity among the Jewish prisoners. A few prisoners would meet in the barracks for prayer. Jewish classics found in the rubble were smuggled into the camp and either passed from person to person or read aloud in the barracks. A few fortunate prisoners were able to draw from a stable reservoir of emotional sustenance from friends or relatives. Jewish prisoners from Greece found fellowship among themselves not only because they felt different from their fellow Jews who hailed from the continent but also because they shared a distinct cultural and communal tradition.

Although the Germans planned to complete demolition of the ghetto by August 1, 1944, the Soviet advance to the east bank of the Vistula forced the camp's closure in July 1944. The Germans decided to evacuate the prisoners westward in the first of the large wave of death marches undertaken in the terminal phase of the war. Before evacuation, the Germans killed a couple hundred of the most debilitated prisoners; approximately 300 prisoners decided to take their chances and volunteered upon request of the camp's authorities to remain after evacuation to complete the dismantlement of the camp. On July 28, the Germans evacuated approximately 4,500 of the remaining 5,000 prisoners under heavy SS guard in the direction of Kutno, located 120 kilometers (about 75 miles) west of Warsaw. The Germans shot any prisoner breaking ranks or falling behind. Marching in scorching summer heat, the prisoners were wracked by thirst. The death march to Kutno lasted three days. On August 2, the surviving prisoners were loaded into boxcars on a train to Dachau for a journey of almost 750 kilometers (466 miles). Conditions in the cars were abysmal. Approximately 100 men were crammed into each boxcar without any rations. Scores of prisoners died en route from suffocation and heat prostration, while several became mentally unhinged during this agonizing journey. This death train reached Dachau on August 6. Of the prisoners who were evacuated from Warsaw, not quite 4,000 survived the death march and death train to Dachau.<sup>5</sup>

In Warsaw itself, the Warsaw Uprising erupted on August 1, and on August 5, the "Zośka" battalion of the Polish underground Home Army (*Armia Krajowa*, AK) liberated the Warschau concentration camp. In a fierce skirmish on the first day of the uprising, Polish fighters had already freed a group of 50 Jewish prisoners toiling outside the perimeter of the camp. Of the roughly 350 Jewish prisoners freed in the camp by the AK, dozens, including 24 women, had been transferred on July 31, from Pawiak. (Pawiak was the notorious prison for Poles suspected of underground activities; its

inmate population included Jews discovered in hiding on the "Aryan" side or temporarily spared from destruction because of their indispensable manual skills.) The vast majority of liberated prisoners volunteered to fight in the uprising and served the revolt in various capacities. A special Jewish fighting platoon and a Jewish brigade to construct barricades were formed from liberated prisoners. These units sustained heavy losses. The morale of the former prisoners was corroded, however, when antisemitism reared its ugly head in the fighting units; antisemitic Poles even killed several liberated prisoners who volunteered for combat units. With the defeat of the Warsaw Uprising by superior German forces on October 2, the surviving Jewish prisoners were compelled either to flee or go into hiding in bunkers. Life in the bunkers was a grueling ordeal. When the Red Army finally entered Warsaw on January 17, 1945, only 200 Jews, among them former prisoners from the Warschau concentration camp, reemerged from their bunkers still alive.

The existence of the Warschau concentration camp is hardly mentioned in standard accounts of the Holocaust. It was doubtless a minor camp in the large scheme of things, but it dispensed more than its fair share of suffering. Thousands of Jews fell victim there to the Nazi annihilationist labor policies. Of the 8,000 to 9,000 inmates who were impressed into the prisoner labor battalion of this camp between the summers of 1943 and 1944, 4,000 to 5,000 of them perished in the course of the camp's existence, during the camp's evacuation, and in battle or in hiding after liberation.

There have been several postwar trials of camp personnel. In the late 1940s, eight SS men were executed for the murder of camp prisoners—five in German courts and three by the Polish regional court in Lublin. In addition, Walter Wawrzyński, the camp's initial orderly, was convicted in an East German criminal court in Leipzig in 1950 of the murder and mistreatment of camp prisoners. On appeal, his death sentence was reduced to life imprisonment.<sup>6</sup> In July 2000, the U.S. District Court of the Eastern District of Pennsylvania vacated the citizenship of Theodor Szezhinsky because of his service in the ranks of the *Waffen-SS* in various concentration camps, including the Warschau concentration camp. He should have been ineligible for a visa to enter the United States after the war.<sup>7</sup> Substantial evidence from the camp was introduced during the trial in Poland of Jürgen Stroop, who was executed in 1951 for his role in the persecution of Jews and Poles in Warsaw. Both Germany's Central Office of State Justice Administrations (*ZdL*) in Ludwigsburg in the 1970s and the Polish Main Commission for the Investigation of Crimes against the Polish Nation-Institute of National Memory from 1974 to 1996 conducted extensive investigations of camp personnel. In both 1974 and 1980, German state prosecutors in Munich terminated the proceedings, and in 1996 the Investigative Department of the Provincial Procurator in Warsaw followed suit for similar reasons: the death of many suspected culprits, the failure to discover the whereabouts of others, and the difficulty of identifying the perpetrators of numerous individual killings.

**SOURCES** There exists a modest literature on the Warschau concentration camp. Effective surveys from its establishment to its liquidation are Tatiana Berenstein and Adam Rutkowski, “Obóz koncentracyjny dla Żydów w Warszawie (1943–1944),” *BŻIH* 62 (1967): 3–22; and Adam Rutkowski, “Le camp de concentration pour Juifs à Varsovie (19 juillet 1943–5 août 1944),” *Le monde juif* 49:147–148 (1993): 189–216. The author’s essay “Jewish Prisoner Labour in Warsaw after the Ghetto Uprising, 1943–44,” *Polin* 17 (2004), focuses on the experiences of the camp’s Jewish inmates.

Source material for the Warschau concentration camp is scattered in various archival record groups. The most interesting Nuremberg Trial documents pertaining to the camp are Stroop’s final report of May 16, 1943, on the liquidation of the Warsaw ghetto, which contains his recommendation to establish a concentration camp for Jewish prisoners on the ruins of the ghetto (PS-1061); Himmler’s order of June 11, 1943, to establish a concentration camp in the former ghetto (NO-2496); Pohl’s announcement of July 23, 1943, of the establishment of the camp (NO-2516); and four reports by Kammler from October 1943 through June 1944 on the progress of the demolition of the former ghetto by the camp’s prisoners (NO-2503, NO-2517, NO-2504, NO-2505). Files from Stroop’s trial in Warsaw in 1946, located in IPN and available on microfilm in USHMM, 1998.A.0255, 3 reels, contain several relevant documents. In the course of its investigation, the ZdL amassed several witness statements from SS men and German prisoners assigned to the camp (available at BA-L). The evidentiary record of the Szebinskyj trial includes two transfer reports and a troop muster roll, all of which were discovered in Russian archives, showing the transfer of SS units to and from the Warsaw camp. The AŻIH, RG No. 301, and YVA, Record Group No. 03, possess the most extensive collection of Jewish survivor accounts of life in the camp. On transports from Auschwitz to Warschau, see Danuta Czech, *Auschwitz Chronicle, 1939–1945* (New York: Henry Holt [Owl Books], 1997). Two survivors of the camp have published memoirs. In *Zibn in bunker* (Warsaw: Idisz Buch, 1962), Chaim Etzel Goldstein movingly describes not only life in the camp but also the camp’s liberation by the AK, inmates’ participation in the Warsaw Uprising, and his concealment in a bunker

after defeat of the Polish revolt until the Soviet liberation of Warsaw in January 1945. This book has been translated from the Yiddish into English by Charles Goldstein as *The Bunker* (Philadelphia: Jewish Publication Society, 1970). The English version is abridged, and several passages dealing with the camp and the aftermath of its liberation are missing from the translation. In addition to conditions in the camp, the journey to Dachau is recounted in Max Mannheimer, *Spätes Tagebuch: Theresienstadt-Auschwitz-Warschau-Dachau* (Zurich: Pendo Verlag, 2000).

## WEWELSBURG

The wooden gate tower at Wewelsburg concentration camp, 1941.  
USHMM WS #82780, COURTESY OF AKM-WN

## WEWELSBURG MAIN CAMP [AKA NIEDERHAGEN]

On September 1, 1941, the Wewelsburg subcamp was renamed the “Wewelsburg concentration camp” (KL Wewelsburg).<sup>1</sup> With 480 prisoners it was the smallest autonomous main camp within Germany. Prior to this, the camp in the village of Wewelsburg, about 20 kilometers (12.4 miles) to the southwest of Paderborn, Westphalia, was a Sachsenhausen subcamp, financed by the Association for the Promotion and Maintenance of German Cultural Memorials e.V. (Gesellschaft zur Förderung und Pflege deutscher Kulturdenkmäler e.V.).<sup>2</sup> Reichsführer-SS Heinrich Himmler founded the association in 1936. He used it as the developer for his building project “Wewelsburg.” As a registered association, the company—unlike the SS, which was not a legal entity—could acquire donations and credit. The Wewelsburg Renaissance castle had been built by the Paderborn prince-bishops (Fürstbischof) at the beginning of the seventeenth century. In 1934, the Büren Council leased the castle to the association. Himmler planned to establish a Reich Leadership School (Reichsführerschule) there, the SS-Schule Haus Wewelsburg. It would later become a large ideological-religious center for the SS.

For the necessary renovations and expansion of the castle, Himmler initially used the Reich Labor Service (RAD). When these workers were transferred to build the Westwall and the project was facing a shortage of labor, Himmler, as did other SS economic enterprises, considered the use of concentration camp prisoners for his private construction project. By using concentration camp labor, he was able to continue the building project, regularly obtaining exemptions from the general building prohibition for his private building project, which was not vital for the war effort. A detachment of “preventive custody” prisoners (*Befristeter Vorbeugehäftlinge*, BV) was sent to Wewelsburg in May 1939. Following two escape attempts, which caused much public attention, and resulted in the deaths of the escapees, the detachment was replaced in February 1940 by Jehovah’s Witnesses. In the summer of 1940, the prisoners constructed a protective custody camp on the outskirts of Wewelsburg, on the boundary with Niederhagen. Other categories of prisoners were sent to Wewelsburg from the autumn of 1940, and the number of prisoners steadily increased to 470. On January 7, 1941, the work detachment was confirmed as a Sachsenhausen subcamp.<sup>3</sup> The transformation of the subcamp into an autonomous main camp did not occur because of the increasing size of the camp but for economic reasons. The sale of the Wewelsburg subcamp to the state relieved the “Gesellschaft” from the financial pressure that it was under. Initially there was some uncertainty, but on October 15, 1941, the name “Niederhagen concentration camp” was finally decided upon.<sup>4</sup> The Reichsführer-SS probably chose the name Niederhagen to disguise the concentration camp and to hide the connec-

tion between the concentration camp and his construction project at Wewelsburg.

The protective custody camp initially consisted of 4 barracks; the number subsequently increased to 16. The barracks were in two rows. Next to the prison camp was an industrial quarter with workshops and garages and opposite was an SS camp and building yard. The prisoners were given new prisoner numbers when the camp became autonomous. There were German prisoners, Jehovah’s Witnesses, BV prisoners, political and so-called asocial prisoners, Sinti and Roma (Gypsies), homosexuals, and Jews; and from 1941 there were more and more foreign prisoners including prisoners from Poland, the Soviet Union, Czechoslovakia, France, the Netherlands, and Belgium. The prisoners were sent to the camp either individually or in groups from other concentration camps, especially Buchenwald and Sachsenhausen, or directly

from Gestapo offices, especially those in the Ruhr but also Paderborn and Osnabrück. These prisoners were mostly Polish and Ukrainian forced laborers who had been arrested by the Gestapo. Many of the Soviet prisoners arrived at Wewelsburg as prisoners of war (POWs) or in transit transports.

As the Jehovah's Witnesses were the only prisoner group during the initial phase, they, unlike in other camps, took over in Wewelsburg the positions for prisoner self-administration: Willi Wilke was camp elder (Lagerältester); Wettin Müller was camp scribe (Lagerschreiber). The block elders (Blockältester) were Jehovah's Witnesses, German politicals, asocials, and BV prisoners. The Kapos and foremen were mostly BV prisoners and asocials. BV functionaries wore a green triangle and excelled in their brutality and unscrupulousness at Wewelsburg—for example, in the prisoner infirmary (block 11) and the punishment detachment, Forest Settlement (Waldsiedlung). Jehovah's Witnesses played an important role in the camp and tried to remain true to their beliefs. They smuggled bibles and other religious works into the camp and conducted secret bible studies. Their solidarity and common, strong belief gave them the strength to survive the extreme camp conditions in Wewelsburg.

During 1942, there were on average 1,000 prisoners in the camp. In 1943, the number increased to around 1,500 prisoners. In the period up to August 1941, 48 prisoners died. When the camp became autonomous and new prisoner groups were admitted into the camp, the numbers of dead rapidly increased: by the end of 1941, another 80 prisoners had died; in 1942, 868 died; and to April 1943, when the main camp was dissolved, 287 prisoners died. The reason for the increase in the death rate was in part due to the physically weak condition of the prisoners, especially the Soviet prisoners, who were sent to Wewelsburg from June 1942, and in part due to the extremely poor living and work conditions in the camp. Some 1,285 of the approximate 3,900 prisoners who arrived in the camp between 1939 and 1945 died,<sup>5</sup> of whom 734 were of Soviet origin. It is likely that only a few Jewish prisoners were sent to Wewelsburg—20 death certificates suggest a Jewish background. In the summer of 1942, a crematorium was established in the camp because of the high death rate. Until October 1942, the corpses were taken to the crematoria in Dortmund and Bielefeld-Brackwede. It is thought that initially in Wewelsburg there were transportable crematoria ovens. They were reintroduced at the beginning of 1943. While constructing the crematorium, the SS established in the camp a Registry Office (Standesamt), which from January 1, 1943, kept a register of deaths. As an autonomous concentration camp from April 1942 to March 1943, the Niederhagen concentration camp also functioned as the execution site for the Gestapo Westfalen/Lippe office. It can be proved that 56 people were murdered, of whom 42 were hanged and 14 Soviet POWs were shot at the nearby shooting range. The hangings took place in a walled-in arrest bunker. The victims included female Soviet forced laborers as well as two boys, a 14-year-old Pole and a 15-year-old German Jew.

In 1940, Reinhard Heydrich had introduced for the Reich Security Main Office (RSHA) an official categorization of the camps. Niederhagen was a category 1 camp for “less serious protective custody prisoners capable of rehabilitation, special cases, and individual arrest.”<sup>6</sup> However, the conditions on the ground did not correspond in any way with this official description. The living and work conditions in Wewelsburg were brutal. Many prisoners died because of the heavy work. A detachment was occupied with the renovation and extension of the Wewelsburg north tower, which was to be the ideological center of the facility. When excavating the “vault,” which was planned for honoring the dead, the prisoners had to excavate more than 4 meters (13 feet) of rock with inadequate tools. The work in the constant cold and damp vault meant that the prisoners had to use the maximum physical exertion. Nevertheless, the work detachments in the north tower were regarded as relatively safe work sites by the prisoners, where they were largely protected from mistreatment by the SS. It was different in the three quarries (in the castle, at the railway station, and in the village of Ahden, several kilometers away), building roads, renovating the Marx manor, and constructing the SS settlement Waldsiedlung: there were deaths in these detachments almost every day, with the dead being brought back to the camp. Other work detachments constructed a villa for the architect Hermann Bartels or worked on the north terrace of the SS guard building in front of the castle. The concentration camp prisoners worked in the SS gardens and began excavation work for commercial buildings in the SS camp. They were exploited until they were totally exhausted. The principle “Destruction through Work” (*Vernichtung durch Arbeit*) accurately describes the working conditions for the work detachments in Wewelsburg. The SS treated qualified skilled tradesmen and workmen with more consideration because they could not be replaced so easily. They worked relatively securely in expanding the north tower and in a number of workshops. There were other tasks to be done in the camp's industrial sector, including the camp-owned laundry, tailor's shop, SS garages, and kitchens, or in constructing the camp.

Wewelsburg-Niederhagen prisoners work in a quarry, 1941-1942. USHMM WS #85257, Courtesy of AKM-WN

The infirmary was located in Barracks 15. Conditions there were catastrophic. There were no medicines or instruments. Block 11 was an additional infirmary. Its cellar was used as a storage room for corpses until they were taken to the crematorium. Once inside the infirmary the ill prisoners were at the mercy of the SS and some orderlies who mistreated the prisoners. Survivors have stated that the sick were murdered either by injections or by having cold showers. However, there were no medical experiments in Wewelsburg. On the other hand, Niederhagen was one of the camps from which the death transports for the concentration camp “euthanasia” policy, code-named “Aktion 14f13” (Operation 14f13), departed. In a letter dated December 10, 1941, the Inspectorate of Concentration Camps (IKL) mentions Niederhagen and other camps as those that will be inspected in the following year by the doctors’ commission to select prisoners. The attached sample questionnaire contained the details of a Wewelsburg prisoner.<sup>7</sup> It is not known how many Wewelsburg prisoners were victims of the Aktion 14f13. Those prisoners who remained in Wewelsburg knew the purpose of the selections because the personal items of the dead prisoners were returned to Niederhagen.

An Obersturmbannführer of the Waffen-SS Reserve, Adolf Haas was in command of the protective custody camp in Wewelsburg from June 17, 1940. Once the camp was declared a subcamp in January 1941, he reorganized the camp administration along the lines of the organizational structure required by the IKL, that is, along the lines of the Dachau concentration camp. The camp administration was divided into five areas. Satter was the camp commandant’s adjutant (Department I). SS-Sturmscharführer Friedrich Schultes was in charge of the Political Department (Department II). Wolfgang Plaul, Haas’s predecessor as detachment leader, became leader of the protective custody camp (Department III) and Haas’s replacement when he was absent. To 1942, the Labor Service Leader (Arbeitsdienstführer) was Ludwig Rehn. He was then transferred to Neuengamme and Sachsenhausen. The first administration leader for Department IV was Hermann Michl. The camp doctor at Niederhagen (Department V) was SS-Untersturmführer Dr. Franz Metzger. He was transferred in December 1942 to the SS-Panzer Grenadierdivision “Totenkopf” (Death’s Head) The concentration camp personnel included not only the command office but the guards. The SS guards in Wewelsburg were taken from the SS-Death’s Heads Units stationed locally. They were organized into guards’ units. Gustav Strese was in command of the First SS-Totenkopf-Sturmabteilung Niederhagen-Wewelsburg.

According to the prisoners, Adolf Haas was unpredictable and ruthless. The master baker joined the Nazi Party in 1931 and the SS a year later. He was in command of the SS region (Oberabschnitt) Rhein-Westfalen and in 1935 was promoted to SS-Sturmabteilungsführer. However, a service opinion dated October 4, 1937, excluded him from any further promotion because of his poor writing skills.<sup>8</sup> He undertook a course in Sachsenhausen before he took command in Wewelsburg. After the dissolution of the Niederhagen concentration camp,

Hass, with some of the Wewelsburg concentration camp personnel, was appointed camp commandant at the newly created camp at Bergen-Belsen. He has not been heard of since the end of the war.

After the German defeat at Stalingrad, the architect Bartels could not prevent the stopping of the construction work. A decree dated January 13, 1943, ordered the cessation of all “non-vital war construction work.” In the middle of March 1943, an expert committee appointed by Oswald Pohl appeared at Wewelsburg, to examine whether the protective custody camp and the industrial section could be expanded into an armaments factory. The SS-Business Administration Main Office (WVHA) was considering giving the camp a new use for armaments production. These considerations were part of the overall program to replace the labor shortage in the armaments industry with concentration camp prisoners. However, the armaments industry did not want the Niederhagen concentration camp. Even before the committee had completed its investigations, it was recalled. The decision to dissolve the camp remained. A circular decree dated March 23, 1943, ordered the end of all admissions to the Niederhagen concentration camp.<sup>9</sup> In a surviving express letter dated April 5, 1943, the Niederhagen concentration camp office demanded that the State Police Office (Stapoleitstelle) Düsseldorf not admit any more prisoners to Niederhagen, although a transport from Paderborn on May 7 would be accepted.<sup>10</sup> The large majority of the prisoners were sent in the months of April and May to Buchenwald, Ravensbrück, Dachau, and Bergen-Belsen. The official date for the dissolution of the Niederhagen concentration camp was April 30, 1943.<sup>11</sup> At this point, there were around 150 to 200 prisoners in the camp, mostly Jehovah’s Witnesses. On May 7, the camp commandant Haas accompanied a prisoner transport with some of the guards to Bergen-Belsen. A small detachment of 49 German prisoners remained. They were now under the control of the Buchenwald concentration camp. In the period that followed, the number of prisoners was reduced to 42, of whom 40 were Jehovah’s Witnesses. The other 2 were political prisoners. The camp Registry Office was closed. The last entry in the register of deaths is for April 12, 1943. After that no more deaths were recorded. The remaining prisoners were given Buchenwald prisoner numbers and were accommodated in a workshop barracks in the industrial quarter.

The empty protective custody camp was used from the autumn of 1943 as a resettlement camp by the SS-Main Office Ethnic German Liaison Office (Stabshauptamt Volksdeutsche Mittelstelle, VOMI) for so-called ethnic Germans. At the end of 1944, one of the barracks in the camp was occupied by a Gestapo office from Gelsenkirchen whose own office had been bombed. In the autumn of 1943, an army physical training camp (*Wehrertüchtigungslager*) was established in the former SS camp. The number of SS guards was reduced at first to 12 and in November 1944 to 5. The detachment leadership reported to the Buchenwald concentration camp. Until the end of 1943, SS-Unterscharführer Otto Jacob was leader. He was followed in 1944 by SS-Sturmmann

Schiering, who in turn was replaced by SS-Rottenführer Skuppi.

The SS no longer saw the need to maintain total control. The prisoners could move relatively freely around the industrial quarter and parts of the village. They worked under better conditions, particularly in the gardens, and did small jobs at the castle and in the village. In 1944, the Jehovah's Witnesses began to operate an illegal press to print their literature. It was distributed throughout all of northern Germany with the help of Jehovah's Witnesses who were still free. This conspiratorial underground work continued until American soldiers liberated the work detachment. U.S. troops entered Wewelsburg at around 7:00 A.M. on April 2, 1945. They were surprised to find a concentration camp. Himmler's strategy to camouflage his SS construction project at Wewelsburg was a success. Two days before the Americans arrived, Himmler ordered an SS detachment to blow up Wewelsburg. While the castle was completely burned out, the outer walls and the north tower remained.

Two postwar trials dealt with the crimes committed at the Niederhagen concentration camp. The first trial took place in 1952 by jury at a Paderborn court. A former "asocial" Kapo was charged with "crimes against humanity" and sentenced to four years' imprisonment. The State Prosecutor successfully appealed, and the charge was amended to "injury causing death." In April 1954, the sentence was increased to five years and eight months.<sup>12</sup> The second Wewelsburg trial took place in 1970–1971. Five years of investigations preceded the trial. The trial was prepared by the Senior State Prosecutor in Cologne in conjunction with the Auschwitz Trial, which was prepared by the Zentralstelle in Nordrhein-Westfalen, who was charged with handling National Socialist crimes in concentration camps. Two former SS noncommissioned officers and two former Kapos (a political prisoner and an asocial prisoner) were charged with murder and suspected murder; all other charges lapsed because of the statute of limitations. It could not be proven that the accused had personally committed murder, and they were acquitted. Nevertheless, the court in its judgment made their moral guilt clear.<sup>13</sup>

**SOURCES** The first groundbreaking research on the history of the Niederhagen concentration camp was done by Paderborn University professor Karl Hüser at the end of the 1970s, at the request of the Documentary and Memorial Center in KM-WN, which was founded in 1982. He published his results in 1982 in an exhibition catalog, *Wewelsburg 1933–1945: Kult- und Terrorstätte der SS. Eine Dokumentation* (Paderborn: Bonifatius, 1982). The second edition was published in 1987. Another work is Kirsten John's monograph "*Mein Vater wird gesucht . . .*" *Häftlinge des Konzentrationslagers in Wewelsburg*, 4th ed. (Essen: Klartext, 2001). The focus here is on the pris-

oner groups and includes some prisoner biographies. The brochure by Wulff E. Brebeck and Karl Hüser, *Wewelsburg 1933–1945: Das Konzentrationslager*, 3rd expanded ed. (Münster: Landesbildstelle, 1998), provides an overview. An expanded English translation has appeared as *Wewelsburg 1933–1945: A Cult and Terror Centre of the SS* (Münster: Landesbildstelle, 2000).

With a few exceptions, the original Niederhagen concentration camp files have been lost. It is therefore necessary to rely on files in other archives (e.g., the BA-B; BA-BL, which includes the former BDC; ITS) and memorials (AG-S; APMM). There is no prisoner card index; as a result, the names, for example, and the exact number of prisoners cannot be determined. However, they can be reconstructed in part from using prisoner lists in other camps. Some finds in Russian archives (e.g., RGVA) provide further leads that have not yet been researched. It is oral history sources and trial files—especially the second Wewelsburg Trial (available at NWHStA-(D) ZA-K) and a few chronicles (Pfarrchronik Wewelsburg, in KPAW; Gemeindechronik Wewelsburg, 1814–1947, in Standesamt Büren)—that document the life of the prisoners in the Niederhagen concentration camp. In the collection at the AKM-WN are oral and written reports by survivors as well as recorded conversations with former Niederhagen prisoners (on audio and videotape).

# SECTION III

## YOUTH CAMPS

SS officers, including the head of the Race and Settlement Main Office (RuSHA) chief SS-Brigadeführer Otto Hofmann (second from left), inspect the Litzmannstadt youth camp in 1943. Hofmann's presence suggests that the inspection took place in connection with the Germanization of certain Polish youth.

USHMM WS #02378, COURTESY OF IPN

## INTRODUCTION TO THE YOUTH CAMPS

The idea of establishing a separate prevention institution (*Be-wahranstalt*) or assembly camp (*Sammellager*) for the “difficult or impossible to educate” youth, who had become noticed because of their stubborn and deviant behavior, was not new. From the mid-1920s, youth welfare workers, lawyers, medical practitioners, psychiatrists, and adherents of the “racial hygiene” movement had been demanding such institutions to deal with the high level of care (and thus expense) for such youths. Without any further education, they would be held for an indefinite period of time in such institutions with their labor being exploited. Those advocating such a policy were not successful during the Weimar Republic, but this changed from 1933 with the assumption of power by the National Socialists and the establishment of the concentration camp system.

A series of decrees and orders from 1937 set the legal and institutional basis for the struggle against youth degeneration. A decree dated October 14, 1937, on “preventive criminal measures” established what was regarded as “asocial behavior,” which was “someone who acts against the community, even if such actions were not criminal, but showed that he or she did not want to be part of the community.”<sup>1</sup> This decree formed the basis for the persecution of anyone who deviated from National Socialist norms and ideals. In 1938, there followed a further series of decrees and regulations that dealt with the treatment of asocials and called for the “protective custody” of whole families as well as suggesting the registration and police surveillance of asocials.

Following a circular decree by the Reich Ministry of the Interior (RMdI) on May 24, 1939, the Reich Center for Combating Youth Criminality (Reichszentrale zur Bekämpfung der Jugendkriminalität) was established as a department of the Reich Criminal Police Office (Reichskriminalpolizeiamt, RKPA). This authority was tasked with the police surveillance of youths and the power to use force, including sending youths to closed reform institutes. Later, it would be in charge of the “police youth protection camps” (*polizeiliche Jugendschutzlager*). In actuality, they were concentration camps for youths. On December 22, 1939, at a conference on “degenerate youth,” Reinhard Heydrich demanded the establishment of reform camps for youths (*Jugenderziehungslagern*). This demand was supported in the following months by Hermann Göring and Heinrich Himmler. On June 26, 1940, the Reichssicherheitshauptamt (RSHA) issued a circular announcing that the confinement of youths to police youth protective custody camps could begin within a short period of time. In the end, three such camps opened: Moringen (for boys) in August 1940, Uckermark (for girls) in June 1942, and Litzmannstadt (for Polish juveniles) in December

1942. All remained in operation almost until the end of the war.

Youths were admitted to the Jugendschutzlager on racial, religious, or political grounds. They included the so-called Hamburg Swing Youth (Swing-Jugend), who were accused of establishing a dangerous clique even though they only wanted to listen to jazz, then regarded as un-German, and had formed their own subcultures to do so. The authorities also confined homosexuals, Sinti and Roma (Gypsies), Jews, and Jehovah's Witnesses.

Youths in the camps were subjected to military drill, euphemistically termed “community training” (*Gemeinschaftserziehung*). The stated aim was character education, focusing on cleanliness, order, punctuality, discipline, and above all, work. The inmates worked on agricultural estates, at armaments

firms, and at workshops of various sorts. Living arrangements were primitive, the food and clothing inadequate, and the punishments severe. Death rates were not as high as in some of the adult concentration camps, but prisoners did die in significant numbers.

**SOURCES** Sources on the youth protection camps can be found in the individual camp entries.

## **POLISH YOUTH CUSTODY CAMP OF THE SECURITY POLICE LITZMANNSTADT [AKA POLENLAGER, KRIPOLAGER]**

Between December 1, 1942, and January 18, 1945, the Reich Criminal Police Office (RKPA; also designated the Reich Security Main Office [RSHA], Office V) operated a camp for Polish juveniles inside the Łódź ghetto. Called the Polish Youth Custody Camp of the Security Police in Litzmannstadt (Polen-Jugendverwahrlager der Sicherheitspolizei in Litzmannstadt), it was administratively related to the German “youth protection camps” (*Jugendschutzlager*) at Moringen and Uckermark.<sup>1</sup> Directed by the Criminal Police (Kripo), it deployed forced labor for the SS-Business Administration Main Office’s (WVHA) Office Group D (Inspectorate of Concentration Camps, IKL).<sup>2</sup> In 1969, the International Tracing Service (ITS) classified the Polen-Jugendverwahrlager as a concentration camp.

Two months after the German invasion of Poland, the RSHA inaugurated an arrest campaign against juvenile delinquents. To this end, RKPA head Arthur Nebe called for the establishment of *Jugendschutzlager* in the Old Reich and the newly incorporated territories of Poland. Although he ordered the Kriminalpolizeistelle Lodsch (effective April 11, 1940, the Germans renamed the city Litzmannstadt) to establish a Polish youth camp on April 1, 1940, his order took more than two years to implement.<sup>3</sup> The delay was partly attributable to the imposition of German administration in the annexed territories, particularly of the welfare authorities, but space accommodation for the juveniles also played a role. Litzmannstadt’s Kripo and mayor’s offices repeatedly complained about rising youth crime in 1940 and 1941 but only obliquely connected the Polish children’s begging, stealing, and smuggling (especially into the Łódź ghetto) to the underlying Nazi policies.<sup>4</sup> Among these policies were the forced labor drafts and mass arrests of

Polish adults and the instability caused by the “racial” selection and deportation to the General Government of Poles, respectively, by the SS-Race and Settlement Main Office (RuSHA) Aussenstelle Litzmannstadt and the RSHA Umwandererzentralstelle Posen. In situating the Polen-Jugendverwahrlager in the ghetto, the Kripo followed the precedent set by the “Gypsy” camp’s (*Zigeunerlager*) formation inside the Łódź ghetto between October 1941 and January 1942.

Although the Polen-Jugendverwahrlager was established on the disingenuous pretext of combating juvenile crime, the children’s case files reflected the Kripo’s persecution of “asocials” and outcasts elsewhere and its solution of social problems through policing.<sup>5</sup> Grounds for confinement included membership in the Jehovah’s Witnesses and listening to illegal radio transmissions.<sup>6</sup> Many children were orphans or lacked parental supervision because one parent was held in another camp or performed forced labor, while the other parent was deceased. Some young Auschwitz prisoners were transferred to Litzmannstadt.<sup>7</sup>

Erected in the Marysin district inside the northeast quadrant of the Łódź ghetto at Ulica Przemysłowa 72, the compound consisted of two city blocks surrounded by a high barbed-wire fence and encompassed a section of the New Jewish Cemetery. Construction commenced on September 30, 1942. The Marysin district featured residences for privileged Jews, including ghetto eldest (*Ältester*) Mordechai Chaim Rumkowski, and small agricultural plots essential for the ghetto’s subsistence. As was the case with the Gypsy camp, Jewish laborers seem to have erected the Polen-Jugendverwahrlager. On November 24, 1942, the ghetto chronicler, Dr. Oscar Singer, observed, “The construction of a Polish camp for youth in Marysin continues at a swift tempo.”<sup>8</sup> A few Jewish skilled workers served as the camp’s trade school instructors. The ghetto’s inhabitants called the Polen-Jugendverwahrlager the “Polish” (*Polen-*) or “Kripo camp” (*Kripolager*).<sup>9</sup>

Kripo officials, SS, and ethnic Germans (*Volksdeutschen*) from the Reichsgau Wartheland guarded Litzmannstadt. On January 1, 1943, the commandant, Kripo official, and SS-Sturmbannführer Karl Ehrlich, issued the Litzmannstadt camp order (*Lagerordnung*).<sup>10</sup> Like the IKL’s regulations, it prescribed punishments including beatings with wooden canes or rubber truncheons for offenses such as speaking Polish. The inmates were subjected to paramilitary discipline similar to that found in IKL camps, like roll calls.<sup>11</sup> The females’ camp leader was Eugenie Pohl, a 19-year-old Łódź native who changed her Polish name (Genowefa Pol) after signing the German National List (*Volksliste*). Another Łódź native, Isolda (Sydomia) Bayer, administered the female section.

Called dependents or pupils (*Zöglinge*), the prisoners originally comprised gentiles aged 12 to 16 from the newly incorporated territories.<sup>12</sup> When the Youth Welfare Offices (*Jugendämter*) in Wartheland, Ostoberschlesien, Danzig-West Preussen, and elsewhere dispatched fewer youth than

anticipated, the Kripo reduced the confinement age to 8 in order to enlarge Litzmannstadt's camp population. Some inmates were as young as 4 years old.<sup>13</sup> The first group arrived at the camp on December 11, 1942. Litzmannstadt held approximately 1,000 inmates per month.<sup>14</sup> For each inmate, the administration produced an index card with mug shot and periodic conduct (*Führung*) reviews. The Kripo divided the *Zöglinge* into three levels (*Stufen*): (1) newcomers, (2) reformables, and (3) incorrigibles. Some males wore military uniforms, while females had gray dresses.<sup>15</sup> The inmates' labor consisted mostly of manufacturing straw shoes as well as cartridge belts for the German army.<sup>16</sup>

Because the RSHA deemed undesirable the mixture of Polish and German youth, the SS-RuSHA Litzmannstadt Aussenstelle received the order to screen the camp "racially," starting with the youngest *Zöglinge*.<sup>17</sup> The RuSHA chief, SS-Gruppenführer Otto Hofmann, inspected the Litzmannstadt camp in the spring of 1943.<sup>18</sup> The inmates found "racially valuable" were dispatched to Litzmannstadt's Germanization camp at Ulica Sporna 73.<sup>19</sup>

Between May 1943 and January 1945, Litzmannstadt recorded 77 deaths, including one shooting. During the pe-

USHMM WS #15002, COURTESY OF IPN

riod from September 1943 to November 1944 (except October 1944), inmates were hospitalized for scabies (497 cases), tuberculosis (216), trachoma (116), and mumps (106). They also suffered numerous work-related injuries and had poor dental care. In December 1943 and January 1944, a louse-borne typhus epidemic (*Fleckfieber* or *Flecktyphus*) resulted in the hospitalization of over one-third of the camp's population (378 cases) during these months.<sup>20</sup> Although the camp had an infirmary, the authorities quarantined over 200 typhus-infected children at the ghetto's infectious disease hospital at Ulica Dworska. On December 21, 1943, Rumkowski was ordered to evacuate 100 Jewish patients from the hospital. This order imposed a burden, Singer wrote, because typhus had only recently been contained in the ghetto and the evacuated patients' health remained in jeopardy. Under the care of Czech Jewish pediatrician Dr. Emil Vogl, most of the Polish patients recovered, and the ward was closed on March 1, 1944.<sup>21</sup>

According to ITS, Dzierżążnia and Tuchingen (Tuszyn) were Litzmannstadt subcamps. An agricultural estate approximately 15 kilometers (9.3 miles) from Łódź, Dzierżążnia opened on January 12, 1943, and closed on July 31, 1944. Under Lagerleiter and police official Hans Heinrich Fuge, the 200 female prisoners raised food to support the main camp. Between August 16, 1943, and March 28, 1944, the Umwandererzentralstelle Posen put Tuchingen, a three-story building, "at the [youth camp's] disposal" (*zur Verfügung*).<sup>22</sup>

Four and a half months after the deportation of the Łódź ghetto's inhabitants to Auschwitz, where the majority were murdered, the Germans abandoned the Polen-Jugendverwahrlager during the Red Army's advance on January 17–18, 1945. The inmates were not evacuated. Distantly witnessing the destruction of the Radogoszcz prison, Litzmannstadt inmate Apolonia Beda "feared that they [the Germans] would come back and burn us, but they had actually gone." Soon afterward Łódź resident Janina Ruta-Koperkiewicz saw the children scavenging for food outside the camp.<sup>23</sup>

In 1948, the United States sentenced Otto Hofmann to 25 years in the “RuSHA” case at Nuremberg.<sup>24</sup> After 1945, Eugenie Pohl reverted to her Polish name and became a kindergarten teacher in Łódź. In 1974, a Polish court sentenced her to 25 years’ imprisonment.

## YOUTH PROTECTION CAMP MORINGEN

In the autumn of 1940, at the initiative of Chief of the Security Police and the SD Reinhard Heydrich, a concentration camp for male youths between the ages of 16 and 21 was opened in the buildings of the state workhouse (*Landeswerkhaus*) in Moringen near Göttingen. The first youths were interned in August after having been classified by state institutions for youth, the Reichskriminalpolizei, and welfare practitioners for closed corrective training as "burdensome hereditary criminals" (*erblich kriminell belastet*) or "ethically and morally degenerate" (*sittlich und moralisch verwahrlost*).

The *Jugendkonzentrationslager* in Moringen was the first of the so-called youth protection camps (*Jugendschutzlager*), which were generally welcomed by the social welfare authorities. Formerly the site of an early Nazi men's camp in 1933 and an early women's camp from 1933 to 1938, the Moringen Jugendschutzlager was administratively and conceptually related to similar camps established in 1942 for females at Uckermark and for Poles at Litzmannstadt (Łódź). The Reich Criminal Police Office (Reichskriminalpolizeiamt, RKPA) confined male youths to Moringen after studying their files. Applications to send such youths to the camp were initially made by the State Youth Offices and later by the Criminal Police (Kripo), by the Hitler Youth leadership, and by the protective courts and other judicial authorities. The applications constantly referred to asocial behavior or criminal tendencies. The overwhelming majority were said to be incapable of "readmission to the national community" (*Wiedereingliederung in die Volksgemeinschaft*). The terms used to justify admission to the camps were deliberately vague and allowed the punishment of any type of behavior that deviated from the norm, as well as allowing the expanded persecution of youths who hitherto had not been seized.

Under the command of SS-Sturmbannführer und Kriminalrat Karl Dieter, the guards from the SS-Totenkopf (Death's Head), and "trainers" (*Erziebern*) from the Waffen-SS, the Moringen youths were subjected to military drill, euphemistically termed "community training" (*Gemeinschaftserziehung*). The stated aim was character education, focusing on cleanliness, order, punctuality, discipline, and above all, work.

The camp organization corresponded to that established for concentration camps for adults. The inmates were divided into various blocks, each of which was supervised by an SS

Blockführer, as well as block elders and camp elders, who were chosen from among those interned. These prisoner-functionaries had a similar function to Kapos in the large concentration camps. Operating at the behest of the SS, they reported infringements against camp regulations and ensured that the orders of the camp personnel were carried out.

Everyday life in the camp was planned to the minute. During the summer, the day began at 5:15 A.M. and in winter at 5:45 A.M. The hard physical labor lasted for more than 10 hours; the SS Erzieher permanently controlled, supervised, and committed arbitrary acts of violence against the prisoners. The slightest infringement of the rules, such as a mistake while making beds (*Bettenbauen*), alleged loafing during work, and many other infringements led to draconian punishments. Authorized and unauthorized punishments included the withdrawal of mail privileges; the order to stand while eating; the withholding of meals; sleeping on a “hard bed” (*Harte Lager*—removal of the mattress so that the prisoner slept on the wooden boards); standing at attention; performing penal exercises (often to the point of total physical collapse); placement under arrest (with only bread and water, with a full meal every third day); and being beaten with a cudgel.

At the end of 1941, the Criminal-Biological Institute of the Security Police (Kriminalbiologische Institut der Sicherheitspolizei, KBI), whose tasks included the observation of “community alien youths” (*jugendliche Gemeinschaftsfremde*), was incorporated into the RKPA. It was headed by Dr. Robert Ritter, who promptly established a department of KBI inside the Moringen youth concentration camp. He used the camp to continue his studies, begun in the 1930s, to develop a preventive “racial hygienic campaign against criminals,” which amounted to experiments and selections conducted on the youths based on pseudoscientific criminal and hereditary theories. A letter from the RKPA dated June 24, 1942, to the Moringen and Uckermark youth concentration camps as well as to the Ravensbrück women’s concentration camp defined the purpose of the youth concentration camp as follows: “[to] examine the inmates for criminal-biological traits, to support those who can still be members of the community so that they can take their place in the national community while holding those who are uneducable until their final accommodation elsewhere, while using their labor.”<sup>1</sup> This “final accommodation elsewhere” (*endgültigen anderweitigen Unterbringung*) could mean deportation and murder in one of the death camps, the fate of 21 Sinti (Gypsies) on March 24, 1943.

Ritter developed a classification system to examine and sort the youths into different “human types” (*Menschentypen*): the youths were divided among various blocks based upon their genealogical, moral, and medical characteristics. At Moringen, the newly admitted inmates were allocated to the so-called observation block (*Beobachtungsblock*, or B-block). Held for six months until a final “determination” by Ritter or his assistant of many years, Eva Justin, they were allocated to a block depending upon KBI’s expectation of success in their training and the resultant social prognosis. The prisoners

were dispatched to the blocks for incompetents (*Untauglichen*, U-block), troublemakers (*Störer*, S-block), total failures (*Dauerversager*, D-block), occasional failures (*Gelegenheitsversager*, G-block), questionably educable (*fraglich Erziehungsfähigen*, F-block), educable (*Erziehungsfähigen*, E-block), and the political opponents, Stapo-block (*Staatspolizei*, or ST-block).

The Stapo-block was strictly separated from the others. It held youths who had been classified by the police authorities as political opponents, including foreign youths from countries such as Norway and Luxembourg, partisans from Slovenia, and members of Hamburg’s Swing Youth. The prisoners were mostly admitted to this block on the basis of “protective custody” orders issued by the Gestapo. They were regarded by the police authorities as extremely dangerous to the community. Consequently, they were subjected to an especially strict training and security regime.

The fate of the youths depended on the blocks to which they were allocated. The blocks determined the inmates’ everyday life and formed the basis for their later transfer to the Reichsarbeitsdienst (Reich Labor Service, RAD) and Wehrmacht units or, if there was a negative assessment, to the asylums or to death camps.

Ritter’s criminal and hereditary biological assessment had severe consequences for those who survived the physical and psychological terror of the camp. Many of the youths interned in Moringen were forcibly sterilized at the request of the criminal biologists.

The center point of everyday life in the camp was the ceaseless exploitation of the inmates’ labor with completely inadequate sustenance or medical care. For breakfast there was a little bread with jam and a cup of ersatz coffee. At midday and in the evening, the meal was mostly a thin watery soup with cabbage, potatoes, or beets. Meat was a rarity.

Initially, the inmates’ sustenance was restricted to the minimum necessary to maintain their work strength. Later it did not even suffice for this. As a consequence of malnutrition, at least four youths died, with the result being that the SS-Lagerarzt was forced to demand an improvement in April 1942; otherwise, there would be more deaths. However, the food situation changed so little that illnesses, hunger, and malnutrition remained the inmates’ constant companions.

The daily 10 hours’ forced labor regimen was regarded by the detaining authorities as a particularly valuable education method for the growing boys, even though it imposed the most difficult physical travails, monotony, and permanent threat of punishment. The youths were deployed in labor detachments both inside and outside the Moringen camp. In the camp itself, there were a number of workshops such as a saddlery, a weaving mill, a knitting mill, and machines to glue paper bags, as well as tailor, bookbinding, and paint shops. Some of the prisoners worked under SS supervision and for piece wages offered by the companies Götting Leineweber GmbH, Papiersackfabrik Alfred Rockenfeller, and Jute-Spinnerei und Bindfarbenfabrik August Greve KG. They manufactured overalls, sheets, and hand towels; glued to-

gether cement bags; sorted string; and produced cartridge holders and other armaments products for the Wehrmacht. Other inmates worked on farms in the area and at harvest time were sent to work in the sugar mill at Nörten-Hardenberg.

The majority of the youths worked in labor detachments that were especially notorious for their physical work. They dug trenches to lay cables for the Reichspost, worked on the nearby Leine River to regulate its flow, and on the run carried 50-kilogram (110-pound) cement bags for hours for the Portland Cementfabrik Hardegsen AG. The SS used other prisoners in quarries or on construction sites for the Reichsautobahn and the Reichsbahn.

The SS extracted the most profit from the youths when they worked in armaments industries, which paid bonus and wages to the Reich Security Main Office (RSHA). The prisoners never received their wages or bonuses. Inmates from the Moringen camp worked as slaves in the Heeresmunitionsanstalt (Muna), a former salt mine situated about 15 kilometers (9.3 miles) from the camp in Volpriehausen and in the workshops of the Piller company, which opened a branch factory in Moringen on October 1, 1942, with the express purpose of using the camp's labor. According to historian Hans Hesse, the Moringen workhouse director, Hugo Krack, while performing a wartime assignment, informed Piller of the youth camp's labor sources.<sup>2</sup>

Before its dissolution on April 9, 1945, when the U.S. Army marched into Moringen, around 1,500 male youths passed through the camp. At least 56 youths died in the camp as a result of the inhuman living conditions or were shot while working in the labor detachments or while trying to escape. To this number should be added those who contracted tuberculosis and were transferred to the tuberculosis institute at Benninghausen, where many of them died. Others were transferred to the death camps or the asylums, where they fell victim to systematic mass murder and euthanasia measures. Even when the remaining prisoners were sent on the death marches, they were murdered by the SS guards when they could go no further due to exhaustion and illness. One can assume that at least 10 percent of the inmates in the youth concentration camp died while in camp or as a result of the period spent in the camp.

## YOUTH PROTECTION CAMP UCKERMARK

Intended to hold young women ages 16 to 19, and later women up to age 21, the Uckermark youth protection camp (*Jugendschutzlager*) opened as the first concentration camp for young females in June 1942. Since the Moringen Jugendschutzlager

opened in August 1940, the SS had urged leading officials in the Reichskriminalpolizeiamt (RKPA) to establish a comparable site for females. Like Moringen and the Polen-Jugendverwahrlager Litzmannstadt, the Kriminalpolizei (Criminal Police) directed Uckermark, but its forced labor fell under the jurisdiction of the Inspectorate of Concentration Camps (IKL) in the SS-Business Administration Main Office (WHVA).<sup>1</sup> Like Moringen, Uckermark's inmates, called "pupils" (*Zöglinge*), were classified as criminals due to sexual promiscuity, membership in the "Swing Youth" (*Swing-Jugend*), relationships with prisoners of war (POWs) or "non-Aryans," refusal to work in arms production, or political opposition. There were also inmates whom the Nazis deemed "racially inferior," such as Jews and Gypsies (Sinti and Roma). Many *Zöglinge* were dispatched to Uckermark from "asylums" and juvenile institutions. Some prisoners were Slovenian.<sup>2</sup>

In mid-May 1942, the SS-Kriminalrätin Lotte Toberentz became Uckermark's commandant, with staff drawn from Ravensbrück. Initially, Uckermark had only 2 accommodation barracks, one for *Zöglinge* and the other for female "educators." Male prisoners from Ravensbrück completed a new barrack before the arrival of each additional transport. The first group of prisoners consisted of about 10 females. By August 1942 there were four blocks for approximately 200 *Zöglinge*. By early 1945, there were around 17 barracks holding 1,200 prisoners.

The new arrivals were sent first to Ravensbrück, not Uckermark, where they underwent a demeaning admission procedure. Stripped naked, they surrendered personal belongings, and their hair was shorn. Following a cold shower, they were examined by SS doctors, fingerprinted, photographed, issued prisoner clothing, and introduced to camp procedures. A few days after this "introduction," the young girls were transferred to Uckermark.

As in Moringen, the admission criteria were based upon the obscure criminal-biological theories of Dr. Robert Ritter and his assistant, Dr. Eva Justin, of the Kriminalbiologische Institute (KBI). KBI ascertained the young prisoners' alleged "criminal propensities" and "inherited inferiority" and correspondingly assigned them to different blocks after six months' observation. Although Uckermark's block system was not as elaborate as Moringen's, each block had its own corresponding "educational" methods. Comparatively few were admitted to the higher, "educable" blocks, while most were dispatched to the lower and middle blocks for the "questionably educable" or "hopeless" *Zöglinge*. A special block for Gestapo prisoners and partisans' children was isolated from the others.

According to Commandant Toberentz, an essential reason for the differentiated treatment of female juveniles concerned their alleged proclivity for sexual promiscuity. This assessment about the female asocials' special "nature" reflected welfare administrators' attitudes dating back to Imperial Germany, when *Zöglinge* were consigned to workhouses for "unseemly" behavior. Euphemistically, the authorities, such

as Paul Werner from RKPA, described youth forced labor as fundamentally educational.

Constant torment and hard labor marked daily life. The day began at 5:00 A.M. After a cold shower and clad in underwear, the prisoners went barefoot to "early sport," regardless of season. After dressing, they made their beds, which consisted of straw sacks and simple blankets. The female block leaders and Toberentz inspected the blocks, punishing the disorderly. A simple breakfast and roll call preceded the work assignments.

Under constant SS supervision, the girls generally worked between 10 and 12 hours. If they collapsed or did not reach the daily work quotas, they were punished for sabotaging work. One labor detachment in Uckermark was used for moor cultivation, terrible work that resulted in psychological and physical exhaustion. Many prisoners brought in the harvest at neighboring manors and farms. Others worked in armament firms, such as Siemens, which had opened branches in Ravensbrück and at Uckermark. The Jugendschutzlager had a tailor shop and a workshop; the latter made dolls and toys for the children of fallen SS men. Especially difficult was *Holzmachen*, where 16-year-olds dragged felled trees to the camp, which were then cut into smaller segments.

Conducted back to camp, all *Zöglinge* assembled for evening roll call. Supper consisted of a piece of bread with spreadable cheese. Twice a week there was sausage or soup. The soup was a thick brew with cabbage or beets but rarely contained meat. The meals were totally inadequate for growing youngsters, with the result that the prisoners soon wasted away. After eating there was an hour of sport, cleaning, or roll call. Completely exhausted, the *Zöglinge* were permitted to shower and sleep. But even during the night there was no peace, as Toberentz made nightly inspections and collectively punished the blocks at the slightest opportunity.

The prescribed punishments were warnings, food deprivation, arrest, postal bans, and the withholding of privileges. The *Zöglinge* were also forced to do hours-long military drill. Pursuant to Heinrich Himmler's order, the camp rules forbade the beating of females, but the *Zöglinge* nevertheless suffered blows from male and female SS. A daily torment was the absolute talking ban. Under threat of severe punishment, the inmates were not allowed to talk when eating, working, or at night. Recaptured escapees were harshly punished. Former prisoners reported that vicious dogs were set upon escapees. One *Zögling* was mauled on the calf, and another's nose was torn to pieces.

The poor food, heavy labor, and inadequate clothing caused severe illnesses. In winter, the inmates were given only a scarf for protection, not pullovers or gloves. Working in primitive wooden shoes wounded their feet. The sick and injured were sent to the Ravensbrück infirmary, which had a police doctor and two prisoner nurses. This facility's minimal aim was to return the *Zöglinge* for labor. Toward the end of 1943, Uckermark obtained an infirmary, but its medical standards were also poor. Although cases of forc-

ible sterilization have not yet come to light, it can be assumed that because Uckermark was run similarly to Moringen that the authorities' negative assessment resulted in sterilization.

Based upon Ritter's and Justin's decisions, some Zöglinge were murdered at concentration camps such as Auschwitz, Dachau, Sachsenhausen, Buchenwald, or Ravensbrück. Others were sent to "asylums," where they were murdered as part of the "euthanasia" program.

In June 1944, Uckermark's dissolution began with the opening of the Dallgow-Döberitz transit camp, which was led by Uckermark staff. Of its first transferees, 49 girls were deployed in an armaments firm. Another 58 worked in homes in Uckermark's immediate vicinity; 22 Zöglinge described as "pathologically degenerate" were sent to an asylum, and another 71 youths to Ravensbrück.

In January 1945, the RKPA urged Uckermark's accelerated dissolution because the SS needed the barracks for evacuated concentration camp prisoners. Four Uckermark barracks were separated from the rest for 20 underage political Zöglinge. In the emptied portion of Uckermark, under the command of Ruth Clausius from Ravensbrück, approximately 4,000 weakened female evacuees were murdered or died. The killing methods included strychnine poisoning, starvation, and gassing.<sup>3</sup> On April 20, 1945, Commandant Toberentz fled before advancing Allied troops with the remainder of the Zöglinge. On April 30, the Red Army liberated Ravensbrück and Uckermark.

Postwar trials scarcely touched the Uckermark camp personnel. In the Ravensbrück III Trial at the Hamburg Curio-Haus, April 14–26, 1948, the British acquitted Toberentz of involvement in the murder of "Allied nationals" but condemned Clausius to death.<sup>4</sup> During the 1950s and 1960s, the West German judicial authorities did not categorize Jugendschutzlager detention to be a National Socialist crime.

## A NOTE ON THE RECENTLY OPENED INTERNATIONAL TRACING SERVICE DOCUMENTATION

Until August 2007, the International Tracing Service (ITS) in Bad Arolsen, Germany, remained the largest closed documentation center on the persecution of Jews, forced laborers, prisoners of war (POWs), and displaced persons (DPs) of many nations. With the Bonn Treaty's ratification by eleven signatory governments in 1955, the International Committee of the Red Cross (ICRC) assumed custody of tens of millions of pages of German documents from the Nazi camps, mostly captured by the Western Allied armies, and DP documents created by Allied and nongovernmental relief agencies for the dual purposes of tracing victims' relatives and documenting persecutees. Despite many entreaties, Holocaust survivors' descendants and researchers were denied access to these collections for decades. Spearheaded by the United States Holocaust Memorial Museum (USHMM), particularly its director, Sara J. Bloomfield, and the director of its Center for Advanced Holocaust Studies (CAHS), Paul A. Shapiro, the signatories amended the Bonn Treaty in 2006, granting access to its collections and providing for one archive in each member country to receive the documentation in digital form. The designated repositories include USHMM in Washington, D.C., Yad Vashem in Jerusalem, and the Institute of National Memory in Warsaw.<sup>1</sup>

Just over one month after the five-thousand-page manuscript of this volume was mailed to Indiana University Press, the Museum received the first installment of records from the newly opened ITS collections. The first batch consisted of eighteen million digitized pages on six hard drives. Comprised of Incarceration (*Inhaftierung*) documents, it encompassed Nazi concentration camps, German prisons, civilian internment camps under Wehrmacht administration, some camps administered by other Axis countries, and Gestapo transport lists. In November 2007, the ITS transferred the digitized Central Name Index (CNI) to the Museum. Consisting of card files, the CNI supplies abbreviated references to specific incarceration, forced labor, or DP documents about individual persecutees, giving file (*Ordner*) and page (*Seite*) numbers. To search the CNI's approximately seventeen-and-a-half million names, software makes possible multilingual, phonetic searches. Subsequent collections in process of digitization are Wartime (*Kriegszeit*) documents on Nazi Germany's millions of foreign workers; Postwar documents (on DPs and refugees); and General Documents, the latter consisting of "nonpersonal" documents (*Sachdokumente*; a discrete collection of historical documents including maps, camp plans, some survivor testimonies, and a

40,000-page survey of forced labor and POW camps in Germany by city and county); and millions of pages of Tracing/Documentation (T/D) files arising from the investigation of individual persecutees. As active files, T/D cases less than twenty-five years old are not available to researchers. To expedite searches, in the summer of 2007 the Center translated the ITS Inventory (*Inventar*). The Inventory was originally a compilation of Excel spreadsheets listing collections by camp, numbers of pages and names in a collection; whether the collection consists of originals, copies, original copies, or a combination, and less frequently a collection's provenance. It is now searchable in English and German on USHMM's Web site.<sup>2</sup>

The historic opening of the ITS collections came too late for use in the print edition of this volume, but the collections will prove invaluable for future volumes of this encyclopedia, in particular those on Wehrmacht camps (Volume III), German police camps (Volume V), and forced labor camps (Volume VI). This postscript is intended to sketch how ITS holdings may advance Holocaust research, specifically by reviewing the Incarceration documents and briefly surveying the findings of the first research workshop at Bad Arolsen.

The most important original material in the Incarceration documents is located in the "pre-1955" holdings. For example, the U.S. Army captured the Buchenwald collection virtually intact and transferred it to the U.S. Zone's Tracing Service shortly after 1945. Although the National Archives and Records Administration (NARA) copied certain files submitted into evidence at the Dachau war crimes trials, the majority of documents were not copied before their transfer to the ITS' predecessor organizations before 1955. The Inventory describes the Buchenwald collections as "Property of U.S. Army on Loan to ITS." The small Mittelbau collection is also replete with originals. Other sizable original collections stem from the Neuengamme concentration camp and *Strafgefangenenlager* (penal prisoners' camp) Papenburg. From 1934 to 1945, most Papenburg camps belonged to the Reich Justice Ministry. Although their provenance is "not evident" (*nicht ersichtlich*), British forces liberated Papenburg and Neuengamme.<sup>3</sup> The "Service Watson" collection reproduces ICRC documentation, including 1,739 pages of lists of Red Cross parcel recipients in the Nazi concentration camps. The number of receipts exceeds 96,000. These and related documents furnish additional evidence about the prisoners freed in Operation Bernadotte, Swedish Count Folke Bernadotte's negotiated release of mostly Scandinavian and some

—1  
—0  
—+1

Jewish prisoners from several concentration camps in March and April 1945. The ITS collections also contain many copies of documents amassed from German, Polish, Belgian, and French archives after 1955. Inescapably, there is also some overlap between ITS holdings and the USHMM and NARA collections.<sup>4</sup>

The Buchenwald holdings are particularly rich. As a central artery of the Inspectorate of Concentration Camps (IKL), Buchenwald routed tens of thousands of prisoners to far-flung camps throughout the war, with admissions from (*Zugängen*) and departures to (*Abgängen*) Arbeitsdorf, Auschwitz, Bergen-Belsen, Dachau, Flossenbürg, Herzogenbusch (Vught), Lublin (Majdanek), Mauthausen, Mittelbau (Dora), Natzweiler (Struthof), Neuengamme, Ravensbrück, Riga-Kaiserwald, Sachsenhausen, and Wewelsburg (Niederhagen). Aside from admission and departure lists, there are separate “envelopes” (files) about individual prisoners. For Buchenwald, there are nearly 1.4 million pages of original documents for male prisoners, and approximately 180,000 pages of original documents for female prisoners.<sup>5</sup>

The Buchenwald collections contain many files concerning unusual or privileged prisoner groups, such as recaptured escapees and common criminals (green triangles). In the spring of 1944, Buchenwald issued a list of prisoners bearing “escape markings” (*Fluchtpunkte*). Emblazoning a red bull’s-eye on the chest and back of the prisoner’s uniform, to facilitate being shot in the case of re-escape, this practice was an additional dimension of the color-coded triangle system indicating reason(s) for arrest. A separate document in the Fluchtpunkt file directed individual block elders to the presence of recaptured escapees on their block.<sup>6</sup>

After an alleged escape attempt on August 6, 1943, prisoner Kurt A. bore the Fluchtpunkte. Originally categorized a “Mischling First Degree” after arrival at Buchenwald on July 29, 1943, Kurt A. was subsequently reclassified a Jew. Unlike other prisoners removed from the list for labor redeployment, he remained on the July 27, 1944, list. His prisoner envelope revealed coded SS language dealing with escapees: “DIKAL!” (*Darf in kein anderes Lager!* Not Permitted in Any Other Camp!). The card also reproduced the red bull’s-eye in color. Not mentioned in Kurt A.’s envelope was his November 1944 removal from the Fluchtpunkt list and transfer to a Buchenwald subcamp, a fact established in his T/D file. His prisoner envelope included responses to the U.S. Military Government for Germany (OMGUS) questionnaire for former concentration camp inmates. Asked about the reason for his arrest, Kurt A. or an interpreter on his behalf responded in English, “Because I am a Jew.”<sup>7</sup>

The Buchenwald files furnish considerable insight into the green triangle prisoners. Classified “career criminals” (*Berufsverbrecher*, BV), their behavior often manifested the darker hues of Primo Levi’s “gray zone.”<sup>8</sup> After 1945, some members of this group, openly favored in the prisoners’

“self-administration” as block elders and Kapos, were tried as war criminals or lynched by liberated prisoners. Those held under “temporary preventive custody” (*befristete Vorbeugungshaft*, also BV) or “police security arrest” (*polizeiliche Sicherungsverwahrung*, PSV) most often did not share their experiences. Much of what is known about them comes from other detainees, especially their victims. The Buchenwald prisoner envelopes thus furnish a window for learning more about them and their functions within the camp system. For example, in 1943 the Buchenwald administration listed “volunteers” for the Dirlewanger formation, a notorious Waffen-SS unit composed mainly of former German concentration camp prisoners deployed against partisans (in reality, against unarmed civilians). Because the list indicates arrest categories, it is possible to search for green triangle prisoners’ envelopes.<sup>9</sup>

Arrested in Dortmund on February 9, 1938, for an alleged theft, Wilhelm B. was admitted to Buchenwald the next day and issued prisoner number 2666. On November 29, 1938, he was transferred to the new concentration camp at Mauthausen, holding prisoner number 940. Subsequently he was dispatched to Dachau and from there on September 30, 1940, to Sachsenhausen. With the establishment of the Neuengamme and Arbeitsdorf concentration camps, which were jointly administered under successive commandants Martin Weiss and Wilhelm Schitli, Wilhelm B. was sent first to Neuengamme and then Arbeitsdorf. In Arbeitsdorf he had prisoner number 99. When Arbeitsdorf closed in early October 1942, he came full circle, reentering Buchenwald with the new prisoner number 1836. Volunteering for the Dirlewanger formation, he was dispatched on June 11, 1943, from Buchenwald to Sachsenhausen, where Dirlewanger recruits were released from “protective custody.” It is not known whether he survived the war.<sup>10</sup>

Although the records do not describe his activities in the camps, the pattern of transfers into new camps, especially Arbeitsdorf, strongly suggests that Wilhelm B. was a prisoner-functionary. Described in the file as a mason or building worker, he was unemployed during the Depression years 1932 to 1934, held in “penal detention” (*Strafbast*) for an unspecified offense from January 9, 1934, to August 30, 1935, and worked for a Dortmund building company from 1935 to 1938. Shortly before arrest, he contributed 26 Reichsmarks (RM) to his health insurance provider for the first month of 1938. This seemingly obscure detail generated pages of documentation, because the SS at Buchenwald and Mauthausen deemed his case “not in order” (*nicht geordnet*), and obtained on his behalf a receipt (*Quittungskarte*) from the city of Dortmund.<sup>11</sup> The SS property custodians at Sachsenhausen, Neuengamme, Arbeitsdorf, and Buchenwald dutifully logged this receipt among his possessions after each transfer or had it forwarded from the previous camp, making it possible to follow Wilhelm B.’s path through the IKL system. This envelope also revealed information about perpetrators.

sexuality, especially forced prostitution, the experience of prisoner categories, and, more generally, the camps' and transports' social histories. After overcoming challenges in searching perhaps the most variegated ITS collection, the working group on Wartime documents discovered how to reconstruct a given city's or county's forced labor situation, such as Bad Arolsen in Kreis Waldeck or farms near Saarbrücken. Eastern workers' (*Ostarbeiters*) medical files from 1944 and 1945 revealed possible instances of "wild" euthanasia in Berlin hospitals. The group tasked with surveying Post-war documents noted that ITS holdings complemented, but did not supersede, the rich DP camp collections found elsewhere. The small group of "Hong Kong" files, which in part concern Central European émigrés who settled in Harbin, Manchuria, and who along with other national and religious minorities fled to Hong Kong after the 1949 Chinese Revolution, underscore that the ITS collections stand at the nexus of the crucial scholarly issues about twentieth-century Europe: the plight of refugees and human rights. Many DP cards reveal aid givers' stereotypes about Jewish DPs, while others indicate an attempt—in some cases successful—by Holocaust perpetrators to assume DP status for the purpose of evading justice.<sup>14</sup>

This brief survey only hints at the ITS collections' outstanding research potential. Better than any other set of archival collections, the ITS records speak to the totality of terror, abuse, and suffering inflicted on those regarded as "enemies of the Third Reich," and to the surviving victims' struggles to rebuild their lives after World War II. When combined with the detailed history of detention sites found in this encyclopedia, the ability to follow the lives of persons like prisoners Kurt A. and Wilhelm B. helps the researcher approach the day-to-day level of National Socialist persecution.

Joseph Robert White

## NOTES

1. The Associated Press has published a series of articles on the opening of the ITS; for a listing of these articles and USHMM press releases on the ITS, see <http://www.ushmm.org/museum/exhibit/focus/its/>. Yad Vashem obtained copies of "non-personal" documents (*Sachdokumente*) in the 1950s. Since 1996, Bad Arolsen has permitted researcher access to the same collection, but the bulk of its collections remained off limits.

2. For the Inventory, see <http://resources.ushmm.org/itsinventory/>.

3. Quotation found in the ITS *Inventar* and the USHMM Inventory.

4. This summary of holdings is based upon the ITS *Inventar* (unpublished Excel spreadsheets on CD-Rom, nd).

5. Listed as 1.1.5.3, "Individual Documents Male Buchenwald," and 1.1.5.4, "Individual Documents Female Buchenwald." For the page counts of Buchenwald prisoners' files and for those of other camps, see International Tracing Service, *Catalogue of Records Held by the International Tracing Service of the Allied High Commission for Germany at Arolsen*, 4 vols. (Arolsen, 1954), Vol. I: *Concentration Camp Records; Miscellaneous Records of General or Historical Nature; Records on Unaccompanied Displaced Children*.

6. ITS Digitized Incarceration Collections, USHMM, Buchenwald GCC 2 / 202 IE / 7 Ord. 218, "Listen über Häftlinge mit 'Fluchtpunkten,'" pp. 2, 8 (quotation). Followed by a list of last names and prisoner numbers, the boilerplate reads: "Block Eldest! The following bearer(s) of escape markings is (are) found on your block" [*Blockältester! Folgender Fluchtpunktträger befindet sich auf Deinem Block*].

7. ITS Digitized Incarceration Collections, USHMM, 1.1.5.3, "Individual Documents Male Buchenwald," A., Kurt, pp. 5448862-5448876; Buchenwald GCC 2 / 202 IE / 7 Ord. 218, "Listen über Häftlinge mit 'Fluchtpunkten,'" p. 18 (verso). ITS, T/D file 275307, March 15, 1955.

8. Primo Levi, "The Gray Zone," in *The Drowned and the Saved*, trans. Raymond Rosenthal (New York: Summit Books, 1988).

9. ITS Digitized Incarceration Collections, USHMM, Buchenwald GCC 2/262 IIF/4 Ord. 421, "Listen über Häftlinge der Formation 'Dirlewanger,' 1943-1945," p. 3. On the Dirlewanger formation, see French MacLean, *Cruel Hunters: SS-Sonderkommando Dirlewanger; Hitler's Most Notorious Anti-Partisan Unit* (Atglen, PA: Schiffer Military History, 1998); and Hans-Peter Klausch, *Antifaschisten in SS-Uniform: Schicksal und Widerstand der deutschen politischen KZ-Häftlinge, Zuchthaus- und Wehrmachtstrafgefangenen in der SS-Sonderformation Dirlewanger* (Bremen: Edition Temmen, 1993).

10. ITS Digitized Incarceration Collections, USHMM, 1.1.5.3, "Individual Documents Male Buchenwald," B., Wilhelm, pp. 5609049-5609077.

11. ITS Digitized Incarceration Collections, USHMM, 1.1.5.3, "Individual Documents Male Buchenwald," Mauthausen to Landesversicherungsanstalt Westfalen, March 17, 1939, p. 5609050.

12. Barnewald SSO summarized in French MacLean, *The Camp Men: The SS Officers Who Ran the Nazi Concentration Camp System* (Atglen, PA: Schiffer Military History, 1999), p. 34.

13. US448 Case No. 000-50-5-9 (*USA v. Josias Prince zu Waldeck, et al.*), August 14, 1947.

14. This synopsis is based upon the author's notes taken at the group presentations at Bad Arolsen, Germany, on June 24, 2008.

# LIST OF ABBREVIATIONS

14f13	Code name for “euthanasia” in IKL camps
1999	<i>1999: Zeitschrift für Sozialgeschichte des 20. und 21. Jahrhunderts</i>

## ABOUT THE EDITOR

Geoffrey P. Megargee, Applied Research Scholar with the Center for Advanced Holocaust Studies, received his B.A. from St. Lawrence University in 1981. Following stints as an army officer and in the business world, he went on to get his master's in European history from San José State University in 1989 and his Ph.D. in military history from the Ohio State University in 1998. He is the author of *Inside Hitler's High Command* (2000), which won a 2001 Distinguished Book Award from the Society for Military History and was a main selection of the History Book Club, and of *War of Annihilation: Combat and Genocide on the Eastern Front, 1941* (2006). He is a member of the historical advisory board for the National World War II Museum in New Orleans, and he writes and lectures on German military history, World War II, and the Holocaust.

---

# NAMES INDEX

The index lists all names—internees, guards, Nazi officials, civilians, Allies, and all others—alphabetically by family name. Names, and spellings of names, sometimes vary, because of marriage, use of a pseudonym, or misspellings in the source documents. Although we have made efforts to make the listings as consistent as possible, a person may appear in different places in the index. No titles or ranks are included with the names in the index. Page numbers in italics refer to illustrations and their captions.

- Aaron, Willi, 23
- Abadi (or Abady), Ervin, 277
- Abakumow, Nikolaus, 260
- Abe, Artur, 633
- Abel, 359

# PLACES INDEX

The index lists all places—primarily camp names (and their alternate names), towns, and cities—but not names of organization/enterprise locations to be included in another index. The page numbers corresponding to each camp essay are in bold type, for example, “Babitz, **225–226**.” If that camp is mentioned elsewhere in the text, the index entry appears in normal type. In most cases, the name of each main camp appears repeatedly in each of that camp’s subcamp essays. Therefore, rather than list each individual page, the index entry for each main camp will include a range of pages, in bold type, that covers the main camp essay and all its subcamps, for example, “Vaivara, **1491–1509**.” Page numbers in italics refer to illustrations and their captions.

# ORGANIZATIONS AND ENTERPRISES INDEX

This index lists organizations and entities, such as industrial firms, governmental agencies, political parties, educational institutions, private associations, and small businesses mentioned in the text. Camps and subcamps are not included here, but are included in the Places Index. Abbreviations are not indexed unless they are part of a larger name (e.g. AEG-Kabelwerk Oberspree). Please consult the List of Abbreviations for full names, which can then be found here. Page numbers in *italics* refer to illustrations and their captions.
